Page 376, col. i, line 40. For "Ximinez" read "Ximenez." Also, *passim*, on p. 377, col. i.
Page 499, col. ii, line 22 from bottom. For "19" read "18."

The Nation.

NEW YORK, THURSDAY, JULY 1, 1886.

The Week.

THE President sent in twenty-nine vetoes of pension bills Thursday, and, so far as we have learned, they were received in silence by the members of both houses. When the previous batch went in, Senator Blair and Senator Logan were considerably ruffled, and were disposed to look upon the President's comments upon the bills as "impertinent" and "silly." They have possibly discovered that the people are not taking that view. What the President is doing is simply applying plain business principles to the work in hand. He cannot see why the expenditures of the Government should not be regulated with as much care as those of a private business concern. The introduction of "politics" into the distribution of the public money cannot make right wrong, cannot make illegal payments legal. The country is getting another glimpse of what the President meant when he said "public office is a public trust," and as usual it is much pleased with what it sees.

The thirty more vetoes of private pension bills which the President sent in on Friday appear to have been more than some of the offending Congressmen could bear with equanimity. There is talk of an attempt to pass them over the vetoes, but if the private talk on this subject is as silly as that which was made on the floor of the House, very little is likely to come of it. Mr. Bayne of Pennsylvania appears to have been chief spokesman of the injured members. He was astounded at the temerity of the President in "sneering" at the reports of the House; he even doubted his constitutional authority for doing such a thing, and he was entirely sure that the President was "no better than any other American citizen, and not the equal of any man who perilled his life and went out to save the Union." What has this to do with the question whether or not the claims made in the vetoed bills were deserving or not? We are not engaged in saving the Union now, but in administering the Government honestly and economically. The men who try to cover fraudulent raids upon the Treasury by shouting, "We saved the Union," are doing the sort of thing that was done for so many years when all sorts of scoundrelism and public robbery were explained and condoned by tearful allusions to the "poor negro."

The *Evening Post* prints in parallel columns some illustrations of the extraordinary legislation in which the present Congress has been indulging. Nothing like it, we venture to assert, has ever been seen in a parliamentary country. The practice of granting to individuals annuities called pensions, payable out of the public treasury, simply as a favor, is a very old one, but it has always been a monarchical practice. It was very common in England under the Georges, who put a considerable number of scoundrels on the pension list, though the worst of them were always quartered on the Irish treasury. Pensions provided for by legislatures, however, in later days, are granted for services the nature of which and the way of proving them are distinctly specified beforehand. This is the course which has been followed here. Congress has specified the reasons for which pensions shall be granted, and indicated the way in which claims to them shall be established. It has, moreover, set up official machinery for examining these claims and passing on them, and it is the most elaborate machinery of the kind the world has ever seen, for no other nation has ever undertaken to pay pensions on so great a scale. But now it not only withdraws the examination of certain claims from the Bureau created by itself for the purpose, but actually overrules the decisions of the Bureau, and grants annuities to persons to whom the Bureau refused them. More than this, it grants them to persons who would never have ventured to apply to the Bureau, well knowing that they had not the shadow of a title to public money on any ground recognized either by law or public sentiment.

An innocent foreigner, on hearing of this, would be very likely to say that here was another proof of the corruption and inefficiency of the American civil service. "See," he would observe, in a letter to the London *Times* or to the *Kreuz-Zeitung*, "the Americans have a great public office, carried on at vast expense, for the purpose of superintending the distribution of the immense sums which they are giving as pensions to the soldiers who have suffered in the service of the Republic on sea and land, but they cannot trust it to do the work. The wicked Democrats came into power in 1885, and the Republican Congress finds that the Pension Bureau, as managed by them, refuses annuities to men disabled on the battle-field or to the widows, while it bestows them lavishly and without inquiry on cronies and friends of the officers of the Bureau, who either never saw fighting at all, or left the service without a scratch, and never thought of asking for a pension until they were put up to it by a go-between who wanted a commission." What would his astonishment be in discovering that it was the Pension Bureau which was doing its duty, and guarding the Treasury from marauders, and that it was the Senate which was giving away annuities almost to all comers, without examination or inquiry. They gave them away without debate, at the rate, a Washington correspondent says, of from three to five a minute. On the 21st of April last, 500 of them were passed in two hours. What is most extraordinary, one Senator has actually set up a Pension Bureau of his own, which supersedes that created by law.

The Senate on Friday passed the House bill for the relief of Fitz John Porter, and as there is thought to be no doubt that the President will sign it, 'justice will at last be done in this notable case. One feature of the vote was most encouraging. Despite all the efforts of Gen. Logan to make it a party question and even a test of loyalty, six Republicans voted in Gen. Porter's favor, and two others were paired on the same side. Even Gen. Logan must recognize that the bloody shirt is "played out" when his most vigorous waving of the garment will not prevent George F. Hoar from turning "traitor" and voting with the "rebels."

Gen. Logan executed a skilful manœuvre in the debate on the Fitz John Porter Bill, which will be a startling revelation to his contemporaneous historian, Mr. Blaine, of the superior advantages which Logan has for advertising his work. He charged Porter with "conspiring" with rebels, and then, to prove his assertions, had the clerk read liberal extracts from Logan's own book, 'The Great Conspiracy.' Of course the speech will go into the *Record*, with the extracts and the reference to the book as history, and thus a first-rate advertisement, convenient for distribution under the General's frank, will be secured. There are several ways in which Mr. Blaine can get even, however. He can make another Irish speech, being careful this time not to get hold of Chamberlain's instead of Gladstone's plan for home rule, and then he can read that tremendous chapter upon Ireland which he put into his "history." If this idea does not strike him favorably, why not advertise Blaine readings, and popularize the "history" in that way? Our word for it, something must be done, or Logan will forge ahead as the great historian of this epoch.

A few years ago the announcement of the death of David Davis would have created a profound sensation. He then occupied a position of great importance in national politics, and was generally believed to have fair prospects for becoming a Presidential nominee. His eminence was, however, purely accidental. He happened to be in the Senate at a time when the two parties were equally divided there, and, as the only Independent Senator, he held the balance of power. He performed his duties as presiding officer with ability and fairness, but neither while holding that position nor while acting as a member on the floor did he show any especial fitness for public life. He was a good judge, and the chief lesson of his career is the old one of the mistake which a judge makes when he leaves the bench and enters politics. He was naturally impressed with the belief that his chances as a Presidential candidate depended entirely upon his maintaining a position of strict neutrality between the two parties, and this belief prevented him from taking a definite position upon any important public question. The inevitable result was that his candidacy was very short-lived. It is to be said of him that in politics, as upon the bench, he was always upright, and that all his actions were not only above reproach, but above suspicion.

The Beck bill, prohibiting Senators from acting as counsel for corporations which have or may have legislation before Congress, was sent last week to the Judiciary Committee, which is supposed to be equivalent to its burial. The feature of the discussion was a speech by Mr. Evarts, who has at last found a subject on which he has some convictions. Mr. Evarts considered the bill a "stigma" upon every member of the legal profession, and declared that he would never by his vote "strike at the honor and dignity of the humblest member of that honored profession." There has been for some time past a good deal of talk about the effect of corporation influence in the Senate, but as it has been mostly rather vague, it has not attracted much attention. The fact that thirty-one out of fifty-two Senators are willing to go on record against a proposition so obviously sound as that embodied in Mr. Beck's bill, is calculated to set people to thinking.

Although a test vote in the House on Tuesday week had shown that a majority favored the new rule, allowing an amendment to be made to a pension bill, levying the taxes required to meet the appropriation proposed, the Republicans refused to allow final action upon the matter, and filibustered for hours on Wednesday against its adoption. Of course it is only a question of time when the Democrats can rally enough of their number to constitute a quorum and adopt the rule themselves, and the only result of the filibustering is to expose more clearly the demagogism of members who are ready to vote for pension jobs alone, but unwilling to vote for them if the taxes necessary to pay the bills are to be imposed at the same time.

President Cleveland, in his veto of the De-Krafft Pension Bill, said: "A large proportion of these bills have never been submitted to a majority of either branch of Congress, but are the result of nominal sessions held for the express purpose of their consideration, and attended by a small minority of the members of the respective houses of the legislative branch of the Government." This statement brings out a defect in the Federal Constitution, viz., the failure to require even the votes of a majority of either house to pass a bill. The Constitution does say, "a majority of each house shall constitute a quorum to do business." But in practice hundreds of bills are rushed through, as these private pension bills were, without a roll-call and without any attempt to find out whether a quorum is present or not. It is when Congress is "making political capital"—on a Morrison resolution, for instance—that members become conscientious about the presence of a quorum, not when they are voting away the people's money. The Constitution of this State is much more particular in this regard. It provides that "no bill shall be passed unless by the assent of a majority of all the members elected to each branch of the Legislature," and that "the yeas and nays be entered on the journal." Further, it provides that three-fifths of the members shall be necessary for a quorum to pass "any act which imposes, continues, or revives a tax, or creates a debt or charge, or makes, continues, or revives any appropriation of public or trust money or property, or releases, discharges, or commutes any claim or demand of the State"; and that the assent of two-thirds shall be required to pass a bill "appropriating the public moneys or property for local or private uses." These provisions form a protection against profligate legislation which has saved the State a great deal of money. If similar ones could be inserted in the Federal Constitution, it would save conscientious Presidents much labor and the country much scandal.

Four boycotters in Binghamton, N. Y., have been held for trial under interesting circumstances. They were charged with conspiring to injure the business of a cigar manufacturer who did not conform to the demands of the Cigarmakers' Union. A regular boycott was instituted against his business by the Union, and four men who were leaders in the movement were indicted. Their case was argued before a United States Commissioner, Charles S. Hall, and his opinion, holding them for trial, is published in full in the Binghamton *Republican*. He holds that the defendants were indictable for conspiracy under the Revised Statutes of the United States, and in giving this opinion says:

> "It should be remarked that the evidence shows that the defendants conspired to 'boycott' Hill, while the charge is that they conspired 'to injure, oppress, threaten, and intimidate him in the free exercise or enjoyment of a right or privilege.' But as the term 'boycott' is generally understood, and particularly as it is explained and illustrated by the acts and printed circular of defendants, it seems to me that no more complete, exact, and satisfactory definition of the term can be formulated than is furnished by the words of the statute, and that 'boycotting' and 'injuring a citizen in the free exercise of a right or privilege,' may without injustice to the defendants be taken to be one and the same thing."

The Milwaukee boycotters have received a strong dose of sound law from Judge Sloan of that city. Robert Schilling, the State organizer of the Knights of Labor, is on trial there for conspiracy and for making threats in connection with boycotts. In refusing a motion to quash the indictment, Judge Sloan held that a firm's income from its business was as much property as machinery or buildings, and that to prevent people from patronizing the firm was an injury to its property. He declared both boycotting and attempting to dictate as to who should be employed or discharged, to be offences under the statutes. "Laborers or capitalists," said he, "may organize for their own protection, but have no right to take the aggressive. In our social and industrial life and in our government, the socialist, the anarchist, and the boycott have no place." This homely truth is forcing its way rapidly into the minds of many people, but we regret that the procession of boycotters towards the penitentiary is not accompanied with an equally long procession of professional "friends of labor," who are the worst culprits and deserving of the harshest punishment.

The strike among the switchmen of the Lake Shore Railroad at Chicago is a remarkable proof of the extent to which a great State may be demoralized by an inefficient executive. Business on one of the chief lines of railroad communication is interrupted for days, the safety of travellers on passenger trains is imperilled, the public peace is disturbed, and serious riots occur—all, primarily, because Gov. Richard J. Oglesby has shown the evil-disposed that he has no backbone and that they may defy the authority of the State with impunity, so far as the chosen representative of the State's authority is concerned. The story of the present trouble is very simple. During the epidemic of strikes a few weeks ago the switchmen on the Lake Shore Railroad demanded that eight of their number should be discharged by the company because they did not belong to the Switchmen's Union, and, upon the company's refusal to comply with the demand, they struck work and caused serious disturbances for some days. A settlement was finally reached through the intervention of third parties whose interests as shippers were suffering. The company insisted that it had not yielded to the strikers, and it certainly had not, so far as the published terms were concerned; but the men insisted that there was an unwritten agreement that the objectionable "scabs" should be got rid of within sixty days. This period expired a few days ago, and as the non-union men had not been discharged, the Union renewed its demand that they should be turned adrift. These eight men with one exception have been in the employ of the company for from ten to eighteen years each; they have served their employers with entire fidelity; they are all men who have families to support. The Union men bring no other complaint against them than that they have refused to join the Union, and that they continued at work when the other switchmen struck a few years ago.

As there is no pretence of a grievance regarding hours, pay, or any other feature of the work, the strike is based solely upon the claim that a non-union man has no rights in this country. It is the same claim which was advanced so boldly in the Third Avenue strike in this city, and which in that case challenged the attention of the whole country. It is a claim which public sentiment has condemned as monstrous and intolerable, and which would hardly be advanced now in any community where public sentiment was reflected in the attitude of the authorities. Its reappearance in Illinois is largely, if not entirely, due to the failure of Gov. Oglesby to enforce the laws when "Labor" set itself above the laws in East St. Louis a few weeks ago. If in those troubles Gov. Oglesby had taken the same manly stand as Gov. Rusk of Wisconsin did in Milwaukee a little later, it is hardly too much to say that the Lake Shore switchmen would not have struck last week against the primal principle of a free Government—that a man has a right to work.

The convention of Chittenden County (Vt.) Republicans at Burlington on Saturday was rendered noteworthy by the fact that one of the delegates offered a resolution endorsing Senator Edmunds's course in the Presidential campaign of 1884—a course which the Blaine men have always claimed elected Mr. Cleve-

land. The resolution was smothered by the Committee, which reported instead a resolution simply instructing the nominees for the Legislature to support the Senator's re-election; but the fact that every Republican convention yet held (in ten of the fourteen counties) has nominated Edmunds men for the Legislature, shows how little his attitude towards Blaine has injured him with the party. How strong was the distrust of Blaine and the sympathy with Edmunds's course among Vermont Republicans in 1884, is not generally understood, although it is clearly shown by the *Tribune Almanac*. Although there was no State where Republicans were more strongly influenced by an honest belief in the "view-with-alarm" plank, Blaine received only 66 per cent. of the total vote, against 76 per cent. for Lincoln in each of his two elections

---

The news that the Cincinnati *Enquirer* is in the market, and that it has had hard work to find a purchaser because of its general bad reputation, is a piece of welcome intelligence to everybody who believes in reputable journalism. The course of the *Enquirer* in Ohio politics has long been notorious. It was openly in the pay of the Republican party in the campaign of 1884, doing its utmost to sell out Cleveland in the interest of Blaine. Since that time it has been the persistent defamer of Cleveland and his Administration, attacking every effort at reform and stopping at nothing in its hope of bringing the Administration's civil-service policy into ridicule and disrepute. It has been for years the undisguised organ of a gang of ballot-box stuffers and corrupters of elections in Cincinnati. In short, its reputation has become so thoroughly bad that its editor finds the city no longer tolerable, and wishes to sell out his paper and move away. He finds to his dismay that his course has so injured his newspaper as a property that he can get nothing like the price he thinks it ought to bring. His experience may well serve as a warning to other editors who are possessed of the idea that in journalism some other policy than that of old-fashioned decency and honesty pays best.

Mr. Mayo is still on his travels in the South, trying to persuade the people that they are not able to support their own schools and must turn beggars. He has been for several weeks past preaching the gospel of mendicancy in Missouri, a State which already keeps her schools open 107 days in the year, against only 104 in Maine and but 100 in New Hampshire, and which has increased in wealth 40 per cent. during the brief period since 1880. The astounding ignorance regarding Southern education which he shows only renders more remarkable the vogue which "the Mayo myth" enjoyed until the *Nation* exposed its true character. In an address at Kansas City last week he spoke of Florida as "perhaps at the foot of the class" of Southern States in the matter of educational progress, although the last report of Mr. A. J. Russell, Superintendent of Public Instruction, shows that the school year in Florida is about as long as in Maine and New Hampshire, and that the "percentage of enrolment of children of school age and daily attendance is equal to any State in the Union." A professor in a Virginia college, who writes the *Nation* in hearty praise of its articles against the "bill to promote mendicancy," says:

"It will be a long time before we cease to feel the bad effects of this Mayo craze. Just as the negro had learned the lesson of looking to himself for help, rather than to the general Government, the white people began to see visions of 'forty acres and a mule.' That we shall not suffer as much as the negro did from such visions will be largely owing to the *Nation*, which sounded the warning in time to prevent the fatal results to our school system threatened by the Blair bill."

The true spoils theory is, though it is seldom fully unveiled, simply that the mass of the American people do not, if left to themselves, feel enough interest in the government of the country to lay aside their business even for a few days in the year, either for the purpose of selecting candidates for public offices or of voting for them on election day; that in order to keep the machinery of government in motion at all there has to be a semi-professional class called "workers," or politicians, to get up questions or "issues," as they are called, for the two parties to fight over, and to indicate the line to be taken by the party orators by drawing up party platforms, and "striking the key-note of the campaign," and selecting candidates to be voted for. When this is all done, these workers are supposed to go among the voters, and persuade them that they will be reduced to abject poverty, by a terrible decline in the demand for all products of human industry, in case the other party elects its candidates; and that therefore they must vote on election day, not because they care anything about principles or subjects of legislation, but to escape financial ruin. But, then, the workers will not do this work, it is thought, if they are not paid for or stimulated in it, by some sort of material prize, which must be cash or salaried offices. Therefore we must give them all the Government places as the prize of victory at each election if we are to keep the American Republic agoing as an organized political society.

This theory makes the spectacle we are now witnessing in Great Britain a great mystery. Should Gladstone be turned out of office at the coming election, about thirty offices, all told, will change hands, and about half of these are Cabinet offices. About one thousand candidates for seats in the House of Commons will present themselves to the electors, and of the 670 who will be elected, not over eighteen will have a chance of a place with a salary. Not one will be able to promise a worker or a voter a subordinate office of any description unless a menial one. Not one clerk in the Custom-house, or Post-office, or Inland Revenue Office, or War Office, or Admiralty, has anything to fear or hope as to the result of the election. The excitement about the canvass in all these departments is exactly like the excitement in the dry-goods and drug stores and breweries. Contributions to the electioneering funds are made by Government clerks, if made at all, on precisely the same grounds as contributions by doctors, or lawyers, or clergymen; that is, a man gives if he feels disposed or can afford it; but whether he gives or does not give, nobody knows. Now, on the spoils theory of government the result of this state of things ought to be that Gladstone, and Salisbury, and Trevelyan, and Morley, and Churchill, when they made speeches, would have audiences about as large as the Claimant's in this city the other night—150 all told; that the newspapers would give but meagre if any reports of political matters, and would give the greatest prominence to crimes and accidents; that even if they had political articles, nobody would read them; that candidates could not be found for one-third of the constituencies on either side, because few would be willing to pay the legal costs of the returning officers; that calculations as to the result of the elections would be useless, owing to the difficulty of determining what proportion of the electorate would go to the polls, and whether, in many boroughs or counties, any one would go at all.

The manifesto of the Comte de Paris, though, perhaps, a very natural document for him to issue, must be considered all that the Radicals desired in the way of justification for their harsh action. He admits that he is a claimant of the throne of France. He admits that the marriage of his daughter to the son of the King of Portugal had a national significance, for he says: "It formed a fresh tie between France and a friendly nation." He declares that he has as a Pretender 3,500,000 voters on his side, and maintains that France is coming to recognize, as the result of her experience of the republic, that the "traditional monarchy" is the only remedy for the evils from which she is suffering. He says, too, "the Republic is afraid," but that he has confidence in France, and "at the decisive hour he will be ready." It is difficult to see how anybody, no matter how much he may admire or sympathize with the Comte de Paris, can expect the Republican Government to allow a gentleman putting forward these claims, and holding these views, to remain on French soil.

Political affairs in Mexico are in pause, awaiting the result of the Congressional elections to be held on the 11th of July. The Administration is displaying unusual reticence in announcing its favored candidates. The Gonzalez faction is also surprisingly silent. Probably this does not argue improved political methods so much as new forms of strategy. It is pretty well understood, for one thing, that the Government is bent on securing the defeat of the troublesome Deputies who stood so obstinately in its way in the last Congress. A new element in the campaign is the "National Electoral Committee," with headquarters in the capital and branches in various parts of the republic. This is a circle of radical and advanced Independents, who are striving, in name at least, for the wider use of the franchise and for less governmental interference in elections. It gives some idea of the state of things which Mexican politics has reached, that the platform of this "Committee," just published, should demand individual and judicial rights amply guaranteed in the Constitution, but now in abeyance, such as freedom from involuntary servitude, trial by jury, the right of public assembly and of criticising the Government, and the absence of troops from the polls.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 23, to TUESDAY, June 29, 1886, inclusive.]

DOMESTIC.

THE President on Wednesday sent to Congress seven vetoes, all the vetoed measures being private pension bills which originated in the Senate.

Mr. W. E. Smith of New York, Assistant Secretary of the Treasury, is to resign to accept the position of attorney for a Western railroad corporation, and Gov. Thompson of South Carolina is to succeed him as Assistant Secretary. Gov. Thompson is in harmony with the President's civil-service views.

The following special notice was on Thursday issued by the General Superintendent of the Railway Mail Service: "By order of the Postmaster-General, the clerks named below (naming twenty-nine) have been removed from the service for insubordination, in conspiring to obstruct the regulation of the service by the Department and to injure its efficiency. They have secretly attempted to form an association with a view to dictate action to the Department, and many of them have also been guilty of deception towards their fellow-clerks by representing the purposes of such association to be merely benevolent, and thus entangling them. At the same time the Postmaster-General directs me to express his gratification that so few, comparatively, could be found to engage in such a scheme, and his acknowledgments to those who have kept the Department informed."

The Senate voted on Wednesday, 31 to 21, to reconsider the vote by which the bill prohibiting members of Congress from acting as attorneys of land-grant railroads was passed, and then committed it to the Judiciary Committee, where it will probably rest. The only Republican voting against reconsideration was Mr. Van Wyck. The only Democrats voting in the affirmative were Messrs. Call, Gray, Payne, Pugh, and Ransom.

On Friday the Senate passed the bill for the relief of Gen. Fitz John Porter, six Republicans voting with the Democrats, yea. It has already passed the House and awaits the President's signature.

The Senate on Monday voted by 33 to 12 to insist on the steamship-subsidy item of the Post-office Appropriation Bill, but the conferees on Tuesday receded. The General Deficiency Bill, appropriating $6,062,845, was reported on Tuesday. The Des Moines Land Bill was passed over the President's veto by 34 to 15. The House on Tuesday finally disposed of the Post-office, Agricultural, and Army appropriation bills.

The Senate Committee on Privileges and Elections on Friday voted to report adversely on any investigation of the charges of bribery in connection with the election of Senator Payne. There will be a minority report in favor of an investigation. Senators Logan, Evarts, and Teller voted against an investigation and have excited the wrath of Ohio Republicans.

The Senate Committee on Post-offices and Post-roads has reported adversely the nomination of Clinton Rosette to be Postmaster at De Kalb, Ill. Rosette, in company with his deputy, left his post-office to take care of itself on two days last fall, and officiated as a public pool-seller at the races held in connection with the De Kalb County Fair; and after the death of Gen. Grant he printed an article in his paper rejoicing over it. While the case was under consideration by the Committee this article was read. When it was half finished Senator Maxey (Dem., Tex.) said: "Mr. Chairman, that's enough. I move that the nomination be recommended for rejection," and the vote was unanimous.

The House in the Committee of the Whole has incorporated an amendment in the Sundry Civil Bill requiring the Secretary of the Treasury to issue certificates of the denomination of $1, $2, and $5 on all surplus silver dollars now in the Treasury, in payment of the appropriations made in the bill and other expenditures and obligations of the Government.

In the House on Thursday, during the discussion of the Sundry Civil Bill, the opponents of civil-service reform attempted to prevent the application of the civil-service rules to the clerks in the Bureau of Engraving and Printing, but were defeated by a vote of the Committee of the Whole.

On Monday in the House Mr. Randall (Dem., Pa.) introduced his bill to reduce and equalize duties on imports, to reduce internal-revenue taxes, and to modify the laws in relation to the collection of the revenue.

The Democratic caucus on Thursday night appointed Speaker Carlisle and Messrs. Morrison and Randall a committee to select and push to the point of action such measures as they shall deem proper to attempt to pass. It is reported that they have decided that the time of the House which is not needed for appropriation bills shall be given to Mr. Cobb of Indiana, Chairman of the Committee on Public Lands, to press the forfeiture bills. This policy will defeat all the special orders, including the one setting apart days for the consideration of Indian bills. It is believed that it will not be possible to adjourn until August 1.

While the House, on Friday, was considering the pension bills, Mr. Bayne (Rep., Pa.) attacked the President for his vetoes, referring to him several times as "this man." Mr. Matson (Dem., Ind.) said the President was an honest man, and the people of this country knew it. Though he (Mr. Matson) did not agree with the President on this question, the President was a courageous man, and he honored him for it. Mr. Warner (Dem., O.) defended the President's course, declaring that his aim was only to keep off the pension roll men who were not entitled to go there.

The Massachusetts House on Wednesday refused to pass the Soldiers' Exemption Bill over the Governor's veto by 107 to 87, not two-thirds.

Thomas Cogswell was on Tuesday nominated for Governor by the New Hampshire Democrats. The Convention warmly approved the administration of President Cleveland.

The Alabama Republican State Convention met at Montgomery on Wednesday. There were about 100 present, half white men. All the utterances were for a protective tariff and the Blair Educational Bill. The Convention declined to nominate a ticket, leaving it to the Executive Committee to put up one or not, as they may think best.

Mayor Grace on Friday removed Gen. Alexander Shaler from his position as President of the Health Board, and forwarded to the Governor for his approval a copy of the evidence and findings in the case tried before him, in which Gen. Shaler was charged with receiving a bribe for his vote in favor of the purchase of certain armory sites while acting as a member of the old Armory Board.

The New York Court of Appeals on Friday, in the case of the Mayor of this city vs. the Eden Musée, gave a decision in favor of the plaintiff, affirming the order with costs against the defendants. The decision is an important one, as it definitively settles in the negative the vexed question whether licensed places of amusement in this city can sell ales, wines, or spirituous liquors, etc., on any part of their premises, even when they have an excise license.

The strike of Lake Shore switchmen at Chicago was renewed on Wednesday, because the objectionable non-union men had not been discharged. No freight trains were run on Thursday. The Lake Shore officials deny that they ever promised to discharge the non-union men. On Friday morning the strikers derailed a freight train. The police were powerless to prevent it.

An attempt was made on Saturday to run a Lake Shore freight train under police protection. It was pursued by fifty strikers on board two locomotives. After an exciting race at full speed, the strikers ran into the caboose of the freight train which contained the police. The latter fired at them, and then fled, leaving the train in the hands of the strikers. A number of arrests were made. Several freight trains were moved on Monday afternoon under heavy police protection. There was no interference by the strikers.

Judge Sloan of Milwaukee, during the trial of Robert Schilling, State organizer of the Knights of Labor, for conspiracy, practically ruled on Friday that since Schilling threatened to put the vast machinery of the Knights of Labor in operation to prevent the public from patronizing the firm boycotted, he injured the firm's income, which was as much property as machinery or buildings, and that to attempt to dictate to them whom to employ or discharge was a parallel offence. All organizations of the kind seeking to interfere with the business of manufacturers or others are not in accordance with law.

Three participants in the Southwestern Railroad strike were sentenced at Parsons, Kan., on Friday, under conviction of conspiracy, to pay $100 fine and be imprisoned thirty days. At Fort Worth, Tex., a striker was convicted and fined $125.

Paul Wilzig, who was tried in the Court of Oyer and Terminer in this city on Wednesday on a charge of extorting $1,000 from George Theiss, by means of the boycott, at the latter's music hall, was found guilty. Judge Barrett said he would defer sentence until the cases of Wilzig's associates had been tried.

Ex-President Arthur left this city on Thursday afternoon for his cottage in New London, Conn., where he purposes remaining until late in the autumn. It is hoped that he will be restored to his usual health by that time. He took all his fishing tackle with him.

The Yale University crew won the race at New London on Friday evening over the University of Pennsylvania crew by over twenty lengths in 24:44.

At New London on Saturday the Columbia University crew defeated Harvard's eight in a splendidly contested race. The course was in first-class condition. Columbia was about eight lengths ahead.

In the Eastern Yacht Club Regatta at Marblehead, Mass., on Tuesday the *Puritan* won the race; *Priscilla* second, *Mayflower* third.

David Davis died at Bloomington, Ill., on Saturday after a lingering illness. He was born in Maryland, March 9, 1815, and was educated at Kenyon College, Ohio, studied law and began its practice in Illinois. In 1836 he formed an acquaintance with Abraham Lincoln, and for eight years they travelled the same circuit. They became fast friends. He served as a judge of the Illinois Circuit Court from 1848 to 1862, when Lincoln appointed him a Justice of the United States Supreme Court. Judge Davis had managed Lincoln's canvass at the Chicago Convention in 1860 with great skill. As Justice of the Supreme Court during the war he upheld the cause of the Union with great fidelity. His decisions as a Judge showed remarkable ability. He left the Supreme bench in 1876 and was elected United States Senator. The manner of his election to the Senate gave him a sort of independent standing, and he was during the years from 1872 to 1880 often suggested as a Presidential candidate by the Greenbackers and other organizations. When the Senate assembled in extra session in 1881, Mr. Bayard was elected President pro tem. But the two new Senators from New York and one

from Rhode Island had not then qualified, and when they did so, three days later, David Davis was put into the President's chair, and retained that position until March 4, 1883, when he retired to private life.

FOREIGN.

Parliament was prorogued on Friday. The Queen's speech was in part as follows: "My Lords and Gentlemen: I have determined to release you from your high duties before the full accomplishment of the regular work of the session, in order to ascertain the sense of my people on the important proposal to establish a legislative body in Ireland, for the management of Irish as distinguished from imperial affairs. With this object it is my intention to immediately dissolve Parliament. I continue to happily maintain the most friendly relations with foreign Powers. I have the satisfaction to acquaint you with the fact that the warlike operations of Servia against Bulgaria have been brought to a close through the wise councils of the Powers, and the forbearance of the Sultan, and also, after a period of anxiety, the adoption of pacific counsels by Greece."

Mr. Gladstone met with a most enthusiastic reception in Manchester on Friday night. He addressed an audience of 7,000. In his speech he said that of all the losses to his party none gave him acuter pain than that of John Bright. Although Mr. Bright's conscience had led him to place himself in opposition to the sentiments of the nation on this question, he had shown no eagerness to be first in the ranks of the dissentients. Of course the Government's opponents would not now let Mr. Bright alone. He was too valuable a man. Hence people had seen Mr. Bright giving Mr. Caine a testimonial of character, and Mr. Caine had already deplorably misrepresented this testimonial, just as he had the Liberal party which elected him but recently to the House of Commons. This testimonial made it appear that Mr. Gladstone had once condemned the principle of home rule. Mr. Bright knew that Mr. Gladstone had never condemned the principle of home rule. However, the audience would hear no criticism of John Bright from Mr. Gladstone. "I have taken a resolution," said the speaker, "never to be Mr. Bright's critic. I will never utter a word to disparage the man whose integrity I revere, whose character I love, and who has conferred upon his country services which cannot be forgotten."

In a letter regretting his inability to address the electors of Chester, Mr. Gladstone says: "The Tory policy of twenty years of coercion for Ireland is more rational, and contains more promise of being effectual, than any one of the intermediate and fantastic schemes which have come to birth under the exigencies of the election. The Duke of Westminster recently said that it was time for the Liberals to put their country before their party. That is just what I tried to do when I made known to the Marquis of Salisbury my desire to support him when he was Prime Minister, if he should introduce a comprehensive measure of reform for the government and peace of Ireland in conformity with, as we now know them, the views then entertained by his own Lord Lieutenant."

Mr. Gladstone, in his Liverpool address on Monday, said that home rule was a question of classes against the masses. The Liberal party was, as a rule, not supported by dukes, squires, clergymen of the Established Church, officers of the army, and so forth. Whenever there was a highly privileged, publicly endowed profession almost every member of that profession was an anti-Liberal. But from the legal and medical professions, which were now open, the Liberals received a fair share of support. The question was whether the masses were able constitutionally to overbear the classes, because it had always been shown that wherever truth, justice, and humanity were concerned the masses were in the right and the classes in the wrong.

Mr. Herbert Gladstone, in a speech on Friday, said that while Mr. Chamberlain was in the Cabinet he submitted an alternative land-purchase bill proposing to expend £40,000,000 to enable tenants on less than thirty acres to buy their holdings on the basis of from fourteen to sixteen years' rental, the only security to be their ability to pay and the responsibility of local bodies in Ireland.

Mr. Chamberlain in a published letter says: "Shortly after I joined the Cabinet Mr. Gladstone asked if I had any ideas on the land question, and if I had, to submit them in writing. I told him that I had only notions, and that without official information I was unable to test their value, but would readily submit them for Mr. Gladstone's own information. I did so, and heard no more of the matter until the second week of March, when Mr. Gladstone by letter asked my permission to circulate my suggestions among the members of the Cabinet. I complied, and the paper was circulated, not at my request, but at Mr. Gladstone's special desire. Mr. Gladstone did not adopt my suggestions, and I did not think it worth my while to press them. They were never discussed by the Cabinet. The Premier now invites me to publish them. I hope that at some future time, when I am in a position to develop them in the light of official information, I may be enabled to submit them to general criticism. All I will permit myself to say is that they differ in every essential particular from the Government plan—above all in this, that they do not contemplate the establishment of a separate, practically independent legislative body at Dublin. On the contrary, they presume the maintenance of the unquestioned authority of the Imperial Parliament."

Mr. John Bright issued a manifesto on Friday in which he said: "I do not oppose the views of the Government on account of England more than on account of Ireland. No Irish Parliament can be so powerful or just as the united Imperial Parliament at Westminster. I cannot intrust the peace and interests of Ireland, north or south, to the Irish Parliamentary party to whom the Government now propose to make a general surrender. My six years' experience of them and their language in the House of Commons and their deeds in Ireland makes it impossible for me to hand over to them the industry, prosperity, and rights of 5,000.000 of the Queen's subjects. Our countrymen in Ireland—leastways 2,000,000—are as loyal as the people of Birmingham. I will be no party to a measure thrusting them from the generosity and justice of the united Imperial Parliament. I have written so that nobody may be ignorant of my views. My vote in the recent division has given great grief, but my judgment and conscience made the other course impossible. For forty years I have been a friend of Ireland. Long before any Parnellite now in Parliament or any member of the present Government opened his lips to expose and condemn the wrongs of Ireland, I spoke for her people in the House of Commons and on public platforms. It is because I am still a friend of Ireland that I refuse to give her up to those to whom the recently defeated bill would have subjected her. If you reëlect me, I shall to the utmost of my capacity seek only what I conceive to be for the permanent and true welfare of our country."

In Ireland seventy-seven Parnellite Parliamentary candidates will meet with no opposition, and seven seats will be contested. In London nine Tory seats will not be contested. In Scotland Unionists and Conservatives will contest sixty out of seventy-two seats.

Dr. Oliver Wendell Holmes on Friday received from the University of Edinburgh the degree of LL.D. A most distinguished company was present.

The French Government issued the decree banishing the French princes on Wednesday afternoon. That evening Prince Victor Napoleon went to Brussels and Prince Jerome Napoleon to Geneva. The Comte de Paris, his son, and suite left the Château D'Eu at eleven o'clock on Thursday morning for Tunbridge Wells, England, and will take up their residence there. Hundreds of Loyalists assembled at his estate to bid him farewell. The Duc de Chartres will accompany the Comte de Paris to England and afterwards return to France. The Duc d'Aumale and the Prince de Joinville will live together in retirement.

On leaving France the Comte de Paris issued the following manifesto: "I am constrained to leave my country. I protest in the name of justice against the violence done me. I am passionately attached to my country, whose misfortunes have rendered her still dearer to me. I lived there without infringing the laws. For tearing me thence, a moment was chosen just as I had returned, happy in having formed a fresh tie between France and a friendly nation. In proscribing me, vengeance is taken in my person on 3,500,000 voters who, on October 4, condemned the faults of the republic, which sought to intimidate those daily detaching themselves from the present régime. In me is prosecuted the monarchical principle transmitted as a trust by him who had so nobly preserved it. It is desired to separate from France the head of the glorious family which guided her course for nine centuries in the work of national unity, and which, associated with the people alike in good and in evil fortune, founded her prosperity and grandeur. The hope is cherished that France has forgotten the happy and peaceful reign of my grandfather, and the more recent time when my brother and uncles fought loyally under her flag in the ranks of her valiant army. These calculations will prove fallacious. Taught by experience, France will not be misled as to either the cause or the author of the ills she suffers. She will recognize that the traditional monarchy, by its modern principle and by its institutions, can alone furnish the remedy. This national monarchy, of which I am the representative, can alone reduce the importance of the men of disorder who threaten the repose of the country, can alone secure political and religious liberty, restore public fortune, give our Democratic society a strong Government opened to all, superior to parties, and with a stability which will be in the eyes of Europe a pledge of lasting peace. It is my duty to labor without respite in this work of salvation, and with the aid of God and the coöperation of all those who share my faith in the future I will accomplish it. The republic is afraid. In striking me it marks me out. I have confidence in France, and at the decisive hour I shall be ready." The manifesto caused considerable excitement in Paris.

The names of Prince Murat and his son have been stricken from the rolls of the French Army, because they belong to a former reigning family. The Duc de Nemours has resigned the Presidency of the Society for the Relief of Sick and Wounded.

The French flag is not hoisted officially over the New Hebrides Islands. It is simply displayed over a French storehouse on one of the islands. A British flag floats over another storehouse near by.

Premier Sagasta of Spain, replying to a question in the Chamber of Deputies, said that if he ever found himself in the presence of a Republican majority in Parliament, and that majority legally signified its intention of altering the form of government, he would submit the question to the national will for decision. Later he modified his statement somewhat by giving strong monarchical assurances. The incident, however, has caused a sensation in Spanish political circles.

Prince Luitpold was on Monday formally made Regent of Bavaria, to administer the affairs of the kingdom during the occupation of the throne by King Otto.

"RALLYING" THE YOUNG MEN.

MEN who were not born when Lee surrendered in 1865 will vote, by tens of thousands, in the elections for members of Congress in 1886. More than a million men, 21, 22, and 23 years of age, who were not born until after the end of the civil war, will vote for President in 1888. On the other hand, the youngest participant in the election of 1888 who voted when Abraham Lincoln was elected in 1860 will be then within a year of 50.

The census of 1880 showed that there were in the country 8,270,509 native white males who had reached the age of 21 years, and that of this total 6,311,742, or 76 out of every 100, were between the ages of 21 and 49 years. Considerably more than one-eighth of the whole number (1,189,239) were 21, 22, and 23 years old, and the men who were 21, 22, and 23 years old numbered almost two-thirds as many as all who had reached the age of 49 (1,958,767).

These proportions remain constant, and will hold as true in 1888 as in 1880. They show that more than three-fourths of all the voters in the next Presidential election will be men who either were not born in 1860, or were then too young to vote; that more than one-eighth of the whole number will be men who were not born until after the close of the war; and that this latter class alone will number almost two-thirds as many as all the survivors of the last ante-bellum contest. This means that a new political generation is now upon the stage and is bound to control the Government. It means that the next Presidential election will be carried by that party which appeals most strongly to the support of young men—men to whom the war is only a tradition.

In his recent Boston speech Gov. Hill said: "I have only one suggestion to make to our friends in all parts of the Union, and that is to rally the young men of the land into the Democratic party." The remark indicated that the Governor appreciates the fact that the party which gets the young men upon its side in the next election will win. But there was nothing in the speech which indicated that Mr. Hill understands how the young men are to be got into a party. It was much such a remark as Mr. Blaine dropped in one of the speeches during his Ohio tour in 1884, when he said that the young men had always been attracted toward the Republican party, and urged the importance of "rallying" them into the party in that year.

No feature of the election of 1884 was more significant than the share which the young men had in deciding it. From the days of Fremont's candidacy down to the last national contest, the Republican party had secured the support of the larger share of the new voters in each Presidential election. Its progressive spirit had appealed to men who felt the enthusiasm of youth; its devotion to principle had commanded the allegiance of young men who had been educated to have convictions and to live up to them. The managers at last came to believe that this vote belonged to the party simply because it was the Republican party, instead of because the organization represented worthy purposes. They attempted a campaign without principles, depending upon "personal magnetism" as a substitute, and expecting that what they considered the "taking" qualities of their candidate would captivate the young men of the country. Meanwhile the Democrats showed the good sense to nominate a man who had no "personal magnetism" whatever, but who by his record made the party, for the first time in many years, stand for a real reform in government. The canvass had scarcely opened before young men of Republican antecedents became the heartiest supporters of the Democratic candidate, and Mr. Cleveland was elected because he received a larger share of the votes of the young men than had been given to any other Democratic nominee since the Republican party was organized.

The managers of both parties ought to have learned something from that lesson. It showed conclusively that there is only one way of "rallying" young men into a party, and that is by making the party represent something which is worth supporting. Of all voters they care least for party names, are least bound by party ties. Traditions carry little weight with them; bygone issues are of small account. They do not ask which party Andrew Jackson or Abraham Lincoln belonged to, but which party offers the best prospect of good government to-day. They do not inquire whether a politician favored the "black laws," as John A. Logan did, before they were born, or was a Copperhead in a war which they cannot remember, but whether he favors a purer administration now.

These young men find little to attract them in either of the old parties. All that Gov. Hill has to offer is an assurance that he is "not in favor of mere sentimental appointments," which they recognize to be only a paraphrase of the old motto, "To the victors belong the spoils." They look to Abraham Lincoln's State, and see a Republican convention assembled at Lincoln's old home nominating for the Legislature the Illinois member of the Republican National Committee, after his shameless avowal that he did not believe in civil-service reform "in any sense," and his declaration that it is the duty of the next Republican State Convention to "take bold ground against that infernal, unrepublican, and un-American measure," the Civil-Service Law. They turn to John A. Andrew's State, and find Massachusetts saved only by the Governor's veto from the adoption by a Republican Legislature of a law framed to take the life out of civil-service reform in its application to that State.

The politicians might as well understand that they cannot "rally" the young men into either party by such appeals as these of the Democratic Governor of New York and the Republican politicians of Massachusetts and Illinois. The young men do not feel at all unhappy if they do not "belong" to any party and are quite content to take their places in the growing army of Independent voters, who will decide the election of 1888, as they did that of 1884.

ENGLISH AND AMERICAN RAILROADS.

ABOUT a year ago Mr. Edward Bates Dorsey, of the American Society of Civil Engineers, read a paper before that body giving a careful and in many respects interesting comparison of English and American railroads. The subject was further discussed in October, and again about a month ago, and the interest in it shows no signs of flagging.

In some respects the English and American roads stand at opposite extremes in their methods of construction and management, while those of Continental Europe come midway between the two. The English railroads have cost on an average more than $200,000 per mile; those of Continental Europe about $100,000; and those of the United States (nominally) a little more than $60,000. The question at once arises, Have the English roads secured such advantages in comfort, safety, speed, or economy of operation as to make up for the increased first cost? This question Mr. Dorsey answers in the negative. In the matter of comfort, the very solidity of construction has proved a hindrance for it has rendered it impossible for the roads to make improvements without great expense in the destruction and removal of solid masonry. It has thus bound them down to a system of narrow cars, with all its attendant discomforts. In the matter of safety, the absence of grade crossings is a strong point in favor of the English roads, and the universal use of the block system is worth still more. Yet the statistics of accidents do not tell in favor of England, as is shown by the following table:

		Miles.
Average number of miles a passenger can travel without being killed.....	United Kingdom.	194,892,255
	New York.....	172,965,362
	Massachusetts....	503,568,188
Average number of miles a passenger can travel without being injured....	United Kingdom.	6,992,662
	New York.....	13,940,754
	Massachusetts...,	23,955,630

It will not do to trust these figures too implicitly, seeing that the return of persons injured in New York is probably far from complete. Yet they show enough to justify us in thinking that railroad travel in England is at any rate not safer than in the northeastern part of the United States. How much of the trouble is due to the crowded traffic, and how much to the insufficiency of English brake power, it is impossible to tell. Something also is probably due to the greater speed of the English freight trains, which average about twenty-five miles an hour—much faster than in America. It is in the freight and accommodation trains that the difference of speed makes itself chiefly felt; the express trains are more frequent than ours, but not noticeably faster. For distances between 100 and 300 miles their best schedule times are slightly better than ours; below 100 or above 300 miles there is very little to choose.

The question of comparative economy is a more complicated one, especially since the English companies do not publish some of the figures which are most needed for comparison. We have no means of knowing, except in an indirect and uncertain way, what the average English railroad charges actually are. Mr. Dorsey accepts the prevalent opinion that English freight rates are from two to two and a half cents per ton-mile (about twice the average rates in America), while passenger rates, exclusive of season tickets,

average two and one-third cents per mile. We are inclined to think these estimates rather large; that for the passenger rate is pretty certainly so. But making all possible deductions and allowances, the fact remains that railroad charges in England are higher than they are elsewhere, without giving the companies a correspondingly higher return on their investment. Mr. Dorsey analyzes their reports in detail to show the reasons for this; and while the analysis itself is of too technical a character to reproduce here, the results are of general interest.

He finds, first, that the great original cost of the English railroads was not, from a business point of view, justified by the results—that it did not effect a corresponding saving in current expenses. Second, the lighter rolling-stock in use in England makes it impossible to attain the same economy of power as in America. An English freight car weighs five tons empty, and carries a load of, at most, eight tons; an American car of most approved construction weighs twice as much in itself, but will bear nearly three times the load. For this and other reasons, the American train-load averages about twice that in England. Yet even with these lighter trains the English companies seem to pay out larger sums per train-mile. This is a third point for criticism, not less important than the other two, and far more perplexing. On the face of the returns the difference between England and America in this respect does not seem to be very great. When we come to make allowance for the cheaper fuel and cheaper labor which the English roads can command, it becomes noticeable; when we consider also the lighter train loads, it is surprising. How much of it may be due to the unnecessarily high speed of English freight trains, or how much to differences in organization, it is hard to say. Mr. Dorsey himself does not undertake to explain it. He contents himself with pointing out how great its significance really is.

He concludes his paper by saying:

> "It would certainly pay the management of the English railroad companies to investigate the cause of the extra cost of motive power on their roads, and, if possible, remedy it. If this can be done, they will be able to *decrease their operating expenses* over 8 per cent., without making any changes whatever in present prices. This will enable most companies to *increase their dividends* largely—probably over 4 per cent. For what *is* done in the United States *ought* to be done in the United Kingdom."

This advice is easier to give than to follow. The evil lies too deep for boards of directors to remedy. It is involved in the traditions of English railroad management, which have lasted sixty years and cannot be changed in a day. The greatest trouble is probably due to the separation of railroad engineering from railroad economy. A railroad, even as a mere matter of private property, has two distinct aspects. To the constructing and operating departments it is a machine. To the traffic and financial departments it is an industry. The operating department must deal primarily with questions of engineering; the traffic department, with questions of business. It is the great problem of successful railroad administration to bring the two into proper relations to one another; they cannot be pursued independently. The best engineering may be the worst economy. The fact that the West Shore Road was such an excellent piece of engineering helped to make it such a disastrous piece of finance. The road must be adapted to the traffic and the traffic to the road.

This has not been the English policy. The engineering department has been left to work out problems in mechanics apart from considerations of economy. It has in times past been allowed to experiment with seven-foot gauge and other matters which brought no benefit proportionate to the cost. These worst errors have been abandoned; but the general lesson which they taught has not been learned. One instance will suffice: The *Railroad Gazette*, a few months ago, made a most interesting comparison of the history of fuel consumption in England and America. The English engineers attempted to diminish the fuel consumed; the Americans, to increase the work done. The result was, that the English saved a little coal which the Americans wasted, but that the Americans gained a great deal of work which the English did not.

This illustration will serve as a type of many others. Our comparative lack of trained engineers at the outset may have helped us in these respects, rendering the operating department more subservient to business principles where they conflicted with those of pure mechanics. Our railroad managers have sins enough to answer for, both of engineering and of economy; but they have at least not committed the cardinal sin of trying to divorce the two. And this, we suspect, is the reason why, in any comparison of American and foreign railroads, we find our detailed abuses so bad, and our general showing so good in spite of them.

JOHN BRIGHT AND HOME RULE.

Mr. John Bright has issued an address to his constituents, giving his reasons for opposing home rule, which will hardly exert much influence on the contest now. It does not argue the matter at all, but simply states, what was already well known, that Mr. Bright distrusts the Irish, and thinks that they are better governed by the Imperial Parliament than they would be by a Parliament of their own. Nobody will at the present stage of the controversy be converted by this, but probably a certain number of wavering or unsteady opponents of Mr. Gladstone will be confirmed by it in their opposition. Mr. Bright has long ceased to be a power in politics, but he has a great name, which is associated inseparably in the minds of all voters over fifty with the most glorious traditions and achievements of the Liberal party. Many a Liberal who is shivering over a proposed desertion, on this occasion, of the chief who has led the party to so many victories, will be made to feel easy in his mind by finding that John Bright is on his side.

But Mr. Bright's address is none the less very interesting as containing the sum and substance, or a sort of concentrated extract, of all the arguments brought forward against Mr. Gladstone's bill. We have taken the trouble to analyze a great many of them, including Mr. Goschen's, Mr. Chamberlain's, Mr. Trevelyan's, with the view of seeing what would remain after taking out distrust and dislike of the Irish. We can say confidently that any one who will do this will find that all the other objections to the bill except the probability that the Irish will not keep faith, or are not competent to govern themselves, are petty or trifling. The reason why any particular section or clause will not work, or will work mischief, is invariably, when the argument has been well sifted, that the Irish will break their pledges, or commit acts of folly or turbulence. In other words, it plainly appears that the opponents of the bill would have nothing or very little to say against it if they thought the Irish were like other people, or rather like Englishmen or Scotchmen.

Mr. Bright travels in his opposition on exactly the same lines as Mr. Goschen or Lord Salisbury, but he declines to trouble himself with the intermediate details, and jumps at once to the grand conclusion that the Irish, and especially "the Irish Parliamentary party," are unfit to be intrusted "with the industry, prosperity, and rights of 5,000,000 of the Queen's subjects." This goes at once to the heart of the matter, and if other opponents of home rule had been as direct as Mr. Bright, a great deal of speech would have been saved. As the Irish Parliamentary party represent three-fourths of the Irish people, this means that the Irish are unfit for self-government.

But Mr. Bright's proposition has, as an argument, a terribly destructive effect on some of the minor objections to home rule. In fact, it furnishes the Home-Rulers with some excellent ammunition. It disposes completely of the theory that there now exists a real union of the three kingdoms, and that Irishmen stand on a footing of equality with Englishmen and Scotchmen. No English statesman would venture to assert that either Englishmen or Scotchmen were unfit to be intrusted with the management of their own affairs. It admits, too, by implication, that the Irish representation in the Imperial Parliament is a sham, and it justifies the steady denial to the Irish of that control of their own legislation which has always been conceded to the Scotch. Finally, it concedes the existence among some of the best Englishmen—even Englishmen like John Bright—of a deep-seated dislike of and contempt for the Irish, for here we have them, when driven to the wall, avowing it in every direction.

Now, these three concessions form the basis of the whole case for home rule. The home-rule movement is based on them. Mr. Gladstone's appeal to the Liberal party is made up of them. What the Irish say is that the Union is a mockery; that it does not give the Irish equality of rights; that not only are they made the objects of exceptional legislation, but this legislation emanates from men who hate or despise them; that this representation in the House of Commons is a sham, and is only tolerated because it is a sham; that it is denied control of Irish affairs, on the very ground put forward by Mr. Bright for resisting home rule; and that the government of Ireland is therefore that most intolerable of all governments, a government of force wielded by men who despise those whom they govern; that, according to the generally accepted modern theory of civilized politics, dislike or distrust or contempt of a community, en masse, is an absolute disqualifi-

cation for ruling over it by law, or in any way except by the sword.

There is a passage in an article of Mr. Philip Gilbert Hamerton's in the July number of the *Atlantic Monthly*, on France and England—the first of a series—which throws a good deal of light on the nature of the opposition with which Mr. Gladstone is now contending on the Irish question. Mr. Hamerton says:

"The difficulty with which the English can be brought to respect the French may be partly explicable by their difficulty in respecting foreigners in general, unless they have been dead for a long time, like Homer and Virgil, or are invested with a sacred character, like Moses and Isaiah. It may be further elucidated by the peculiar condition of the English mind with regard to respect and contempt generally. This is a subject of considerable intricacy, which cannot be properly treated in a few words; but I may observe here that although the English are said to be a deferential people, and have, no doubt, the habit of deference for certain distinctions, they are at the same time an eminently contemptuous people, a people remarkably in the habit of despising, even within the limits of their own island. Their habit of contempt is tranquil, but it is almost constant, and they dwell with difficulty in that middle or neutral state which neither reverences nor despises. Consequently, when there is not some very special reason for feeling deference towards a foreigner, the Englishman is likely to despise him."

If we remember that the Irish Catholics have always been foreigners to the average Englishman, and that it is only by a tremendous effort, and by the aid of a species of religious exaltation, that he rids himself of this way of looking at them, the political significance of the above passage at this crisis will be fully seen.

SOUTHWESTERN PINE TIMBER.

Of late a strange phenomenon has developed in the alpine and subalpine regions of southern Germany. Not only have the pine forests sensibly diminished, but replanting has become remarkably unsuccessful. A new and as yet unexplained agency not only produces gradual decay among grown trees of the most valued conifers, but checks even the most scientific efforts towards replacing the loss thus sustained. This is the case in Bavaria. Within the last few years extensive pine-nurseries have singularly failed. Under the most judicious care young trees would take root, grow for a short time, then come to a standstill, linger for awhile, and finally die off. This has occurred to such an alarming extent that the forestry department at Munich, at a loss to account for it, has, at least privately, entertained the idea of, so to say, "infusing new blood" into its forests, by the introduction of foreign species. Its attention has been turned to India and to the United States, to the Himalayas and to the Rocky Mountains. It is particularly the genera *Abies, Pseudotsuga*, and *Picea*, which are favorably looked upon as fit to become substitutes for and successors to their waning congeners in the Bavarian Tyrol.

In a general way it can be stated that the genus *Pinus* tapers towards the south, whereas southwestern *Picea* comes up from Mexico and runs out in Arizona. Of the former, *P. Murrayana* and *ponderosa* are most esteemed as building lumber, *P. edulis* (the "Piñon") is hardly good for anything but firewood and small beams. For posts, the red cedar and the junipers (*J. occidentalis* and *Californica*) are profitably used. While smaller conifers extend into the plain, the Piñon grows on extensive mesas or table-mountains also, as well as on lower slopes; the stately yellow pine covers crests and the higher declivities, and lines mountain torrents in deep ravines. Dense forests are not common. Northern New Mexico enjoys rather a widespread timber area in what is called "Tierra amarilla" (yellow land or soil), and the plateau of the Zuni Range, between Fort Wingate and Nutria, bears a fine growth of stately trees. Many cañons are well stocked; but, on the whole, denuded and treeless expanses vastly predominate. Arizona exhibits similar proportions. The pine regions around the Sierra Blanca are everywhere bounded by naked ranges, basins, and plateaux, and so are the San Francisco mountains. Towards the south all chains become more arid, and therefore, in appearance at least, abrupt and forbidding. There is, in place of lofty trees, thorny shrubbery composed of species which under favorable circumstances also assume arboreal proportions, like the mezquite (*Prosopis juliflora*), the palo-verde or green wood (*Parkinsonia Torreyana*), the red madroño (*Arbutus Xalapensis*); but conifers are scarce except in isolated and not very steep chains, like the Sierra Huachuca and the Sierra Santa-Rita, south of Tucson. Both are very high, the latter culminating at 10,500 feet. It is a well-known fact that the timber line of Arizona in lat. 33° to 34° N. is several hundred feet lower than that of Colorado in lat. 38° to 39°, but these are local conditions. Under the parallels of 37° to 38°, in Colorado also, the timber line is, on an average, 1,000 feet below that of only one degree further north, 600 feet below the uppermost tree-limit of the Arizonian White Mountains, and 1,100 feet lower than on the San Francisco Range.

No part of our Southwestern territories has anything that equals in magnitude the vast area, covered by coniferous forests, of the Sierra Madre of Chihuahua and of Sonora. The Sierra Madre begins in lat. 30° 45′ (about), and, as its slopes ascend, the growth of timber thickens and becomes more stately. The interior of the chain is, as far as lat. 29°, a vast elevated basin, thickly studded with pines, among which varieties of *Picea* are prominent. It is well watered, delightfully cool in summer, not too cold in winter. Game abounds, for along the watercourses grows luxuriant grass. But the region is inaccessible as yet, for so long as Apache outbreaks occur, so long will the savage make it his stronghold, his place of refuge. The greatest wealth of the basin, aside from mines (many of which are yet problematical), consists in its timber. Approach to it must come from the east, as the western entrances are few, tortuous, and often barred by nearly unscalable heights.

The example of Colorado, which possesses now a rather beneficial forestry law, may soon exercise a pressure on New Mexico, causing its Territorial Legislature to follow suit. Devastation of the limited timber supply in the Territories has considerably abated in the last years; the most dangerous time was when the Atchison, Topeka and Santa Fé and the Atlantic and Pacific were studding their roadbeds with "ties." No objection could be raised against this, so long as the timber was used within the Territories; but when it was cut in order to supply the Mexican Central Railroad, people began to murmur. At the present day, careless handling of fire in the mountains may and does cause occasional conflagrations. These are sometimes attributed to Indians, but the negligent traveller or prospector is quite as often responsible for them.

If attempts to increase the forests in the Territories should ever be contemplated, it should always be taken into account that their actual extent, or at least their extent within well-known past times, indicates very nearly the *natural* limits of indigenous conifers. To expand beyond such limits would involve experiments with foreign species. There is ample room for extensive planting of pineries on table-lands which are useless for agriculture, owing to lack of water for irrigation. Still, precipitation is copious enough for Indian corn, and the soil ample for juniper, cedar, and even Piñon. A conversion of some of these mesas into pine groves might effect a greater change in the climate and hydrography of the country than reforesting the Rio Grande Valley or raising orchards. Experiment would soon prove whether it is possible or not, and what kinds of conifers, indigenous or foreign, might be successfully used for the purpose.

THE EXPULSION OF THE FRENCH PRINCES.

Paris, June 17, 1886.

The Chamber of Deputies passed on June 11, by a majority of 83, a bill which exiles the Comte de Paris and his son the Duke of Orleans, Prince Napoleon and his son. The other Princes of Orleans, if they remain in France, will be liable, by the terms of the second article of the law, to be proscribed by a mere Presidential decree. They are prevented, by the terms of the fourth article, from serving in the army and navy or from holding any elective office. When the revision of the Constitution took place last year, the Congress already decided that the members of the families which had reigned in France could not be made Presidents of the Republic, Senators, or Deputies. The Orleans princes are now strangers in their own country, and the head of their family, when this iniquitous bill has been passed by the Senate, will leave the country, in which he has lived for fifteen years as a quiet and law-abiding citizen, remote from the agitations of the capital, in the midst of his young family.

We are far now from the days when M. Thiers said that "the Republic will be conservative or it will not exist." The framers of our present Constitution were all more or less inspired by the ideas developed in the 'France Nouvelle' of Prévost-Paradol. They thought that in our modern times there was no essential, no fundamental difference between a conservative republic and a liberal and constitutional monarchy. The Assembly which made our present constitutional laws had a monarchical majority; if it did not proclaim the monarchy, it was merely because the Comte de Chambord had pretensions which could not be accepted by the liberal members of this majority. It was well understood, when the constitutional laws were made, that the Congress which is formed by the union of both Chambers, could alter the form of the government and substitute the name Monarchy for the name Republic, the principle of heredity for the principle of election of the executive power.

These engagements were forgotten afterwards, and the contract was broken, even before the Comte de Chambord died. The Duc d'Aumale was first deprived of his command in the army. He was appointed Inspector-General of the French army, and he was allowed once to inspect three *corps d'armée* in the south of France, but this new function soon became merely nominal, and, *de facto*, the Prince returned to civilian life. The Duc de Chartres, who commanded a regiment in Rouen, was deprived of his command brutally and without even the semblance of a pretext, as well as his cousin, the Duc d'Alençon, who was merely a captain of artillery.

The temper of the Republic and of the republicans gradually changed: "Trahit sua quemque voluptas." They had undisputed power; circumstances had given them an authority which they did not owe to their virtues, to their courage, or to their intelligence. They had nothing to do but to heal the wounds of the country, to organize the army, the finances, to treat with moderation the traditional friends of monarchy; and if they had made France peaceful, contented, and prosperous, they would never have been troubled by any dangerous opposition, except, perhaps, the opposition of the Socialists and the Communists of the great

towns. They decided otherwise. They first persecuted the congregations, forcibly breaking in the doors of the convents. They began, in every town and in every village, what is called the work of laicization: they took down the crosses in the courts of justice, and in the schools they no longer allowed the masters to teach the catechism to the children; they suppressed the salaries of the priests wherever the Concordat allowed them to do so. The Municipal Council of Paris suppressed some books in the schools merely because the name of God was pronounced in them. They ceased to be the nation and became a sect; they began a sort of new crusade; they made war not only on Christianity, even on philosophy and spiritualism.

This coarse imitation of the German *Kulturkampf* created much discontent; but many other mistakes were made. It would be tedious to enumerate them. The principle of the irremovability of the magistracy was violated; hundreds of judges were removed from the bench and replaced by creatures of the Government. The finances of the country were regarded as inexhaustible, and the extravagance of Parliament had no limits. Each deputy considered it a necessity to get costly favors for his electoral district and for his supporters. The electoral committees became a sort of market of public offices. The colonial policy of the republican Government helped to increase the debt. Tonquin and Madagascar have cost already immense sums of money. I remember that when the French budget attained the figure of two milliards, some orator of the Opposition told the Chamber: "Gentlemen, bow to this round number of two milliards: you will never see it again." The amount of the budget of expenses is now above three milliards, and there has annually of late been an enormous deficit. Only two months ago the Government made a new loan of 900 millions of francs. Meanwhile, the crisis which is felt all over the world is felt also in France; the disease of the vine caused by the phylloxera has greatly impoverished the vine-growing departments of France; the losses incurred within a few years, merely from this cause, may be reckoned in milliards of francs.

The general situation of the country required great moderation in financial matters, and great moderation in politics. But the republican party, even when it has become the uncontested master of the country, seems unable to change its old habits. Bossuet said that every man has a voice which all the time bids him "Marche, marche!" till he drops into his grave. Since the Assembly has left Versailles for Paris, it seems intoxicated by the atmosphere of the dangerous city, which has always been revolutionary. The members of the Municipal Council, who no longer take pains to conceal their sympathies for the Commune of 1870, dictate their will to the Extreme Left; the Extreme Left dictates its will to the Moderate Left; the Moderate Left to the timid and unwilling republican majority. A few men, obscure, mediocre, full of evil passions, mad with hatred and envy, succeed in enslaving the nominees of the people and the ministers. The President, who lives isolated in the Élysée, seems totally to ignore the duties of a republican magistrate: he is a sort of King Log. The Constitution gives him rights which he has not used once; he has not once attempted to support a cabinet of his own choice against the caprice of a majority. He would find a willing instrument in the Senate, but he has never understood the character and the use of the Senate, and he has shown himself disposed to sacrifice its rights to the claims of the popular branch. He has chosen ministers who, the very day after the Senate had refused to sanction some great change by law, have effected this same change by a mere decree. The Senate had rejected the seventh article of a law which forbade the non-authorized congregations to teach the youth of the country; in the face of this refusal, the President allowed his Cabinet to dispel these congregations by force. The Senate had refused to expel the Princes from the army by law; they were expelled the next day by ministerial decrees. M. Grévy has rendered the Presidential function impossible for his successors, or seems to have tried to do so. In the Chamber of 1848 he voted against the Presidency of the Republic; his ideal was then a republic with a mere Cabinet. He has kept his old theories in the Presidential chair, and has systematically annulled himself.

I will not dwell long on the arguments which were presented to the Chamber of Deputies by M. de Freycinet, when he spoke in defence of the law of expulsion as regards the Comte de Paris. It would be idle to prove that the Comte de Paris, when his daughter left France to marry the Duke of Braganza, had a right to allow her to take leave of her numerous friends, before leaving a country which she will perhaps not see again for years. M. de Freycinet seems to have considered that the Republic was in danger because the Comte de Paris invited on this occasion the members of the diplomatic body, though he did not invite them *en masse*, and only asked those who were his personal friends. If M. de Freycinet had felt so much uneasiness, why did he, five days after the soirée given by the Comte de Paris, appoint M. Billet, French Minister in Lisbon, envoy extraordinary for the ceremony of the wedding, especially as the courts of Europe did not appoint any envoy extraordinary on this occasion? Why did the French Foreign Office give M. Billet the permission to congratulate the King of Portugal on a marriage "which created a new tie between the two nations"? Something must have happened which produced a sudden and complete change in the sentiments of our Prime Minister; he must have consulted some very powerful and persuasive Egeria. His motives are not very palpable, for we cannot content ourselves with the theory which would condemn princes to be outlaws for the mere reason that they are princes. Napoleon used to say that politics were the modern representative of the ancient *fatum*; he shot the Duc d'Enghien in the name of inexorable destiny. Our French republicans will proscribe the Princes of Orleans in virtue of a so-called necessity. They do not know that the forces of imagination are the greatest forces in the world. If France, in an hour of need and in a great national calamity, finds it necessary to substitute a constitutional monarchy for a lawless republic, it will not much matter where the pretender lives. Louis XVIII. was unknown to the majority of Frenchmen when the Empire fell in 1814. There are necessities for peoples as well as for kings. M. Thiers used to say: "There is one thing which the people cannot make, which is *time*." It took time to make the royal family of France, and, if France will ever again have a king, she cannot choose any other dynasty than the dynasty which has been for centuries identified with its own history, with its troubles and its triumphs, its miseries and its glories.

At this writing the Senate manifests a decided hostility to the law of expulsion as passed by the Chamber of Deputies. Out of nine committeemen selected in the bureaus of the Senate, six are adverse and only three favorable to the law, and these six are all tried republicans. One of them is M. Barthélemy-Saint-Hilaire, who was the most intimate friend of M. Thiers, and who has been Minister of Foreign Affairs under the Republic (he was in 1848 Secretary of the Provisory Government). The moderate republicans feel that the blow is not alone directed against the Comte de Paris and his family, but that a decisive struggle is beginning between the moderate republic and the radical republic, which is only a mask for the Commune.

Correspondence.

MISSING MARYLAND ARCHIVES.

To the Editor of The Nation:

Sir: In the sixth volume of the *Atlantic Monthly* is an article from the pen of the late John P. Kennedy, called "A Legend of Maryland," telling the romantic story of Talbot the homicide. As one of his authorities, he refers to an original Journal of the Provincial Council, covering the year 1684, consulted by him at Annapolis, and describes it very minutely.

Now, from the archives which the State has placed in the hands of the Maryland Historical Society for editing, this volume is missing, nor has the most diligent search been able to discover its whereabouts. Of the years 1669–1674 we have no original Council-books, though we have later copies; and of the years 1674–1694 we have neither originals nor copies. The book consulted by Mr. Kennedy has vanished, leaving a gap in the record at a most important period in the history of the province.

As there have been times when these archives have been very carelessly kept—one of the earliest original record-books known to be in existence was rescued from a junk shop not many years ago—there is a bare possibility that this journal or other missing records may have found their way to the collections of antiquarians. Should this be the case, and should this notice meet the eye of any possessor of even a fragment of the ancient records of Maryland, he will confer a favor by communicating with the Maryland Historical Society.

Wm. Hand Browne,
Editor of the Maryland Archives.

CORNELL'S FELLOWSHIPS FOR WOMEN.

To the Editor of The Nation:

Sir: In the *Nation* of June 3 is an article by "M.," entitled "Collegiate Alumnæ," containing the statement that but two colleges yet offer the privileges of fellowships to women, and expressing the opinion that greater opportunities of that nature would be productive of much good.

Permit me to state briefly the provision made at Cornell University for the education of women. Besides being granted the same general rights and privileges as men, it is provided that twelve of the thirty-six scholarships of $200 each, continuing for four years, shall be open to *women only*; while they are in no way debarred from attaining any or all of the remaining twenty-four, should they be better qualified than their male competitors. Furthermore, eight fellowships are provided, each yielding $400 for one year, or, to quote from the University Register for 1885–86, "in cases of remarkable merit, for two years." I again quote, regarding the fellowships: "They are intended to offer to young men and *young women* [Italics mine] of exceptional ability and decided interests the opportunity for advanced study of a high character."

It will be seen that, while the fellowships are not open to women exclusively, they are granted to the most worthy applicants irrespective of sex. Whatever may be the case elsewhere, it seems evident that Cornell—with less than one-eighth of its 640 students women—has dealt equitably, even liberally, in this matter.

Respectfully, D. D. Jayne.

ORTHODOX POLITICAL ECONOMY.

To the Editor of The Nation:

Sir: Some of the statements of Prof. Perry, in a recent issue of the *Nation*, seem to me questionable; as, for example, that all cases of buying and selling are alike; that in no case of buying and selling is there any compulsion or any obligation except the obligation to fill the contract; that all buyers and sellers are equal, man to man; and that a man has the right to get as much service as he can, and to give in return no more than he can help.

If I go into a shop and buy a pair of shoes, that is one case of buying and selling. If a wealthy Italian proprietor hires a girl for six cents a day, that is another case. The two cases do not seem to me precisely alike. To call the contracting parties in the latter case "equal" seems sheer mockery, since the one of them may have the direst need to make an immediate sale and purchase, and the other no appreciable need at all. The girl sells her labor for six cents a day because she considers Indian meal with prospective *pellagra* preferable to nothing to eat. This does not seem to me to be very far removed from "compulsion." And the proprietor, I think, was under "obligation" not to take from her all he could get, and not to give in return no more than he could help. We are surely under obligation not to take advantage of a fellow-creature's weakness or ignorance when we make a contract with him as much as at any other time. Political economy is hardly far enough advanced yet to propound a brand-new law and gospel.

I strongly suspect Prof. Perry does not practise what he preaches. I was once drilled in his Political Economy by another professor of the "dismal science," who was as meek as Moses, as patient as Job, and too tender-hearted to hurt a fly. And yet he swallowed the most cold-blooded doctrines of orthodox political economy without a grain of salt. His favorite formula, "Here political economy steps in," was uttered with as much fervor as though it were an exact equivalent for "Thus saith the Lord." And had it not been for the questions of the amused students, there would have been little in his lectures to show that the "persons" with whom his science dealt were anything more to him than so many corpses.

J. C. Cozens.

Amsterdam, N. Y., June 21, 1886.

THE DEATH OF GEN. McCOOK.

To the Editor of The Nation:

Sir: In the lately issued vol. iii of the American Supplement to the 'Encyclopædia Britannica,' under the head of McCook, it is stated of Robert Latimer McCook: "He was captured by bushwhackers while lying sick in an ambulance near Selma, Ala., Aug. 6, 1862, and was murdered by them."

A detailed account of the killing of McCook is given in the *Southern Bivouac* of March, 1886, published at Louisville, Ky. Frank B. Gurley, of Forrest's regiment, was commissioned by Gen. Bragg a captain of Confederate cavalry, and it was on one of his scouting expeditions that the General was killed. While pursuing some Federal scouts with his company of cavalry, he very unexpectedly ran into McCook's brigade while it was on the march. The troops were taken by surprise and were almost panic-stricken, and allowed the small cavalry company to ride almost the entire length of the brigade. While dashing through, Gurley and three others met two officers riding in a buggy. They fired, and wounded one of the officers; the other surrendered, and stated that his wounded companion was Gen. McCook, and asked for assistance. "Gurley stopped, and caused the wounded General to be carried into a house near by, where he soon expired." His sword was given to Gurley, who returned it to the General's family after the war. Many false accounts were given of the General's death: that he was murdered after having surrendered; that he was killed while lying sick in an ambulance.

In 1863 Gurley was captured, and confined in the State penitentiary until the close of the war; in the general jail delivery he was released. On being elected to the office of Sheriff of his county, the first election after the war, the old charges were trumped up against him, and he was "arrested, heavily ironed, thrown into jail, tried by a military court, and condemned to death. In all these proceedings there was great haste, and the conviction was entirely based on ex-parte testimony. A reprieve was granted by the President until he himself could investigate the matter; and, after a careful hearing of the evidence, he overruled the sentence of the court and set Gurley at liberty. This was not an act of clemency, but of justice, as the President, who had before him all the facts, was convinced that the prosecution and conviction were not warranted by the facts. The question 'Who killed McCook?' can never be answered. Of the four persons who were nearest him when he fell, one was killed in the cavalry attack at Fort Donelson, Feb. 3, 1863, another fell in battle near Kennesaw Mountains, Jan. 9, 1864."

C. Meriwether.

Johns Hopkins University, Baltimore, Md., June 23, 1886.

Notes.

A new monthly magazine, the *Menorah*, makes its appearance to-day in this city. It is to be the official organ of the Jewish philanthropic order, B'ne B'rith, but it will have nothing to do with religious controversy, and will aim at literary distinction.

T. Y. Crowell & Co. will bring out early in the fall 'The Boys' Book of Famous Rulers,' from Agamemnon to Napoleon I. The author, Mrs. Lydia Hoyt Farmer, publishes also, through D. Lothrop & Co., Boston, during the present month, 'The Story Book of Science,' and in the autumn 'The Prince of the Flaming Star,' a fairy operetta containing original songs, music, and illustrations.

We have received from Karl Wilberg, Athens, the prospectus of a work illustrating the Museums of Athens, edited by C. Rhomaïdes, and accompanied by a descriptive text by A. Cavvadias, and forty-eight heliotype plates in each volume. The number of volumes is left indefinite, but subscriptions for a single volume (at $10) are accepted.

We can praise everything about the "Handy Edition" of Thackeray's Works which J. B. Lippincott Co. are publishing in connection with Smith, Elder & Co.—everything except the size of the type. The press-work of these two volumes of 'Vanity Fair' is very clear, the binding (red-cloth backs) very tasteful, the price remarkably low, and yet the eyes must pay for it. This is true of the ordinary narrative page; but when we have a letter of Becky Sharp's, say, in still finer type, it becomes clear that this edition is meant for the public that knows its Thackeray already, and not for first acquaintance unless through a *loupe*.

Mr. Wm. J. Rolfe has made a 'Young People's Tennyson' (Boston: Ticknor & Co.) with good judgment in his selections. His notes are for maturer minds than he has sought to win for the poet, and so is the style of the otherwise excellent biographical sketch of Tennyson. A visit to Coventry would have led Mr. Rolfe to modify his note on "Godiva," so far as it relates to *one* effigy of "Peeping Tom" in that city. It is almost the municipal trade-mark. The book, by the way, is illustrated.

A reminiscence of the olden time comes to us from Chicago (the Interstate Publishing Co.) in the shape of a thin little volume, 'Old School-Days,' by Amanda B. Harris, in which the district school, with its teachers and scholars, its games, customs, and characteristic anecdotes, is once more drawn upon to revive memories in the old, and to teach the young how much better off they are than were their elders. The book is embellished with twenty-four illustrations, sketchy in manner, and less vivid than the racy descriptions of the text. But was it in the district school that the authoress learned such othography as "all wore '*tiers*,'" or such grammar and syntax as "how my class ever *come* by it," and "I do not know how many summers and winters I was reading in that book, but I should think there were ages"? We will not multiply examples, but content ourselves with hoping that the present boys and girls are at least as well taught in the rudiments as were the children of the old red school-house under review. Notwithstanding lapses of this sort, the picturesque and homely quality in the humble schooling of the country a generation or two ago is happily caught, and simply expressed, in this primer-like first issue of a series of volumes for home education.

Mr. James Dwight's qualifications for giving instruction in the game of lawn-tennis could not be doubted, and his name as author on the title-page of the little volume 'Lawn-Tennis' (Boston: Wright & Ditson) would warrant its purchase by every one interested in the subject. What is surprising is to find the literary quality of this manual so excellent—indeed, a model of clear, direct, unaffected, undogmatic exposition by an expert. One reads on for the mere pleasure of reading. The eighth chapter consists of cases and decisions; the ninth and last, of lists of winners.

Mr. S. Russell Forbes's sensible and straight forward guide-book, called 'Rambles in Naples,' has reached a third edition (T. Nelson & Sons). It abounds in maps, plans, and views.

E. T. Underhill & Co., No. 22 Spruce Street, send us a fantastic 'Picture Booke of ye Patchworke Vyllage of Sconsett by ye Sea,' pen-drawings after photographs of that quaint Nantucket resort, preceded by a copy of an ancient print showing Siasconset in 1791.

The two hundred and fiftieth anniversary of the founding of the city of Providence, just celebrated, prompted a series of articles in the Providence *Journal* from the pen of Mr. Reuben A. Guild, librarian of Brown University. These have been reprinted as a pamphlet with the title, 'Footprints of Roger Williams' (Providence: Tibbitts & Preston). Mr. Rider's sharp criticisms in his *Book Notes* have not been left unnoticed. The people of Rhode Island have not been very diligent in furnishing funds for the proposed monument to Roger Williams, and Mr. Guild contemplates the year 1936 as that of its probable completion if the funds now in hand are unaugmented except by interest.

The 'Annual Register for 1885' (London: Rivingtons) summarizes a checkered and important year. England was disturbed by the fall of Khartum, the Tower and House of Parliament explosion, the menace of war with Russia over the Afghan boundary, the defeat of Gladstone's Ministry on its budget, and the new elections which brought Lord Salisbury to the helm. All these chapters have a peculiar interest at the present moment. France in 1885 saw the setting of two Ministries (Ferry and Brisson) and the penumbra of a third. Germany was absorbed mainly in forcing its colonial expansion. The

everlasting Eastern Question was revived by the union of Bulgaria and the impotent resentment of Servia and Greece. The United States had nothing so picturesque to show as the Old World, but the editor of the 'Register' has not overlooked the momentousness of the change of administrations in March. He quotes President Cleveland's inaugural in full, and abstracts his message in December; and the rest of the section is largely occupied with notices of the death of Grant, McClellan, Hendricks, and Vanderbilt. In the regular month-by-month obituary, Grant again receives great attention. There is the usual chronicle of events, and survey of literature, art, and science.

The competition of British electoral news with domestic is marked in our daily press, and tends to prove the essential unity of Great and Greater Britain. A life-size portrait of Gladstone, accordingly, is as much in order as one of Cleveland, and the Premier's face in front view may now be had of J. H. Bufford's Sons, lithographic publishers, of this city. There is a great choice in original likenesses of Mr. Gladstone, and we have known better than this; but if it falls short, it does not caricature.

Science for June 25 gives a folding geological map of Ohio, to accompany an article on the oil and gas wells of the State. Another interesting paper is that on the improved administration and cultivation of Cyprus under British rule, read by Mr. C. Gordon Hake, before the London Society of Arts.

The collection of geographical appliances, as maps, charts, globes, text-books, etc., used in teaching geography in different countries, recently on exhibition in London, has been taken to Edinburgh, where it will remain during this month. In connection with the exhibition, lectures are to be given by Messrs. Ravenstein, Scott Keltie, and others.

The principal paper in the *Scottish Geographical Magazine* for June is a lively account of travels in Madagascar by the Rev. W. D. Cowan, for ten years a missionary in that country. Civilization seems to have made but little progress in certain important directions. There are no roads, and consequently "nothing moves on wheels in all the length and breadth of Madagascar." The common means of conveyance is a "filanzana, a small leather seat, between two poles 10 feet or 12 feet long." These are borne on men's shoulders at a rate of from 20 to 25 miles a day. Mr. Cowan thinks "the island is perhaps the most varied and delightful in the world," with a "fairly enjoyable" climate, and rich in agricultural and mineral wealth. He prophesies that as soon as the country is at peace, a tide of emigration will set in to occupy the vast tracts admirably adapted for cattle-raising and wool-growing, as well as to search for the gold which is believed to exist in the mountains.

From recent observations made at the mouth of the Congo, it appears that an enormous delta, stretching in a northwesterly direction, is being formed. The very opposite is the case with the Amazons. Not only is there no delta, according to Mr. Wells, but "it can be proved that the sea is encroaching upon and eating away the land faster than the river can deposit its alluvial matter."

In a recent letter relating to British Bechuanaland the theory is put forward that underground rivers exist in that part of Africa, which could be brought to the surface "by means of long drains, or by the use of siphons," and utilized on an extensive scale for agricultural purposes.

The American Library Association will meet in Milwaukee on July 7, 8, 9, and 10. The recreative part of the programme appears to be unusually attractive and inexpensive. Members' friends who desire to avail themselves of the rates and opportunities held out, can do so on payment of two dollars, which makes them associate members of the Association for the year. The Library Bureau, No. 32 Hawley Street, Boston, is the centre of information on this excursion. Mr. Thorvald Solberg's paper on "International Copyright in Congress" possesses more general interest than any other on the programme.

—As to the teaching of English grammar, "J." writes us from Bristol, Conn.:

"This work is done almost entirely in the primary or common schools. It ought to be relegated to the secondary or high schools. English grammar has a place in the curriculum of very few high schools to-day. The knowledge of grammar which the scholars in those schools gain, comes from the study of Latin and Greek, which is, to be sure, useful and proper, but certainly does not tend to a knowledge of, or a facility in the use of, idiomatic English. The construction of a proper text-book will do most to promote the proper methods of teaching. Let the text-book contain: (1.) Examples for the illustration of, and drill in, what few forms of inflection are used in the language. (2.) A multitude of examples drawn from the best authors, illustrating these forms of inflection, the English idioms, and the use of all the parts of speech in their different relations. (3.) Suggestions for the production by the scholar of examples illustrating the same principles. The English language would thus, so to speak, teach itself. A supplementary book, dealing with the subject technically and theoretically, might be supplied for the scholars in high schools."

—"E. W." writes us, from Illinois:

"Having been on your subscription list from No. 1, I have for some weeks been purposing to write you a brief censure of your wrong position, and your failure to see *the underlying ideas* of our labor troubles; which furnish such a contrast to your right position on the Irish question."

But does not "E. W." see that it is not every one who can, like him, be right on *two* such questions? It is a great thing for an ordinary man to get right on one of the leading topics of the day.

—On a theoretical basis of bacteriology, modern surgery, under the lead of Sir Joseph Lister, has reached results that twenty years ago were as unattainable as would then have been the present use of high explosives or of economical electricity. Given certain appliances, and a successful termination for very severe wounds may almost be insured. Dr. Robert T. Morris thinks, and probably correctly, that the average doctor, especially if he has been graduated before the era of antisepsis, does not know all this, and he has written a little book, 'How We Treat Wounds To-day' (Putnams), which will open the eyes and perhaps loosen the tongue of the surgeon who has not just come out of a hospital nor cast off within the last season the swaddling clothes of pupilage. To the emergent medical generation life is evidently rose-colored. There is no question that their patients would all get well if only they might have the patients. They probably know all about it, and it is for their elders that Dr. Morris has kindly written, and written unconsciously of himself as well as of his subject. He is, it would appear, a young man, which is enviable; and an energetic one, which is commendable; and a confident one, which it is very easy and pleasant to observe. He has more regard for his facts, as he believes them and as doubtless they are, than for his style —although he probably approves of his style as well as of his facts. This is of the pincushion sort. He has cut up his literary material into a vast number of minute sentences of from one word to a dozen or two, sharpened for introduction. Each of these pins he sticks by itself into the brain of the reader, so that the little page twenty-five lines deep contains ten or a dozen distinct sentences, and is as staccato in its action as so many drum taps. In his effort to be forcible Dr. Morris makes true his prefatory remark that the book "is modest only in size, and possesses dignity only in its facts." Nevertheless, as his facts are facts that will require to be shot into some people, what is lost in one way is gained in another; and those who would heal, or, more properly, would allow Nature to heal, our bodies, may very well overlook occasional æsthetic infelicities for the value of the coincident information.

—We recur to Heine's 'Harzreise,' briefly mentioned the other day as edited by Prof. C. A. Buchheim for the Clarendon Press Series of German Classics (Macmillan). It must be regarded as an aid in the study of German literature rather than of the German language, for Heine's prose is not at all adapted for beginners. This is abundantly proved by the forty-five closely-printed pages of notes accompanying the eighty pages of text—notes chiefly linguistic, literary, biographical, historical, and geographical, and characterized by Prof. Buchheim's usual accuracy. The paucity of grammatical rules would be a regrettable feature if the series of German classics addressed itself to beginners, which it does not; and yet some of the notes show that it was not the advanced student or the teacher alone whom the editor had in mind. Thus, if so simple a word as "Die Nachbarskinder" called for explanation, why should not the more puzzling "lumpigste Ladenschwengel" (p. 81) have been translated? Of course the difficulties of maintaining a uniform standard of annotation are great; still, we think Prof. Buchheim has unduly, even if unconsciously, yielded to the temptation of giving hints to the translator rather than help to the student. Sometimes his effort to be literal leads to an erroneous or at least weak rendering, as in the case of "das . . . gottverlassene Ansehen" (p. 28), which, it is stated, "may here be rendered by *unhallowed*," though 'God-foresaken' would have been both stronger and perfectly literal. A few remarks show that the veteran editor, who has made his home in England for many years, is not quite *au fait* in the changing customs of his native country. Thus, it is scarcely *now* "the custom with German artisans, after completing their apprenticeship, to travel about, in order to gain varied experience in their craft," nor would a Berlinese admit that German school-books anywhere "*are*, or rather were, generally printed on a kind of blotting paper." Quite comical is Prof. Buchheim's attempt to wrestle with Heine's 'Manufakturwaren-Gesicht' (p. 79). "The oddly-coined word 'Manufacturwaarengesicht' may be rendered by 'manufactured-goods-like face,' or simply by 'manufactured face (!)'"—the truth being that "Manufakturwaren" is our plain "dry-goods," and the mysterious countenance a truly Heinish "dry-goods face."

—The *Revue Bleue*, in its number for June 5, has a posthumous study, by M. Gustave d'Eichthal, on the phrase *L'Être Suprême*, considered in relation to the Declaration of the Rights of Man by the Constituant Assembly of 1789. M. d'Eichthal asserts that the origin of this phrase has never been properly investigated, and that "to the immense majority of our contemporaries, even the most enlightened, the sinister figure of Robespierre, associated with this memorable innovation, has discredited it, cast ridicule on it, dishonored it." The thesis of the whole paper is that it was an innovation, and that it was a memorable one: "The formula certainly was new, and would be sought for in vain in the repertory of the old theology." The writer quotes from a letter addressed to him by the distinguished philologist, M. Adolphe Regnier, to the effect that while the expression *Être Suprême* was employed as early as the latter half of the seventeenth century,

it was as "*cet* Être Suprême," not "*L'*Être Suprême"; and that Voltaire was the first to use it in the *absolute sense*. M. d'Eichthal strangely fails to point out that in the absolute sense, the Supreme Being, this "name," as it may unhesitatingly be styled, was in use by English writers for at least a generation before Voltaire, and that it may well have been imported by him from England. Addison in the *Spectator* (1711–12) uses it over and over again: "The exuberant and overflowing goodness of the Supreme Being." "There is an infinitely greater space and room for different degrees of perfection between the Supreme Being and man than between man and the most despicable insect." "It is folly to seek the approbation of any other being besides the Supreme, because no other being can make a right judgment of us." And so, constantly, elsewhere. Locke habitually speaks simply of "God"; but in his 'Thoughts on Education' (1693) this sentence occurs, where the form we are considering seems to be in a half-way stage between *a* (or *this*) and *the*: "There ought very early to be imprinted on his mind a true notion of God, as of the independent Supreme Being, Author and Maker of all things, from whom we receive all our good, who loves us and gives us all things; and consequent to this instil into him a love and reverence of this Supreme Being." Yet earlier he wrote, in the 'Treatise of Human Understanding' (1690): "If we examine the idea we have of the incomprehensible Supreme Being, we shall find . . . that the complex ideas we have both of God and separate spirits are made up of the simple ideas we receive from reflection; . . . when we would frame an idea the most suitable we can to the Supreme Being, we enlarge every one of these [ideas of existence and duration, etc.] with our idea of infinity; and so, putting them together, make our complex idea of God: . . . that complex idea whereby we represent to ourselves, the best we can, the Supreme Being."

—Berkeley, to come down a little later, in his essay on Tar Water, published in 1744, has this remark: "Nor is the Supreme Being united to the world as the soul of an animal is to its body." And afterwards: "The force that produces, the intellect that orders, the goodness that perfects all things, is the Supreme Being." But another passage does more still in carrying back the phrase to the Neo-Platonists. "'The Supreme Being,' saith Plotinus, 'as he excludes all diversity, is ever alike present.'" Three years before the publication of this, Berkeley's last work, and fifty years before the Constituant Assembly, Hume's Essays appeared. In describing "a superstitious man," Hume says (the passage is in the "Natural History of Religion"): "He considers not that the most genuine method of serving the Divinity is by promoting the happiness of his creatures. He still looks out for some more immediate service of the Supreme Being, in order to allay those terrors with which he is haunted." And two pages afterwards: "Every kind of barbarity is ascribed to the Supreme Being from the terrors with which we are agitated." Swift and Pope—the one in his accusations against the Deity, the other in his vindications of Him—preferred the form "Providence"; but their common friend Lord Bolingbroke, sixteen years Voltaire's senior, said: "The objections urged by atheists and divines against the wisdom and goodness of the Supreme Being . . . destroy their own foundations." "We may wonder," with Mr. Morley, "whether Voltaire ever read Hume's masterly essay"; but it is unquestionable that he picked up a great deal from Bolingbroke. Another (younger) contemporary of Voltaire, Johnson, while giving in his Dictionary as the only definition of the word God, "the Supreme Being," quotes from a work by Grew, published in 1701, "The Supreme Being, whom we call God, is," etc. And in a very impressive and singularly touching essay in the *Rambler*, Johnson enumerates among the circumstances and conditions of death "an immediate and perceptible communication with the Supreme Being." In 'Rasselas,' also, he uses the expression more than once. To an English reader, "the sinister figure of Robespierre" is certainly not that most closely associated with this phrase.

—The nature and scope of the *jus italicun* have long been the subject of controversy among scholars: the generally accepted view being that the soil of the provinces, not being properly the subject of quiritarian ownership, was therefore under the obligation of a land tax to the republic, and that the right in question, by assimilating provincial soil to that of Italy, removed these features of inferiority. It is certain that, whatever else it implied, it did carry with it exemption from the land tax. Dr. Bernhard Heisterbergk published last year a treatise of 190 pages, entitled 'Name und Begriff des Jus Italicum' (Tübingen: Laupp'sche Buchhandlung), in which this vexed question appears to have received a final answer. He shows that there was no such opposition as is assumed between the soil of the provinces and that of Italy, but that Roman territory wherever found was capable of quiritarian ownership. Further, that the *jus italicum* was identical with the right of a *colonia italica*—that it was invariably associated with colonies, and was the regular property of Roman colonies, inasmuch as these colonies were part and parcel of the Roman domain. Certain colonies, however, although consisting of Roman citizens, were of inferior right, and did not possess the exemption in question. The ground of the distinction and the origin of the name he finds in the fact that the earlier Roman colonies, as distinguished from the military colonies of the Empire, were without exception situated in Italy (a single temporary exception being Narbo, which seems to have been converted by Cæsar into a military colony). Under the Empire, therefore, the grant of the *jus italicum* meant the conversion of a town into a *colonia italica*, by which it became assimilated with the old-Roman colonies of Italy; becoming a part of the Roman domain, they acquired by this act the right of quiritarian ownership, and exemption from the land tax. Colonies, on the other hand, founded by the executive act of the Emperor (the military colonies, so called), although consisting of Roman citizens, were not Roman colonies in the broad and unrestricted meaning of the term, and did not enjoy the rights in question.

GRANT'S MEMOIRS.

Personal Memoirs of U. S. Grant. Vol. 2. Charles L. Webster & Co. 8vo, pp. 647.

THE second volume of Grant's memoirs is made up of two easily distinguishable parts: the one written before his prostration by fatal disease, the other dictated in the intervals of agony from the ravages of cancer upon his system. The first is comparatively short, including about one hundred pages only, and ending with the battle of Chattanooga or Missionary Ridge, though a note of the publishers tells us that the description of the battle of the Wilderness was also written before the great change in his physical condition. It is noteworthy that this division of the work is at the point where Grant completed his career in the West, and was transferred to the general command of all the national armies. The two parts, therefore, may be regarded as substantially independent of each other. His retrospect of his earlier campaigns at the West, and of his gradual rise to the first place among the generals developed by the Civil War, was written in comparative health of body and mind, and is a fair index of his methods of thinking and writing. The circumstances under which the later chapters of the memoirs were written disarm criticism, though we may still fairly say that the composition must always remain one of the most wonderful proofs of tenacity of will and domination over physical obstructions which even Gen. Grant has given to the world.

In noticing the first volume (*Nation*, No. 1078) we dwelt upon the progress of his military education by experience in actual war and of the development of his powers. The new volume covers the period of assured and self-confident action. His preëminence was uncontested. Lincoln and Stanton gave him unquestioning support, and put the resources of the whole country at his disposal. The Virginia campaign of 1864–5 is, consequently, his own work, after his own method, uncontrolled and untrammelled. His clear idea of his object was beyond question the right one—it was the defeat of Lee's army, which was "just over there in the woods," and did not need to be sought by any roundabout change of base. There are, however, two ways of dealing with an army when in contact with it. It may be attacked in front wherever found, or the tactics may be generally defensive while the strategy is offensive.

Sherman's Atlanta campaign must always be regarded as a model of the latter method, while Grant's Virginia campaign, till he crossed the James River, is a type of the mode of wearing the enemy out by persistent attacks which came to be only too grimly familiar as the method of "attrition." In both, the initiative was taken and continuously held by the national armies. On both lines the Confederate armies were gradually forced back till they reached centres of railway connection which could not be abandoned without large and permanent loss of territory and the transfer of operations to a new theatre. When this stage of the campaign was reached, the Confederates had no choice but to attack. Hood at Atlanta and Lee at Five Forks were under the same necessity. They must try the chances of assault, or confess that the cause for which they fought could hope for nothing better than a lingering death.

The difference between the Western and the Eastern campaign consists mainly in the subordinate steps taken to reach the similar results. Sherman distinctly adopted the rule of "flanking" his adversary's positions and forcing him to abandon them or assault, while he himself carefully avoided massing his troops to attack field fortifications. His principle was so well understood that he was sharply criticised for his only departure from it, that of Kennesaw Mountain, though his losses there were small compared with the smallest of the casualty returns in the many engagements from the Wilderness to Cold Harbor. "Retreat or attack my entrenched lines" was the dilemma he systematically put to his opponent. He saw clearly that the time must come when even this option would not be left, and when the enemy must attack or surrender. The wild desperation of Hood's attempt to transfer the war out of Georgia into Tennessee, leaving such an army as Sherman's behind him, was the public confession that such a crisis had come. The march to the sea and thence north through the Carolinas was the rapid reaping of the harvest. It reduced the limits of the Confederacy practically to the little space between Richmond and Greensboro in North Carolina. By saving his men, Sherman led sixty thousand war-seasoned veterans through the heart of a hostile country. Had he assaulted Johnston in front at every new position that general took, his army at Atlanta (if

he had still had an army) would have been mostly of new recruits to whom the march to Savannah would have been an impossibility, to say nothing of the tenfold greater task of the winter movement through the Carolina swamps.

In Virginia, Grant also made flanking movements; but when Lee met him by equal extension of his lines, instead of applying counter lines, still pushing further to that flank or quickly shifting to the other, Grant's method was to make a determined effort to overwhelm his enemy at the new point of contact before trying new turning movements. This it was which made the fearful lists of dead and wounded from the Rapidan to the James, and which, after Cold Harbor, made similar assaults a moral impossibility. It means a great deal when Grant confesses (p. 276), "I have always regretted that the last assault at Cold Harbor was ever made." The knowledge of the great cost of life on our side has made our historians too sceptical in regard to the Confederate returns of killed and wounded; for the discrepancy is in great measure accounted for by the fact that they fought behind good earthworks. Whenever the conditions were reversed, as they were in several of Hood's assaults at Atlanta and in the battle of Franklin, the same enormous disproportion is found in our favor.

After the crossing of the James and the investment of Petersburg, it is not far out of the way to say that a new army of recruits was learning the soldier's duty, and a more careful economy of men and means was preparing the way for the final success. The last military lesson Grant learned was to modify his faith in aggressive fighting, and to adopt his great lieutenant's principle of making the enemy do most of the costly work of assaulting intrenched lines.

The sad conditions under which most of this volume was written forbade the reference to records and to the writings of others which even the best memory cannot safely omit. The treatment of the career of Gen. Warren follows the harsh lines laid down in Badeau's book, which was the authoritative expression of Grant's earlier opinions. Gen. Humphreys, in his volume on this campaign, has given evidence which is conclusive in showing that Warren was not obnoxious to the charges brought against him of delay or hesitation in obeying orders at Spottsylvania and Cold Harbor. In one instance, at least, when Warren was blamed for desisting from an attack, Gen. Humphreys shows that he himself, as Meade's chief of staff, delivered the order to do exactly as Warren did. Had Grant's health permitted him to read Humphreys's book, we must assume that he would have done something to correct the injury instead of repeating it.

The case of Gen. W. F. Smith is another in which the stubborn character of Grant's prejudices is shown. Grant had given the strongest personal testimony to Smith's abilities and military conduct at Chattanooga, and had expressed the same confidence in him down to the moment when Smith was allowed a temporary leave of absence before Petersburg. But this officer was never again allowed to exercise a field command. Grant himself does not explain his change of feeling; Smith has asserted that the cause was purely personal; and Badeau has intimated that the offence was a freedom in criticising, possibly in a sarcastic vein. No one could demand of a general in chief command that he should wholly ignore the recommendation of personal devotion in his subordinates, for this leads to zeal in execution, and is a strong factor in securing success; but in writing history twenty years after the event, justice demands that a great reputation and authority shall not be used to destroy or to belittle an officer's military character. He has a right to have his alleged faults so distinctly formulated that he may make an intelligible defence.

In the case of Gen. Butler, the relations between Grant and him after the war seem to have modified the somewhat notorious mutual dislike of which the country heard a good deal during the campaign of Petersburg and Fort Fisher. Grant devotes a couple of pages to explaining away the famous *mot* about Butler's being "bottled up" at Bermuda Hundreds, and the references to Butler's military career are kindly, if not complimentary. Comparing these recent expressions with the language of some of Grant's official documents written at the time, one cannot help seeing that the subsequent political friendship of the two men had a retroactive effect upon Grant's earlier judgments.

Indeed, the influence of his personal attitude towards others upon his opinions of their conduct, is one of the most plainly noticeable of Grant's traits of character. He shows an almost childlike naïveté in apologizing for the mistakes of his friends or in warmly praising their successes, while it is very hard for him to see any merit in those who had lost his good-will. This is shown in omissions as well as in affirmative statements, and one who is familiar enough with the actual course of events to read between the lines, will often have occasion to reflect how difficult Grant found it to do justice to any one whom he disliked.

The portion of the book which shows most plainly that the writing of this second volume became severe task-work is the synopsis of those military events which did not occur under the writer's own eye. He followed Badeau in treating the campaigns of Sherman, Thomas, Banks, Canby, and others as part of his own military history; but here it was impossible that he should do much more than make an abridgment and paraphrase of Badeau. It is painfully evident that he was unequal even to a critical reading of Badeau, for he falls into errors of fact which are plainly the result of inattentive reading. We cannot wonder at this. Let us repeat that the wonder is rather that he was able to write at all, especially when he left the field of his own retentive memory for one in which he was necessarily collating the statements of others. It is absolutely necessary, however, to note this, since to the general reader the great authority of the man will strongly tend to the reception of all his narrative as accurate and indisputable. It cannot be too carefully remembered, as we said in beginning the notice of the first volume, that the chief value of the book must be in the revelation of Grant's own character, feelings, judgments, and modes of thinking. It is both valuable and interesting as making us know *him* better than we knew him before; but, regarded as history, all the circumstances under which it was written precluded the possibility of that critical testing of memory and comparison of voluminous documents without which not even so prominent an actor on the world's stage can safely claim to write the history of his own time.

CURTIUS'S GREEK ETYMOLOGY.

Principles of Greek Etymology. By Georg Curtius. Translated by Augustus S. Wilkins and Edwin B. England. London: John Murray. 1886.

THE two handsome volumes in which Prof. Wilkins and Mr. England have given to the world the second English edition of Curtius's Greek Etymology are calculated to evoke sombre rather than sunny memories in the older generation of scholars, in those who were in the first flush of youth when Curtius rose on the horizon of the philological world, as a bright spirit that had succeeded in yoking together the fresh steed of comparative grammar and the ancient but vigorous and rebellious Pegasus of the classic school. The men who rule the present, with few exceptions, have to learn from books what was thought and said thirty-five years ago; they have not felt the hot breath of the enthusiasm, the icy chill of the criticism, of the past generation. It is one thing to read among Lehrs and Ritschl's ten commandments, "Thou shalt not pick Sanskrit roots," another thing to have the commandment reinforced by the thunders of eloquence and lightnings of wit. It is one thing to smile at the antiquated prejudices of the older school as conveyed in the acrid Latin of works that are often cited and seldom read, another thing to hear a man of genius and culture coolly assert that "really there is nothing in the whole business of comparative philology except what such an old noodle as Franz Bopp could find out." The stout old Grecians of 1850 did not believe it possible for a man to know Greek and to dabble in comparative grammar, and they looked askance at such a man as Curtius, who came forward as a mediator between the hostile camps. Nothing better was to be expected of Krüger, because Krüger, with all his excellences as a scholar, had a sad way of considering himself to have acquired a monopoly of every department he had worked in, and it was only necessary to write a Greek grammar or edit Xenophon's 'Anabasis' in order to call forth his wrath. To the day of his death he considered Curtius "a European humbug," to use his own language; and though few expressed themselves so plainly, there were sneers enough.

But if any man was qualified by openness of mind, by sweetness of temper, by charm of exposition, to act the part of mediator, that man was Curtius, and even those who had been reared in the classic camp welcomed his books with enthusiasm. None but the most obstinate could shut their eyes to the light that seemed to illumine the whole structure of Greek forms and to shed some penetrating rays into the domain of Greek syntax. Unfortunately for Curtius, unfortunately for the classical philologians themselves, the seductiveness of his style, so clear, so limpid, so touched with suasion, won the too easy assent of those who could not control his processes, and, while Curtius was reckoned a conservative in his later days, in the course of his long and successful career he led many a believing classical philologian a dance, the memory of which is rueful beyond expression, so that not a few of his early followers prefer to remain seated rather than to be guided by the new lights which have proved to their own satisfaction that they are true polestars and no misleading jack-o'-lanterns. The man who has been once fooled into believing that the κ of the Greek perfect was born of the hiatus, is too much ashamed of his credulity to accept the analogical formation advocated by Brugmann on the basis of a solitary waif, or the incorporated potential particle-theory broached by Osthoff. He looks stolidly at the form and submits to it as he does to the tariff on German books. And yet we are told on all sides that Curtius was sobriety itself. If so, the brewage is a heady brewage; and while it is an ungracious and a melancholy task to recall the various fancies of Curtius and his school that found lodgment in Greek text-books as certain results of comparative grammar, still it is not without its use to reflect on what may be called, from one point of view, progress, from another point of view, retraction.

There are few departments of scientific research in which the image-maker has been followed so speedily by the image-breaker, image-maker and image-breaker often being one and the same. In Curtius's Greek Grammar we were told that the loss of a short syllable at the end of

a word is compensated by a lengthening of the remaining vowel. It was an explanation that was readily accepted—and it explained nothing. It made the personification called Language a court of claims for the adjustment of losses incurred in the war of the elements. Alas! Curtius found out after a while that only consonants that had property could leave property, and the 'Studien' took back what the Grammar had proclaimed as a certain result. The Grammar, we believe, followed after a space, but meantime the translations of the Grammar went calmly on exploding old-fashioned explanations of certain phenomena, which were after all the only true explanations. So point after point has been taken back that should never have been made—the late origin of the subjunctive, the formation of the middle endings; and those who praise the eminent sobriety of Curtius's judgment forget his fairy stratification of language. Of course much still remains intact, but how long will it so remain? His very editors confess that the world has gone beyond him, and present this new edition not as containing the latest and most trustworthy results of comparative grammar, but as showing the high-water mark of Curtius's intellectual life. It will be readily granted that if any man deserves this honor, Curtius deserves it. He did a great and memorable work, and did it in a spirit which lifted him as a man far above those who forget what he accomplished in their eagerness to set forth their own transcendent merits, who forget that without him they would have been impossible. And yet as a matter of duty to the younger generation, who cannot be supposed to have the same filial piety toward the memory of the departed master, it must be frankly said that it would have been better to postpone the new translation of the Greek Etymology until the editors could have registered the results of recent investigations.

To be sure, all American classical scholars are familiar with German, and what might be counted a mistake here may be fully justified in England. And besides, it must be granted that it would be very hard for a friend and admirer of Curtius to show the proper patience in recording even the best work of those who have rectified his processes. When one remembers his gracious and gentle ways, his thoughtful helpfulness of others, his quickening power, his wide range of vision, his generous receptivity, it seems a sacrilege to criticise him even as gently as has been done here, to say nothing of the ruder assaults to which he has been exposed. The disciples have outrun the master on the master's own lines. As he in his youth criticised Pott, so the *epigoni* criticise him, but not in his spirit. The man who insisted with so much vigor on the observance of phonetic laws, lived to see phonetic law elevated into a merciless machine with no check but analogy—and analogy that is not always in its right mind—so that the domain of comparative grammar, like the Empire of Russia, is a despotism tempered by assassination.

To the classical philologian, eager for light from every source—the old-fashioned indifference being now impossible—matters look gloomy in the extreme. The neo-grammarians show no toleration for any work done outside of their own school, and are doing their best to alienate classical scholars by their arrogance and to amuse them by their ignorance. No man can master a language by grammar and dictionary alone. The literature, the life, must give the setting for the facts, and classical scholars will not bow to the authority of those who mix up the characters of so familiar a play as the "Clouds," and cite a notorious barbarism as a normal Greek usage. And, not satisfied with this lordly neglect of those who are trying in their way to penetrate the secrets of classic expression, recent grammarians are flooding English—nay, European—speech with a Babylonish jargon. Instead of drawing on Greek for the expression of phonetic processes, the technical terms are introduced in the original package. We have got fairly used to "umlaut" and "ablaut," uncouth as they appear in English; but what shall we say of "dvandva," and "sandhi," and "svarabakti"? One really yearns for the return of the older generations of nabobs who gracefully moulded the language of India to suit the mouth of England, and gave us "punch," and "brandy pawnee," and "bungalow." Much might be done with "dvandva," and "sandhi," and "svarabakti," for English sounds lie provokingly near; but we forbear, and end as we began, with a sigh for the happy past of implicit faith in the certain results of comparative grammar, for the golden youth of the mediator between classical philology and linguistic research.

RECENT NOVELS.

The Story of Don Miff. As told by his friend John Bouche Whacker. A Symphony of Life. Edited by Virginius Dabney. Philadelphia: J. B. Lippincott Company.

A Desperate Chance. By J. D. Jerrold Kelley, U. S. N. Charles Scribner's Sons.

Haschisch: A Novel. By Thorold King. Chicago: A. C. McClurg & Co.

Next Door. By Clara Louise Burnham. Boston: Ticknor & Co.

Natasqua. By Mrs. Rebecca Harding Davis. Cassell's Rainbow Series.

Demos: A Story of English Socialism. Harper's Franklin Square Library.

Major Frank: A Novel. By A. L. G. Bosboom-Toussaint. Translated from the Dutch by James Akeroyd. Harper & Brothers.

A Tale of a Lonely Parish. By F. Marion Crawford. Macmillan & Co.

Atalanta in the South. By Maud Howe. Boston: Roberts Bros.

The Sphinx's Children, and Other People's. By Rose Terry Cooke. Boston: Ticknor & Co.

Hurrish: A Study. By the Hon. Emily Lawless. Harper's Handy Series.

Love's Martyr. By Lawrence Alma Tadema. D. Appleton & Co.

Colonel Cheswick's Campaign. By Flora L. Shaw. Boston: Roberts Bros.

MR. DABNEY, in his warm desire to avoid the conventional methods of modern fiction-writing, tells the story of 'Don Miff' in a way peculiarly his own. He allows himself the luxury of a preface as well as an announcement to his friends—the book having been published by subscription. Yet in spite of the many odd devices which give the story an air of strangeness, Mr. Dabney's return to eighteenth-century models is too incomplete to produce anything more than a queer mixture of conceits with some occasional good work. He is hampered from the start as a story-teller by his desire rather to portray life as it was in the South in the old days than to tell his story merely, while his perpetual asides are wearisome. If a writer persists in taking the dear reader into his confidence concerning the most unimportant matters, he must not be surprised if the dear reader finds him quite as much of a bore as the people in real life who are always telling one of their affairs. The scene of the story is in Virginia, the time just before and during the war; and the author frankly admits that whenever the narrative compels him to show his sympathies on one side or the other, they will be found to be with those people among whom he was born, by whose side he fought, and with whom he suffered. This is all natural enough, nor can any one blame Mr. Dabney for his attitude. Nor, on the other hand, can he consistently object if the exhibition of his sympathies thus made should affect the reception of his book among those of the North who are ill-bred enough to still speak of "the Rebellion" instead of "the civil war."

The improbable motives and shadowy, uncertain characterization of Mr. Kelley's novel, 'A Desperate Chance,' are drawbacks too serious to be offset by exciting episodes. The book promises in the beginning to be interesting; but the absurdity of Marion Darlington's hatred for Marsden, the weak way in which it is accounted for by her partial insanity, and the general collapse and cheapness of the mystery, deprive it even of this quality.

Like the farmer who found a linchpin and built a wagon to fit it, 'Haschisch' seems to have been written for the sake of showing how a criminal might betray himself while under the influence of the peculiar drug which furnishes Mr. King with both the idea and the name of his novel. The part which introduces the haschisch episode is cleverly enough done; but the rest is so evidently nothing more than a preparation—setting the stage in order, as it were—that the forced situations strike one as more than ordinarily unnatural and sensational.

The excellences of 'Next Door' are not of the highest sort, but they are as refreshing—in the general lack of excellences of any sort—as a morning rain in a dry season. The tone is airy and light, but never flippant, while the story keeps unflagging pace with the style. All through one is rather entertained than interested; and it is very good entertainment, too, following the adventures of Aunt Ann and her cat, and the development of her nieces' love affairs. It would be hard to find two more pleasant, lovable girls than Kate and Margery, in the first place, or more worthy, suitable husbands for them than John Exton and Ray Ingalls, in the second. Then it is pleasant to accompany such characters through scenes so naturally and admirably done as the girls' boarding-house life and their vacation in the country. It is a great satisfaction to read on in confidence to the end, with a tolerably safe assurance that you will find no straining for effect, no posing, nor, in fact, anything but straightforward, genuine work. It is true that one is reminded of the psychical phenomenon of having had a similar experience at some other time and place, when Mrs. Exton, the aristocratic and invalid mother, is on the stage, as well as by the railroad accident. But, on the whole, the book is noticeable, equally with its other good qualities, for its freshness.

The absurdities of 'Natasqua' practically force one to consider the whole story as a mere piece of extravagance, in spite of its evident seriousness. A choice of oddities for character does not give us types, nor does an odd treatment make originality. The scenes read like the record of a laconic impressionist, and are without natural sequence or dramatic interest.

The one merit of 'Natasqua' is its brevity. But, in the opinion of the anonymous author of 'Demos,' there apparently is no merit in being brief. The story of English socialism, as 'Demos' purports to be, is extremely tedious, and is only superficially concerned with socialism. It is mechanically put together, without life or interest; and is so far from being a genuine *Tendenz* novel that it seems to have fulfilled its end in getting printed.

Mrs. Bosboom-Toussaint, who died a few months ago, was generally acknowledged to be the leading Dutch female novelist. When she first appeared before the public, more than forty years ago, the historical novel was popu-

lar, and it was in this field that she gathered her brightest laurels. She did not possess the easy, conversational style of her principal rival in public favor, Van Lennep, but she far surpassed him in accurate historical knowledge. Her later efforts have been in the direction of the modern *roman de mœurs*, and of these 'Major Frank,' which appeared about ten years ago, is perhaps the best. The character of the heroine, a very independent and eccentric young lady, who owes her nickname of "Major Frank" to the masculine manners she has adopted, is well drawn, and although the type is not novel, there is much originality in the mode in which the idea is carried out. But it is not a great novel. Its form is against it. The story is told in letters written by the man who woos and eventually wins this fair young Amazon. If the hero were more sympathetic, the use of this old-fashioned form would perhaps not be so objectionable; but, unfortunately, of all wooden, uninteresting young prigs described in novels, this man is one of the worst. The plot is very slight, and the minor characters are either commonplace or repulsive.

Those who most admired the pyrotechnics of 'Mr. Isaacs' (and, indeed, astonishment was no small element in the vogue of that book) will find least entertainment in the present story. Judges of good work, however, will see in its more sober tone and its less ambitious aim the evidence of a care and painstaking which Mr. Crawford has not shown before. The quiet *mise-en-scène* is rather in the Trollope manner, and, by the time the main action begins, we are quite at home in the lonely parish, where the vicar and his wife are the only gentry, and where a beautiful woman can be glad to come to hide her sorrow and make both ends meet on three hundred a year. The dispute over the succession to the one great estate of the parish is opportunely settled at this moment; and the new squire, "a gentleman, a scholar, and a man of the world," appears upon the scene to complete the group of *dramatis personæ* for act the first. It ends, obviously, with a declaration from the squire to the beautiful lady, who confesses to him that she is no widow, but that her husband is a prisoner for forgery. Act second, the entrance of the husband and what became of him. Act third, "and so they were happy ever after."

The rapid movement which Mr. Crawford never fails to impart to his stories carries one through a first reading without any question. If this is all that is wanted of a novel, then this is a success. If a novel should be a fine and unsuspected combination of many parts and details to form a harmonious whole, Mr. Crawford has not yet by any means attained full mastery of his work. He selects a few striking situations, connects them with a train of more or less coherent incident, and trusts to a surface impression of the whole for his effect. What incongruities or what absurdities are committed on the way is no affair of his. Any chapter furnishes illustration. The Squire is a man "who, if he were remarkable for anything, it was for his apparent determination not to be remarkable at all," yet he walks in upon his first call at the heroine's cottage, without so much as saying by your leave, accompanied by a Russian bloodhound. (We cut the description.) "Quickness and sudden ferocity of the tiger, . . . his great red fiery eyes that reflected red lights, . . . the ferociously agreeable canine smile." The reader at once suspects him of being there for a purpose, and watches him stalk through the book to find an anti-climax at last, for the most commonplace watch-dog could have done all he did. The convict is overdrawn, with the exaggeration of some of Mr. Crawford's earlier characters. Worse men have escaped from prison, but here it is a question of relative values: he is much too big and too mean a rascal if we are to keep our admiration for his beautiful wife, for he had once been "the chief joy and delight of her life." Such a villain does not develop after thirty-five. Wrong he might have done, debased he might be, but his character should have been made consistent with the fact of a good woman's love for him. The conclusion presents the difficulty so often found in novels, to which the writers are so strangely blind. The same hero or heroine cannot with dignity figure in two love-stories in one book, unless one of them be a long-past memory or a distant hope. To watch with Mary Goddard through a scene as terrible as ever was possible where a man died in his bed, and then in a half minute to be told that she is the happiest of women, jars painfully. Such defects as these make it something curious to see Mr. Crawford placed for grave discussion side by side with such careful workmen as Mr. James and Mr. Howells; but, granted the defects even, it is a pleasure to mark the great advance on all he has done before. Mr. Juxon is a figure that deserves to stand beside any one of the worthy English squires with whom fiction has made us friends.

Miss Howe's book shows a gain in steadiness and sense of fitness over her earlier stories, though it hardly yet comes up to the level of serious work. This is of the more consequence since no one now can write of New Orleans without coming into sharp comparison with Cable. 'Atalanta in the South' is simply a collection of hastily outlined sketches, mainly of places, one or two only being of characteristic manners or customs, without any inherent dependence or even any skilful matching by the author. They are strung upon a slender thread of highly sensational story, of the sort which that latitude has furnished to the dime novel since dime novels were. Miss Howe has dated it fifty years too late. There is nothing of veritable New Orleans society in the book, for the two young men who supply the necessary rivalry are not primarily and naturally of it. The heroine, we are reiteratedly told, is "Margaret Ruysdael, sculptor from the North." Her father, and a lady who can only be described as from all over the world, with her husband, make up the little group of intimates. Three-quarters of the people who take up the book will finish it and call it entertaining, but not one of them will fail to see in it a carelessness that seems almost like scorn of good workmanship. The fullest complacency towards irregular idioms could not pass many of the English sentences, while the lapses from good taste are startlingly frequent. "Old man" and "old woman," and even "gaffer," have an accepted place in the irony of affection, but when it comes to "a grinning gargoyle," "a regular ringtailed roarer of a humbug," from a lady at the head of her table to her husband, in the midst of a dinner party, it makes the reader feel *de trop*, whatever the company may think.

Rose Terry Cooke's work stands out in strong contrast to Miss Howe's, for every page shows thoughtful painstaking. 'The Sphinx's Children' is but the name of a rather fantastic sketch which is prefixed to a collection of the stories already so well known in the *Atlantic* and *Harper's*. One of them, "The Deacon's Week," with the sweet sobriety of its working-day piety, has long ago made its way round the world. The stories are unfortunately no exception to the rule that short stories gathered together do not help each other —not in this case as to quality, for all contribute to the impression of careful observation with much loving sympathy, and of a constant aim after the simplest and most effective expression. So many of the stories are in a minor key that the sadness becomes a burden. In some shape or other, the ever-recurring subject is the forbidding aspect of New England life, one or two generations ago, and the revolt of the younger or more ardent spirits against it. The total effect is to make it duller, colder, harder, than it really was. One drive along the old Connecticut turnpikes will show proof enough of the existence of a large and generous life, side by side with such homes as Mrs. Cooke has preferred for her chief study. Her picture to be complete should more fully include both. At least, the apple blossoms come once a year in New England.

The odd title 'Hurrish' is but west-coast Irish for Horatio. It is the name of the hero of a pitiful tale of the wantonness of crime. It is only of private grievance and private vengeance, though Nationals and all the rest are, so to say, just within ear shot. It is well called "a study" only, and would seem to be a picture of some neighborhood, in County Clare, well known to the writer, who chooses to throw it into the form of a very slightly elaborated story. The book should not be passed by, for it contains most graphic descriptions of a wonderful and almost unknown country.

'Love's Martyr' shows unmistakable evidence of a direct eye and a strong hand, but both are wasted or misused upon a painful story which has not one gleam of light to relieve it. There is something in the tense, overstrained fantasies of the book that reminds one of the younger Brontës, though the present writer has vastly the advantage in knowledge of the world and in trained taste.

A novel by the author of 'Hector' has been a pleasant anticipation, which is now pleasantly realized. 'Colonel Cheswick's Campaign' is not a great book, but it is a charming story. The mutual love of father and daughter forms the main theme, which is worked out through all the manifold incidents of the attractive life of an English country-house. A wider horizon bends round the whole, encircling with the English fens the Egyptian sands. It would have been too much to expect, on the larger scale, the simple perfection of 'Hector.' Neither introspection nor analysis is part of Miss Shaw's method, and to fill her canvas she employs a number of minor figures which crowd each other, and which we could gladly have spared. Not of these, however, is the beautiful old pair, in their death not divided. The main figures stand out very clearly. It is no small power of characterization which, almost without a comment, makes us understand the complex nature of the Colonel and his wife. The latter, trivial, foolish, selfish, we can still see is lovable to the fond eyes of her loyal daughter. In the Colonel is combined that reckless, happy-go-lucky spirit which justifies self-indulgence that is even cruel to wife and children; and yet, in his place at the head of his regiment, he is the duteous, brave, ardent soldier. It was an early comment that the daughter, Ailsa, is only Zélie (from 'Hector') or Phyllis Browne (from the story of that name) grown up. No one will admire or love her the less for that: it is very high praise.

Mary Wollstonecraft Shelley. By Helen Moore. Philadelphia: J. B. Lippincott & Co. 1886.

THE life of Shelley's wife has hitherto been accessible only in a dozen different volumes, and the gathering of the fragments which is effected in the present book is a service of love. The lack of any good life of the poet is one reason for this biography; in fact, Mrs. Shelley's life, so far as literature is concerned, was included in his own, since she did not distinguish herself apart from him. The author of these pages consequently was compelled to give over two-thirds of her work to the years before Shelley's death, and to piece out the remainder with résumés and extracts from Mrs. Shelley's writings. In the

course of the story there are two prime points—one, the unconventional union of the two; the other, their alleged unhappiness during the last year or so of Shelley's life. The first of these is very sensibly passed over as a matter which does not admit of argument. The second is treated somewhat more at length, and Mrs. Shelley is defended from Trelawney's charges of having troubled Shelley by her exacting nature and her regard for the proprieties. It is not a subject in which the world is much interested; but it must, we think, be granted that Shelley's poems and letters, the remorseful utterances of Mrs. Shelley in after years, and the marked anxiety she displayed in mature life never to offend against social forms, go far to sustain Trelawney's view. She had felt for some years the shafts of scandal, and knew the social penalties involved in departing from conventionalities of belief and practice, and a half-dozen little incidents may be cited in the last six months of Shelley's life which indicate a disposition on her part to be socially respectable and to bring him to order. Moreover, it is patent to every reader that Shelley was unhappy in his home life, though he tried to make the best of it. The cloud would probably have passed away with time. It is both pleasant and sad to read once more the oft-told story of Shelley's wedded life; and though this biography practically ends when its heroine was but twenty-four years old, the slight sketch of her long widowhood, her loyalty to her father in his poverty, and her care for her son, her industry, her little circle of friends, and her worship of Shelley's memory, is a memorial of an honorable literary career and of a refined and attractive womanly character.

The Chautauqua Movement. By John H. Vincent. With an Introduction by President Lewis Miller. Boston: Chautauqua Press. 1886.

THE Chautauqua movement is so various in its activity that this account of its history and view of its present state, both educationally and geographically, is a contribution to pedagogic literature of a notable kind. The Chautauqua "idea" has taken many forms, and it is difficult to make out what it is until one is told. Now it is a Sunday-school Assembly; now a summer lecture-bureau; now a missionary cause in foreign lands; now a reading circle, a theological academy, a university; now a park, pleasure-grounds, and cottages, or Houghton Farm, or local encampments sprung from a parent-lodge; now there are banners and text-books, the Hall in the Grove, the Order of the White Seal, the League of the Round Table: and to the uninitiated the whole is a perplexing medley. Dr. Vincent reduces all these manifestations of the "idea" into orderliness and coherence, and it is plain to see that—whatever one may think of an apparatus which seems to tempt the nickname of educational Salvationists—a very considerable work is being done in guiding the reading of many thousands of people. The success of the Chautauqua experiment—its "run," if one may say so—shows the existence of a want which must have been wide-spread and long-felt: the want, namely, of intellectual guidance for adults in the effort to improve their minds through books; and the "Chautauquans" have taken the lead in this and have developed an organization very influential upon the reading people of the country. In a sense the new "Reading Circle" succeeds the old "Lyceum." In the large number of its departments of instruction, under the necessary disadvantages of a correspondence-system of teaching, there is perhaps a sign rather of unrestrained and undiscriminating good-will than of wisdom; but as "Chautauqua" addresses itself rather to arouse, instruct, and cultivate the mind than to make scholars out of the people, it may be as well to sow all kinds of seeds, and leave their future to heaven.

However it be looked at, the movement is a philanthropic and humane influence in the country; and its genesis and development, as told here, are things to reflect upon, because of the light thrown on the social state in which an educational movement so conducted has in fact enlisted eminent men upon its side, and grown in favor with the common people. There is a note of glorification in these pages, however, which is incomprehensible in its vanity; a kind of camp-meeting *Io Triomphe*, which soars with hallelujahs in the "Hall in the Grove," and rolls to the skies the semi-centennial of the institution "with music in the air, among the trees, and on the lake, from bells, bars of steel, from chords of Æolian harps, moved into melody by the touch of electric fire," etc., rising to higher notes than we care to follow. As Dr. Vincent says, "There will be 'high days' in Chautauqua!" And one cannot refrain from asking whether it is religious "good form" to speak of the Sermon on the Mount as the "great inaugural" These things, however, belong with the paraphernalia of Orders, Leagues, and Seals, and the army marching with banners; they are accidents of the movement, which, on the side of its real power, its influence as an organ for democratic education beyond the range of the schools, is heartily to be welcomed and seconded.

The Life of a Prig. By One. From the second London edition. Henry Holt & Co. 1886.

THIS is the sort of a thing which was without a name till the word *skit* was invented. It is a very clever bit of writing, and it is calculated to give pleasure to a great many people because the prig whose life is written by himself displays his priggishness in a special manner. Its ridicule is directed mainly against two sorts of "feeble folk," the high churchmen and the agnostics, in about equal parts. All intermediate classes are allowed to go unpunished. But high churchmen and agnostics are not necessarily devoid of humor, and they are not necessarily prigs, so that for many of them also there is here a fountain of refreshing laughter. The author says in his prologue, "If this little work should have the effect of making even one prig more priggish, the writer will not have labored in vain." It ought to have the effect of making a good many prigs less priggish by holding up to them a mirror in which their intellectual and moral habit is exhibited without much exaggeration.

The extracts from the Prig's diary on pp. 11-13 are so good that we would fain have more of them. We quote two or three sentences: "Resolution at breakfast not to talk much in society or to make myself too agreeable. . . . Will endeavor as much as possible to check the flippancy of those around me." Next to being of a clerical family, a student, and an Oxford man, his great pride was to be a high churchman, but it galled him to find that some were higher than himself. Purchasing a few ritualistic books, in a little while he knew as much about "compline" and other "functions" as any of the most advanced clique in Oxford. He set up a private oratory, and, hiring a ciborium by the week, had various functions, among them the discipline of scourging, in which his friends assisted. After they had gone, with the aid of two looking-glasses he examined his bruises, and found them highly satisfactory. Concluding that he had a vocation for monastic life, he joined a venerable order, three months old, and had many interesting experiences, including a miraculous cure from a dangerous sickness which his rigors had induced. A tour upon the Continent was the next stage of his advance. Here he had much surreptitious enjoyment of Roman Catholic offices, and, finding his ability little appreciated by High Anglicans, he resolved to join the Romanists. But his conversion not being taken at his valuation, and the priest to whom he went advising him to buy a Penny Catechism and read up, he was so disgusted that he resolved to "turn his beak toward the East" and seek for consolation in the bosom of the Aryan world. He soon mastered all the great religions of the East. He remained a Brahman a week, and then passed on to Buddhism. It is evidently the Sinnett and Blavatsky set that is intended by the scholar who says to him, on page 85, "'My great fear is lest a number of literary fools should bring the venerable but mistaken old creeds of the East into disrepute and ridicule, by aping them or serving them up for modern use in a sort of hotch-pot.'" On pages 81, 82, the Spencer-Harrison controversy is not so vaguely hinted at but that it can be recognized. The Prig has now become an agnostic and a private tutor. His pupil also is an agnostic, with the fondness for the 'Imitatio Christi' which is peculiar to his class. The worship of the Ego is his final consummation. A lady wishing to adopt the cult, he assures her that of her Ego he knows nothing, but she is at liberty to worship his, and she consents.

No summary can give an adequate idea of this naughty satire, for its excellence is not in the circumstances of the Prig's career, but in his turns of expression, in his serene self-confidence and his ineffable conceit, that appear in every line.

Dictionnaire universel illustré biographique et bibliographique de la France contemporaine. Par une société de gens de lettres et de savants sous la direction de Jules Lermina. Paris: L. Boulanger; Boston: Schoenhof.

THE concluding part of this work, which forms a large and compact volume of 1,397 double-columned pages, has just been published. It claims to be an alphabetical record of all that constitutes the "intellectual and social life of France." It is a biographical dictionary of contemporary men and institutions in which literature has the lion's share; nor is it the best literature which occupies the most space or is the most carefully done. A marked feature of the work is the summaries (generally very good) which are given of comparatively recent novels and plays. In certain cases M. Lermina goes back as far as 1830 or even earlier. Thus "Hernani" (1830) occupies five columns; Vacquerie's "Tragaldabas" (1848) has half this amount, for the author never misses an opportunity to make the most of Victor Hugo and his school. Even "Bug-Jargal," the monstrous production of Hugo at sixteen, is fully analyzed, and three pages are devoted to 'Les Burgraves.' In general M. Lermina's book is full of interesting details, always given in the most friendly spirit whenever he has to deal with men or things connected with the most advanced political movement in France. The Commune finds favor with him, although he avoids writing an article upon it, simply referring to his own 'Histoire de cent ans,' and giving a long bibliographical list of two pages which sufficiently marks his tendencies. His evident desire to make the dictionary a good republican manual induces him to admit some articles very much out of place by the side of contemporary topics. Thus we find *Cahiers de* 1789 after an analysis of the 'Cahier Bleu de Mlle. Cibot' of Gustave Droz; but we do not find *Concordat.* We find *Catéchisme socialiste*, by M. Jules Guesde, but not *Catholiques libéraux.*

The tenderness with which the editor handles

those who have defended radical, socialistic, and anarchical doctrines is exemplary. Jules Vallès, Félix Pyat, Henri Rochefort, and all the upholders of the Commune become very mild personages. But he goes out of his way to say of the Orleans princes: "Until now *ces messieurs* have kept quiet. *Ils font bien.*" As for Émile Ollivier, Jules Simon, Maxime Du Camp, and others, the writer seems incapable of expressing with sufficient bitterness all that he feels regarding them. The relative length and still more the tone of the biographies show plainly the writer's political proclivities. The D'Haussonvilles, Waddington, Leroy-Beaulieu, Taine, Cherbuliez have very meagre notices; but the lives of Rochefort, of Claretie, of Ranc are told with every possible amplification, and frequently quotations from those with whom M. Lermina is in sympathy are added. To the biography of Gambetta alone twenty pages are devoted, reproducing, with a few omissions, the life written by M. Joseph Reinach. Some names are entirely omitted, apparently solely because the political opinions of the bearers are not orthodox according to the author's standard. The notices of the writers on philosophical subjects are also extremely insufficient, and many of the names which ought to appear in any dictionary of contemporaries, are omitted altogether, as are those even of MM. Th. Ribot, Alfred Fouillée, Léon Dumont, Émile Beaussire.

From the long list given under the word *Revues* both the *Correspondant* and the *Polybiblion*, excellent publications of very general interest and strong Catholic sympathies, are omitted, and also the *Revue Contemporaine*, which represents a movement in French literature entirely ignored by M. Lermina. The too frequent omission of dates is annoying to one who seeks for exact information; but such omissions are perhaps inevitable in the first edition of so large a volume, as well as occasional discrepancies which betray hasty execution. Thus in one place the Erckmann-Chatrian stories are very harshly judged and pronounced unpatriotic (p. 171); in another (p. 774) they are more justly spoken of as books "où respire l'amour de la patrie." Under the notice of Taine's 'Philosophes français au XIXe siècle' we read: "À l'article *Révolution*, nous nous verrons obligés de combattre les tristes doctrines de M. Taine," but under the word *Révolution* Taine is not mentioned. In the list of Zola's Rougon-Macquart books on page 1256, 'Pot-Bouille' and 'Au Bonheur des dames' are omitted, though they are repeatedly mentioned elsewhere. The whole subject of this "histoire naturelle et sociale d'une famille sous le second Empire" is very fully treated under *Rougon-Macquart* in six closely printed pages, composed in great part of a certain very curious document which M. Zola placed in the hands of a publisher as long ago as 1868, three years before the publication of the first work of the series, and which M. Lermina has not hesitated to reproduce, with the object of showing the author's persistence in carrying out, in all essential particulars, a plan conceived nearly twenty years ago.

On the whole, in spite of its many deficiencies, M. Lermina's dictionary will be found very useful. It gives information that cannot be found indexed or classified anywhere else. Vapereau's 'Dictionnaire des Contemporains' is good only for the biographies of the most celebrated men; Larousse's 'Grand Dictionnaire universel,' even with the Supplement, does not give information beyond 1877; while the 'Dictionnaire de la France contemporaine' aims to be complete up to the end of 1885. The synopses of so many books, novels, plays, poems, are destined to be often used without acknowledgment. They certainly will not take the place of a reading of the originals, but how many a hurried writer, not only outside of France, but in Paris itself, will they help out of difficulty. The book is made to help the hurried man. There is even an index at the end of the names of authors, of whom there is sometimes no separate notice, with an indication of such of their works as are analyzed, to aid the memory of those who may have forgotten the exact title of the book about which they may wish to know something.

Scotland in Pagan Times. The Bronze and Stone Ages. By Joseph Anderson, LL.D., Keeper of the National Museum of the Antiquaries of Scotland. Edinburgh: David Douglas. 1886.

WITH this fourth volume of the series, Dr. Anderson completes his course as Rhind Lecturer in connection with the Society of Antiquaries of Scotland for 1879-82. The previous volumes have been noticed in the *Nation* as they appeared. These lectures were intended to embrace a general review of the whole existing materials for the archæology of Scotland, which the ravages of time and the vandalism of farmers are causing rapidly to disappear.

Inverting the usual order, Dr. Anderson ascends the stream. His starting point is where history proper ends and archæology begins. Regarding the historical method of dealing with "prehistoric" materials as wholly inapplicable to them, he substitutes what he calls a purely scientific method:

"Instead of commencing with the story of primeval man, and leading the narration downwards (as if drawing it from record), it was necessary to select a starting-place in the region of history bordering on the prehistoric, from which, by tracing upwards, through the unrecorded ages, the interlinked succession of types and systems, he might penetrate as far towards the primitive conditions of human life in Scotland as the materials might serve to carry the investigation."

Beginning, therefore, with the twelfth century, beyond which all the common materials of history are left behind, Dr. Anderson's first two volumes dealt with "Scotland in Early Christian Times." In them were described the structural remains and relics of the early Christian times in Scotland—the edifices of the early Celtic Church, the bee-hive cells, and other ecclesiastical remains; and also the other relics of "that school of early art that arose and flourished among the Celtic Scots when art in Europe was well-nigh dead—a series of monumental sculptures of a class which exists in no other country in the world, and exhibiting a system of mysterious symbolism which is found in no land but our own."

Passing to "Scotland in Pagan Times," and adopting the popular classification of the three stages of progress towards the existing culture and civilization marked by the use of Stone, Bronze, and Iron, in the third volume the lecturer dealt with the relics of the Iron Age as shown in the Brochs, Crannogs, Yird Houses, and other remains, some of them so specially Scottish that no single example of them is known elsewhere. The present volume takes an exhaustive survey of the field belonging to the Bronze and Stone ages. Under the headings of "Bronze Age Burials," "Circles, and Settings of Standing Stones," and "Weapons, Implements, &c., of the Bronze Age," Dr. Anderson gives a minute account of the typical phenomena of Bronze Age Burials and of the typical characteristics of the Bronze Age culture. The Circles and Settings of Standing Stones, so numerous in some parts of the country, and which have given rise to so many theories as to their origin and purpose, he does not regard as the remains of temples of the Druids. "In point of fact, there is nothing which is of the nature of evidence by which the stone circles of Scotland can be assigned to any race or historic order of men. Taking them at their own testimony, the only evidence they yield amounts to this, that they are the funeral marks of our Pagan predecessors of the Age of Bronze." His general conclusion as to the characteristics of this peculiar phase of culture and civilization as manifested in Scotland is as follows:

"Whether they be weapons or tools, they have this characteristic in common, that they are always well made, substantial, and purpose-like. They possess the high merit of being well designed, graceful in outline, and finely proportioned, exhibiting, even in the commonest articles, a play of fancy in the subtle variations of their distinctive forms that is specially remarkable. As the forms of the manufactured articles were given to them in the moulds in which they were cast, it is evident that the brain that designed and the hand which modelled these forms must have been specially conversant with the technicalities of complicated processes, and with the experiences of dexterous and skilful workmanship implied in such manufactures. The hammered work of the period was equally skilful. The large globular caldrons, formed of plates of bronze beaten almost as thin as sheets of paper, riveted together, and ornamented with studs, are really beautiful works of industrial art; and I venture to say that nothing finer than the workmanship of these bronze shields has ever been produced by the hammer. If life with them was a struggle for existence, we look in vain for its memorials: but there is no wide district of country in which the memorials of their dead are not prominent, picturesque, and familiar features. In this, no less than in the varied phenomena of their burial customs, the preparation of the funeral pile, the fabrication of the finely ornamented urns, and the costly dedication of articles of use or adornment, freely renounced by the survivors, and set apart from the inheritance of the living as grave-goods for the dead, we realize the intensity of their devotion to filial memories and family ties, to hereditary honor and ancestral tradition" (pp. 226–7).

In the remaining chapters, "The Age of Stone" is treated in a similar method. The "structural" constructions of the remarkable group of Chambered Cairns of Caithness, Argyll, Orkney, etc., are carefully reviewed, with an interesting account of such implements and weapons of the Stone Age as have been discovered. Of dates or epochs, however, Dr. Anderson says absolutely nothing. Man of the Stone Age he regards with higher favor than has hitherto been customary:

"Reviewing the whole phenomena of the Stone Age as these are manifested in Scotland, we find them affording evidences of capacity and culture in the individual, associated with evidences of civilization in the community. The application of intellect and energy to the perfection of the art of working in stone is effected in directions that are different from those adopted by workers in metals. But it would be manifestly absurd to say that the application of intellect and handicraft to the perfection of an art is culture when it is directed to one material, and is not culture when it is directed to another. Again, when we consider the aggregates of individuals in whom this culture existed, we find them possessing social organizations sufficient for the construction of works of enormous magnitude. These vast sepulchral constructions, which are necessarily the work of aggregates, are thus in their nature and significance essentially evidences of civilization. As time rolls on and fashions change with the ever-increasing complexities of social organization, the methods of expression may be altered or may be improved; but will any one say that the moral feeling and sense of public duty which then found expression in the manner of the time were less moral and less dutiful than those which find expression now in the manner of our time? In this man of the Stone Age, whose capacity, culture, and civilization are thus made dimly visible to us by the relics of his life and the memorials of his dead; this maker of finely formed and admirably finished tools and implements in stone; this builder of great sepulchral monuments that are completely structural, we have reached the typical representative of primeval man in Scotland. There is no evidence of the existence within our area of any representative type of man of higher antiquity or of lower culture than this" (pp. 381–385).

The fact, however, of the discovery of weapons of polished flint proves no more than possession

of the ability to polish it; just as similar capacities of modern savage tribes do not make them civilized. The existence of "vast sepulchral constructions," displaying no mechanical, engineering, or even architectural skill, and little more than huge piles of stones rudely put together, no doubt implies more than the labor of an individual. If "necessarily the work of aggregates," in itself it postulates nothing as to an organized form of society higher than what may any day be seen in a tribe of savages combining for the moment to realize some special end; while between the "moral" feeling displayed in the erection of a cairn of stones as a sepulchre for the dead with its accompanying urn, and the "moral feeling and culture of to-day," there is an infinite distance. The difference may not be absolute, but only in degree. Yet between the "capacity, culture, and civilization" of this man of the Stone Age, and the "capacity, culture, and civilization" of to-day, there is all the difference between savage and civilized man. Indeed, on the social and political conditions and religious ideas and ceremonies—the great questions with which modern archæology has to do—these volumes do not directly touch. They are rather an illustrated and descriptive catalogue of the remains of the past found in the National Museum and throughout the country. They are, however, the outcome of patient and careful research. They contain full and accurate information regarding the whole field of Scottish archæology as it stands at present. The illustrations are elaborate and executed in the highest style. Altogether, this series of the Rhind lectures must henceforth be invaluable to the student of Scottish archæology.

Psychiatry: A clinical treatise on the diseases of the fore-brain, based upon a study of its structure, functions, and nutrition. By Theodor Meynert. Translated (under authority of the author) by B. Sachs, M.D. Part I. The anatomy, physiology, and chemistry of the brain. O., pp. 285, 65 figures. G. P. Putnam's Sons. 1885.

In this, the first part of Meynert's last work, the following general topics are taken up in order: Structure and architecture of the brain; the minute anatomy of the brain; anatomical corollaries and the physiology of cerebral architecture; the nutrition of the brain; the mechanism of expression. The author's preface states that the work has been written at intervals (and with "no taste for bookmaking") during the past ten years, which may explain, but does not excuse, certain omissions, anachronisms, and other objectionable features. It is unfortunate for author, translator, and readers that the work appears in parts; if this was unavoidable, the present volume should have embraced the notes (promised for Part II in the preface) from which one might gather wherein the author's "views have been necessarily modified or supplemented by later researches" of himself and others.

The remarks in the preface that "hitherto the science of psychiatry has been too largely subjective," and that "our knowledge of the diseases of the fore-brain should be obtained by a study of the structure, the function, and the nutrition of the organ concerned," may have been novel when the book was begun, but all recent treatises on mental disorders take the same ground. Meynert's account of the development, surfaces, and cavities of the prosencephalon adds to less than it detracts from the usefulness of the work. It is not too much to say that what is certainly true is not new, and what is original is usually not proven, often improbable (as the homologies of the cerebral fissures), and sometimes literally improbable and confusing (as the account of the "foramen of Monro," p. 18). The author admits (p. 131) a previous error of opinion on one point, but adheres to a view respecting the course of conductors in the spinal cord which, the translator is forced to acknowledge (p. 131, note), differs widely from that of original observers like Flechsig, Aeby, Roller, Wernicke, Spitzka, and Starr. Meynert states that he has not adopted any new method, but has elaborated with greater care the cleavage (defibrillation) method of his predecessors, which "enables us also to extend our knowledge of the minute anatomy of the brain beyond the information we can obtain from microscopical sections." This last claim will not be generally conceded; on the contrary, at the present day, few neurologists admit that the cleavage method is competent to settle any question unless corroborated by the microscopical, embryological, or atrophy methods, which have been so successfully employed by some of his own pupils. It would seem, indeed, that the "reorganizer of encephalic anatomy" of fifteen years ago now lags somewhat behind his own recent followers.

The references in this work to other publications are few and general, the most important and specific being embraced in the translator's note to page 131. Dalton's magnificent 'Topographical Anatomy of the Brain' might well have been named in connection with the macroscopic structure, since it appeared some months prior to the present volume. The original has no index, and that of the translation is very incomplete, omitting such names as *pons*, *oblongata*, *insula*, and *occipital operculum*, all of which occur in the text. Minor defects of the translation are the irregular use of italics, and the introduction of inelegant abbreviations like *epenceph.*, *pes ped.*, and *corp. callos.* The figures are numerous and mostly clear in themselves, but the explanations are inadequate and ill-arranged. It is safe to say that to find the meanings of the several abbreviations—some German, some Latin—in, for example, figure 9, exacts from each reader as much time as it would have cost the author to make the signs uniform and arrange them alphabetically, to say nothing of the exasperation almost inevitably engendered. So long as leading German scientists and philosophers practise—if they do not openly profess—the "Browningian" doctrine that obscurity is the sign of profundity, it would be too much, perhaps, to have expected the author to deliberately undertake to make his writings readily intelligible and easy of reference; but surely we may look for some improvement in that respect in an American translation.

Of the figures exhibiting encephalic structure, fine and coarse, including the fissures, nearly two-fifths represent the brains of monkeys, dogs, cats, etc. Usually the points in question would have been illustrated equally well and much more appropriately by human brains, especially fœtal, to which latter, however, the author states (p. 7) he has given little attention. Moreover, only the professional zoölogist could be expected to recognize monkey in *Hamadryas* (fig. 8), or even weasel in *Mustela* (fig. 10). The tendency of medical writers to intrude irrelevant matters of comparative anatomy (apparently because the subjects are convenient or otherwise interesting) is one which should be checked, in the interest of the patients whose health and lives may hang upon an absolutely accurate acquaintance with the human structure. Besides somewhat numerous typographical errors, for which the publishers are equally responsible, the translation reproduces the original's mistake of rendering *Affengehirn* by *primate brain*, and *die Olive des Menschen* by "the olivary body, common to man."

The philosophical portions of the book are good upon the whole, though not markedly in advance of the author's previous writings. The general reader will be interested in parts of this, and in the pretty and instructive diagrams on pages 157, 158, illustrating the paths of sensory and motor impulses. Some of the psychological portions are pungent and even witty, and the remark that "Volitional mimical movements lack the character of spontaneity, and become ridiculous as expressions of foppishness, or excite contempt as expressions of falsehood," applies to many popular follies (Anglomania, etc.) of the day. Little as the present treatise is likely to enhance the already high reputation of the author, it is needful for working neurologists, and Dr. Sachs deserves their thanks and congratulations for making his teacher's views more generally accessible to English and American readers. He is certainly warranted in remarking that "those best acquainted with the original will not underrate the difficulties of the task."

Poets and Problems. By George Willis Cooke. Boston: Ticknor & Co. 1886.

Mr. Cooke deals with the "prophets," Tennyson, Ruskin, and Browning, in their world-and-time relations. He is not a critic, at least not an ordinary professional critic. For that *genus*, "the vultures seeking only to satisfy their hunger by the task of their pens," he has "little other than feelings of contempt," both for itself and for "the methods by which it contrives to live." He himself is quite a different creature. "I enjoy the pages of Browning at the same time I enjoy those of Tennyson"; because, it seems, he seeks "to give them the sympathetic appreciation they demand." "I am of the opinion," he adds, "that this is the first and highest quality in the critic; and if he does not possess it, he is wholly unworthy the name." An inference as to Mr. Cooke's right to bear the name, in his own judgment, is easily made. He says, further, of his own endowment, that his "essays will everywhere betray my incapacity for finding the faults of the authors of whom I have written." This sentence appears to be a slip of humility. To quote at random, he says later on that "'Maud' betrays Tennyson's incapacity for plot and structural creative power." We pass the Mohawk English of this to note that "the defects of 'Maud' reappear in 'The Princess'"; that "Arthur is an unreal person in the Idyls"; that Ruskin is "not always a true guide to the technical interpretation of art"; that he "misread the life of Turner"; that he is "petulant," "complaining," "querulous," "wrong-headed," "wilful," "quite out of the way of what is simple and sensible," "too much a sentimentalist," "a social fanatic." Browning is "often wanting in artistic beauty and finish"; "delights in parentheses, an abomination"; "as a poet he can afford us little pleasure in his more thoughtful poems"; "he 'wrote Greek in shorthand,'" and "the criticism is justly made," etc. Mr. Cooke wrote better than he knew; in fact, as his essays, which have the diffuseness of sermons, are the reproduction of the current general criticism, he could not easily exclude "the defects" of the three "prophets." The special mark of his book, however, is its relating the poetic work of these men to a transcendental pseudo-pantheism, which is the latest hybrid birth of science and philosophy. This, too, is at second-hand—a consideration which we mention not as a fault, but as a fact. The personal and original element he gives us lies in the tone of his "sympathetic" laudation. He writes of Ruskin, for example, as one "whose eyes are set with tender ravishment on all the deeds of men." Picture it! But the critic, one must re-

member, "holds his author at arm's-length, and scrutinizes him as he would a fossil"; and the idea of a fossil gazing at anything with "tender ravishment"! Again, he says of Browning: "With an eye keen for facts, like Darwin's, he unites a subtle instinct for truth, like Kant's, and Dante's high-soaring imagination"; but again, too, one recollects that the critic is "too often of a cold and analytic mind." Mr. Cooke may rest in quiet: he is not a critic; no one will ever charge him with any worse fault than sermonizing.

The White Horses of the West of England. With Notices of some other Ancient Turf-monuments. By the Rev. W. C. Plenderleath, M.A., Rector of Cherhill, Wilts. London: Alfred Russell Smith. 1886.

As far as seems to be known, delineations in turf are, at least for Europe, confined to Great Britain, and, almost exclusively, to the southern part of the kingdom; only a single specimen of them having been discovered in Scotland, and none at all in Ireland. One of these tracings, cut, in some immemorial age, on the declivity of a chalk hill at Whiteleaf, in Buckinghamshire, has the form of a cross, measuring 55 feet high, supported by a triangular base 340 feet in width, and 175 feet in elevation. Of human figures depicted on hillsides there are two instances. One of these, speculatively referred to a date anterior to A. D. 600, is to be seen near Corne Abbas, in Dorsetshire. It represents a naked man, with a club in his right hand, and covers nearly an acre of ground. Whether it commemorates the Saxon god Heil is an open question with antiquaries. Its sole brother in the land is the Long Man, so called, at Wilmington, in Sussex. This figure has its arms partly extended, and holds in each hand a staff reaching to the level of its feet. Its height is 240 feet; and its extreme width, from hand to hand, is 148 feet. In 1874 it was retouched, to the effect of rendering it more permanent and more easily discernible, at the expense of the Duke of Devonshire, on one of whose domains it stands.

Much more noticeable than these, however, among the English turf-monuments, are the picturings of horses, all of which, except a red horse in Warwickshire, giving its name to the Vale of Red Horse, are white. The most ancient of these, the Uffington Horse, in Berkshire, and the horse on Bratton Hill, near Westbury, Wilts, lie each in close proximity to a reputed Danish camp, and are traditionally associated with signal successes achieved against the Danes, by King Alfred, in A. D. 871 and 878, respectively. The Uffington Horse, which exhibits the fantastic peculiarity of having a bird's head, measures 355 feet from the nose to the tail, and 120 feet from the ear to the hoof. Of the festivities connected with the periodical cleanings of it a full account is given in Mr. Hughes's 'Scouring of the White Horse.' The Bratton Hill Horse, which was destroyed in 1778, yielded, in dimensions, to its prototype at Uffington, in being only 100 feet long; but its existing successor, designed in 1853, has a length of 175 feet, with height in due proportion. Other horses are found at Cherhill, and likewise near Marlborough, as well as elsewhere. These, however, are all of them of recent date. For their history, and also for ample details regarding the older horses, accompanied with a profusion of relevant antiquarian lore, the reader must be referred to Mr. Plenderleath's curious and researchful monograph.

Old Salem. By Eleanor Putnam. Edited by Arlo Bates. Boston: Houghton, Mifflin & Co. 1886.

NOT a few of our readers, probably, will remember a short series of charming papers in the *Atlantic* not long ago, upon the cupboards and shops of Salem, and upon a "dame-school" there, which were distinguished by simplicity and freshness of touch, and seemed really to have absorbed into their sentiment the not too oppressive odor of antiquity which still lingers about the streets and wharves of the sleepy city. It would be difficult to write about "Old Salem" without entertainment; but the author of these papers had so delicate a touch, so womanly a tenderness for associations, and yet humor and fancy, and alertness in catching the artistic outlines of character, together with such loving acquaintance with the scene, that the pictures of "Old Salem" which she promised would have been a rare treat. Of these but one new one, and that a fragment, is added to those already published—a sketch, "My Cousin the Captain." The thin volume which is thus made is a kind of memorial given to the public by her husband. The author died before she had got fairly into the work of reminiscence which she had proposed, and one reads the relics of her literary life with a regret that they should be so scanty, and with a somewhat saddened appreciation of their delightfulness.

BOOKS OF THE WEEK.

Albert Victor and George of Wales, Princes. The Cruise of Her Majesty's Ship *Bacchante*, 1879-1882. 2 vols. Macmillan & Co. $16.
Allen, J. B. Rudimenta Latina. Macmillan & Co.
Anson, Sir W. R. The Law and Custom of the Constitution. Part I. Parliament. Macmillan & Co. $2.75.

SOME NEW SCHOOL BOOKS

PUBLISHED BY

Henry Holt & Co.

CLARK'S PRACTICAL RHETORIC.

(*Ready soon.*)

Its main source of inspiration was an attempt to work Herbert Spencer's 'Philosophy of Style' in the classroom, the result of which was the accumulation of a body of rules which adapt the principles of that incomparable treatise to actual work with untrained students. The exercises, which are a leading feature, are treated somewhat after the manner of Abbott's 'How to Write Clearly.'

ARTHUR, BARNES & COULTER'S PLANT DISSECTION.

12mo, 256 pp., $1.50.

A guide to the systematic study of a few typical plants. The chapter on each plant is divided into three parts: I. Preliminary matter, telling where to find the specimens and how to prepare them for study. II. Laboratory work, with explicit directions for careful examination of the plants. III. Annotations, which aim to explain points that for any reason the student cannot clear up for himself.

REMSEN'S CHEMISTRY.

12mo, 389 pp., $1.50.

A book for beginners. Instead of presenting a large number of facts, and thus overburdening the student's mind, it treats a smaller number than is usual in elementary courses in this science; but selects such substances and such phenomena as seem best suited to give insight into *the nature of chemical action.* The method followed is purely inductive, and, wherever experience has shown it to be practicable, truths are drawn out by questions rather than fully stated. Unlike other elementary works, it defers the discussion of theories till the principles of the science are thoroughly taught.

GOODELL'S THE GREEK IN ENGLISH.

(*READY SOON.*)

The Greek element of English in conversation and especially in literature carries many of the key-words to the thought, and he to whom these key-words are not alive with meaning is at a great disadvantage. And yet mere dictionaries or etymological handbooks alone cannot give what is wanted. *The words in their Greek form and with some fragment of their Greek associations,* must become somewhat familiar before one can be sensible of that grasp of their English derivatives which will enable one to use those derivatives correctly and fearlessly. The Greek vocabulary surviving in English *can* be so presented in a sort of Greek primer, with its relations to English so pointed out that even young pupils will find the study far from dull. And this is just what this book aims to do. It is not intended to lessen the number of those who shall enter on a full course of study in the Greek language, but it is rather hoped that it may increase that number.

Henry Holt & Co.'s new educational catalogue, which contains full descriptions of these and other new and forthcoming books, will be sent free on application

Little One's Own

July 17 we begin a weekly magazine with colored pictures for children.

There is nothing wonderful in it for grown folks. The pictures will please the little ones, keep them out of mischief, give them occupation, and do them no harm—that's enough to promise beforehand.

There is a page of big letters and little words; another page of Bible tales and the like; and the rest short stories and other diversions. It isn't heavy, scientific, æsthetic, or blood-thirsty.

The whole is four pages of bright-colored pictures, four pages of good safe English; eight pages in all besides the cover.

You are thinking already, "How much have I got to pay for fresh pictures every week the year round and all that story-telling?" $1.50; but you may keep your $1.50 till you see the LITTLE ONE'S OWN. Let us have your address, if you have the little ones—anywhere from getting their eyes open to ten years old—and, if you will do us the favor of mentioning any other persons who ought to know of a wholesome and interesting picture-paper for young children, we'll send a copy each to you and to them no matter where they are—free, of course.

John Wanamaker
Philadelphia

A DELIGHTFUL COUNTRY BOOK.

In cloth, novel design, price $1.50.

A STORK'S NEST.

Or, Pleasant Reading from the North.

Collected by J. FULFORD VICARY,

Author of 'A Danish Parsonage,' etc. A choice collection of old-fashioned Danish and Norwegian stories.

The *Nation* says: "As refreshing as a cool breeze in summer. Plain downright stories without any theory of life or art, told simply to please the old-fashioned taste in man for a narrative."

The *Literary World* (Boston) says: "Stories of the Northland usually have a charm peculiarly their own, and among the charming must this volume be counted in."

In cloth gilt, $1.25. A fourth edition of a valuable book on Dietetics.

FOOD and FEEDING.

By Sir Henry Thompson, F. R. C. S.

"It is perhaps the most useful, suggestive, and at the same time entertaining work on gastronomy in the English language, if not in any language."—*The Nation.*

"Sir Henry Thompson is not a cook, but we should like to live where his rational directions ruled the kitchen."—*Literary World, Boston.*

Roberts Brothers'

NEW BOOKS:

BALDWIN; Being Dialogues on Views and Aspirations. By Vernon Lee. 12mo, cloth, price $2.

"The Responsibilities of Unbelief," "The Consolations of Belief," "Of Honor and Evolution," "Of Novels," "The Value of the Ideal," "Of Doubts and Pessimism" are the subjects of these "Dialogues." Says the London *Academy*, "One cannot read a page of 'Baldwin' without feeling the wiser for it." And the London *Athenæum* says, "We read the book on and on with continual respect and even admiration for the writer's acuteness, sincerity, and independence of thought."

INDIA REVISITED. By Edwin Arnold, author of 'The Light of Asia.' With 32 illustrations from photographs selected by the author. 12mo, cloth, price $2.

The extraordinary sale which 'The Light of Asia' has had will make this visit of its author to India curiously interesting.

A NEW "NO NAME."

JUSTINA. A Novel. 16mo, cloth, price $1. The 35th in the "No Name Series," and not a whit behind many of the best in interest.

Sold by all booksellers. Mailed, postpaid, by the publishers, ROBERTS BROTHERS, Boston.

RUSSIAN LITERATURE.

Taras Bulba.

By Nikolas V. Gogol, with portrait of the author. 12mo, $1.00.

A tale of the Cossacks, in which the author (himself a descendant from that race) describes the heroic exploits of his ancestors; their wild mode of life and warfares, the wonderful scenery, the forests, the ponds, the wide stretches, and the sky of the steppes, all of which are woven together in the form of fiction, and placed before the reader in the most picturesque and vivid prose which equals in beauty the accents of the noblest poetry.

A Vital Question: or, What is to be Done?

By Nikolai G. Tchernuishevsky. With portrait of the author. 12mo, $1.25.

The Nation.

NEW YORK, THURSDAY, JULY 8, 1886.

The Week.

MR. BOYLE and three other Democratic members of the Pan-Electric Investigating Committee have presented a long and labored report, which seeks to "whitewash" the officials implicated in the scandal, and a resolution declaring that "a full, fair, and exhaustive investigation has failed to adduce any evidence which tends to show that Attorney-General Garland, Solicitor-General Goode, Secretary Lamar, Indian Commissioner Atkins, Railroad Commissioner Johnston, or Senator Harris—they being the officers named in the Pan-Electric publications of the newspaper press, which gave rise to this investigation—did any act, official or otherwise, connected with the matter investigated, which was dishonest, dishonorable, or censurable." Such an issue of the investigation has been expected by the public all along, and the report will change nobody's opinion. Indeed, the whole investigation has not affected the public judgment of the matter, because it has not shaken the main facts upon which that judgment was based. These facts are that Mr. Garland and his official associates went into the Pan-Electric speculation years ago under suspicious circumstances, and that Mr. Garland retained his stock after becoming Attorney-General and when the value of his investment was to be affected by the action of his department. No amount of special pleading will ever convince the public that this was a proper thing to do. At the very best it was a refusal to "avoid the appearance of evil," which is an obligation of almost as binding character as the obligation not to do evil. The whole scandal has been due to the Attorney-General's lack of delicacy of feeling. Mr. Garland has paid a heavy penalty for his blunder. When he went into the Cabinet he enjoyed universal regard, and the public looked with favor upon his well-known ambition to occupy a seat upon the Supreme Bench at no distant time. To-day he is greatly discredited, and now that the investigation of his conduct is concluded, he ought to relieve the President of the undoubted embarrassment caused by his presence in the Cabinet.

Senator Edmunds has brought in a bill for the reform of the civil service, which gives the President the appointment of all the minor officials without the advice or consent of the Senate, but makes them irremovable during their term without a trial on charges before a United States judge. One does not need to know much about the United States civil service to know what the result would be; one only needs to know a little of human nature. No man of capacity or business experience would take charge of an office containing a large number of subordinates if he could not get rid of any of them without a formal trial in a law court. Four-fifths at least of the things which make a clerk incompetent are small things, any one of which would seem ridiculous on paper, and absurd to lay before a United States judge. It is the repetition of them which mostly decides that a man is not worth his salary. Nothing in the whole art of administration, whether civil or military, is so well settled as that there can be no proper responsibility in the chief if he have no discretion in the selection of his subordinates. Some capable men might be found ready to take charge of offices under Mr. Edmunds's bill, but if they did so, they would probably at once go to work to break it down. They would let inefficiency and disorder have full swing, and refuse to go into court with trumpery stories about A's coming late, and B's drinking, and C's being unmannerly, and D's spelling badly and blotting his books, until the public offices became public nuisances and the law was repealed.

President Cleveland's policy in regard to civil-service reform has always had two weak points. The first is his appointing to several important places—the New York Custom-house is one of them—persons who were notoriously either not in sympathy with the reform or openly hostile to it. The second is his failure thus far to punish a single official for displaying his dislike of or contempt for the rules by disregarding or evading them. The notion that such a reform as this can be carried out by agents who hate it is of course a chimera. A good illustration of all this has just been afforded by the working of the new rule adopted by the Civil-Service Commission at Washington, which provides that the examining boards at various points shall elect their chairmen and secretaries every year, these officers having hitherto been appointed by the Commission, as in fact they ought to be, for they are nothing more than the agents of the Commission. However, if the Government officers at various points were, as they ought to be, men chosen because they believed in the reform, and were ready to carry it out cheerfully, the change might not in practice do any harm. But see how it works in New York. The Chairman and Secretary of the Examining Board at the Custom-house, Messrs. Comstock and Babcock, have filled these positions for years. They thoroughly understand the new system and thoroughly believe in it, and have had more experience of its working than perhaps anybody in the country. Moreover, they are the only friends of the reform in a Board of eight members. Under the new order, which seems to have been a concoction of Mr. Oberly's, these two gentlemen have been turned out, and there have been elected in their places two open enemies of the reform, who can and doubtless will, in a thousand ways, hinder its execution, either by evading it or making it ridiculous. These suspicions may prove unfounded, but we hold that there should be nothing in the character or antecedents of the men filling high places in any of the great Government offices, to give rise to them.

The appointment of Gov. Hugh S. Thompson of South Carolina as Assistant Secretary of the Treasury, to succeed Mr. W. E. Smith, who resigns to accept the solicitorship of a Western railway, is one of the very best which Mr. Cleveland has made since he became President. Gov. Thompson has been prominent in the affairs of his State for the past ten years, during the first six as Superintendent of Education, and during the last four as Governor. In the former capacity he built up the public-school system amid great difficulties and obstacles, earning the hearty confidence of both races by his impartial oversight; and in the higher office he has justified the faith which the colored Republicans reposed in him. Gov. Thompson is a sincere believer in civil-service reform, and it was largely his influence which led the South Carolina Legislature in 1880 to adopt a resolution urging Congress to "take such measures as may be expedient for the reformation of the civil service, so that the tenure of office under the General Government may no longer be dependent upon party success or subject to levy by means of forced pecuniary contributions to any political party, and so that capacity and character shall be the test of fitness for office and the sole but certain guarantee of its tenure"; and which led the Legislature four years later, after Mr. Cleveland's election to the Presidency, to "reiterate and reaffirm the principles and policy of the said resolution," by adopting a further resolution declaring that "this General Assembly adheres to the same and tenders to the Administration of the President elect the approval and support of the people of this State in carrying out the provisions of the law in regard to civil-service reform."

The reported consideration by the President of the expediency of abolishing the age limit of forty-five for admission to the civil service does not raise any very serious question. It may be said in general terms that those who favored the present limit did so in the expectation of drawing into the service men who meant to make it a career, or at all events stay in it a considerable period. They thought, and not unnaturally, that a man who sought for a subordinate place in the public service after forty-five, would be apt to be a man who had failed badly in something else, or whose powers of work were waning, and who would consequently probably have to leave it very soon. But we doubt very much whether the abrogation of the rule would have much practical effect. It would pacify a few elderly and discontented "workers" in various parts of the country, who think all the places are reserved for young college graduates, but it would not admit many, if any, to the service who were not capable, for a while at least, of rendering good service. If a man over forty-five can pass the examination, there seems to be no good reason why he should not go on the eligible list. If the appointing officer thinks him too old for the work, he need not take him, and if he takes him, and he becomes too old, he can be got rid of in the usual pitiless fashion.

The President's vetoes of private pension bills are calling out a mass of testimony as to the fraudulent character of many of the claims which are advanced. The editor of the Portland *Oregonian*, who served in the ranks of the Union army, declares that he knows of his own knowledge, that "since the passage of the Arrears of Pension Act about every shirk and utterly worthless veteran of his brigade has been a successful applicant for a pension." In one case a wagoner, who lost his leg by tumbling off his team while helplessly drunk, got a pension on the plea that he had lost it in action with the enemy. In another case a man swore to having received injuries in a battle at which he was not present; and described his regiment as supporting a battery, when it was in a thick wood, distant half a mile from any artillery. In several instances within the editor's knowledge, men who escaped from service by shooting off their fingers have received arrears of pensions as if for honorable wounds. He describes one case where within two years a New England merchant, worth at least $50,000, who never was in action, and who resigned after less than three months' service, has mortified his decent comrades by trying to get a pension on the plea that he could trace his present condition of imperfect health to a catarrh he suffered from while in service. It is not a pleasant reflection, but it is unfortunately the fact, that there was a considerable percentage of shirks in the Union army, who are as conscienceless in pressing fraudulent claims now as they were in avoiding active service during the war, and it was time that the attention of the country should be sharply called to the gross abuses which have been growing up under the pension system.

President Cleveland sent a very depressing letter of regret to the Tammany braves assembled for their Fourth of July celebration. Great preparations had been made for having a true Jeffersonian reunion. None but iron-clad Democrats of the approved old-fashioned type had been selected to make addresses, and the hated Mugwump doctrine of civil-service reform was to be given such a drubbing as it had not received in many a day. Into this choice assemblage the President dropped his letter, containing the following passage:

> "I should be very glad to join those who on that occasion will 'renew their pledges of devotion to the principles for which the fathers of the republic fought.' *These principles had no relation to personal advantage or ambitious schemes*, but were adopted and cherished because their enforcement promised prosperity and greatness to a free and victorious people."

The sentence which we have put in italics was a plain announcement that the man whose nomination Tammany had tried in vain to prevent, and whose election Tammany had tried in vain by wholesale treachery to defeat, was the same man still, and just as deserving of Tammany hatred as he had ever been. More than this, it was a fresh notification to the Wigwam, crammed with perspiring and hungry Jeffersonians, that there would be no "clean sweep." What cheer was there after that in Senator Vance's blatant denunciation of civil-service reform, and Mr. Randall's praise of the "grand old society"? Neither of those men had any offices to distribute, and both of them had been defeated in Congress in their efforts to break down the Civil-Service Law.

All the Fourth of July oratory appears to have been pretty barren of ideas. Mr. Bowen's annual display at Woodstock was much less entertaining than usual, none of the speakers appearing to have anything to say. At a soldiers' reunion in Chicago, Senator Logan made a very melancholy pension bid for votes, at the close of which he said: "The evidence of decay is upon us to-day. If I have shown weakness in your presence to-day, I hope that in the light of our past struggles you will forgive me." The speech was the usual bloody review of the war which Logan always makes, and which he has put into type of several kinds in his great history. It is high time that signs of "decay" appeared upon it, for it has become very wearisome to the public, and we should think that the soldiers would by this time be tired of it.

It is very hard for the average Republican organ to give up the idea that there is something still to be made out of the sectional issue. Referring to the statement that the Alabama Republicans have decided not to put any ticket in the field this year, on the ground that it would be of no use, a Blaine organ in Connecticut says: "These things should not be so, and they will not continue after the Republican party is restored to power." And yet "these things" came to be "so" while the Republican party was in power. In deciding to nominate no ticket at the first State election under a Democratic President, the Alabama Republicans only follow the same course they pursued at the last State election under a Republican President in August, 1884, when they made no opposition whatever to the Democratic nominees, upon precisely the same ground as that on which they base their present policy. It was the same way in the last State elections held under a Republican President in South Carolina and Georgia. If the Republican party in the South had fallen into decay under a Democratic administration, there might be something plausible about the claim that things would be different under a Republican President; but considering that a whole line of Republican Presidents could not do anything to arrest the process of deterioration, the idea that "restoring" the Republican party to power will cure the trouble is rather too absurd for the year 1886.

None of the Republican platforms thus far adopted, in Maine, Vermont, and Pennsylvania, appear to have hit upon an issue which can serve as a rallying cry for the party. They all studiously avoid any mention whatever of the most pressing question of the day—silver coinage. Has the party no convictions upon this? They are all very bitter in their denunciation of the Morrison Tariff Bill, but as that measure has failed in a Democratic House, it is difficult to see how party capital can be made from it. The Maine platform was very ferocious on the fishery question, but that, too, has been settled, and in such a way as to do credit to the Cleveland Administration. A significant plank in the Vermont platform was a commendation to "Republicans everywhere of the policy of dropping past dissensions, of welcoming all who will return to the party allegiance"; but this found no echo in the Pennsylvania declarations. It is likely to be looked upon coldly as an Edmunds contribution, more or less tainted with Mugwumpism; yet it is the only utterance thus far made which has in it any important bearing upon the prospects of the party in future national contests. The Republicans failed in the last campaign because they did not have a majority of the votes cast, and they will continue to fail for the same reason unless they take some steps towards securing recruits. Making faces at the Mugwumps, and nominating candidates whom they will not support, are not steps of this kind.

Next to its absurdity, the most noticeable thing about the Pennsylvania Republican platform is the feebleness of its denunciation of the Cleveland Administration. "We bring an indictment," it says, "against the present Democratic National Administration for its inconsistency, indifference, and inefficiency, which has been alike inconsistent in the methods employed to promote promised reform, indifferent to our industrial and commercial interests, and inefficient through lack of experience and ability to meet any of the grave questions of the day." Not a single specification is advanced to support the indictment—no allusion even to Higgins. There is nowhere in the platform any of that good round denunciation which ought by this time to appear in Republican platform literature if there is going to be any real "war" in this fall's campaigns. The pension vetoes, which we inferred from the comments of some of the party's organs were to be utilized as bait for the soldier vote, are not mentioned at all; and even the Pan-Electric scandal passes unnoticed.

Mr. G. F. Hoar made a terrible attack on the President on Wednesday week, apropos of secret sessions of the Senate, which he strenuously defends. His thesis is that nobody wants open executive sessions but the newspapers, and he denies that the newspapers in any sense represent public opinion; this, he says, is revealed, in the old seventeenth-century fashion, by petitions and elections. So he will not agree, we presume, to have open sessions until the people have voted for it at elections; but how it will be got before the people he does not point out. He said one of those delightfully absurd and startling things for which he is famous, when he averred that the Senate never stood higher in the estimation of the people than it does now. After all these gymnastics came the attack on the President. He denied his title to his office, which he declared properly belonged to the "idolized" Blaine, and then made the usual accusation of breaking his pledges and having used the appointing power to an unexampled degree for partisan purposes. Time must hang heavily on any one's hands who argues with Mr. Hoar, because he can, owing to his habit of inventing his premises, never be refuted. No matter what you say, he stops you with a "fact." So that all that can be done with him is to expose him occasionally and then let him run.

In his diatribe Senator Hoar referred to the removal by the Post-office Department during the first twelve months of the present Administration of 8,635 fourth-class postmasters—which, it may be remarked, is only about one in six of the whole number—and said: "The President knows that under the law the term of every postmaster in the country would expire during his Administration." The whole number of post-offices in the United States when the present Administration came in was 51,277, of which 2,346 belonged to the first, second, and third classes and were filled by Presidential appointment. The remaining 48,931 were fourth-class offices. The Revised Statutes provide (section 3830) that "Postmasters of the fourth-class shall be appointed and may be removed by the Postmaster-General." *The United States Official Postal Guide* declares (section 750) that "Postmasters at fourth-class offices are appointed by the Postmaster-General, *and their term of tenure has no specified limit.*" In other words, Mr. Hoar stated that the term of all the 51,277 postmasters in the country would expire during Mr. Cleveland's Administration, while the fact is that the term of 48,931 of them "has no specified limit," and will not expire during the present administration or at any fixed time. This is a fair sample of the relation between fact and fiction throughout the whole of Mr. Hoar's speech.

Mr. J. W. Alsop of the Connecticut Senate, for several years Chairman of the Agricultural Committee of the Legislature, and an earnest advocate of the Connecticut law which requires imitation butter to be sold simply on its merits, declares himself and the committee of which he has been chairman decidedly opposed to prohibitive legislation or taxation of imitation butter, as unjust to the manufacturer and to the consumer, and adds that one of the strong reasons for the enactment of the present law was the practice of farmers to mix oleomargarine with their own dairy butter. The Dairy Commissioner of Connecticut, according to the Middletown *Constitution*, reports that the chief trouble "is with an article which purports to be the first quality of dairy butter, and is sold at a fancy price." He "doubts whether Connecticut dairies at this season, when grass is plenty, are doing much in the bogus line, though he has reason for suspecting that they have done their share hitherto, and will need watching next fall."

It is melancholy but true that Lord Salisbury's word on a matter of fact does not carry the same weight in politics that it once did, and that consequently his denials addressed to Mr. Parnell and Mr. Gladstone in his letter on Tuesday week do not count for much. When he was Foreign Secretary under Lord Beaconsfield in 1877, he entered into a secret agreement with Count Shuvaloff, the Russian Ambassador, and embodied it in a memorandum by which he bound England to make a number of important concessions to Russia at the Berlin Conference, which was shortly to meet. When the Conference did meet, he and his chief went through the form of resisting stoutly in public what they had already surrendered in private, of course for the purpose of humbugging their own people. A copying clerk in the Foreign Office got hold of the memorandum, and published it in the *Globe*, and it, of course, made a profound sensation. But Lord Salisbury, on being taxed with it in the House of Lords, flatly denied its existence. He was, of course, soon after exposed, but he bore it bravely, and now charges opponents with "baseless fabrication" as cheerily as if it had never happened. A public man, however, does not get over this sort of thing easily, as our own Blaine knows to his cost. Neither Lord Salisbury's affirmations nor his denials now settle anything finally in the public mind.

His denials now relate to an interview between Parnell and Lord Carnarvon. Parnell asserts that Carnarvon asked for it—he being at the time Lord-Lieutenant of Ireland—and talked "autonomy" with him, and gave him to understand that the Conservative party might, if properly supported, give the Irish even autonomy enough to enable them to "revive their industry" by protective duties. The corroboration of this is that Lord Carnarvon acknowledges there was an interview, that Parnell soon after made a speech in which he did propose protective duties, and that the Irish supported the Conservatives at the elections, which they would hardly have done, angry as they were with the Liberals, had they believed that, as Lord Salisbury now says, they had nothing to expect from the Conservatives but the suppression of the National League and twenty years of "resolute government." Lord Carnarvon, on the other hand, alleges that the interview was of Parnell's seeking, which is unlikely, considering Parnell's distrustful and disdainful ways with Englishmen, and that all the talk of autonomy was on Parnell's side, which seems a little ridiculous, as there was no occasion to get Parnell into a private room in order to hear him talk autonomy. Lord Salisbury acknowledges also that Lord Carnarvon told him of the projected interview two days before it took place, and that he gave him an account of it afterwards. But these admissions have only been made under a fire of taunting questions from Mr. Gladstone, and the general impression made by the whole affair is undoubtedly unfavorable to the Tories. There are probably few people who really doubt that if Mr. Gladstone be now defeated, the Tories will themselves before long grant home rule to the Irish in somewhat the same shape, just as, after driving Earl Russell from office in 1866 for trying to extend the suffrage, they extended it themselves as soon as they got into power in 1867. By that time the English public will have got used to the idea, and the dreadful predictions which the Tory orators are now making about the excesses in which the Irish will indulge if they ever get a Parliament, will have lost their force through familiarity.

The tide continues to run against Mr. Gladstone. He is losing seats, or retaining them by diminished majorities in the boroughs. He may still be saved by the counties, but there is no chance of his doing more than holding his own. This will be a great feat, to be sure, considering how his colleagues have deserted him, but it will be simply a personal triumph. It will not make home rule possible. On this result nobody can possibly be congratulated. It is not likely to furnish materials for either a Tory Ministry or a Unionist Ministry, or even a coalition Ministry. The Opposition united will probably at best have a bare majority, and the Irish question will stare them in the face, calling for solution as imperiously as ever. Moreover, Parnell will still have to be reckoned with, and he will certainly meet his enemies with as indomitable will and as high courage as ever. He will force them either to treat with him or to resort to desperate measures, which will make their talk of imperial unity more plainly absurd than it is now.

In commenting, at the time, on the new electoral law adopted by the Belgian Chamber last August, we expressed the opinion that it was an ingenious piece of partisanship, well calculated to make the recovery of the anti-clerical phalanx in that body from its late reverses a task of almost insurmountable difficulty. "The Liberals of Brussels," we remarked, "who suffered so unexpected a defeat in June, 1884, but counted on a *revanche* in the next elections, will find it now very difficult to reverse the last electoral verdict. Another stronghold of the Liberals, Ghent, where the anti-Clerical victory in 1884 was achieved only by a very light majority, is in danger of being lost in 1886, with the possible disastrous result of securing the Government party a two-thirds majority in the Chamber." The elections of last month have completely justified these predictions. The Liberals were beaten in Brussels, Charleroi, Verriers, and other towns, which were formerly chief seats of their strength, and were totally routed in Ghent, in consequence of which their minority in the Chamber has been reduced from fifty-two members to forty, and the clerical majority has risen from eighty-six to ninety-eight, or more than two-thirds of the whole number. The late socialistic disorders in the mining districts of the kingdom, which frightened the mass of the manufacturers into supporting the powers that be, while the extreme radical wing of the Opposition, to the very eve of the election, coquetted with the Socialists, contributed strongly to the excessive triumph of the Government party. Another element of defeat for the Liberals lay in their stanch fidelity to free-trade principles, while their clerical adversaries were free-traders in Brussels and Antwerp, and protectionists in the manufacturing towns. Fortunately for the beaten party, the two-thirds majority of the clericals in both houses of the Legislature can only pave the way for a revision of the Constitution, but not effect it; for a revision can be carried only by a two-thirds vote in both houses of the Legislature succeeding the one which moves the amendments. It is also probable that the Conservative Government will find its victory embarrassingly sweeping. The excesses of its supporters may speedily lead to a new and thorough revulsion of public sentiment such as Belgium has so often witnessed.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 30, to TUESDAY, July 6, 1886, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND on Thursday signed the Fitz John Porter Bill.

Congress is making more rapid progress than had been anticipated with its work, and, unless there shall be long political debates, it may be possible to adjourn by the 20th.

In the House of Representatives on Wednesday Mr. Boyle (Dem., Penn.), from the Pan-Electric Committee, submitted a report signed by four members of the Committee upon the subject of its investigation. It is accompanied by the following resolution: "Resolved, That a full, fair, and exhaustive investigation has failed to adduce any evidence which tends to show that Attorney-General Garland, Solicitor-General Goode, Secretary Lamar, Indian-Commissioner Atkins, Railroad-Commissioner Johnston, or Senator Harris (they being the officers named in the Pan-Electric publications of the newspaper press which gave rise to this investigation) did any act, official or otherwise, connected with the matter investigated which was dishonest, dishonorable, or censurable." The report was in line with the resolution. It was referred to the House calendar. The Republican members of the Committee submitted a minority report in exactly the opposite sense.

The House on Thursday refused to pass over the President's veto the bill to quiet the titles of settlers on the Des Moines River lands by 161 to 91, not the necessary two-thirds.

The House Ways and Means Committee on Tuesday ordered an adverse report to be made on the Randall Tariff Bill.

In the Senate on Thursday Mr. Riddleberger (Read., Va.) introduced a preamble and a bill for the reduction by 25 per cent. of the salaries of Cabinet officers, Senators, and Members, and addressed the Senate in its advocacy. He said that if they were to begin reductions of $1,200 clerks and to conclude with reductions of per diem labor, it seemed to him that they should go back and begin at the head. He also referred to the contracted currency as a disadvantage to labor and an advantage to capital. The bill was referred to the Committee on Finance.

In the Senate on Friday, during the consideration of the Legislative Appropriation Bill, an amendment for an additional clerk for the Civil-Service Commission was opposed by Mr. Vance (Dem., N. C.), who remarked that, if the Commission was unable to do any more business, it would be so much the better. Mr. Saulsbury (Dem., Del.) looked upon the Civil-Service Commission from beginning to end as a useless piece of machinery; if he had his way he would repeal the law. Mr. Voorhees (Dem., Ind.) said that he had never been for the law, sleeping or waking; but, while it was a law, he would treat it fairly and give it a fair chance. If there was any good in it he hoped the good would come out. The fact would be made manifest in good time and the people would pass upon it. The amendment was adopted by 34 to 11.

The Naval Appropriation Bill, as reported in the Senate on Saturday, appropriates $12,883,234, a net reduction of $46,800 as compared with the House bill.

The new resolution of instructions to boards of examiners for the classified customs and postal service, which was adopted by the Civil-Service Commissioners, to go into effect on Thursday or as soon thereafter as practicable, is already causing commotion, which will undoubtedly increase. The resolution directs that every customs district board and post-office board shall nominate to the Commission on the first Thursday in July in each year "one of its members for appointment as Chairman, and one of its members for appointment as Secretary of the Board." The result of this vote is to be reported without delay to the Commission, and the persons so nominated are immediately to enter upon the discharge of their duties, "unless the Commission shall make other appointments than those advised by the Board." One of the first results was the reorganization of the New York Custom-house Board. Both the Chairman and Secretary of the Board were Republicans and civil-service reformers. On Thursday both were displaced and Democrats elected in their places. It was reported about the Custom-house on Friday that the change was brought about in a way to justify the fears of those who look upon it as a deliberate attempt to convert the Civil-Service Board into a political machine. According to statements which appear well founded, Mr. Lyman, the only Republican member of the Civil-Service Commission at Washington, left that city for official business in the West only about a week ago, and was to return the last of this week, yet the change in the manner of designating the officers of local boards was rushed through in his absense. The responsibility for this action is laid at the door of Commissioner J. H. Oberly, who has been an active partisan politician, and used to be the Chairman of the Illinois State Democratic Committee.

Mr. Veazey, late Postmaster at Baltimore, publishes a letter in reply to Civil-Service Commissioner Lyman's recent report on his administration. He says when he entered the Post-office all of the 260 employees but six were Republicans. "My purpose," he says, "was to apply the civil-service rules to those inside of the service as well as those outside, and, as far as possible, without violating the law or sacrificing the business interests of the community, to displace all non-civil-service Republicans with civil-service Democrats. . . . The men composing the force at that time were, as a rule, faithful and efficient members of the Republican political organization, and this is the only uniform rule which can be declared with reference to them; they differed in everything except in politics. Some of them were excellent clerks, and some were admirable carriers, while others were utterly unfit for any position whatever. . . . I take pride and pleasure in advising your honorable Board that it is quite true that all the new appointees were appointed because they were Democrats, and I am glad to have been able to accomplish such gratifying results without affecting the efficiency of the postal service. I am sure that my course in this respect has met the approval not only of Democrats, but also of fair-minded Republicans, and I shall not concern myself as to the views of Mugwumps. I do not hesitate to acknowledge 'that I appointed Democrats because they were Democrats,' but not for that reason alone; I never appointed an incompetent or unreliable Democrat in preference to a reliable and competent Republican, and how shall Mr. Lyman say that I was guilty of discriminating when I appointed thoroughly 'honest and efficient' men?"

The Republican members of the Ohio delegation in Congress have all joined in a petition to the Senate Committee to reconsider their decision not to investigate Mr. Payne's election; and Senator Sherman has added to their request his endorsement, with the statement that he is perfectly willing to have it known what he has to say on the subject. Messrs. Butterworth and Little have also addressed a personal letter to Chairman Hoar, saying they have new and important evidence to lay before the Committee.

The Pennsylvania Republicans on Wednesday carried out the programme of the Boss Quay Machine and nominated Gen. James A. Beaver for Governor by acclamation; William T. Davies of Bradford County for Lieutenant-Governor; T. J. Stewart of Montgomery County for Secretary of Internal Affairs; A. Wilson Norris of Philadelphia for Auditor-General; and F. A. Osborne of Luzerne County for Congressman-at-Large. The platform favors the Inter-State Commerce Bill, demands the passage of a law prohibiting the importation of foreign pauper labor, calls for the protection of farm products against fraudulent imitations, and "the enactment of proper laws affording facilities for conference and arbitration based upon the principle that all men are free and equal, and directly recognizing the equality of all the interests involved—the workers, the employers, and the people at large"; arraigns the Democrats; praises the high tariff, and asks the Legislature to submit a prohibition amendment to the people.

The Arkansas Democrats on Wednesday nominated S. P. Hughes for Governor, E. P. Moore for Secretary of State, W. E. Woodruff for State Treasurer, and Daniel W. Jones for Attorney-General. The platform favors a tariff for revenue only, and unlimited coinage of silver.

The Democrats and Greenbackers in Iowa have fused, the Democrats nominating the Secretary of State, Auditor, Attorney-General, and Clerk of the Supreme Court, and the Greenbackers the Treasurer.

The Massachusetts Legislature on Wednesday passed a bill appropriating $20,000 for entertaining President Cleveland in case he should visit the State this summer. It has adjourned its session.

Ex-President Hayes, in an address at Toledo, O., attacked President Cleveland's vetoes of fraudulent pension bills, saying that the President's action was "contrary to every tradition of the country, and one which would meet with no approval from the patriotic and the just."

Judge Barrett of this city, on Friday, sentenced the Theiss boycotters to terms of imprisonment ranging from one year and six months to three years and eight months. In pronouncing sentence Judge Barrett said: "You have violated public right and opinion. Your offence is not short of blackmail. The distribution of circulars by you in places of business is conspiracy, and punishable as such. Your conduct, if unpunished, would lead to savagery. You may have been misled by bad advice, but your counsel should have rebuked you. You did not use the money for your own advantage and this palliates your offence. I shall not impose the extreme penalty of the law."

At a meeting of the directors of the New York Central and Hudson River Railroad Company on Wednesday a letter from Cornelius Vanderbilt to President Depew was read, in which Mr. Vanderbilt said: "I have had plans prepared for a building 80 feet front by 40 feet in depth, to be used for the benefit of railroad men in the service of the companies centring at the Grand Central Depot. It will be a substantial structure, with bath-rooms, gymnasium, and bowling alleys in the basement; reading-rooms, library, room for games, and offices on the first floor; a large hall for general meetings and rooms for classes on the second floor; and rooms for janitor's family and sleeping-rooms for men coming in late or detained in the city over night in the upper story. I wish you to lay before the Board of Directors this proposition: If the company will set apart the land at the corner of Madison Avenue and Forty-fifth Street (40 feet on the street by 80 feet on the avenue) for the use and purposes for which such a building would be erected, I will bear all the expense of construction and of fitting amd furnishing it ready for use." The directors authorized President Depew to accept Mr. Vanderbilt's offer and thank him.

Prof. Timothy Dwight was on Thursday inaugurated as President of Yale College. In his inaugural address he pledged himself to carry on the present policy of Yale College, looking to its development towards a great University, preserving what is best in its traditions. He spoke strongly in favor of the ancient classics.

William Walter Phelps has been reëlected a member of the Yale College Corporation.

The Harvard Freshmen crew won the boat race at New London on Thursday by three lengths; Columbia second; Yale out of the

race because her boat upset at the half-mile. Yale defeated Harvard in the University boat race at the same place on Friday, and also won the intercollegiate base-ball championship by defeating Harvard at Hartford on Saturday by 7 to 1.

Paul H. Hayne, the Southern poet, is dying.

FOREIGN.

John Bright addressed a large audience at Birmingham on Thursday night. In the course of his speech he said in substance: "The Liberal leaders had generally followed the course adopted by Mr. Gladstone in preference to following their own convictions. Some intimate friends of his had no notion of anything but following where Gladstone led. They reminded him of Cook's tourists, who enjoyed great security because they were 'personally conducted.' The old story of Ireland had nothing to do with the question. It was unbecoming in the Premier to make a long speech telling what had happened in Ireland a century ago. Going back would show the enormous progress of Ireland during the past fifty and even twenty years. The whole tone of Parliament towards Ireland had altered. He said he was entirely against anything in any shape called a Parliament at Dublin. He was also opposed to the monstrous proposition to purchase estates. But for the bill to revolutionize Ireland, nobody would have dreamed of so extravagant a proposal. In regard to the land, the political scheme made the economic scheme necessary. While the economic proposals were condemned, the political bills proposed would create a government in Ireland that would be untrustworthy as regards the first duties of government, namely, the preservation of property and the security of public order. Mr. Bright proceeded to suggest, as an alternative to the Government's proposals, that a permanent committee of Irish members be formed, and that Irish bills after the first reading be referred to this committee. The committee shall have a special place of meeting at Westminster, appoint its own chairman, and have power to decide whether a bill is acceptable. No English or Scotch member shall be appointed on the committee. The House shall only have power to consider a bill on a report of the committee. He admitted that the plan was simple, and depended upon the honest working of the Irish party in combination in the House of Commons. Assuming that there was a moderate loyal spirit in the Irish party, the plan would succeed, but if Irishmen were disloyal, neither this nor the Government plan would succeed. His suggestion might be called one of the unexhausted resources of civilization which should be tried before they capitulated to one of the worst conspiracies that ever afflicted any country."

Mr. Gladstone has written a letter to Mr. John Bright, in which he says: "I am sorry to be compelled to again address you. In your speech at Birmingham you charge me with having successfully concealed my thoughts last November. You ought to know that this is not a fact, for in reply to others, from whom this gross charge was more to be expected than from you, I pointed out that on November 9 I told my electors in Edinburgh that if the Irish elections went as I expected, the magnitude of the subject they would bring forward would throw all others in the shade, and that it went down to the very roots and foundations of our whole civil and political constitution. Do you now adhere to your accusation? Second. You say that I described a 'conspiracy' now existing in Ireland as marching through rapine to break up the kingdom. This also is contrary to fact. In 1881 there was, in my opinion, such a conspiracy against the payment of rent in union counties, and I so described it. In my opinion there is no such conspiracy now, nor anything in the least degree resembling it. You put into my mouth words which, coming from me, would be absolute falsehoods. Third, you charge me with a want of frankness because I have not pledged the Government to some defined line of action in regard to the Land Bill. A charge of this kind as between old colleagues and friends is, to say the least, unusual. Evidently you have not read the bill or my speech introducing it, and you have never been concerned in the practical work of legislation on difficult and complicated subjects. The foundation of your charge is that on such a subject I do not, in the midst of overwhelming work, formulate at once a new course and method of action without consulting my colleagues. It might have occurred to you, who have been in the Cabinet, that such a course on my part would have been indecent and disloyal, and that I should greatly prefer to bear all the charges and suspicions which you, unexpectedly, are the man to fasten on me. For you state that you are convinced that it is my intention to thrust the Land Bill through Parliament. If I am a man capable of such intention, I wonder that you ever took office with one so ignorant of the spirit of the Constitution and so arbitrary in character."

Lord Salisbury has written for publication a letter denying in detail every assertion made by Mr. Parnell concerning the alleged negotiations made on behalf of the late Conservative Government to secure Irish support in return for the concession of home rule. In a speech in London Lord Salisbury said that he discussed the question of autonomy with Lord Carnarvon two days before the latter had his interview with Mr. Parnell, and that he (Salisbury) had emphatically assured Lord Carnarvon that the Government could not possibly entertain the proposition to grant Ireland autonomy. He wished to repel Mr. Gladstone's suggestion that Lord Carnarvon had done anything not consistent with most scrupulous honor. Lord Carnarvon had informed him of what had passed in the interview with Mr. Parnell. The information exactly coincided with Lord Carnarvon's statement in the House of Lords. He told Carnarvon in the interview with him that his objection was so strong that even if the Conservatives adopted a policy in favor of a Parliament in Dublin, he would refuse to join the Ministry.

Mr. Parnell addressed a large meeting at Wrexham on Thursday. In the course of his speech he said: "When I parted with the Earl of Carnarvon, then Lord Lieutenant of Ireland, I left the conference feeling that he favored the Irish cause, and that a home-rule bill and a land-purchase act would be passed by the Conservatives with Irish votes before the end of the session, with the obnoxious clause cancelled, but in the shape I had demanded on behalf of the Irish party. I had besides this the strongest reasons to believe that the Tories would have given Ireland home rule if they had been successful at the polls. If coercion be continued in Ireland, the national sentiment will be increased among the Irish people until it becomes uncrushable. Home rule, on the other hand, will unite the two countries in bonds of love and amity."

The British Parliamentary elections began on Thursday, most of the elections on that day being uncontested. There was one exception, at Colchester, where the Conservative candidate defeated the Liberal by a majority of 295, an increased majority of 129. But the Unionist total was less than the total Conservative poll of last year. On Friday a most desperate electoral struggle between the Gladstonites and the Unionists ended by the utter rout of the latter in the Parliamentary district known as the Leith Burghs. Mr. W. Jacks was returned to the last Parliament as a regular Liberal by a majority of 3,870, in a total poll of 8,840 votes. He opposed the Home-Rule Bill, but was nevertheless considered invincible in his district, and was nominated in the present canvass as a Unionist to continue his opposition to the Premier's Irish policy. The Tories left the field clear to Mr. Jacks. It was hard to find a candidate to oppose him, but at the last hour allowed by law Mr. Gladstone consented to run himself. Mr. Jacks became scared and withdrew, and Mr. Gladstone was elected without opposition. He was also returned from Midlothian. Mr. Parnell and Mr. Maurice Healy (Parnellite) were reëlected to represent Cork City in the House of Commons. They were not opposed.

The Gladstonians were confident that they should maintain their hold on Scotland. Their victory in Dundee was decisive, and agents reported that the agricultural vote was safe for the Ministerialists. But on Monday the Glasgow Radicals revolted. Of the seven contests in that city the Unionists carried three. Mr. Bradlaugh and Mr. Labouchere have been returned from Northampton, the former by an increased majority. Sir Charles Dilke was on Monday defeated at Chelsea by Mr. Whitmore, Conservative, the vote standing 4,304 to 4,128. This result has caused a sensation in political circles. In many constituencies the Gladstonian majorities have been reduced 1,000. The tendency of Monday's elections was so strong against Mr. Gladstone that the Liberals became much disheartened. Prof. Thorold Rogers was unexpectedly defeated. C. E. Lewis, Conservative, was reëlected in Londonderry over Justin McCarthy, Parnellite, by a vote of 1,826 to 1,724. In the last election the same candidates contested the district, when Mr. Lewis won by a vote of 1,824 against that of 1,795 for Mr. McCarthy. After the result was announced, a ballot-box which had not been counted was discovered. A recount gave Mr. Lewis a majority of only 3. A riot ensued. The police interfered, and a large number of people were injured.

Among the encouraging features of Tuesday's elections for the home-rulers was the defeat of the Right Hon. George J. Goschen, one of Mr. Gladstone's bitterest Unionist opponents, in the East Division of Edinburgh, by Mr. Wallace, the Gladstonian candidate, by a majority of 1,339 in a total of 5,937. In the last election Mr. Goschen was elected as a Liberal by a majority of 2,408 in a total vote of 6,266. Mr. John Morley, Chief Secretary for Ireland, has been reëlected from Newcastle-upon-Tyne by a vote of 10,681, an increase of 552 in his vote. At midnight Tuesday the Tories had elected 210 candidates, the Unionists 43, the Gladstonians 99, and the Parnellites 43. The net Tory gain at that hour was 21.

A riot at the Conservative Workmen's Club-house in Dublin on Monday evening was provoked by men in the Club. A Catholic procession passed the Club-house, which was crowded with men at the time. They attacked the procession with bottles. This attack was answered with threats and some stones. The Club people then literally showered bottles at the procession, and also fired a number of shots into it from revolvers. More than twenty were injured. The police surrounded the house, getting control of the premises, and finally arrested seventy of the inmates.

The German imperial revenue for the fiscal year 1885-1886 will, it is calculated, fall 17,000,000 marks below the estimate. The deficiency is attributed to a decrease, amounting to 20,000,000 marks, in the revenue derived from the sugar tax. The taxes on salt, beer, and spirits show an increase in their yields to the treasury. The new sugar tax law will, it is thought, produce an addition of 16,000,000 marks to the revenue.

The Servian peasantry generally are rioting. They refuse to pay the taxes levied since the unsuccessful war against Bulgaria, and maltreat the tax collectors. Their hostility to King Milan's Government is continually fomented by the Opposition party.

Owing to the greater strictness with which internal and customs revenues are being collected, Mexican treasury officials assert that the new fiscal year will show from 10 to 15 per cent. gain, which will amount to nearly $3,000,000 addition to the Federal revenues. President Diaz feels encouraged at the outlook and at the prospect of the establishment of national credit.

TWENTY-ONE YEARS.

THE national anniversary of 1886 is the twenty-first since that which immediately followed the downfall of the rebellion. The nation has thus come to its majority in the new existence which began with the end of the civil war and the abolition of slavery. The intervening period has been in a sense one of nonage, and it is hardly fanciful to regard the reunited nation as having only now come to the full stature of manhood.

For the first time in their history the people of the United States now feel an assured confidence in the perpetuity and safety of the nation. The danger of disunion shadowed the whole existence of the republic down to the war; the fear that irreparable harm might yet be done the country by the section which attempted secession has possessed a large share of the population since the war. One thing alone could demonstrate the integrity of the reunited nation, and that was proof that its government was as secure with the party which was strongest in the South in power as with the party which was strongest in the North. So long as hundreds of thousands of men believed that a party which contained half the people would plunge the country into ruin if it should come into power, real confidence in the republic could not exist. Nothing short of a year's peaceful administration of the Government by the party which they so dreaded could convince these hundreds of thousands of men that the country is truly safe. This test has been applied, and a host of people are drawing long breaths of relief at the evidence that their honest apprehensions were baseless, and that there are no longer any "rebels" against whom they must "vote as they shot." It is simple truth to say that there is now a more general, settled, and well-grounded confidence in the future of the republic than ever before since it was established.

This confidence largely grows out of the discovery that the nation no longer has a negro problem to settle. Before the war, slavery always threatened the attempt at secession which was finally made; for some time after the war emancipation did not give assurance of the black man's future. The race still suffers keenly from injustice, and it will long be handicapped sadly by its generations of servitude. But experience has shown that the negro is as safe with one party in power at Washington as with the other, and that his former masters are ready to give his children the education which is seen to be as essential for them as for the whites, in the interest of the latter quite as much as in that of the blacks. The education of colored children in free schools maintained at the public expense by the old slave States is proof that the negro problem is at last in process of solution.

Still another great gain is the staggering blow which has been dealt at the domination of the spoils theory of popular government. Pernicious and demoralizing as this theory was when originally formulated two generations ago, it was not until the population had reached 50,000,000, and the number of offices exceeded 100,000, that people realized all the dangers which it threatened. The "clean sweep" demand typified and embodied the doctrine of the spoilsmen, and when a new administration, involving a change of parties for the first time in a quarter of a century, refused to make a "clean sweep," the axe was laid at the root of the evil. A vast deal remains to be done before we shall have a thoroughgoing reform of the civil service, but the spoilsmen have already met their Waterloo—and they show that they know it.

There are dark shades as well as light in the national picture. While the black labor of the South is emerging from ignorance, the North is awakening to the danger of ignorant white labor. The fact that great bodies of men in the East and West have avowed and endeavored by force to establish the doctrine that a man shall not have the right to earn a living unless he subjects himself to the odious despotism of a secret, oath-bound "union," is an unwelcome revelation of the lack of intelligence among the masses of the newcomers from abroad. A body of workingmen who had been educated in the public schools of this country would never have tolerated such a proposition, and while some native-born Americans have participated in the recent assertions of this doctrine, its chief strength has been found among the ignorant laborers who have come to us from the lowest classes of every European nation. The work of emancipating such men from the shackles of ignorance is no small task.

The growth in the power of corporations is an unhealthy sign. The undue influence of these great aggregations of capital in our legislation, the demoralizing effect of their methods upon public men, are plain to the most careless observer. The wide ramifications of more than one vast monopoly, as they are sometimes exposed to view, are well calculated to alarm the timid. It is not strange that people are found who consider the dangers threatened by corporate power hardly second to the worst that the country has yet encountered.

The admiration — even the worship — of wealth, which characterizes a large share of the population, is a sign of the times which the thoughtful observer must note. Material success, as evidenced in the possession of a great fortune, is undoubtedly more highly valued now than ever before. The very rich man is the popular hero to an extent previously quite unknown in this country, and hardly ever equalled elsewhere. A million dollars now invest the most ordinary person with a degree of consideration which the most commanding talent may not insure the poor man, and too often ability stands no chance in a contest with a long purse when the two appeal for what should be that loftiest mark of public esteem—a high office in the State.

The "spread-eagle" oratory of the Fourth of July in the era before the war has gone out of vogue. The sobering effect of that great struggle is reflected in the quieter treatment of the anniversary. There was always something hollow about the oratory of that bygone period, for speaker and hearers alike realized, even if they tried to forget, the absurdity of celebrating the birth of freedom in a land which permitted slavery. The orator "let the eagle scream," and the audience applauded the national bird, in the hope of forgetting the "irrepressible conflict" of which everybody dreaded to think. The conflict having at last come and ended, so long ago that the baby then born is now a full-grown man, we approach the anniversary with a well-grounded confidence such as our ancestors never felt. If we do not make so much noise as they did fifty years ago, it is because we have learned that it is wiser to reflect upon the dangers which still confront us than to pretend that the republic has yet reached perfection. The comforting reflection is always present, however, that no peril can exceed those which we have escaped, and that a nation really united and free is prepared to meet any dangers.

SOME CRITICS OF THE GEOLOGICAL SURVEY.

THE invocation of the Divine blessing on our enemies is a natural accompaniment of the prayer to be delivered from our friends, and if there is a man living whom a decent sense of gratitude should move to pronounce that invocation, it is Maj. Powell, Director of the Geological Survey. This officer is now intrusted with the annual expenditure of a lump sum of $400,000, in his own way, through agencies selected by himself, in the preparation of a geological map of the United States. In deciding what a geologic map is, and how it is to be made, what regions should be first covered, what agencies to employ; in the adoption of methods of administration and in the fixing of compensations to be paid, he is subject to no legal limitation or control whatever, except such as the Secretary of the Interior may be able to exercise. Not two months ago it was authoritatively reported as the unanimous opinion of the joint commission on the survey that this power should be in some way restricted. And yet, last week, a proviso intended to limit the expenditure of the money strictly to the object named in the appropriation was voted down, with so near an approach to unanimity that not even a count was called for. Two days later the Committee on Appropriations in the Senate recommended a reduction of the Director's salary by $1,000. On a division this recommendation only received five votes. We doubt if there is any instance in the history of the country of an officer of the Government, in time of peace, exercising such powers and receiving such an endorsement in both houses of Congress.

If we ask why this endorsement was so emphatic, the natural answer will be that Congress was willing for the moment to sacrifice the usual precautionary provisions in making appropriations, for the sake of leaving untrammelled the administration of an officer whom they knew to be executing the duties of his office with the highest ability and integrity. If we go still further, and inquire why this confidence, we shall find it to be very largely the result of a series of unfounded attacks upon the Survey which have been made in various journals during the past twelve months. If there was anything open to criticism in the Director's conduct of his work, the authors of these attacks were singularly unfortunate in failing either to bring it to light or to guess at it. The published statements of the Director himself, and the result of examinations both by officers of the Treasury and of the

Interior Departments, show that all adverse statements were either pure fabrications and random guesses, or were founded on misconstruction of the law or of the facts. The more completely the affairs of the bureau were looked into, the less room was found for criticism. The natural result was that the principle involved was entirely overlooked in the reaction against such a mass of falsehood. Congress is evidently convinced that the present Director knows better how to spend his appropriations than Congress can tell him, and is not disposed to frame laws which, while guarding against the abuse of his trust by a careless and incompetent officer, would only trammel a careful and efficient one.

Under these circumstances we regret the publication of an ill-advised criticism of the Survey just issued from the Government Printing Office by the Chief of Engineers. Nominally, it consists of extracts from the report of Capt. George M. Wheeler upon the International Geographical Conference held at Venice in 1881. The extracts, however, are really a republication of the whole book except the sixty pages devoted to the work of the Congress. Why those were omitted, it is difficult to say. The body of the work is a description of the Government land and marine surveys of the leading countries of the world, including the United States. The moral of the story is everywhere kept in the foreground, and is, that in all countries, except our own, topographical surveys are under the direction of the military branch of the Government, and marine surveys under the naval branch. This moral is so obtrusive as to detract from the confidence the reader should be able to repose in the fulness and fairness of the statements. Lest it should be forgotten, it is reënforced by "little digs" at the scientific men of our own country. Capt. Wheeler speaks of the fashion among a certain class of scientific official specialists in the United States, who apply the name Geodetic Survey to a portion of their work. He tells us that no general topographical survey on a trigonometrical basis for the United States has yet been instituted. As the Geological Survey has for several years past been carrying on this work, we must charitably interpret this statement as meaning that no official knowledge of such a survey is in the possession of Captain Wheeler's department. Our readers will recollect the curious fact that the Engineers' Survey ten years ago had no official knowledge of the work of the Hayden Survey, but went on resurveying the regions which Hayden had already completed.

What connection the report on marine surveys has with any work of the Corps of Engineers or with the Geographical Congress, it is difficult to see. It looks very much as if this part of the report were an afterthought, prepared exclusively to support the project for transferring the Coast Survey to the Navy Department, which would be the natural complement of transferring the work of the Geological Survey to the War Department. A rapid glance at it shows no information which could not have been as readily compiled in Washington as in the countries in question. Of the Coast Survey Capt. Wheeler says: "In the United States the anomaly exists of a hydrographic survey *legally* consisting of a civilian head, with primarily army and navy officers and astronomers, etc., as assistants, under the administration of the Treasury Department." Following the example of the rest of the report, the main object is to make it evident to the reader that all marine surveying is in foreign countries conducted by naval officers under the respective navy departments. The report is made as available as possible for home use by placing in the background, or entirely ignoring, the most essential feature in which the organization of these foreign services differs from that proposed for our own in the event of its transfer to the Navy Department. They are, for the most part, not made or directed by "sailor men," officers in the line of naval command, but by a selected and specially trained "staff corps" which our navy has not and does not intend to have. Thus Capt. F. J. O. Evans, R. N., who is named in the report as Hydrographer to the Admiralty, was a "staff captain," who, in the order of command of a ship at sea, would have been preceded by any lieutenant on board. The Hydrographic Office of England is, in fact, not classed as naval at all, but as one of the civil branches of the Admiralty. In France the surveying is, for the most part, not conducted by sea-going officers at all, but by the corps of hydrographic engineers ("ingénieurs hydrographiques"), who never had a naval education. In Germany, also, the chief of the Hydrographic Office belongs to the "marine staff," and his office is a permanent one. All this is very different from our plan of having sea-going officers of the line take their turn in conducting the work of the Coast Survey for three years at a time, as they command a navy-yard or a ship; and Capt. Wheeler, by ignoring it, deprives his report of all the weight it should have as an official paper.

THE RAILWAY POSTAL SERVICE.

For some unexplained reason the railway postal service was not covered by the civil-service rules when the present Administration came into power. It ought to have been, but it was not. There is no reason in the world why clerks in the large post-offices should be appointed and promoted by competitive examination, and the clerks in the railway postal service should not. On the contrary, the service rendered by the railway clerks is even more laborious, and calls for greater skill, intelligence, integrity, and bodily endurance, than that rendered by the clerks in the post-offices.

Mr. Vilas ought, when he came into office, to have obtained from the President an order putting this branch of the service also under the rules, in view of its very great importance to the public, and especially the commercial public, to whom the prompt delivery of letters is a matter of so much concern. The whole railway postal service is in fact organized and exists for the promotion of promptness. It sorts the mails en route, and therefore makes a clear saving of the time which would be passed in this way in the post-office. But this sorting is done under great difficulties—that is, is done with defective light and under the oscillation caused by the rapid motion of the train, and much of it is done at night, and therefore calls for strong eyes, vigorous bodily health, and thorough devotion to duty.

Mr. Vilas seems to have been fully conscious of all this when he came into office. Whether he sought to have this branch of the service brought under the rules we do not know, but he issued the following order within a few weeks after taking charge of the Post-office:

> "March 31, 1885.—Railway postal clerks who have become efficient and valuable men, against whom no just complaint of neglect, inattention, or want of fidelity, honesty, or efficiency can be brought, need have no fears of being disturbed so long as they continue to render meritorious and faithful service."

Now, we are sorry to say that he does not appear to have lived up to this order for a single month. From the very first this most important branch of the public service was in a greater or less degree given up to the politicians. They were allowed to make it a receptacle for the worthless henchmen whom they could not, in the old fashion, get into the great post-offices covered by the rules. Railway postal clerks who "had become efficient and valuable men," and against whom "no just complaints" could be be made, have been not only "disturbed," but removed to make room for new and untried men, who had nothing to recommend them but their political influence. Men who have rendered and were rendering "meritorious and faithful service" have found that it did not protect them against arbitrary dismissal. In other words, the Postmaster-General's pledges have proved valueless, and because valueless, a discredit instead of an honor to him and to the Administration.

This is not all, nor the worst of the matter. The state of disorganization and inefficiency they brought about in the railway service has of course done much to deprive the public of the benefit of the greater efficiency introduced into the large post-offices by the new rules. No matter how well the work of the New York Post-office is done, for instance, in making up and despatching the mails, it may be largely wasted or neutralized by the inefficiency of the sorters in the mail-cars on the roads. We can testify as a matter of experience that this is true. Irregularities and delays in the transmission of the newspaper mails have increased during the past year, and we have found almost invariably that they were due to diminished efficiency in the railway postal service.

The postal clerks have organized a trades-union, and are threatening a strike unless the Postmaster-General redresses certain specified grievances, the principal of which is the repeated violations of the promise which we have quoted above. We are as much opposed as any one can be to the formation of unions with striking powers, among any body of men engaged in a public service. No policeman, or railway official, or telegrapher ought, we hold, to consider himself at liberty to join in any movement against his employers which involves the infliction of enormous loss and inconvenience on the public. Anybody who tries or arranges to make his private quarrels a

public calamity richly deserves the punishment of a public enemy or traitor. But we are bound to say that if a strike among public servants could ever be justifiable, it would be among the railway postal clerks. They have been badly treated, and in treating them badly Mr. Vilas has shown an indifference to the public interests which has sorely disappointed his best friends. We can hardly expect, and he can hardly expect, the Postal Clerks' Union or "Brotherhood" to consider the loss and inconvenience they will inflict on the public by striking, when he has considered them so little as to let politicians get into the mail cars. It is high time for this wretched scandal to cease, and we trust that if Mr. Vilas does not feel equal to cope with it, the President will take it in hand and make an end of it.

RICH COLLEGIANS.

THE very burning question of the influence of rich young men in college came up once more at the commencement dinner at Harvard the other day. The Chairman, Mr. Leverett Saltonstall, started the subject in his address by saying:

"With this great growth and these improvements have followed other changes, which I regret to say are of a nature to fill us with anxiety. I refer especially to the growth of luxury and extravagance among the students.

"This is doubtless the natural result of the enormous increase of wealth and the rapid accumulation of vast fortunes. Not only has the old simplicity of life vanished, and habits of economy, so important to the sons of the rich, as well as to those of moderate means, been destroyed, but much of that kindly feeling which used to exist between members of a class has been lost.

"Brothers, I speak plainly on this subject because I consider it an evil which cannot be remedied by faculty or overseers, but only by the good sense and united action of those who send their sons hither. It is, I know, impossible to return to the simplicity and cordial feeling of former college days, for it must be within the college walls much as it is outside of them. The number of students is four or fivefold greater than in my day. The college is rapidly growing into a great university. Still, it is to be hoped that some strong effort may be made to remedy this great evil by all who care for the college."

President Eliot sought to break the force of this criticism by remarking on the other side:

"It is true that there has been a deplorable increase of luxury among a small fraction of the students of the university. No one can deplore it more than the college faculty; nevertheless, let me point out that it is an exceedingly small fraction of the college against whom this charge can be made. In the first place, not more than 10 per cent. of the college students can on any principle be called rich. A great many people have a totally erroneous impression about the average character of the Harvard students in this regard. They think that all the students are rich men's sons. Nothing could be further from the truth. Among those students who may fairly be called rich there is also a large percentage of the sons of families who know how to use riches—who have been accustomed to them; and the evil of which the president of the day justly complained arises from a small fraction even of those who are rich, who are generally the sons of people who have had no experience in the possession of riches. [Applause.]

"Now, the great bulk of the students of Harvard College are the sons of people in moderate circumstances. But, going beyond them, I find that nearly one in five of all the students of the college has been aided from scholarship, beneficiary, or loan funds—nearly one in five of the entire number of students. They have been aided because neither they nor their families can afford to support them here completely, and meet all the expenses of their education."

Mr. Saltonstall's statement of the case would not have been complete without President Eliot's. People undoubtedly do exaggerate very much the numbers and activity of the undergraduates at Harvard who spend large allowances extravagantly. Many parents of modest means hesitate much about sending a boy there, in the belief that he will be surrounded by the sons of millionaires living like Sybarites, and looking down on poor scholars. The truth is that not only, as President Eliot points out, is the number of rich men's sons small, but the number of the sons of vulgar rich men—that is, of men who have recently acquired money, and do not know how to spend it—is still smaller. The great bulk of the students are men of small means striving to get an education through great self-denial either on their own part or that of their friends. One-fifth of them, or nearly a whole class, are actually helped through college by the aid of some sort of gift or endowment.

This is all true, but it is also true that college extravagance is not only an evil, but a growing evil, and it ought somehow to be checked or abated. The number of men who are acquiring great fortunes in all parts of the country without possessing any of the traditions of refined or dignified living, is larger and larger every day. After they have got over the effects of the first sweets of wealth, the fine houses, the numerous horses and vehicles, and the yachts, and the diamonds for the wives, they turn their attention to "social position" for the "boys," and if possible—that is, if the boys are not too old or too spoiled to submit to preparation for college—they send them to Harvard. It is only very rarely that the sons of such men have the habits, or aims, or the kind of ambition necessary to make successful students; so, in order to enable them to make a figure of some kind, the father loads them with money. He gives them sometimes larger incomes than the President or any of the professors—larger than 90 per cent. of professional men make by hard labor. He gives it to them, too, with the intention that they shall make a show with it. Thence come the luxurious clubs, the rooms furnished like boudoirs, the horses, the dog-carts, the thousand little ways of spending money easily and carelessly, which now are characteristic of "the Harvard man" of a certain type. The example of all this does not touch the poor fellows who are holding on to college by the skin of their teeth, and scorning delights and living laborious days as the only means of avoiding instant ruin. They see all this splendor afar off, and spend few thoughts on it. But it does greatly increase the difficulty which the very large class of young men of more moderate means, who come more or less in contact with the gilded youth, without actually belonging to the same set, and who may be extravagant now and again without perishing, experience in living within their incomes, and in buckling down to their work on fine days. It makes the college clubs, which are now nearly as luxurious as the Somerset or the Knickerbocker, more and more attractive, and the study and the library less and less so. It greatly increases the importance of knowledge of wines, and cigars, and liqueurs; and, worse than all, it breeds a certain very thinly veiled contempt for the man who "grinds" over the college curriculum, as compared to "the man of the world," who knows what is going on in "society." How far this influence goes in college, it is of course impossible to say. But no one who knows college life well will deny that it is wide-reaching, and that the number of those who are not in some degree touched by it, and find their lives made harder by it, is small.

It also undoubtedly has much to do with the extraordinary interest in the athletic sports. These sports are actually carried on in every college by a very small number of men. All that the others have to do with them is to contribute money towards the expenses, and travel long distances to act as "shouters" at the various inter-collegiate contests. Indeed, the extent to which participation in what is called "college life" is now confined to subscribing money to clubs, societies, and crews, and teams of various sorts, is something startling. Of course the rich men are more active in getting up things to subscribe to, and subscribe more than anybody else. Consequently the more the glory of the college becomes dependent on subscriptions, the more does wealth aid a man in becoming a college model and champion.

What the Faculty can do to remedy this state of things it is hard to say. But it undoubtedly can do something. We doubt if an appeal to rich parents on the subject of allowances would be thrown away, except in the case of the coarsest and most ignorant. All wealthy fathers who had ever tasted mental cultivation themselves — and they now furnish a large body of undergraduates—would certainly respond to it. The clubs surely, too, could be subjected without difficulty to some kind of sumptuary regulation, which would prevent their being close copies of the clubs in all the great cities. Moreover, what is there to prevent the Faculty requesting a young man who is distinguishing himself by his extravagant expenditure, to withdraw, just as if he drank too much or was licentious, on the simple ground that his example was pernicious? We believe it would be easy for any college in the country to be made so unpleasant for the luxurious idlers that they would keep clear of it, without instituting a very rigid censorship of anybody's personal tastes or habits. And it would do a world of good to many a groping millionaire to be taught sharply that in the new world which he had entered, money was not the supreme good.

THE METAPHYSICS OF CHAUVINISM.

AN anonymous writer in the Berlin *Gegenwart* has lately been giving to the world some very curious literature. He writes under the heading, "If so, so be it," and takes the field ostensibly for the purpose of discussing the ability of Germany to meet France in another war. Upon taking up an essay so labelled, one who is familiar with the traditions of this sort of writing thinks at once that he knows what is awaiting him. He expects an array of facts and figures, with perhaps such an expression of defiance or of solicitude as these facts and figures seem to call for. He expects an estimate of each party's strength in men and munitions of war; a comparative statement concerning infantry and cavalry, concerning guns small and great, and concerning ironclads and torpedoes. He ex-

pects, also, that the relative quality of these destructive appliances, and that questions of organization, discipline, and generalship, will be duly taken into consideration. Finally, he will be on the lookout for some confident remarks regarding the relative bravery of each party's men. Such are commonly thought to be, though the list makes no pretence to being exhaustive, the main sources of an army's strength. Now these, with the exception of the last, are all, so to speak, physical factors. The strength of an army is supposed to have as its basis the physical force represented by the men who compose it and the tools they use. What military science does is partly in the way of increasing the amount of force that can be wielded by a given number of men, and partly in the way of teaching them how to use this force more effectively than they otherwise would. The science is still chiefly a matter of skill in the manipulation of physical forces.

That the moral quality of the individual soldier is likewise a factor in the strength of an army, is of course no secret, and there are many historical instances in which this seems to have been the great and decisive factor. But, with all deference for the lessons of history, there would appear to be no need of any confusion of mind as to what is meant when the phrase "moral quality" is used in such a connection. It means little more than willingness to face death under orders, and this is a quality dependent almost entirely upon previous discipline. It has little to do with character in the higher import of that word; little to do, that is, with the general condition of the soldier's ethical, æsthetic, and scientific faculties. It has also less to do than we are prone to imagine with the soldier's deliberate, reasoned conviction regarding the value of that for which he supposes himself to be fighting. It may be agreeable to polite vanity to think that a company of gentlemen can whip a regiment of clowns, just because the gentlemen are gentlemen and the clowns are clowns. It is, however, not true, especially if the clowns have the better tools and are themselves officered by gentlemen. The familiar generalization that France was beaten in 1870 by the German universities, has undoubtedly some truth in it; only we must beware of concluding that the decisive fact in the war was in the relative culture of the private soldiers engaged on either side. Culture goes down before superior shooting.

These remarks are not put forward as anything revolutionary; on the contrary, they are supposed to reflect the general opinion of the time in matters military. We were therefore surprised and straightway interested when we found a countryman of Bismarck apparently arguing that the most important factor in successful war is the moral character of the soldier. We say "apparently," since we are constrained to gather the writer's meaning from out the sinuosities, obscurities, and general splay-footedness of the most atrocious style it has ever been our lot to encounter even in a German periodical. Divested (in part at least) of its vagueness and of its metaphysical subtleties, the author's drift is something like this: War is a mode of national self-affirmation, and as such is not an evil but a blessing. It contributes to the national welfare in the same measure that an equal putting forth of strength in peaceful ways would contribute. Self-affirmation, or struggle for existence, being the law of the world, one nation has a right to make war upon and conquer another simply to assert its own superior title to leadership in the world's affairs. Victory goes to the worthiest, and is, in fact, nature's certificate of a people's fitness to live. It would, however, be a mistake to suppose that worthiness or fitness to live is identical with physical strength. It is rather a compound of physical strength and of various moral and intellectual qualities, the sum total of which our philosopher calls virility of culture (*Männlichkeit der Kultür*). Virility of culture is really the great desideratum if a nation is to "overcome the obstacles which hinder its free development," or, in other words, if it is to conquer its enemies in war. And this desideratum, so far as masses of men are concerned, must be secured by an educational process. The individual must be *taught* patriotism by being taught the value of his country's culture and the grandeur of his country's mission to the world. When he is so taught he will not only wish to see his fatherland prevailing among the nations of the earth, but he will be ready to contribute his own life to this end when need arises. The writer concludes in a hortatory strain:

"Let us nourish the soldier with all the true, the beautiful, and the good in our culture, so that he may know of it and may carry it against the enemy on the battle-field. Let him be given, not narcotic drinks, but enduring strength to meet death. There need be no fear of his becoming imbued with an excess of romantic idealism. It is an old experience that, in order to hit the good, we must aim at the best; and that which is best in man and best worth preserving springs from his idealism. . . . All work for civilization is of the nature of battle against that which is of inferior value. Let us do each his own part that the virility of German culture may surpass that of France, and we shall beat France in battle. *In hoc signo vinces.*"

This manner of talking would have, perhaps, but little interest were it simply an isolated expression of patriotic ardor. But it is more than that. It shows us the mental condition to which large numbers of intelligent Germans—men, too, of naturally humane instincts—are being brought by the brutal logic of contemporary European politics. These men are coming to look upon the present policy of blood, and iron, and defiance, not as a reproach to humanity, to be defended at best only on grounds of temporary necessity, but as really the last and highest word of civilization concerning the way in which the nations of the earth should dwell together. And so they talk to us, not of the hideousness and brutality of war, but of its dignity, majesty, and momentous bearing upon the self-consciousness of a people. We hear learned professors, who would certainly prefer to be gentle with a kitten, discoursing upon the ethico-social value of military discipline, and upon the beautiful upbuilding in manliness which comes of having gone through a course of training the ultimate purpose of which is to enable a people to slaughter its neighbors in as large numbers and with as much despatch as possible, whenever diplomatic lubricity shall give the signal. It is painful indeed to find men of culture, who have inherited the humanistic traditions of the great era of German letters, engaging in the abominable work of gilding with the language of poetry and philosophy that which is nothing more than the morality of the prize-ring (or say, rather, of a herd of swine) exalted into a canon of international politics. Especially painful is it, at least to the scholar, to find these men perverting the lessons of history, and misusing the inferences of natural science, in the interest of a national ideal which is radically false, and false because it is brutal instead of human. In ethics what is inhuman is wrong. It makes no difference what view one may take with regard to the ultimate nature of ethical sanctions; settle that question as we will, there is still a difference between a man and a hog, and that difference is as well worth accenting in the national as in the individual life.

From the poet we naturally expect poetry. Readers of that amiable dreamer, Novalis, will perhaps recall this deliverance: "War in general seems to me a poetic transaction. The people think they must fight on account of some paltry possession or other, and they do not know that the Genius of Romance is driving them on to bring about a mutual destruction of ineptitudes. They do but bear arms in the cause of poetry, and both armies follow an invisible banner." To the purely historical vision there seems a measure of truth in what Novalis says. At least we can affirm that what he says is *sometimes* so. Often in the history of humanity has some bloody battle been the starting-point and apparently the indispensable preliminary condition of a glorious career of national achievement. Who can estimate the value of Marathon and Salamis in the national life of Greece? And, we must admit, it is not alone from the great battles in behalf of life or liberty, not alone from those defensive struggles which the moral sense of men instantly approves, that good has come in the process of the years. Wanton wars have also brought blessings in their train, and in such cases posterity is wont to deal more and more gently with the wantonness. Looking back to the greatness of the foundations that were laid by the Seven Years' War, history judges more and more leniently the morality of Frederick's first invasion of Silesia. One may even see reason to think that the Franco-German war of 1870 has proved of prodigious benefit to both the parties concerned. In these cases, perhaps, and in many others that might be named, the soldiers who fought, followed indeed an invisible banner, and wrought better than they knew. But can we affirm that this is always so? How about the Thirty Years' War, the Succession Wars, the Crimean War? How about the greater part of the fighting that men have been doing ever since we know anything about their history? Does any sane man, surveying the whole field of history as thoroughly as one man can, find there reason to conclude that the cultivation of the military spirit has been for the good of mankind? That we can see how the Power that rules the world occasionally transmutes the poison of human brutality into food for humanity, is no reason why we should systematically expect this result, and so put our faith altogether in poison.

Let the deep and sagacious German mind not be deceived by its own historical learning. If there be apparently some truth in Bulwer's saying that the "frenzy of the nations is the statesmanship of fate," that is only because fate has had so much of frenzy and so little of anything else to work with. It is the business of nations, as of individuals, to be ruled less and less by frenzy and more and more by reason and humanity; and as they advance in this direction the "statesmanship of fate" can be trusted to take on a fairer aspect than it has hitherto assumed. In the other direction, the direction of fighting, nothing is to be hoped for. We began with that ages ago, and the naked fact may as well be recognized that the propensity for fighting is a relic of animalism. What we need is to get rid of this propensity as rapidly as possible, and to put it behind us forever; not to call it by fine names and to incorporate it with our highest ideal of human perfection. No; neither Germany nor any other country has a valuable legacy for posterity which needs to make its way by the aid of gunpowder and dynamite.

THE YALE-HARVARD UNIVERSITY RACE.

NEW LONDON, Conn, July 3.

WHEN Mr. Rives, the referee, called the eights into line at six o'clock this evening, the sight of the two shells lying at the very foot of the grand stand on Winthrop's Point must have suggested

to more than one old graduate the college regattas away back in the "sixties," when Harvard and Yale, rowing three miles with a turn, started and finished their annual race before the stand at Lake Quinsigamond. To those on the press boat who had been accustomed to watch the beginning of the race each year on a steamer that usually lies over on the east shore, and at least a quarter of a mile away from the eights, which have always started from skiffs anchored close up to the west bank, it was a novel and exhilarating experience to be able to look down into the shells and mark the play of well-developed muscles, and to note the very expressions on the faces of the sixteen men as they got in readiness at the referee's command.

An adverse wind, blowing directly up the course and "freshening" the water to a condition unfit for racing craft, caused a half day's postponement from the morning hour originally named for the race. "The usual postponement," it used to be called in the old Saratoga days, but spectators accustomed to the prompter and more efficient management that has hitherto characterized the New London era of college rowing, found it an unexpected and vexatious annoyance. As the rules expressly provide that the race shall be rowed with the ebb tide, there was nothing for Mr. Rives to do but to put the race over for twenty-four hours, if either side had so insisted. He very wisely suggested, however, to the two captains that they might by mutual consent waive the strict letter of the rule, and by starting at the finish line and pulling up the river, row the race to-day and still get the benefit of the tide. The suggestion was at once agreed to, and the start was made off the grand stand at Winthrop's Point, near the city, within half an hour of the time set.

Harvard was the first to appear, getting into the shell from their launch a few minutes after six. As they paddled down to the post they looked as strong and well set up as the best crews which either college has sent to New London. With perhaps a single exception, every man in the boat was full-chested and thick-set; but twenty strokes was enough to convince any experienced observer that their stroke was radically defective. Even in their preliminary paddle it was plain to see that the long, swinging action which has marked the style of all Harvard eights for the last nine years had been lost. The Yale eight, on the other hand, though certainly the inferiors of their opponents in muscular development and seasoned strength, had been taught to row a much more effective stroke. Their body swing was perfection, and they got into the water together with just enough of a "catch" for impetus and not enough to reduce the "heave" that has marred the style of so many Yale crews in years gone by, and sent the nose of their shell bobbing up and down. It seemed as though the Harvard men, in their anxiety to avoid this very defect, had gone so far to the other extreme that they failed to do any effective work with the oar until the stroke had been pulled half through. It was said a year ago that the Harvard crew had been coached to mind their "time in the water," and to let their "time in the boat" take care of itself. While in 1885 their oarsmanship in the latter particular was open to criticism, in the former they were above reproach, and their "watermanship" generally was something marvellous. To-day the unevenness of their body swing had become so great that it affected their work in the water, and their oars failed to get in with anything like their precise and delicate manipulation of a year ago.

Mr. Rives had much trouble in getting the crews into line. Owing to culpably bad management, no starting skiffs had been anchored off the flag, so that the eights had to be "lined up" in the old-fashioned way, alternately backing and filling at the order of the referee. The word was given at 6:29, the crews caught the water simultaneously, and the race began. Harvard started at a much faster pace than any of the newspapers have credited her with. Her stroke, accurately timed, was nearly 40 to the minute. That is to say, the first 39 strokes were pulled and the crew were swinging forward on the 40th just as the second-hand touched the dot. Yale went off at 36, and although Harvard's sharp burst for the lead probably succeeded in securing for her a slight advantage (at least so it appeared from the press boat, which lagged uncomfortably far astern), it was only temporary, for, before a hundred strokes had been pulled, Yale's nose began to show in front, and at the half mile the lead was undoubtedly with her never to be lost again. At this point both eights were rowing at 37, for although Mr. Penrose, the Harvard stroke, had dropped his pace, the crew, owing to their short and "snatchy" actions in the water, appeared still to be "hitting her up" at three or four strokes per minute more than Yale; and they seemed to labor at an ineffective spurt, while their opponents, swinging evenly, catching together and pulling their stroke clean through, pushed gradually but surely ahead. The mile flag was pased with Yale leading by from three to five seconds. Both crews were pulling at 36.

There was no official time accurately taken except at the start and finish, and the guess-work from the press boat, a quarter of a mile astern of the shells, is utterly unreliable. At the mile-and-a-half flag, the distance between the boats had widened by at least another length, and the difference in styles of rowing became more and more emphasized as the race proceeded. At this point Yale rowed at 35, Harvard still pulling at 36. For the next mile there was little change in the relative positions of the two shells, the strokes setting the same pace as before, until the 2½-mile flag, when Harvard dropped to 35, Yale leading by three or four lengths of clear water. As they cleared the flag, Penrose began to quicken and sent his pace up to 38. The whole crew responded vigorously, and, rowing in as good form as at any time during the race, they seemed to draw up on the leaders, hand over hand. But the spurt was short, and though dashing and plucky it did not suffice to cut down the lead. At the 3-mile flag Yale increased her pace to 36, with Harvard still dashing away at 38, and it seemed from the press boat (which the management had very carelessly allowed to become overcrowded with spectators, not representatives of the press, so that it fell hopelessly behind) as though the two crews were on even terms. Mr. Caldwell, the Yale stroke, rowed, however, with excellent judgment at this point, and did not allow himself to become at all flurried by Harvard's spurt. He waited until they had come within two lengths or so of his rudder, and then, just as the Harvard spurt began to die away, he added a single stroke to his pace, and drew easily ahead, this time taking a commanding lead, which he maintained without difficulty to the finish. Both crews began the last half-mile at 35, and both spurted splendidly on the last quarter, Yale running up to 38. A tug in the line of vision prevented the spectators on the press boat from catching Harvard's rate, though it was plain to see that she was spurting, too. Both eights went down the home-stretch at a rattling pace, Harvard pulling with a snap and good form seldom seen in a beaten crew, while Yale flew over the line the winner by seven or eight lengths in the very fast time of 20 minutes, 41¼ seconds. Harvard was 24½ seconds slower.

The race was pulled with great spirit, and although the better crew led practically from the start, it was an eventful and exciting struggle. Mr. Cook deserves great credit for his masterly work in licking into shape a raw crew, who a month ago were certainly much behind their Cambridge rivals. Harvard's defective stroke made victory impossible, in spite of her apparently superior material. She will have to go back, as Yale's bitter experience has already forced her to do, to the successful teachings of the past, retaining certain undoubted advantages gained from her work with Faulkner under Capt. Storrow. Her crew did not row a "professional" stroke, as many have foolishly and rashly declared simply because they failed to win, but they emphasized one or two defects of last year.

G. W. G.

THE TWO PARLIAMENTS OF 1886.

LONDON, June 26.

IT will be necessary to speak in the plural of the Parliaments of 1886. There has been a spring Parliament, and there will be an autumn or winter Parliament. The first, dissolved to-day, has been a Parliament of one session. The second, it is probable, will have the same character. If so, the Parliamentary year will be, if I may venture to say so, without going very minutely into the remote antiquities of the subject, or to the dark ages of the Constitution, unique in English history. There have been only two Parliaments during the past hundred years which approach it in the brevity of their duration. The Parliament of 1806 lasted four months and a half. The Parliament of 1830 lasted nearly six months. That which has come to a close to-day, though summoned for the 12th of January, was not organized for business until the 21st, when the Queen's speech was delivered. It has therefore had a working, or rather a talking, existence of rather more than five months. The precedents, however, of shortness of life are not really to the point. In 1806 the Granville Administration was dismissed by the King because it had brought forward certain measures for the relief of the Roman Catholics. Though the Portland Ministry, which succeeded it, had the support of the House of Commons, a dissolution took place in order that the country might be consulted as to the action of the King in changing his advisers. "You have taught me," George II. said once to the elder Pitt, "to look elsewhere than in the House of Commons, to the sense of my people." It was not through any prudence of constitutionalism that George III. took this course. He knew that the "No-Popery" feeling was as strong in the country as it was in his own mind, and with the sagacity which he not unfrequently displayed, he desired to strengthen himself against future attempts to force the Catholic question upon him by a decisive popular vote. The appeal was successful.

The one-session Parliament of 1806 does not therefore afford any analogy on the grounds of its dissolution to that of 1886. The House of Commons was not at variance with the Ministry; but the King desired to obtain the sanction of the electoral body to a personal act of his own, scarcely in harmony with the theory of the Constitution, even as it was at that day interpreted. The instance of 1830 is more nearly to the point. Lord Grey's Ministry had been defeated in Committee on the Reform Bill. The King then, as the Queen now, had accepted the advice of the Ministers to submit the question at issue to the sense of the country. In one important particular the analogy fails. The cry with which Lord Grey and his colleagues went before the constitu-

encies was "The bill, the whole bill, and nothing but the bill." They did not say, "The principle of reform alone is at stake. The bill is dead. You have nothing to do with its details." This is what Mr. Gladstone says with respect to the Government of Ireland Bill, although some of his colleagues contradict him. This uncertainty confuses the issue. An ostensible majority may be returned, which will be in favor of the principle that affairs exclusively Irish shall be referred to an Irish Parliament, but which will yet withhold its assent to the particular scheme which may be submitted to it when Parliament meets. When Capt. Cuttle affirmed a general principle, he was in the habit of adding: "The bearing of this remark lies in the application of it." There was a good deal of the wisdom of Burke in Capt. Cuttle's philosophy. Mr. Gladstone is ready enough to say what he intends to do, but he declines to say how he intends to do it. The result may be a majority for the principle, but a minority for the measure; another short Parliament, and a dissolution before the year is over.

The late Parliament scarcely lived long enough to develop or display a character of its own. The Speaker, who to-day ceases to be the first commoner in England, and becomes simply Mr. Arthur Peel of Sandy Lodge, Bedfordshire, is understood to have formed and expressed a very favorable opinion of it. But the Speaker's view is rather that which a headmaster would take of a school of not very brilliant, but steady, orderly, and well-conducted boys, than of a political observer. The new members were not mutineers. Many of them were necessarily unacquainted with the rules of Parliament, and the inexperience and want of authority of the chief Ministerial whip were sources of embarrassment. Ludicrous anecdotes are told of mistakes and blunders which would have made the hair stand upon the heads of the late Col. Taylor and the late Sir William Hayter. But the hitches arising from these causes were slight, and did not counterbalance the immense gain to Parliamentary order and decorum obtained through the novel good behavior of the Irish members. Whether this good behavior will be apparent in the next Parliament depends of course upon contingencies as yet undetermined. If a ministry remains in existence, and a policy is persisted in which will give them what they want, the Irish members will be models of social and Parliamentary deportment. If not, they are likely enough to outdo their exploits in previous years. With a view to this possibility, the reëlection of the late Speaker is a matter scarcely of choice in the House of Commons. Members whose experience in the House of Commons extends over half a century, going back to the first reformed Parliament, speak of Mr. Peel as decidedly the ablest occupant of the chair within their knowledge. With the high-bred courtesy of his immediate predecessor, the present Viscount Hampden, he associates perhaps somewhat greater quickness of perception and authority in decision with a firmness of character which will not be trifled with, an impartiality which even Irish members do not dispute. He is an instance of a man of great and in some respects unique powers, finding, at a time of life when the career of others is drawing to a close, the one thing which he can do better, perhaps, than any one else. He has waited and his fate has come to him.

Within a fortnight the character of the new Parliament will be determined. The borough elections will be over by about the 5th or 6th of July, the counties by the 10th or 12th. The absurd arrangement by which the elections are dispersed over a fortnight not only protracts a period of excitement and tumult, but often falsifies in part the independent judgment of the country. The accidental result of the first day's polling sways a good many weak-minded and impressible people to the side of the party which has a purely casual majority on that day. If the elections were taken simultaneously all over the country, this improper bias would be avoided, a fortnight's tumult would be compressed within twenty-four hours, and the disingenuous tactics of party managers setting their sails to the veering wind of opinion would be impossible. The only objection to this course is that persons possessing qualifications in different and distant constituencies might be unable to vote in more than one or two of them. But those who hold that the "one man, one vote" principle is the sound one, would approve this accidental corrective of a vicious system of plural voting.

An interval of thirty-five days must elapse between the dissolution of one Parliament and the assembling of another. A day is named in the writ of summons, and usually an early day, so that in case of emergency the two houses may be assembled. But if there is no special reason for bringing them together, the time of their actual meeting is by successive prorogations adjourned to the time now consecrated by usage, that is to say, until the first week of February. Mr. Gladstone has, however, promised that in the event of the elections not being on the face of them decisive one way or the other, Parliament shall be called together at the earliest practicable date, that is to say, in the present instance, on the first day or in the first week of August. If the returns show a clear majority against the Government, it may be taken for granted that he will follow the precedent created by Mr. Disraeli in 1868, followed by himself in 1874, and confirmed by Lord Beaconsfield in 1880. That is to say, he will resign office, so as to allow of a new Ministry being formed, which will fix such a date as may seem convenient for the meeting of Parliament—a date which will give it time to consider its policy and prepare its measures. This procedure was a revolutionary innovation when Mr. Disraeli introduced it, but may now be considered a constitutional usage. The old theory was that no member of the House of Commons was pledged to anything but to the exercise of his independent and unbiassed judgment on the proposals which might be submitted to the House by the Government; that the opinion of the constituencies could only be pronounced through a formal vote of their representatives. Now it is recognized that the electorate itself directly gives judgment, and that that judgment must be promptly obeyed by the Ministry; that is to say, that the Parliamentary sovereignty resides not in the Queen, the Lords, and the Commons in Parliament assembled, but, on a dissolution, in the Queen, the Lords, and the Commons, who, as an electoral body, have chosen representatives instructed to support a particular minister and policy. If there is a conclusive majority on behalf of the Government, probably the meeting of Parliament will be postponed to such a date as will allow the present ministers time to prepare their measures. Only in the case of parties being nearly equally balanced will Parliament be summoned at once to strike the balance between them. This third possibility is more likely than either of the two others. Of course, it will be for Mr. Gladstone to decide what he will regard as a popular vote in his favor. We may assume that the vote of Ireland will be substantially what it was at the last general election. The Irish vote in favor of home rule, strengthened by a large minority of the members for Great Britain, might possibly give a majority of the whole Parliament. But, if the practical unanimity of the Irish representatives in favor of home rule was the condition precedent of proposing such a measure, a decisive majority in its favor of the representatives of Great Britain is a condition not less essential. To persist in it against the recorded opinion of the greater and more important island would be a scandalous indecency. If a measure only so supported came to the House of Lords, that house would be abundantly justified, by constitutional usage and moral propriety, in rejecting it. If the virtual unanimity of Ireland is necessary, the virtual unanimity of Great Britain is not less necessary, to a revision of the constitutional relations between the two countries. What the result will be depends on forces the existence of which is known, but the relative intensity of which it is impossible to estimate beforehand. Pretended prediction can only be a lucky or unlucky guess.

Correspondence.

THE TOMBS OF MYCENÆ.

To the Editor of The Nation:

Sir: Your well-known correspondent, Mr. W. J. Stillman, in No. 1090 of the *Nation*, urges with renewed vigor his familiar arguments against the claim of high antiquity usually made for the tombs discovered by Dr. Schliemann at Mycenæ. Having recently revisited both Mycenæ and Tiryns, he is strongly confirmed in his theory, that the so-called "Royal Tombs" are no sepulchres of Achæan princes or of "heroes before Agamemnon," but Celtic graves of the third century B. C., "of the period of the barbarian invasions stimulated by Pyrrhus." The "palace of Tiryns" is assigned without hesitation to the Byzantine period—"it may be as late even as the tenth or eleventh century A. D." The same arguments and conclusions appear in a letter recently addressed to the London *Times* by its Athens correspondent, and an elaborate reply to these, written by Dr. Dörpfeld, appears in the *Times* of May 29.

I am the last person who would presume to dispute the age of a stone wall with your correspondent, provided the facts were beyond question. But my visit to Mycenæ in 1883 convinced me that the walls which now line the tombs discovered by Dr. Schliemann, and the wall enclosing the so-called agora in which the tombs were dug, are in a condition which makes them a very unsafe basis for determining the age of the tombs. Before going to Mycenæ I had been much puzzled by the reports brought by travellers who visited the famous tombs, all agreeing that the walls which lined them were entirely different from those which Schliemann had described in 'Mycenæ' and had drawn with such exact measurements in the vertical sections of his plan B B. On looking into the tombs themselves I was still more puzzled by the modern character of the walls which lined them, and all idea of referring such walls to the heroic age was at an end. I was also struck by the barbaric character of much of the elliptical wall which supports the agora within which the tombs were excavated. The whole mystery was, however, solved, at least to my own satisfaction, when the Greek who was showing me the tombs informed me that, after Dr. Schliemann had left Mycenæ, *every stone had been removed* from these tombs in the hope of

finding more gold and silver, and that the walls had all been replaced *under his own direction*. He stated, also, that the sustaining wall of the agora, a stone wall about fourteen feet high, below which there is a narrow passage open to travellers, was thought to be in danger of falling and had been pulled down and rebuilt in many places. He at first declared that everything had been replaced "exactly as it was found"; but when I showed him split stones with fresh surfaces built into the walls, he admitted that he had sometimes found it necessary to "split the larger stones" so as to handle them. From what this man told me of the careless way in which he and other "Greeks of a late period" had been allowed to repair and rebuild the walls I have mentioned, I felt satisfied that the only walls which could properly be used as testimony concerning the age of the tombs have been so changed by irresponsible workmen as to be utterly worthless as evidence of anything. No one who compares the vertical section of the first tomb in plan B B of 'Mycenæ' with its exact measurements, giving a length of only five and a half feet for the space in which the fossil man now in Charvati was found, with the present tomb, which gives a clear length of seven feet in the same place, can explain this difference on any theory of careless measurements or careless statements on the part of Dr. Schliemann. What we now see and what he described cannot possibly be identical.

Although the testimony I have given may not satisfy everybody, and some may think that I was deceived by an artful Greek, I am perfectly satisfied for myself that all the present walls of the tombs of Mycenæ, and many important parts of the enclosing wall, do not date from the heroic age or even from the age of Pyrrhus, but from the year 1879 A. D. W. W. Goodwin.

Cambridge, June 14, 1886.

THE CONSPIRACY AGAINST CHEAP BUTTER.

To the Editor of The Nation:

Sir: In Boston, by a combination of municipal appropriation and private benevolence, cooking-schools have been established in which girls attending the public schools, many of them from families of very limited means, are not only taught the art of cookery practically, but are told about the composition and nutritive values of foods, and how to select as well as use them most economically. The teachers are not merely ladies of large general intelligence and skill in household affairs, but have had especial training in the scientific principles that underlie the right exercise of the art they teach. One of these schools is in North Bennett Street, a quarter inhabited by the poorer people of the city. Miss Palmer, the teacher in this school, in referring to the efforts made to instil right ideas of economy, says:

"I do not find much difficulty in getting my girls to see that inexpensive foods are really wholesome, nutritious, and good. . . . The children are much interested in learning the price of oleomargarine (the best is fourteen cents a pound here now) as compared with that of butter. . . . No butter has been used at the North Bennett St. Cooking School during the past year, and, had it not been for oleomargarine, I should have rejected, on the ground of extravagance, dishes which we were thereby enabled to cook. The children buy the food they prepare, if they so desire, at the cost of the materials, and it has been my object to keep the price of even the most attractive articles so low that even the poorest girls might take them home and reproduce them there. . . . I visited a poor family yesterday [who have lately become comparatively prosperous], . . . and asked about the butter they used, and learned that they allowed themselves for cooking and table use for five persons but a pound a week at twenty-eight cents per pound, which is the lowest price, even at this season [June], at which butter is palatable. How much better it will be for her [the mother] to use oleomargarine at fourteen cents in the future! . . . When the directors of the School held their meetings there they wanted a noon lunch. I had no butter to give them, so they ate oleomargarine on their bread much more cheerfully than they would have eaten poor butter."

Miss Palmer cites other instances of the use of oleomargarine in places where oleomargarine is used with greatest satisfaction among well-to-do people, and considers its general use, especially for cooking, very advisable.

While the Oleomargarine Bill, which, instead of providing for regulation of the manufacture and sale of imitation butter in such ways as to prevent use of unwholesome materials, and to insure its sale on its merits, proposed to tax it so high as to bring the price up to that of butter, and render the manufacture and sale unprofitable, was pending in the House of Representatives at Washington, the *Connecticut Farmer* called upon its readers to keep close watch upon their representatives in Congress, and by their future votes to "strike down any man, be he Republican or Democrat," who should not vote for the bill. Three Connecticut representatives supported the measure, and received the warm approval of that journal. The single one who opposed it received a full measure of the threatened opprobrium.

Now notice the contrast. Science has shown how an excellent food product may be brought within the reach of that large mass of people of limited means who make up the bulk of our population—a product to whose nutritive value specialists bear unanimous testimony, and with whose flavor even the critical are content. In the exercise of an especially useful charity, a school, supported by public and private benevolence, teaches daughters of families in moderate circumstances and of the worthy poor in Massachusetts how to work towards elevation of their home life, by more refined and judicious economy in selection and use of food the cost of which makes more than half of their whole living expenses. With other things, this food product is wisely commended. But another class of the people, the dairymen, regarding this food product as interfering with their own profits, ask, not that its improper manufacture and sale, of which they justly complain, shall be regulated in accordance with the principles of legislation that justice and experience have approved, but that it shall be subjected to a tax which will not only put its price beyond the poor man's reach, but, if practicable, stop its manufacture. Is this the fairness and the wisdom which the American people will approve? W. O. Atwater.

Chemical Laboratory, Wesleyan University, Middletown, Conn., July 2, 1886.

SECOND-HAND ERUDITION.

To the Editor of The Nation:

Sir: I have before me No. 54 of the English Classic Series, published by Clark & Maynard, New York, 'American Taxation, a Speech delivered April 19, 1774, by Edmund Burke. Edited, with notes, by Albert F. Blaisdell, A.M.' At first glance it seems that Mr. Blaisdell has done his work thoroughly and well. Besides a life of Burke, a number of quotations from leading writers in regard to Burke, and a paragraph on "Burke as a Master of English Style," the reader is given an introductory note to the speech and a number of valuable explanatory and illustrative notes. Quotations are introduced from or references made to Locke, Adam Smith, Bentham, Bancroft, Erskine, Walpole, Sherlock, Macaulay, Johnson, Hazlitt, Lucan, Goldsmith, Pope, Milton, and Shakspere; and Mr. Blaisdell is made to seem a very well-read man, thoroughly fitted for his task.

To *seem*, for in reality all this erudition is second-hand, and Mr. Blaisdell is "a man of one book." That book is 'Burke's Select Works, Edited, with Introduction and Notes, by E. J. Payne, M.A. Vol. i,' one of the admirable Clarendon Press Series. The introductory paragraph on "Burke as a Master of English Style," in Mr. Blaisdell's edition, a large part of the introductory note to the speech, every explanatory note, illustration, quotation, reference, or allusion—except *two*—all are taken from Mr. Payne's edition, the exact wording being retained save in a very few instances. Occasionally we are treated to such a patchwork as the following:

Burke as a Master of English Style.	*From Payne's Introduction to Vol. I.*
The writings of Burke are the daily bread of statesmen, orators, and political writers. We cannot study the speeches of any successful modern orator without observing how much he owes to the method, the phraseology, the images, and even the quotations of Burke. Shakespeare above all things refines the taste; Milton quickens and exalts the imagination. The peculiar effect of Burke is to enlarge, strengthen, liberalize, and ennoble the understanding. . . . No writer, not even Macaulay, excels him in producing an effect by interspersion of short, pointed, and forcible sentences, so necessary to an energetic and suggestive style. Burke gave a lasting stimulus to English prose literature by the introduction of a fresher and more natural diction. His writings have ever since been the model of all who wished to say anything forcibly, naturally, freely, and in a comparatively small space. The young student of Burke will find it necessary to exert an unusual degree of patience, and to acquire the habit of continually suspending his own judgment. He will find himself in contact with much that seems dry and uninviting. It may therefore be well to caution him at the outset that Burke, like all writers of the first class, will not repay a superficial perusal. He gains upon us, not altogether by the inherent interest of what he presents to us, but very much by the will and force with which he presents it; and these qualities do not immediately strike the mental eye in all their fulness.	But while the speeches of Sheridan are read once and then laid on the shelf, the writings of Burke are the daily bread of statesmen, speakers, and political writers. . . . We cannot peruse the speeches of any successful modern orator without observing how much they owe to the method, the phraseology, the images, and even the quotations of Burke (8). Shakspere, above all things, refines the taste; Milton quickens and exalts the imagination. The peculiar effect of Burke is to enlarge, strengthen, liberalize, and ennoble the understanding (37). Nor does any writer, not even Macaulay, excel him in producing effect by that less methodical interspersion of short, pointed, and forcible sentences throughout the performance, which is so necessary to the energetic and suggestive style (41). In this way Burke gave a lasting stimulus to English prose literature, as Wordsworth soon afterwards gave a stimulus to poetry by the introduction of a fresher and more natural diction. His writings have ever since been the model of all who wish to say anything forcibly, naturally, freely, and in a comparatively small space (34). He (the student) will find it necessary to exert an unusual degree of patience, and to acquire the habit of continually suspending his own judgment. He will find himself in contact with much that seems dry and uninviting. It may therefore be well to caution him at the outset that Burke, like all writers of the first class, will not repay a prejudiced or a superficial perusal. He gains upon us, not altogether by the inherent interest of what he presents to us, but very much by the skill and force with which he presents it; and these qualities do not immediately strike the mental eye in all their fulness (5).

Sundry verbal changes in the above extract—obviously errors—must have been noted; but the conclusion of the second note, page 8, proves that even as a plagiarist and literary hack Mr. Blaisdell is a bungler: "The student should observe the contrast between this preamble and that of the speech which follows. The latter is full of touches of that trifling which was so common in the speaking of the last century—what Hazlitt terms 'calling out the speaker to dance a minuet with him before he begins.'" In Payne's edition, as the speech on conciliation with America follows that on American taxation, this note was quite appropriate; but in Blaisdell's "edition," as no speech follows, it is only ridiculous, and serves to point out the source of Mr. Blaisdell's inspiration.

One further point is worthy of note. Mr. Payne gives on page 290 of his volume a quotation from Prof. Goldwin Smith, enclosing the extract in the proper marks and giving due credit to the author. Mr. Blaisdell, on page 22 of his pamphlet, steals the quotation from Mr. Payne, omits the quotation marks, and neglects to credit the extract to

its author. Is Mr. Blaisdell a victim of "literary kleptomania"?

What makes the matter more serious than if Mr. Blaisdell had simply stolen another man's poem and signed his name to it, or "conveyed" a little story from the French or German, is that this pamphlet is intended for school use. One of the evils that a teacher has often to encounter is the propensity of idle students, or of students working only for credits or rewards, to plagiarize, and often heroic remedies must be used to cure the evil. How must anything the teacher can say lose weight, if the student finds that the "editor" of the very book he is studying not only does not lose caste, but even wins reputation and money by the very practices condemned; for surely plagiarism is not a labor of love with Mr. Blaisdell?

Just what punishment should be inflicted on one guilty of such practices, it is difficult to say. For analogous practices an attorney would be disbarred, an officer in the army or navy degraded or cashiered. Surely the morale of the teachers and scholars in this country is as high as that of these professions. Mr. Blaisdell affixes A.M. to his name; does not a way for our colleges to make the degrees mean something suggest itself? WM. DALLAM ARMES.

UNIVERSITY OF CALIFORNIA, BERKELEY, CAL.

NATURAL GAS.

TO THE EDITOR OF THE NATION:

SIR: In this time of discussing taxation and protecting industries, there is one commodity that seems to be a natural subject of special taxation—natural gas. The scope and promise of this new factor in industry is such as portends no little disturbance to our iron and other industries, and there seems no good reason why the nation should not share in the benefit of this great boon, although its discovery and source be in a special district of the country.

Natural gas, as its name indicates, is not a product of skill, is not even a surface product such as is conveyed in Government titles to land. It comes from "the bowels of the earth," and one who regards its present vast influence and conjectures its future, must concede that it will throw our industries out of balance. If ever there was a suitable and equitable subject for special taxation, is not here one? The menace to the dairy sinks into insignificance in comparison with the danger to our manufacturing industries from this new and miraculous fuel. It is not too much to claim, on the score of cost alone, to say nothing of other advantages, that the cheapening of many manufactures in Pittsburgh amounts to ten per cent. How is fair competition to be maintained without a tax? "PROTECTION."

PITTSBURGH, June 22, 1886.

PRAISE FROM A WAGE-WORKER.

TO THE EDITOR OF THE NATION:

SIR: Enclosed you will find Post-office order for three dollars, renewing my annual subscription to your admirable paper. I am, and always have been, a wage-worker, and as such necessarily take a deep interest in all questions and agitations having for their avowed object the improvement and amelioration of my class. In none of the current newspaper literature of today in this republic do I find such healthy, vigorous articles upon labor and cognate topics as in the columns of the *Nation*. If the more thoughtful and intelligent of my class could be induced to take a course of the *Nation* for the next twelve months, and compare its utterances with the sophistry and mendacity of the New York *Sun* or *John Swinton's Paper*, it could not fail to neutralize the pestilent mischief which those advocates of demagogy, buncombe, and rascality are rapidly instilling into the minds of the working classes.

It is hardly possible that a paper which appeals solely to a cultivated intelligence and high ethical principle can become popular with the masses. Their sentiments and prejudices are in the main stronger than their principles, and the policeman is a more effective restraint upon their appetites than the love of God or the fear of hell. There is, however, thank God, a rapidly increasing number of our fellow-citizens who are acting upon the principle that the claims of the country are paramount to those of party, and that fealty to the Constitution and the laws is of more importance than partisan political success. That their numbers may grow, and the *Nation*, as their leader and organ, fulfil an honorable position in aiding the development of a higher, truer, and purer civilization in this great republic, along the lines of equity, justice, and morality, is the sincere wish of

Yours respectfully, JAS. RYAN.

CRESTON, IOWA, June 26, 1886.

PLEASING EVERYBODY.

TO THE EDITOR OF THE NATION:

SIR: Having been on your subscription list for some time, I have (really) been purposing to write you a brief but *emphatic* censure of your wrong position and your failure to see the underlying ideas of the *Irish question*, which furnish such a contrast to your *clearly* right position on our labor troubles. J. M.

CHELSEA, MASS., July 5, 1886.

HOME RULE AS A SETTLEMENT.

TO THE EDITOR OF THE NATION:

SIR: In discussions on the Irish question, is not one point too much left out?

Since 1846, when I was a regular contributor to the Irish *Nation*, I have been always an advocate of justice to Ireland. I take home rule to be a part of that, and I am still, as I have ever been, anxious for a settlement of the quarrel between Ireland and Great Britain. I am told that the Parnell Parliamentarians, speaking in the name of the Irish people, would accept Mr. Gladstone's measure as a final settlement, not merely as means for enforcing more. May it be pertinent to ask whether the American Irish (or Irish-Americans, whichever is the correct term) and the Fenians and the "Invincibles" would in good faith accept the same? If not, how are they to be dealt with? Will some Irish friend make answer? W. J. LINTON.

NEW HAVEN, CONN., July 4, 1886.

DR. WALDSTEIN AND THE METOPE OF THE PARTHENON.

TO THE EDITOR OF THE NATION:

SIR: In answer to Mr. Waldstein's letter published in the *Nation* of June 10, I wish to state that the sole object of my note in the *Nation* of April 29 was to put your readers on their guard against the conclusions they might have drawn from the facts as stated in your review of Mr. Waldstein's book. Mr. Waldstein was not aware of the discussion which had occurred in the Société des Antiquaires: his good faith and honesty are indeed quite out of the question. But the existence of the *Revue des Revues*, which brings every year to the notice of the public analyses of all periodicals and proceedings of societies, gave me the right to regret that Mr. Waldstein had ignored a discussion relating to the favorite object of his studies. Bibliographical accuracy and completeness, which were almost unattainable ten years ago, are now made so easy by the exertions of some periodicals, that an author is no longer allowed, in my opinion, to miss any late authority concerning the work he is engaged in.

As for the genuineness of the Louvre terracotta and Mr. Waldstein's note F, I can only refer to a recent article which I contributed to the *Revue Critique*, where I expressed my regret that Mr. Waldstein had not entirely rewritten his essay, which, as it now stands, may prove very misleading to many scholars.

Truly yours, SALOMON REINACH.

MUSÉE GALLO-ROMAIN DE ST.-GERMAIN (SEINE-ET-OISE).

Notes.

H. V. & H. W. POOR have just issued a useful 'Directory of Railway Officials,' giving in a more comprehensive manner a great deal of information for which the public has been accustomed to seek in the 'Manual of Railroads,' annually issued by the same publishers. Poor's 'Manual' was intended to give a statement of the extent and condition of the railroads, rather than the names and addresses of the managers. By putting the latter in a separate volume they have been able to make their lists fuller and better. The 'Directory' contains upwards of 30,000 names and addresses, including railroad officers and directors in the United States and Canada; contractors, bridge-builders, and dealers in equipment or supplies, horse-railroad officials, railroad commissioners; clearing-houses, transportation companies, and various associations of railroads or railroad employees, with their officers. Some information, though far less complete, is given with regard to Central and South American railroads, and even those of Great Britain and Ireland. The whole forms a volume of about 400 pages, not quite half of which are occupied by advertisements. The substance is remarkably good; the arrangement is not as good as it might be. The order of the tables is a haphazard one; even the index of names is not placed at the end, but a hundred pages earlier. We hope that this defect will be remedied in subsequent editions.

The more than welcome announcement is made that the third and concluding part of Tolstoi's 'War and Peace' will be published (in the Clara Bell version) in this city on July 9—by Wm. S. Gottsberger in his series, and doubtless simultaneously in the Franklin Square Library.

The second volume of Morley's 'Miscellanies,' in the uniform edition of Macmillan & Co., is wholly occupied with French biographical studies—of Vauvenargues, Turgot, Condorcet, and Joseph de Maistre.

Charles Scribner's Sons publish directly a novel by Robert Louis Stevenson, entitled, 'Kidnapped; Being Memoirs of the Adventures of David Balfour in the Year 1751: How he was Kidnapped and Cast Away; his Sufferings in a Desert Isle; his Journey in the Wild Highlands; his acquaintance with Alan Breck Stewart and other notorious Highland Jacobites; with all that he Suffered at the hands of his Uncle, Ebenezer Balfour of Shaws, falsely so called'; and 'Carlsbad and its Environs,' by John Merrylees, who discusses the value of the place as a health resort. In August they will publish, in connection with Chatto & Windus, 'A Secret of the Sea,' and other collected stories by Brander Matthews. They promise for delivery in the autumn the second volume of J. D. Champlin, jr.'s 'Cyclopædia of Painters and Paintings.' In the July number of their *Bookbuyer* they give a specially engraved portrait of Dr. Schliemann.

We learn that the demand for Mrs. Dall's pamphlet on "Sordello" has quite exhausted the edi-

tion, and copies are obtainable with difficulty, if at all. The publishers have none. Another and larger edition might be issued if the present call in excess of the supply should continue.

Mr. Charles E. Merrill, who retired on July 1 from the publishing firm of Taintor Bros., Merrill & Co., has purchased their interest in the *Critic*, and will devote himself for some time to promoting its interests; Miss Gilder and her brother still retaining editorial charge and a proprietary interest.

The latest of Mr. David Douglas's beautifully printed little volumes by American authors is Mr. William Winter's 'Shakspere's England,' a revision in one volume of the American books called 'The Trip to England' and 'English Rambles.' This most excellent series, issued by honorable arrangement with the authors, now extends to more than two-score volumes, including sixteen by Mr. Howells, six by Dr. Holmes, six by Mr. Burroughs, and five by Mr. Aldrich.

Mrs. Lamb gives many interesting particulars concerning the laying out of Lafayette Place in this city, in her *Magazine of American History* for July. She gossips also about the builders and occupants of many of the more important houses on this beautiful street, which in a single generation lost its fashionable attractiveness, and began to be given over to business purposes. The Astor and Mercantile Libraries and some large printing establishments and publishing houses at present give the neighborhood a literary stamp which it might well retain for many years.

A convenient conspectus of the part taken by the alumni of our American colleges in their management is given in the *Madisonensis* for June 16, by Mr. Edward M. Grout of this city.

Mr. H. D. Traill, in the May *Macmillan*, quoting Mr. Lowell's remark that books formerly were regarded, "like umbrellas, as *ferœ naturæ*," adds—"a *mot* to which I have no other objection to take than that in its form it is calculated to confirm the popular error that *ferœ* [videlicet, in this locution] is a nominative plural instead of a genitive singular." It is curious that the Lounger of the *Critic* wishes to remind "Mr. Traill that, granting he is right, he is criticising an error in a report of which Mr. Lowell presumably did not see a proof."

One might expect a wide demand for Circular No. 5 of the Bureau of Education in the series of 1885, just published. It is an exhibit of the systems of physical training in American colleges and universities, by Dr. Edward Mussey Hartwell, of Johns Hopkins, and is illustrated with plans and elevations of the more important collegiate gymnasiums.

The programme of the eighth year of the Harvard Annex for women is now issued and procurable at 5 Waterhouse Street, Cambridge, of Mr. Arthur Gilman, Secretary of the Society for the Collegiate Instruction of Women.

From L. W. Schmidt, 7 Barclay St., we have the concluding parts (56–60) of the lesser 'Brockhaus' Conversations-Lexikon.' This work, bound, makes two volumes. Its chief recommendation, apart from its freshness in selection and revision, is its extreme condensation. An article a column long is a rarity, though such and longer occur. As a handy reference for essential facts, this compendium will find a place where larger and more costly dictionaries are out of the question. Indeed, perhaps it is as desirable for persons whose culture is not regulated by the cyclopædia as for the opposite class. The plates are excellent, and numerous enough.

Russia and Saxony are the leading articles in Parts 196–201 of the larger Brockhaus (13th ed.), which now advances as far as *Schleifen*.

Le Livre for June offers a diversion from reviews of current literature in M. Adolphe Racot's instructive analysis of three historical romances by Alexandre Dumas *fils*—'Tristan le Roux,' 'Henri de Navarre,' and 'Les Deux Frondes,' 1849–51. In the "Gazette Bibliographique" we read of Marshal MacMahon writing his memoirs, not for publication, but for his own family; also, of a projected library of the first French Revolution to be gathered for the Exposition of 1889 (a hundred years after '89), and made the nucleus of a permanent Museum and Library of the Revolution. The full text of the new Belgian copyright act of March 22, 1886, is given on pp. 321–324.

In *Polybiblion* for May there is a notice of a pamphlet, 'Le Chant de la Marseillaise,' by M. Arthur Loth, in which the author is said to prove that the tune of the Marseillaise hymn is merely the reproduction, note by note, of a page of an oratorio entitled 'Esther,' by a certain Grisons, formerly *maître de chapelle* at the cathedral of Saint-Omer. Of course, the writer in *Polybiblion*, which is in every sense hostile to the French Revolution and to anything emanating from it, rejoices at the discovery—at the "ungilding of another Revolutionary glory."

The *Journal des Débats* is publishing in its *feuilleton* 'Souvenirs de la maison des morts,' translated from the Russian of Dostoyevsky.

The Chinese general Tcheng-Ki-Tong, who is now at the head of the diplomatic service of his country in France, and whose success in Paris, both as a man of the world and as a writer, has been great, has won new honors as a *conférencier*. The *Journal des Débats* of June 13 gives an account of the address delivered by him the previous evening at the Cercle Saint-Simon upon "Les Lettrés en Chine," which, in addition to the solid facts that it gave, must have sparkled all over with the peculiar grave and ironical wit of the learned Oriental who has absorbed the *esprit* of his Parisian associates. When this lecture appears in his next volume, it will be well worth reading, not only for the contrasts between the two dissimilar civilizations which he presents, but for the ease with which he throws a shade of mockery over all he says, so delicate and light that it is impossible to determine just where he intends it to rest. It seems to be one of the most amusing and telling things he has yet done.

Hetzel has just published one of Turgeneff's works which has not before been translated into French, 'Un Bulgare.'

Calmann Lévy has just published the first volume of a work by the Duc de Noailles, 'Cent ans de république aux États-Unis' (New York: Christern).

The poetic works of Shelley, hitherto very little known in France, have been for the first time completely translated into French by M. F. Rabbe. The first volume is announced (Paris: E. Giraud & Cie.).

As an example of enterprise, the conductors of our illustrated periodical newspapers might well examine the *Bersagliere* issue of the *Illustrazione Italiana* of Milan. It commemorates the fiftieth anniversary of the creation of the corps of *bersaglieri* on June 18, and its doubled or trebled pages are bristling with soldiers, battle scenes, portraits, monuments, etc. The heads of Italian military commanders are very impressive in tone, dignity, intelligence, and manly beauty.

The Biblioteca Nazionale Centrale Vittorio Emanuele at Rome has begun publication of a *Bollettino* of modern foreign works acquired by the Government public libraries of the kingdom. These lists appear bi-monthly, from January, 1886, and are classified. The typography, like that of the *Bollettino* of the Florence Central National Library, is open and attractive. A letter or letters affixed to each title denote the respective libraries (out of the thirty) in which the work is to be found. An asterisk signifies a donation; two asterisks, an international exchange. In the second number it is pleasant to find a considerable collection of works relating to our civil war acknowledged as a gift to the Victor Emanuel Library from Mr. John S. Pierson, of this city.

The number of admirable reproductions of specimens of early German typography and engraving — of which the 'Kulturgeschichtliches Bilderbuch aus drei Jahrhunderten' and Muther's 'Bücherillustration der Gothik und Frührenaissance' (Leipzig: Hirth) are prominent examples —is fast being augmented. The latest series of publications of this character is issued by Grote of Berlin, under the title 'Deutsche Drucke älterer Zeit in Nachbildungen,' and now comprises three volumes. The first volume is a reproduction of the first edition of Martin Luther's 'Septemberbibel,' published at Wittenberg in 1522, the illustrations being by Lucas Cranach. The second volume is a facsimile of the earliest 'Faust-Buch,' of the original edition of which only five copies are extant. The third volume is the anonymous 'Passional Christi und Antichristi,' first published at Wittenberg, probably in 1521. This work is a series of woodcuts, each underscored with a few lines of descriptive or commentative text. Luther has commonly been credited with the authorship of the text, but the editor's researches trace it to Melanchthon, and the woodcuts likewise to Cranach. Luther undoubtedly inspired and advised the composition.

—Two striking portraits of Frank R. Stockton, with a full sketch of his life, are a feature of the July *Century*, the contents of which are agreeably diversified. The irrepressible economic question makes a triple appearance, and the wide differences of view in the three papers enforce the chaotic nature of current opinion in relation thereto with a power all the greater from their immediate juxtaposition. Probably Miss Lazarus, in her delightful narrative of a visit to Merton Abbey, had little intention of setting forth the spirit of modern socialism in one of its most attractive practical forms; but this is what she has best succeeded in doing in the account, without details, of Mr. William Morris's workshops and business methods, while the personality of the poet himself stands out with breadth and frankness and a certain power of character, amid the picturesque and artistic surroundings of his factory. As a piece of brief literary portraiture of a many-sided man the article is remarkably well done. After this glimpse, which reminds us that the Chicago anarchist is not the only type of the socialistic faith, a "manufacturer," Mr. Edward L. Day, gives a rapid and firm-handed review of the status of the laborers since they began to be earners of fixed money-wages, and of trades unionism, and the writer exhibits a temperate judgment, a fair-mindedness, and a sense of difficulties to be met upon any basis of settlement, which are only too rare in the controversy. He concludes with a distinct leaning toward profit-sharing, for which he outlines a scheme of percentages. Last comes a "master-printer," Mr. Theodore L. DeVinne, who describes a cooperative association that failed, and leaves one with the impression that workmen have not enough character to sustain the system. He apparently thinks it can succeed only when the administrative control remains as under the wages system, and the capitalist is content to take the position of a philanthropist. In other words, successful coöperation is only another form of Christian charity; and it must be confessed that historically, so far as coöperative production is concerned, there is plenty of evidence to support this view. One ought not to leave unmentioned the papers by Theodore Roosevelt and Henry Cabot Lodge, who plead very dexterously against the prejudice felt towards fox-hunting or drag-

hunting in this country. Mr. Lodge expects that the farmers of Hamilton and Wenham will begin to follow the hounds and breed hunters "before very long," and says it is a very democratic sport.

—*Lippincott's* has a novelty in the form of a drama by "J. S. of Dale," of which the scene is laid in London; the characters are nearly all well-marked, there is speed and variety in action and situation, and the setting is closely attended to—altogether an excellent and surprising piece of society sketching. There is improvement in the "body" of this writer's work, and as it goes on he may willingly let some of his elaborated details die, which would be a gain: but, as it is, his literary finish is as good as there is among us, as this drama, though a new field for his pen, again proves. In the rest of the magazine Henry Gréville's literary confessions have a taking amiability which the reader yields to with pleasure; and in Joaquin Miller's authentic account of himself one finds the rarest thing in autobiography—a simple, sincere, strong man. The character so unconsciously disclosed earns something more than respect—earns a due of that honor paid to exceptional nobleness. His words are worth a short quotation:

"And now, soon—this year, God willing—I shall stop writing, and, in a small way, take up the law again. For a man who writes constantly cannot think much, and a man who does not think much ought not to have much to say. There is a disposition to selfishness and egotism in writing that is ruinous to all men. A man who makes a profession of writing poetry ought to die early; for if he lives long he will surely suffer deeply. Besides all that, the field of legitimate poetry is so small that no man ought to try to make his bread, much less maintain others, on it. . . . Other immortal gods of song have selected war and celebrated a lot of cruel butchers through all the ages, sowing dragons' teeth in every sounding syllable. I would starve first. . . . And then, with the Bible, Shakespeare, and the Brownings, the world is not greatly in need of more poetry; but it is greatly in need of more fruit, more flowers, and more beautiful gardens."

—The pleasant connection of Carlyle with America, which began with his friendship with Emerson and ended with the bequest of his Cromwell and Frederick books to Harvard College, has an after-episode in a valuable article, which must hold wide attention, by Prof. C. E. Norton in the July *New Princeton Review*. Emerson, in a note to the latter in 1873, though neither of them could have guessed what meaning the injunction would take on, said: "I please myself with believing that you will take care hereafter that his (Carlyle's) memory will suffer no detriment on this side the sea." In the spirit suggested by these words Prof. Norton, having had the original manuscripts under his examination, submits Mr. Froude's editorial work to a brief but very damaging review; and on his own account records a few reminiscences of Carlyle in which he illustrates to what an extent Carlyle's manner, intonation, laugh—in a word, his personality—limited and colored his language in conversation; the spoken words being only one element in the expression of the thought. Thus the way is cleared for a kindlier construction of his words and a more just apprehension of his spirit. These anecdotes—brief records of daily talk—are framed into a general characterization of Carlyle, made with firmness and vigor, of which, perhaps, it is most significant to say that it calls up and harmonizes with the portrait of Carlyle more constantly and directly than any which we have read. The weight of the article, however, is critical, and, though the case is compressed to a degree which leads one to believe that this is not the end of the matter, bears heavily upon Froude. We refer our readers to the author's own statement, as we have space only to say that Prof. Norton shows that the publication of the 'Reminiscences' without editing of a very thorough kind was never contemplated by Carlyle, and was expressly prohibited while their contents were fresh in his mind; and that the general consent of Carlyle to whatever Froude should choose to do was given when he had no longer any recollection of their substance. Though it should be granted that Froude acted within his verbal right, he is convicted of being an unfit man to hold such a trust. His editing was confined practically to the omission of the paragraphs prohibiting the publication without editing! But it is impossible to compress the case against Froude in smaller limits. In the lesser matters of editorial labor there can be no excuse for the negligent manner in which the manuscript got printed. Gross carelessness is charged and proved. Instances are given in profusion, the most amusing error being that by which Sir Henry Taylor is said to be characterized by "*morbid vivacity* in all senses of that deep-reaching word"—Carlyle having written "*marked veracity*." Prof. Norton concludes: "A similar indifference to Carlyle's injunctions of privacy, a similar carelessness in the printing of his manuscript, are exhibited in many parts of Mr. Froude's *Life* of him, together with many misstatements of facts and misrepresentations of character and action. I must, however, reserve the proof of this assertion for another occasion. To have placed unlimited confidence in one capable of such dealing with a sacred trust seems to me to have been Carlyle's greatest error. It was an error for which the heaviest penalty has been exacted."

—The addresses delivered before the Johns Hopkins University on the occasion of its tenth anniversary are printed in full in the last Circular. Prof. Welch maintains the rather barren thesis that the final end of hospitals and medical schools is the relief and cure of the sick. Prof. Rowland reaches the inmost secret of successful education when he says that its great object is to produce a man who can do, not simply one who knows; and that to this end the student must be trained from the beginning in doing, not in remembering. The demand of the age is for the man who is able to dispense with the instincts which were his guide in infancy, and to decide from reason what to believe and how to act in the daily routine and the emergencies of life. He neither accepts the opinions which have been taught him as final, nor attempts to construct opinions of his own unassisted by the labors of others. He has a longing for the truth, and he is willing to test himself, to test others, and to test nature until he finds it. He differs as widely as possible from the unscientific person whose characteristic is, that he is willing to accept and to make statements of whose meaning he has no clear conception to begin with, and of whose truth he is not assured. The former is the mind which has built up modern science, which is destined to govern the world in the future and to solve problems pertaining to politics and humanity as well as to inanimate nature, and which the physical laboratory is peculiarly well adapted to produce. Prof. Gildersleeve maintains that all healthy literature must be kept in communion with the great masterpieces of antiquity.

—In variety of subjects, interest, and picturesqueness, the concluding prints issued by the Society for Photographing Relics of Old London compare favorably with any previous twelve in the whole 120. No less than four are representations of chimney-pieces of marked beauty or elaboration of carving—that in the court-room of the New River Company, attributed to Grinling Gibbons, taking the palm. One plate is devoted to three canopied doorways, suggestive of the days when umbrellas were unknown, but also noticeable for the fine proportions of the several parts of the doors themselves. In one case we seem to see the button of the electric bell in the jamb, flanked on one side by the ancient knocker, and on the other by "one of the old extinguishers used for putting out links or torches." A sheet of bric-à-brac, so to say, exhibits London Stone in its securely grated cell; an ecclesiastical hour-glass mounted on a high metal standard; a church clock, with figures striking bells—a relic of the demolished St. Dunstan's in-the West; and two sculptured emblems—"the Boy at Pie Corner" marking the staying of the Great Fire there which had begun at Pudding Lane, and was appropriately attributed to the sin of gluttony. Of exteriors, the most poetic is St. John's Gate, Clerkenwell, with a charming vista under the arch; but one may also admire the lines and members of Emanuel Hospital, Westminster. Good architecture, too, in its way, is the Tennis Court in James Street, Haymarket. The south entrance of Great St. Helen's; some old houses in the Strand antedating the Great Fire; and a bit of Queen Anne's Gate, showing the statue of the good Queen herself, complete the present series. We must repeat our regret that this useful and instructive enterprise is now brought to a close. The pains involved in selecting subjects, photographing them, and describing them in the letter-press with the aid of much laborious research, have fallen in the greatest measure on Mr. Alfred Marks, who now takes a grateful leave of subscribers not less grateful in turn, we are sure. Some few sets are procurable for a while by addressing Mr. Marks at No. 155 Adelaide Road, South Hampstead, London, N. W.

—The June number of *Les Lettres et les Arts* (Paris: Boussod, Valadon & Cie.; New York: Charles Scribner's Sons) contains a longer list than usual of illustrations, but the articles are fewer and consequently longer than they generally are. M. Paul Bourget begins the number with a short story, "Ruse de guerre," such as M. Bourget might be expected to write, exquisite in literary form and execution, and, unlike his other productions, gay rather than sad in tone. It is illustrated by Mme. Madeleine Lemaire and M. Saint-Elme Gautier. The *chandelier* of the latter artist which begins the story, and the one which closes it, are gems of suggestive illustration. M. Barbey d'Aurevilly has a poem, "La Haine du Soleil," full of fire and passion and tempestuous harmony, a powerful and not a sympathetic poem, but inspired by true poetic feeling. Then follows "Louis XV. et Madame de Pompadour: Statues de Pigalle," by M. A. Chabouillet, a long and learned and interesting article, richly illustrated with reproductions of famous works of art of the period—statues, portraits, pictures; among these, Boucher's charming picture of Mme. de Pompadour seated under the trees of a park. M. Paul Hervieu has an exquisitely executed sketch: "Tom Bred et John Bred, jockeys," in which all his artistic excellence of conception, all his sober elegance of language, is lavished upon a most uninteresting and even disagreeable subject. M. Albert Guinon writes in a lively way about the actress Mlle. Jeanne Granier, a full-length aquarelle of whom, by Mme. Madeleine Lemaire, accompanies the article. Then follows a duet of six pages, by M. E. Paladilhe, "Au bord de l'eau: Musique sur une poésie de M. Sully-Prudhomme," which ends with an exquisite little picture by Adrien Moreau. But by far the cleverest thing in the number is the "Délégué au Salon: Notes d'un voyageur," by M. Louis Ganderax, who appears here even more mordant as a writer upon art than he does as a dramatic critic in the *Revue des Deux Mondes*. The arti-

cle is lavishly illustrated at almost every leaf by large, full-page reproductions of many of the most important pictures and statues of the present Salon. Among them are Bouguereau's "Printemps," which is the frontispiece of the number, Benjamin-Constant's "Justinien," "Quand on devient vieux" of Israels, "L'Hyménée" of Chartran, "Les Hiérodules" of Rosset-Granger, and Bernier's beautiful landscape in Brittany, "Le Vallon," which is most effectively rendered.

—Vol. vii. of the *Goethe-Jahrbuch* compares favorably with any of its predecessors. Its contents appear under the three rubrics: New Communications, Essays, and Miscellanies. An appendix gives the first report of the new Goethe Society of which the *Jahrbuch* is hereafter to be the official organ, and with this report are incorporated the by-laws of the Society and a list of its members. A second appendix contains the Constitution and a list of members of the Goethe Society recently founded in England. The copious bibliography published in each successive number of the *Jahrbuch* (there are eighty pages of it in this last volume) seems to demonstrate that Herman Grimm was within the bounds of the most sober truth when he said that henceforward there is to be a science called Goethe, just as for some centuries there have been sciences known by the names of Homer, Shakspere, and Dante. Of the "Essays" above mentioned the most valuable is one by G. Dehio, entitled "Alt-italienische Gemälde als Quelle zum Faust." The conclusion of "Faust," or that part which follows the death of the hero, has always been rich in problems for the student. Critics of the temper of Vischer, who find fault with the poet for converting his work at the last into a Catholic mystery-play, simply shrug their shoulders over this final portion as a pitiable senility. But even those who are content to take the drama as it stands, and whose endeavor it is "to understand the poet by going into the poet's land," find difficulty here in carrying out their laudable programme. Whence came that grotesque imagery of the battle between the devils and the angels? Whence came the last scene, with its mountain-gorges, waving forests, gentle lions, holy anchorites, and all the rest? It has generally been thought that this "scenery" was worked out by Goethe chiefly from hints found in his *reading;* that the hermits' mountain was Montserrat, of which he had read in a book of travels, and that a good part of the details were mere capricious imaginations of his own. Herr Dehio, however, makes it clear that this was not the case, but that Goethe was here copying three old Pisan frescoes of the fourteenth century, one a representation of the life of the early Christian hermits in the Thebaid, another being entitled "Hell," and the third "The Triumph of Death." These pictures were engraved and published by Lasinio in 1822, and Goethe is known to have been interested in them. Copies of these reproductions are now given in the *Jahrbuch*, and it must be admitted that they are the most valuable of all commentaries to the latter part of "Faust." Not only in his general *mise en scène*, but in a multitude of incidental and often fantastic details, has the German poet reproduced the unknown painter of Pisa. And so we have another verification of that deepest and most useful of all maxims for the understanding of Goethe, namely, that his starting-point is not a mental abstraction, but a corporeal form. As Schröer states it:

"Goethe geht vom Bilde aus."

—But by far the most interesting part of the *Jahrbuch* is a batch of letters written by Goethe, while a student at Leipzig, to his sister Cornelia and to his friend Behrisch. In these letters German alternates with English and French, and, taken together, they give us a delightful picture of clever but unspoiled boyhood, and also of the later Goethe in the chrysalis state. The lad felt proud of his English. Under date of May 11, 1766, he writes of his occasional melancholy moods and of his resorting to verse-making for relief. "But hark ye," he says, "in like a situation of my soul, I make english verses, . . . english verses that a stone would weep. In that moment thou shalt have of them. Think on it sister thou art a happy maiden to have a brother who makes english verses. I pray thee be not haugty thereof." Then follow ten stanzas entitled, "A Song over the Unconfidence toward myself," three of which are as follows:

"Then fogs of doubt do fill my mind
With deep obscurity;
I search my self and cannot find
A spark of Worth in me."

"When tender friends, to tender kiss,
Run up with open arms;
I think I merit not that bliss
That like a kiss me warmeth."

"An other tought is misfortune
Is death and night to me;
I hum no supportable tune
I can no poet be."

The dubious rhyme, *arms: warmeth*, recurs in some verses to Behrisch on the pleasures of innocent love:

"What pleasure, God! of like a flame to born,
A virteous fire, that ne'er ta vice kan turn.
What volupty, when trembling in my arms,
The bosom of my maid, my bosom warmeth!"

The following may be taken as at once a specimen of the youngster's English style and as a commentary upon his later well-known saying, "Der Umgang mit Frauen ist das Element guter Sitten":

"Often sister I am in good humor. In a very good humor! Then I go and visit pretty wifes and pretty maiden. St! Say nothing of it to the father.—But why should the father not know it? It is a very good school for a young fellow to be in the company and acquaintance of young virtuos and honest ladies. The fear to be hatred by them makes us fly many excesses seducing by his outward side and therefore periculous to the Youth. Look Sister, that is the State of my present life: I seek to do nothing of what I could not give reason to my superiors, which are God and my parents; I seek to further please to the uttermost part of men, wise and fools, great and littles, I am diligent, I am mirthy, I am luky. Adieu."

AN EYE-WITNESS OF THE FRENCH REVOLUTION.

The Despatches of Earl Gower, English Ambassador at Paris from June, 1790, to August, 1792, to which are added the Despatches of Mr. Lindsay and Mr. Monro, and the Diary of Viscount Palmerston in France during July and August, 1791, now published for the first time. Edited for the Syndics of the University Press by Oscar Browning, M.A., F. R. Hist. S., Fellow of King's College, Cambridge, and University Lecturer. Cambridge: at the University Press; New York: Macmillan. 8vo, pp. 400.

Mr. Browning is right in thinking the documents contained in this volume a welcome contribution to our knowledge of a very confused epoch:

"They are not," he says in his preface, "of an exciting character, nor do they show great insight or penetration. They are careful accounts written week by week by a competent and well-placed observer for the information of his Government, and they are perhaps more valuable because the writer did not comprehend the full significance of the events which he describes. The French Revolution has been so often lifted by sensational writers into the region of cataclysmal and almost superhuman occurrences, that a narrative is specially acceptable which tends to range it among the facts which appeal to our ordinary experience."

The account of the September massacres by Mr. Monro is exciting enough; but certainly Lord Gower's despatches, in spite of his uneasy feeling, frequently repeated, that some great crisis was at hand, do not read at all like the premonitions of a great and bloody revolution.

These despatches, together with those of Mr. Lindsay and Mr. Monro, give a nearly continuous view of the course of events from the summer of 1790 to the death of the King. After this the Terror set in, and there is a blank in the information obtained by the English court for a full year. "After the declaration of war between France and England in February, 1793, Paris was hermetically sealed. No effort on the part of our Ministry or of Lord Elgin, our representative in Flanders, could penetrate the obscurity; all who were suspected of giving information were put in prison or guillotined. The veil did not lift until the summer of 1794, when an unknown but well-informed correspondent in Switzerland was able to send to Lord Elgin some remarkable accounts of the political, military, and social condition of France. These reports are printed at the end of this volume." No part of the volume is more interesting than these reports (written in January and February). They present a most graphic picture of the despotism that then held sway, and make plain the policy and methods by which the Committee of Public Safety had managed to bring all the resources of the country under its control, and to present to the enemy an absolutely unbroken front, and a concentration of military and moral force before which the half-hearted invaders were incapable of standing.

The events of the first year, as depicted by Lord Gower, give no sign of the terrible catastrophe that was approaching. The violence and excitement of 1789 had passed away, and every one would have said that affairs were settling into quiet. Even after the King's flight, the Conservative party seem to have held their own, and even to have effected something of a reaction. More than once we are told that the Extremists are discouraged and are losing ground; and this is the impression given by the tone of the despatches. The new Constitution went into operation quietly and successfully, and it is hard to find, in these pages, any adequate reasons for the revulsion of the next summer. Nevertheless, all through this second year, as we have already remarked, Lord Gower was predicting some serious crisis near at hand. Its indications were in the air rather than in any specific facts and events that he is able to put upon record. What we do note here, however—and this is the most serious sign of the times—is the excessive weakness of the Government. Society appears to be falling to pieces. There are no great convulsions or disorders, but all France—army, navy, and civil organization—is distracted with petty conclusions and disorders, which the Government is utterly unable to control, and which indeed are regarded as the generous expression of the spirit of freedom, rather than as the signs of approaching anarchy. A strong man at this juncture, it would seem, might have saved society; for the well-meaning elements still had the upper hand, and a competent leader could have given them the victory. But Mirabeau was dead, and Lafayette—honorable, able, courageous, constantly appearing in these pages as the most eminent and respected man of the time—was not a leader such as the crisis demanded.

It is in these months, from the going into effect of the Constitutional monarchy in October, 1791, to the disorders of the early summer of 1792, that one feels most clearly that there is in the despatches no "great insight or penetration." Lord Gower, it is true, saw the crisis approaching, but he does not make his readers see it, and his accounts, unless supplemented by such details as we find in Taine or Von Sybel, fail to prepare us for what is coming. The 20th of June, the 10th of August, the 2d of September, even after all that has gone before, come upon us with a kind of surprise.

Two circumstances especially deserve to be

mentioned in relation to this period. In the first place, there appears during the year 1791 a surprising degree of material prosperity: frequent mention is made of the high rates at which the church lands were selling, and of the great demand for French manufactures. It is evident that the change in government two years before —constantly alluded to as *revolution*—joined with the reaction against the extremists, had given an impulse to trade and industry which may perhaps be compared with that which followed the civil war in this country; and in all likelihood it, too, was largely speculative, and was deceptive as a sign of prosperity. On the other hand, there are constant and significant indications of the inexperience and want of capacity of the French people in respect to self-government. They recognized the evils of the centralized system which had been established by the Bourbons, and jumped to the opposite extreme in organizing a plan of local self-government which deprived the central Government of all real efficiency. They had no doubt received a powerful stimulus from the successful revolution of the American colonies; but they thought they could improve upon a republican system which was built upon English precedent, and so cast aside the conservative features of the American Constitution. The excessive decentralization, just mentioned; the abolition of the old courts without establishing new ones in their place (p. 36)—thus throwing the administration of justice into confusion; the prohibition of members of the National Assembly from holding seats in the new Assembly, thus depriving themselves of the fruits of experience; the wild and unbalanced theories which governed their actions—these are among the causes and the signs of the collapse of the new Government. A good illustration of this temper, belonging, to be sure, to a later and more excited period, is Danton's assertion (Sept., 1792, p. 252) that "it was impossible to have any constitution but that which was accepted by a majority of the people in the *assemblées primaires*."

The anonymous reports (in French) contain, as we have said, the most interesting statements of the vigor and efficiency of the Revolutionary Government. The anarchy of 1791 had been succeeded by a degree of energy and a concentration of resources of every kind, of which the assailants had no conception. "The republic is richer and calls out more resources than all the sovereigns of the Coalition taken together; for here it is the national wealth of an empire, and the accumulation of wealth for a century in this empire, which are contending against the feeble revenues of a few princes" (p. 327).

We have often been told, most effectively by M. Taine, that France was now controlled by a small minority. This statement is confirmed by our informant (p. 347), who adds: "In fact, the very small minority governs with a rod of iron; another minority follows heartily in the steps of the first, sharing its passions, and executing its designs; authority, attachment to the revolution as a whole, a common desire to preserve it, to perpetuate it, to enjoy it by means of every kind of crime, belong to both these dominant classes. . . . The majority, on the other hand, is an untied faggot, divided into several disunited branches."

The editor has prefixed an introduction of twenty-four pages, summarizing the information contained in the despatches; and has added an index of great value, a complete *onomasticon* of persons and places.

RECENT FRENCH BOOKS.

M. Ernest Legouvé, with a chatty communicativeness, has for some years past treated the readers of *Le Temps* to numerous personal reminiscences of the literary men of France with whom he came in contact in his youth. He has now fairly begun his autobiography, in which his recollections of others occupy more space than his own personal life and experiences, under the title 'Soixante ans de souvenirs' (Paris: Hetzel; Boston: Schoenhof). Many of the chapters are headed by names well known in letters, and the author is perfectly honest when he tells us that his memoirs ought to be entitled, 'Les Mémoires des autres.' Thus one of the first chapters is headed, "Casimir Delavigne." In it the author relates what he wishes to say of his own youth, of his first verses, of the poem he sent to Delavigne; but by far the greater part of the chapter is given up to a kindly review of the works of an author little read by the present generation. He does the same for Népomucène Lemercier, and Bouilly and Andrieux. But it is when he comes to speak of Villemain that his sympathy is warmed to the utmost by his admiration for the orator and reader. M. Legouvé is an admirable reader himself, and he takes every occasion to dwell upon the diction of the men whose memories he calls up. Always pleasant memories they are, too, of forgotten or half-forgotten names, once, not in a very remote past, well known by all. Who reads nowadays the 'Ermite de la Chaussée d'Antin,' by Jouy? Who reads Dupaty? How many can boast of having read 'Le Mérite des femmes,' by Legouvé (or Le Gouvé), the father of our author? Even Eugène Sue is fast passing out of the memories of men. All these and others live again in the delightfully written 'Souvenirs'—delightful and never indiscreet. The author always stops in time not to make them *Confidences*, nor does any portion of them at all answer to the title *Confessions*, yet the personal note, and especially the sympathy of the writer, are always present. Thus M. Legouvé, with commendable filial affection, tries to persuade us that his father's chief poem still lives in the memories of men in spite of its "élégances de style un peu démodées." We are more ready to admit that the thought of the paternal work was an incentive to the author of 'L'Histoire morale des femmes.' As to the other productions of the elder Legouvé, 'La Mort d'Abel,' 'Épicharis et Néron,' 'La Mort de Henri IV.,' they are all interestingly spoken of in the 'Souvenirs,' but the quotations of the weak, insipid Alexandrines of the dying classic tragedy are enough to disprove the praise given to them. M. Ernest Legouvé's tastes may be observed in the chapters, "Les Goûts," "L'Escrime," and in the lively picture of the two fencing masters, Bertrand and Robert; for he is an ardent admirer of the art of fencing, in which he is said to excel. After several chapters on those whom the author calls his initiators in music—Maria Malibran, Chopin, Berlioz—the volume closes with a long chapter on Eugène Sue, whom he knew well, and whose memory he in a measure rehabilitates, presenting his eccentricities and his shortcomings in as favorable a light as possible.

The impression left after reading the 'Souvenirs' is very pleasant. We feel as if we had been listening to an agreeable talker who had many things to tell us, and who cared especially about telling them well, effectively, and dramatically—too dramatically perhaps. We are never tempted to doubt M. Legouvé's veracity; but we feel that he is carried away by the very effort he makes to present his characters vividly before us. We hear them talk: the writer constantly falls into bits of dialogue between himself and the man whom he recalls to us. What he tells us may have been said forty years ago; M. Legouvé tells it all with more accuracy of detail, we might almost say of tone and gesture, than that with which any ordinary mortal could reproduce a scene witnessed the day before. But how can we find fault with a writer of such delicate taste, of such broad sympathies? He loves acting and good reading as he does fencing, and though he professes admiration for many things besides, it is the love of the dramatic, tempered in his case by a delicate sense of propriety and measure, that makes him write as he does.

On opening the volume 'Œuvres posthumes de René Grousset' (Paris: Hachette; Boston: Schoenhof) we find the portrait of a very young man. René Grousset died in 1885, early in his twenty-fifth year, and yet he had already done enough for his instructors and friends to see the beginning of the realization of his promises as an archæologist. The 'Étude sur l'Histoire des Sarcophages chrétiens' (Paris: Thorin), which contains the results of his researches while a student in the French school at Rome, was duly appreciated by specialists. And now two of his friends, MM. Doumic and Imbard de la Tour, have collected the literary remains of their brother *normalien*, who had been appointed lecturer at the Faculty of Grenoble shortly before his death. Sainte-Beuve said that there was in every man a poet who died young. In Grousset the poet had not died, as is shown not only by the fifty pages of verse published, but also by some delicate bits of correspondence during his travels in Italy. Two of the essays preserved are entitled Homeric Studies: "The Games in honor of Patroclus" and "Helen." But the most important, from a literary point of view, and the longest fragments in the volume are those devoted to the "Société dite des Libertins." In these the young author's aim seems to have been to connect the literary history of the seventeenth and eighteenth centuries in France. He traces back the need for free inquiry, the spirit of incredulity of the contemporaries of Voltaire and D'Alembert, to the strong undercurrents of scepticism which had received the name of *libertinage* in the sixteenth century. A *libertin*, to the contemporaries of Molière and Bossuet, was a free-thinker—one who rejected authority in all things—authority of Church or State or the received canons of literature and art; a man who indulged in his *sentiments particuliers* (to use the expression of the times). Grousset is not at all in sympathy with the *libertins*. He became, as the biographical notice written by his friends informs us, a faithful son of the Church very soon after the close of his college studies. After relating the horrible end of Vanini, whose tongue was pulled out before he was given over to the flames, he merely adds that this spectacle made all who had known Vanini reflect. To our author, in spite of his knowledge of the facts, a *libertin* becomes identified, not so much with men like Vanini or Gassendi, as with those who were to a certain extent libertines in the modern sense of the word—men like Théophile Viau or Cyrano de Bergerac. He accepts freely as good authority the 'Historiettes' of Tallemant des Réaux in regard to all those who rejected authority as far as it was safe to do so, and that was not very far. It would not be difficult, by the aid of this same Tallemant, to prove that some of the greatest upholders of authority, both in state and in religious matters, were libertines as we now understand the word. It must be confessed that Grousset has to deal with very few of the known names of the seventeenth century. Such men as Desbarreaux and Chapelle were anything but leading spirits; but the spirit that animated them was felt in various ways by Descartes, by Pascal; felt, to be opposed, by Bossuet. Pascal especially was revolted by *l'esprit libertin*, by the doubt of Montaigne. The 'Pensées,' in the opinion of Grousset, contributed more than any other book to give precision to what was before vague in the minds of the *libertins*; for Pascal, in order to refute their opinions, was the first to state them openly.

The essay is evidently hastily finished, for the

author, after a rather feeble analysis of the character of Molière's *Don Juan*, passes rapidly over the end of the century merely to mention Bayle, who presents to the next age "tout l'esprit du libertinage français." The pages which follow on Saint-Evremond are the very best that Grousset wrote. They seem to form a complete, finished chapter of the work he intended to write. Here the author, who analyzes the writings of that delicate Epicurean, has made himself fully master of his subject, and, though not in sympathy with the free-thinking tendencies of Saint-Evremond, he does full justice to the spirit of toleration which he shows to have sprung up among the sceptics, "qui leur appartient en propre, qu'ils ont inventée." The pages on Saint-Evremond alone would justify the loving admiration of the friends who felt that the early death of René Grousset was a loss to literature.

M. Albert Delpit is a successful writer of novels and plays. "Le Fils de Coralie," before it had made the reputation of its author upon the stage, had created a sensation as it appeared in the pages of the *Revue des Deux Mondes*, and the novel is quite as dramatic as the play. His books seem to be written to be turned into plays, and perhaps this is the reason why they have, with all their passion and life, an unreality of conception and of sentiment which does not bear examination, but which the interest of the moment carries the reader over unconsciously, as the sympathy of the spectator does when the plays are presented upon the stage. In the choice of his subjects M. Delpit is always sensational. 'Solange de Croix-Saint-Luc,' the best story he has written, is a scarcely veiled reproduction of the circumstances which led to and accompanied the famous law-suit in which, a few years ago, the young Duchesse de Chaulnes attempted to recover the possession and guardianship of her children, whom the law had given to their grandmother. M. Delpit has now published, in another manner, a story of the Commune, 'Mademoiselle de Bressier' (Paris: Ollendorf; New York: Christern). It is written with the author's customary ease and smoothness, and is full of startling and tragic situations and sentiments; but it does not stir the sympathies of the reader, because the dramatic fire and pathos of the story are those of the stage, not of reality. 'Mademoiselle de Bressier' will interest, however; and M. Delpit, without being a great or even a fine writer, always writes well.

Mme. Augustus Craven, who is only English by marriage, has written a number of works that have been received with great favor in the religious and aristocratic world which M. Octave Feuillet also addresses. But the author of 'Fleurange' and of 'Anne Séverin' has not the literary preoccupations of M. Feuillet, and never forgets the moralist in the artistic creator. Her stories, which are always grave and serene, are at times both interesting and pathetic; her views of life are not broad nor deep, but her moral rectitude and sincerity are great and very attractive. Her new story, 'Le Valbriant' (Paris: Perrin; Boston: Schoenhof), like her previous works, is strongly Catholic and royalist. The characters have all the Christian virtues and very few human weaknesses. The tone of perfect good breeding never varies, even in the most moving circumstances, and the interest, without being at any time painful, is always sufficient to carry the reader to the end. The most interesting thing about the book, however, is the success with which the author has rendered the moral atmosphere of a certain narrow but extremely interesting world—that which produced the Aliette of 'La Morte.'

M. André Theuriet, who can be so satisfactory at times, is not always, nor even often, happy in the choice of his subjects. His latest novel, 'Hélène' (Paris: Charpentier; New York: Christern), has many fine passages, as his books always have—much exquisite description of nature and of the impressions produced by it upon his characters; much fine analysis of temperaments and feelings. But the people he shows us are all so devoid of any charm or fineness of character or of sentiment that the story often becomes distasteful, and at times positively disagreeable. M. Theuriet deprives his characters of all the nobler qualities, as a physiologist experiments upon his pigeons and his frogs, and then he minutely observes and describes the actions of the maimed creatures. The result is a story even more depressing than his stories generally are, which at the end leaves the reader unmoved and unsympathetic and dissatisfied with the author, though conscious of the fine qualities of the writer.

'Bigarreau' (Paris: Lemerre; Boston: Schoenhof), another new volume by M. André Theuriet, contains, besides the charming story which gives the name to the collection, some of the author's finest and most delicate writing. When M. Theuriet writes a short story, he is at his very best. Touching, tender, and human, a poet and a painter in one, he moves the heart and gratifies the poetic fancy at the same time. "Bigarreau" and "La Pamplina" are perfect in their way, never going beyond the limitations of the author's best performance. "L'Oreille d'Ours," the sad little romance of the writer's old neighbor, related through the recollections of his own boyish days, is delightful, with its blending of tender sympathy for the old woman and the boy who have both gone out of his life. With "La Saint-Nicolas" M. Theuriet gives his volume a happy ending, almost the only one in all his writing. The stories are well worth reading, and they bring back the author who charmed us long ago with 'Mademoiselle Guignon' and 'Le Journal de Tristan.'

A Diary of Two Parliaments. By Henry W. Lucy. The Gladstone Parliament. 1880-1885. Cassell & Co. 1886.

Mr. Lucy's second volume is hardly as amusing as the first, perhaps because the style has less of novelty; but it is even more interesting, inasmuch as it foreshadows, all the more forcibly because unconsciously, the great events of this year. The Irish members occupy a large place—not politically, for the book avoids politics to a degree which detracts from its interest and makes it sometimes unintelligible—but personally; and though Mr. Lucy does not like them, he tries to be fair towards them and does not go much beyond poking fun at their peculiarities. The following passage is very striking in view of later events:

"Lord Hartington's public career is a paradox that grows more puzzling the more closely it is considered. He is a statesman *malgré lui*. But still more against the grain, as it lies on the surface, is the company in which he finds himself. It is impossible to conceive of two men more absolutely opposed to each other in temperament and habit of thought than Lord Hartington and Mr. Gladstone, and in less degree this holds good as between the Secretary of State for India and his other colleagues In social life Lord Hartington's intimate friends are chiefly found on the other side of the House. Thus he lives a dual life, which adds largely to the complexity of the situation. On the Irish policy of the Government, what is called society does not hesitate to speak in uncompromising terms. Lord Hartington mixes a good deal in certain coteries of society where Lord Beaconsfield is held in higher esteem than is Mr. Gladstone. The Marlborough Club, for example, is not a political institution, but it is, therefore, the more dangerous as a place of resort for weak-kneed Liberals."

That Mr. W. E. Forster's government of Ireland was a failure, there can hardly be a question, though, as Mr. Lucy says, "that he made the effort honestly and earnestly, sparing himself no pains, probably even Mr. Biggar would not deny." "In the days when he was restrained by official responsibilities, there was something pathetic in his patience under attack. That he felt the blows, could be seen at a glance. But when he rose to speak he never met personality with retort, but set himself to answer the real or fancied grievance with painstaking minuteness. To-day all the suppressed indignation and anger of those days blazes forth." The description of this attack (p. 311) on Mr. Parnell is really thrilling, and forms one of those scenes which make the House of Commons the most dramatic stage of public life in the world.

Of course the central figure throughout the book is Mr. Gladstone, and it is a wonderful picture of the man in his strength and his weakness. It would be difficult to believe what is set down even in this matter-of-fact diary, were it not that after reading the three hours' speech which he made last winter upon home rule, one is prepared to believe almost anything. "It is the opinion of those who have been familiar with Mr. Gladstone's work through many years, that he is only now (1880) reaching the prime of his powers. One gets tired of recording that his latest speech excelled those that have gone before. But to listeners it seems perfectly true." However empty the House may be, it fills up again as soon as Mr. Gladstone begins to speak; and the way in which he holds a crowded audience spell-bound for two and three hours at a time seems almost miraculous. However weary and even ill he may seem in his seat, he is no sooner on his feet than all signs of fatigue disappear. When the debate on the Compensation for Disturbances Bill was turning badly against the Government, Mr. Lucy says (p. 66): "It seemed a hopeless task for any man to reunite the Ministerialists, inspire them with enthusiasm, beat down the boisterous insolence of the other side, and turn an ignominious defeat into the semblance of a brilliant victory. Yet all this Mr. Gladstone did in a speech of less than half an hour's duration. By the sheer weight of genius, and the force of lofty character, he lifted the debate far above the reach alike of Mr. Gibson and Mr. Forster." His wonderful voice has much to do with this power. "Unconsciously the art of the orator was marvellously displayed in the sonorous tones in which this phrase 'a flood of indignation' was spoken. You could almost hear in it the sound of many waters."

But Mr. Gladstone has the defects of his qualities:

"With all his transcendant genius he is not a good leader of the House of Commons. The business there being, after all, to work, he has a fatal propensity towards the prolongation of talk. He not only talks continuously himself, but is the cause of unnecessary talk in others. It is a fresh tribute to his overmastering personality that when he is present the whole debate revolves round him. Members speak directly to or at him, in contravention of the elementary rule which requires all speech to be addressed to the Chair. This would not be, or certainly would not be to so great an extent, if Mr. Gladstone could affect insensibility or indifference. Whoever may be the speaker, however absolutely unimportant his remarks, Mr. Gladstone pricks up his ears and follows the speech with avid attention, and, by interjecting observations, often makes a conversation of what should be a debate.

"All this is very bad for the business of the House. But it must be still worse for Mr. Gladstone. The pitcher that goes too often to the well will be broken at last. Night after night the Premier needlessly risks fracture. It is impossible for him to half do anything. If he could be forcibly kidnapped every night at half past eleven, taken home and put to bed, though the procedure would be highly illegal, it would at the same time greatly add to length of years with him and conduce to the speedier progress of the business he has at heart."

Again:

"What took place on Tuesday morning forms

a striking example of the unfortunate influence which the personal impressionability of the Premier exercises upon Parliamentary affairs. It was, regarded from a dramatic point of view, a fine and moving spectacle when at last Lord Percy and his friends succeeded in making the Lion roar. They had been poking at the cage fully an hour, and had drawn forth nothing more pleasing or exciting than some vigorous shaking of the head and one or two monosyllabic ejaculations. Mr. Gladstone was evidently conscious of the undesirability of yielding to temptation. He might easily crush these young men, but at what expense! The whole of a night had been already wasted. It was early morning when the Minister for War had found an opportunity of rising and making his statement explanatory of the estimates. It was absolutely necessary that certain votes should be taken before the House adjourned. Every one except Mr. Gladstone was weary with the long sitting and worn out with watching for the coming of the Chairman of Committees

"These thoughts were evidently present in Mr. Gladstone's mind, and, fleeing from temptation, he vacated his usual seat by the despatch-box. If he had gone a little further, left the House altogether and gone home to bed, it would have been better for himself and public business too. He was like a man conscious of his own weakness in the face of drink, but who could not make up his mind totally to abstain. He went on the temperance principle, and, instead of leaving the House altogether, took up his seat at the lower end of the Treasury bench, under the shadow of the Speaker's chair. But this required only a little lengthening of the arm on the part of his pursuers, and presently they succeeded in drawing him. Since the night when, in Opposition, he suddenly turned and rebuked Mr. Chaplin, who had gone a pace too far, nothing has been finer in its way than his discomfiture of Lord Percy on Tuesday morning. The spare figure, trembling with indignation, bending forward as if preparing for a spring; the flashing eyes, the extended hand, and the ringing voice, combined to form an effective scene, the like of which no other stage in the world could parallel. It was magnificent, but it was not business."

It has been often remarked what a difference of results is produced by the difference of size of the House of Commons as compared with our House of Representatives. In the vast space of the latter every member is provided with a comfortable chair and a desk, and there is plenty of room to move about. But, owing to the distance and the irrelevant noises, it is impossible for a speaker to be heard, and there is no community of impulse or motion. On the other hand, in a full House of Commons, members cannot even find seats on the benches, but stand crowded round the doorways and the Speaker's chair like the audience in a theatre where only standing room is left. But they have their reward. The effect is like that of a group of men gathered around a fire. Every joke, every successful sarcasm, every bit of real or mock eloquence, every individual characteristic, acts upon the whole body, and cheers and laughter, or indignation and hooting, electrify the whole House. If the House of Commons was not, by this meaas, the most interesting and exciting club in the world, it would be hardly possible for men, many of whom are engaged in active occupations during the day, to attend, during six months, sessions which end from midnight to four or five o'clock in the morning.

The Azores or Western Islands: A Political, Commercial, and Geographical Account. By Walter Frederick Walker. London: Trübner. 1886.

Mr. Walter Frederick Walker is a member of the Royal Geographical Society; but his first sentence shows how exceedingly incomplete the library of that excellent institution must be, at least in its Azorean alcove. He says that it is forty-five years since Bullar's work on the Azores appeared, and that it is "the last work in our language purely descriptive of these delightful islands." So far is this from the truth that there have appeared in the United States alone, during that time, no less than three works "in our language" purely descriptive of the Azores; these being 'A Trip to the Azores,' by M. Borges de F. Henriques (Boston: 1867); 'Among the Azores,' by Lyman H. Weeks (Boston: 1882); and 'A Summer in the Azores, with a Glimpse of Madeira,' by C. Alice Baker (Boston: 1882). Each of these volumes gives a greater variety of information about the present condition of the islands than is contained in Mr. Walker's book, he devoting himself almost exclusively to the only island much visited by his countrymen, San Miguel or St. Michael. Of course he did not intentionally ignore these predecessors, but he simply adds another to the many proofs that English bibliography has its limitations.

Among these various recent writers on the Azores there is not one who has taken so much pains with their early history as Mr. Walker. Yet even here his reading finds anew its limitations; for he apparently has never heard of the one painstaking historical book written and published in any of the islands, the 'Annaes da ilha Terceira,' by Francisco Ferreira Drummond, "natural da mesma ilha," the first and only volume of which, published by the municipal council of Angra do Heroismo in 1850, now lies before us. Its 700 dingy pages are a mine of minute history, such as no historian of the islands can properly ignore. Nor does Mr. Walker make any reference to the few modern productions of the islands, in the way of belles-lettres, as, for instance, 'Contos e Poesias Açorianas,' by Ernesto Rebello, printed at Horta, Fayal, in 1873. He, moreover, discusses at great length the alleged Phœnician remains which so interested Humboldt, and confidently assumes that no such exist. This is probably true, but Mr. Walker is evidently ignorant of the curious inscription imbedded in the floor of an old church built about A. D. 1500 at Cedros, Fayal—an inscription concerning which there exists no explanation or tradition, although it has been suggested that it is probably of the same class with certain inscriptions in Belgian churches built under Philip II.; these memorials having long passed as Runic, but turning out at last to be in Latin, inscribed in a bastard Greek alphabet. A report on this Fayal stone may be found in the *Journal* of the American Oriental Society (vol. x, part i, p. xvi), and it perhaps does more than anything else to explain the origin of Humboldt's supposed Phœnician remains at the Azores.

Mr. Walker's book is written in a style of no especial literary attractions, but he gives a good deal of valuable information. Had he employed only the modest title claimed many years ago by Dr. J. W. Webster for his work on the same subject, 'A Description of the Island of St. Michael, with Remarks on the Other Azores,' he would have characterized his own work more accurately. Even within this limit, his descriptions of the far-famed gardens of Ponta Delgada —the chief attraction to strangers in his favorite island—are far less ample and interesting than those given by Mr. Weeks in his 'Among the Azores.' Mr. Walker's maps, however, are excellent; and he outdoes all his predecessors by publishing the notes and words of several popular Portuguese melodies, as the "Vivandeira" and the "Lagrimas," although he does not give us "Viva bella Criadagem," the prettiest of them all. It is the more remarkable that he should have taken this trouble, because he finds the Azorean Portuguese language "harsh and discordant" (p. 311)—a phrase not at all descriptive, certainly, of the sweet drawling sing-song of the more western Azores.

Das Leben Raphael's. Von Herman Grimm. Zweite Ausgabe des ersten Bandes und Abschluss in einem Bande. Berlin: Wilhelm Hertz; New York: Westermann. 1886.

When Herman Grimm published the first volume of his Life of Raphael (1872), he proposed to write a second, containing a life of the great painter based on original documents, and a critical study of his works. Finding it impossible to carry out this plan for want of material, he abandoned it, and determined to remodel his first volume, which, in its new and greatly improved form, now lies before us. The original introduction has grown into a history of the fame of Raphael from his death to the present time. The Italian text (second edition) of Vasari's life, with lengthy commentaries between each chapter, has been replaced by an unbroken reprint of the texts of the first (1550) and second (1568) editions of the same, with a German translation of the latter *en regard;* and an essay has been added on the "Sposalizio," the "Entombment," the "Camera della Segnatura," the Cartoons, the Sistine Madonna, and the "Transfiguration," with short references to other well-known works. The volume closes with a chapter in which the five Sonnets of Raphael are given in their different versions, with accompanying translations.

In his valuable bibliographical essay, entitled 'Les Historiens et les Critiques de Raphael' (note, p. 51), M. Eugène Müntz characterizes the first edition of Grimm's Life as "a systematic and paradoxical work, in which the author has taken pains to refute and depreciate Vasari and Passavant, the two men who have given us the most valuable information about Raphael." This charge, so far as it relates to Vasari, cannot be brought against the book in its present shape, as the author not only does him the honor to reprint and translate his Life of Raphael, but furthermore makes the *amende honorable* for previous depreciation, by acknowledging that "it is the chief source of our knowledge of the painter's life and career," and "that it is in the main trustworthy." Those who know how many of Vasari's errors have been detected and rectified of late years by Milanesi, Cavalcaselle, Müntz, and Lermolieff, will consider the above qualification justified. Perhaps, says Grimm, when Vasari began to collect materials for his 'Life,' Rome was full of legends about Raphael, among which he selected for his purpose those which seemed to him most worthy of credence. In regard to Passavant's work, Grimm seems to us to be actuated by an equally fair spirit. He considers the biographical portion to be of little value, but he lauds the second part as "a masterpiece of German research," and such indeed it is.

The most interesting and the most original part of the present volume is the first chapter, in which the author traces the decline of Raphael's fame after his death, to its upward tendency at the close of the last century. The first kept pace with the decadence of art in all its branches, which reached its lowest stage in the wild extravagances of the *baroque* and *Zopf* periods. The second set in about a hundred years ago, thanks to leaders of thought and taste like Goethe, who coupled Raphael with Homer and Shakspere in their esteem; and when, early in the nineteenth century, the artistic spoils of Italy and Spain, including the largest number of Raphael's pictures ever collected under one roof, were displayed in the Louvre, the supremacy of the Prince of Painters was still more widely acknowledged. His fame increased still further, as engravings of his works, beginning with Desnoyers's "Belle Jardinière," were spread abroad, and it culminated in our own day when photographic reproductions of them, at small cost, are found in every part of the civilized world. "The knowledge and the possession of Raphael's works," says our author, "has become essential to human

culture. Men have come to regard them as integral parts of their well-being."

Having but a limited space at his command, and many really important questions concerning the master to discuss, one can hardly understand why Grimm has thought it worth while to devote no less than forty pages to the worn-out question as to the real subject of the "School of Athens." The theories of Vasari and Giorgio Mantovano, and the modern suggestion, which has found little favor in the eyes of competent critics, that it is "St. Paul preaching at Athens"—a suggestion which, as it seems to us, our author treats with more respect than it deserves—would appear to be completely controverted by the fact that Raphael adopted and always adhered to certain types in representing the Apostles, as well as by the certainty that had he intended to represent St. Paul as preaching at Athens he would have placed him on the Hill of Mars and not in a Roman temple. Finally, the painter would not have symbolized the fresco in a medallion figure of Philosophy had his subject been taken from the Acts of the Apostles.

In conclusion, we may mention two points on which Grimm's statements are controvertible—viz.: one concerning the weaving of the tapestries, which he says was accomplished at Arras; the other relating to the painting of the "Transfiguration," which he believes to have been finished by Raphael. In the second edition of his 'Life of Raphael,' p. 478, M. Müntz quotes M. Pinchard's 'Histoire générale de la Tapisserie,' to show that the manufacture of tapestries in the upright frame at Arras ceased in 1477—*i. e.*, between thirty and forty years before the Cartoons were executed—and on p. 479 cites a legal act of the 14th June, 1532, which proves that the tapestries were woven from them by Pierre Van Aelst, the chief tapestry weaver at Brussels during the first third of the sixteenth century.

Concerning the completion of the "Transfiguration" by Giulio Romano after Raphael's death, the evidence seems no less conclusive. Two years after it occurred, Count Castiglione wrote to the Cardinal Giulio de' Medici, who had commissioned Raphael to paint the picture, at the price of 655 gold ducats, for a church at Narbonne, asking him to pay Giulio a certain sum (224 gold ducats) for his work upon the "Transfiguration." As Penni, who was employed with Giulio to finish the pictures left incomplete by Raphael, is not mentioned in the Count's letter, it is fair to conclude that he had no hand in the work, but it seems no less clear that it was done by Giulio.

Handbuch der Verfassung und Verwaltung in Preussen und dem deutschen Reiche. [Handbook of the Constitution and Administration in Prussia and the German Empire.] Von Graf Hue de Grais, 5te Auflage. Berlin: Julius Springer. 1886.

SINCE its first appearance in 1881, this work has been revised and reissued yearly, and has earned the well-deserved reputation of being the best, in fact the only adequate, exposition of the Prussian and German Governments which exists in a comparatively condensed form. The bulk of the book is devoted to Prussian matters, not only because Prussia occupies the more important field in the author's view, but doubtless also because so many of the laws and regulations of the Empire are but copies of Prussian models. The work is, as its name implies, merely a description of constitutional and administrative provisions of the Empire and monarchy, and contains very little historical matter, almost nothing that can be called theorizing, and but few criticisms of existing conditions. With German formality it is divided into chapters, headings, and numbered paragraphs, and is written in an involved style which is concise, but not always clear on first reading. It is necessarily only a sketch, and often gives but the barest outline where one would gladly pursue the matter further. The book is supplied with abundant notes, which, however, for the most part refer to works rarely accessible to the American reader.

When one considers how young the Empire still is and of what various elements composed, he will naturally be struck, in reading this work, with the rapidity with which comparative unification has been brought about. The reason therefor the author himself gives (p. 13), basing it on the thorough practicalness of the imperial legislation. This has one drawback, especially to the German mind, in that it lacks system. That will doubtless come later. In the meantime, the several members are learning that their best interests are closely bound up with those of the Empire; and though no constitutional change can be made in the internal regulation of any State, or in its relation to the Empire, without its own consent, each year brings some further success of the imperial Government in this direction.

In the minds of many Americans it is not clear whether there exist one or two legislative chambers for the Empire. This is doubtless owing to the fact that not only does the Bundesrath prepare bills for the consideration of the Reichstag, but its consent is also necessary for the confirmation of those originating in the latter body. Its functions are, however, rather executive than legislative, and its power over administrative affairs very considerable. Its members do not vote according to their individual convictions, but in accordance with instructions from the Governments of their respective States. As any constitutional measure can be defeated by fourteen opposing votes, Prussia, having seventeen votes, has the power to dictate at least what shall not be done when any important change is proposed. The members of the Bundesrath cannot be members of the Reichstag; but they have the right of attending the sittings of the latter, and, on demand, can at any time have the floor. The same holds true of the Prussian Ministers in the House of Representatives (*Abgeordnetenhaus*) of the Landtag. Here are precedents worth considering in the much-discussed question whether our Cabinet officers should be heard in Congress. The Reichstag is the legislative body of the Empire; and its members are elected by universal suffrage and direct vote, which is very different from the elaborate Prussian system of indirect vote based upon the comparative amount of tax paid by the respective citizens.

In reference to Prussia's greatness, our author calls attention to two important facts in that nation's history, viz., (1) that its rapid gain of power in foreign relations and its internal development "have been essentially the work of its princes" (p. 31); and (2) "that it was essentially the absolute form of the Government (*Staatsform*) which we have to thank for our magnificent development in the last century" (p. 32). The two truths are so closely interwoven that they are practically one; for with all their ability the Hohenzollerns would have been unable to build up the Prussia of to-day by any other method than compulsion, as German individuality tends naturally to the formation of small communities. With the modern advance of democratic ideas it would be practically impossible to reëstablish absolute government in Prussia. That country is still, however, far from adopting the opposite extreme of universal suffrage. The system of electing members of the Landtag is too complicated to be explained in a few words. It must suffice here to say that the voters are divided into three classes based on the census returns of property; so that wealth gives power. At the same time the principle is applied, which we Americans are slow to learn, viz., that responsibility should ever accompany power. In this respect the Germans criticise our politics severely, in that we have no method of inducing or compelling our best men to assume the cares of government, especially of those seemingly petty, but, in the end, weighty matters of local administration. A wealthy Prussian may have a dozen votes in his district; but in return he must assume the frequently annoying duties of magistracy, and not only serve without pay, but be answerable in the regular courts for the slightest overstepping of the strictly defined bounds of his jurisdiction. Furthermore, if he declines to accept the office, his taxes, already heavy, will be increased one-eighth or one-fourth; or he may adopt an alternative which seems still less attractive, *i. e.*, appoint a substitute, whom not only he will have to pay out of his own purse, but for whose every act he remains answerable in the courts.

The administrative system of Prussia is exceedingly complicated, and, for a foreigner, not always easy of comprehension. The book before us explains it, so far as the author's prescribed limits allow. A knowledge of the details, however, is not necessary for the understanding of a few great principles which lie at the bottom of it, and which are in all probability the secret of its success. In the first place, almost all offices are held practically for life. No slight failure in performance of duty, not even an arbitrary abuse of power, unless it be a great enormity, is considered cause of dismissal. The delinquent may be reprimanded, fined, suspended; but expulsion from the service is so weighty a matter that the unhappy man must either die or emigrate. There remains for him in Prussia no place of public or private trust. A man can therefore make choice of a Government career, and spend years in fitting himself for it, in the certainty that, once accepted in the service, he is practically sure of a comfortable berth for life. The Government not only requires, by rigid examinations, that applicants for office be well fitted for the positions they wish to fill, but it provides institutions of learning with courses specially adapted to the various careers open to a man desiring to enter the Government employ.

Not only are the positions life-long, but the system of pensioning old or disabled officials, or the families of deceased ones, is very complete. The sums thus given seem to an American sometimes ridiculously small. The salaries themselves are very moderate. But Germans, as a rule, are not accustomed to the luxury of American life; and the certainty of a small sum, with comparatively light work, possesses great attraction for them. But this official life possesses still other advantages. Not only does position give a corresponding place in society, but the families of officials in the same department form social circles among themselves. Furthermore, in addition to their salaries, the higher officials receive a fixed sum yearly for entertaining their subordinates, and these entertainments are given in handsome Government apartments provided expressly for this purpose. To these considerations add further the system of conferring orders and honors, from the Black Eagle down, for efficient service. Last, but not least, there is held out the hope of perpetuating one's name in marble, bronze, or other material; if not in the form of a great statue in an open square, or a niche in the Hall of Fame, still in a panel in a public building or a portrait in a museum or picture gallery, there to abide for centuries to be seen and remarked of men.

As a whole, and in spite of obvious disadvantages, the service is so effective, and the protection of the citizens against abuse of power so complete, that the system deserves thorough

study at the hands of those interested in the bettering of our own public administration. For this purpose the book before us furnishes an excellent outline, which will make a good basis for more exhaustive research.

My Study, and Other Essays. By Austin Phelps, D.D., Professor Emeritus in Andover Theological Seminary. Charles Scribner's Sons. 1886.

THIS is the sixth volume which Prof. Phelps has published within two or three years. It has the general character of his volume before this, 'My Portfolio,' which was lighter and brighter a good deal than the three preceding volumes. It is not strange that there should be such a demand for his writings in certain quarters as to justify such frequent publication. His theology is hard, but his heart is evidently kind. His style is always vigorous. He is opinionated and dogmatic, and he is livelier reading upon these accounts. Whatever his subject, he can manage incidentally to get in a good deal of homely common sense, and the clerical love of a good story is very strong in him. For some of his best stories he is indebted to Emerson, and they are therefore pleasantly familiar. He is more remarkable for the energy than for the accuracy of his literary work. Thus, on page 293, he quotes a considerable passage from Emerson as his description of the Pilgrims. He does not localize it, but it is taken from the essay on Shakspere in 'Representative Men,' and it has no reference to the Pilgrims whatsoever. On page 200, we read of "William G. Burney, the 'Free Soil' candidate for the Presidency." James G. Birney, the Liberty Party candidate, is probably intended. On page 183 Emerson's description of the "Chardon Street Convention," at which he was a sympathetic looker-on, is disingenuously made to pass for a disparaging description of an anti-slavery meeting. On page 98 Emerson is represented as having said, "Damn George Washington!" in a public lecture, which, except in quotation marks, he could not have done. Wendell Phillips's "God damn the Commonwealth of Massachusetts!" is severely reprobated on page 202. But this is only because the Professor is trying to make out a case against the abolitionists. Elsewhere he leaves the oaths out of his stories with evident reluctance, and hints at secret riches of profanity, and on page 90, telling how the Rev. John Ryland was overwhelmed by the story of the "middle passage," and how "the cultured reverence of years gave way" and he "broke out into a volley of imprecations," he asks: "Can we find it in our hearts to blame him?" Perhaps not. But if not, Phillips's monosyllable should certainly be recommended to mercy in view of the extenuating circumstances of the case.

Prof. Phelps's papers that name his book give an interesting account of his study, the men who have occupied it, its habitual visitors, and the schemes of evangelical enterprise that have had their inception there. A series of papers upon "Retribution" is the most elaborate in the volume. Prof. Phelps would have his readers believe that he maintains the creed of Calvin and Edwards in its original force, but his doctrine of eternal punishment for eternal sin is something foreign to the traditional theology, which argued infinite penalty for infinite sin, and declared that all sin was infinite because it was against an infinite God. Prof. Phelps calls no names, but his article on "The Hypothesis of a Second Probation" is a thundering broadside into the "New Theology," the "Progressive Orthodoxy," so called, of Andover.

Two articles on "The New England Clergy and Anti-Slavery" are hardly less amusing than the most amusing chapters of 'The Innocents Abroad.' Prof. Phelps contends that the New England evangelical clergy were anti-slavery almost without exception, and that if there had been no abolitionists, the clergy would have put an end to slavery in a way that would have been pleasant all around: in fact, slavery was gradually dying out when the abolitionists began their assault upon it. Webster's 7th of March speech is a sufficient answer to this nonsense, and the recent Garrison volumes to this and all the rest. Those volumes bring us to the year 1840, when abolitionism had attained its maximum growth as a special organization. The abolitionists "more hostile to Christianity than to tyranny" had not then appeared upon the scene. Garrison was still as orthodox as Prof. Phelps. His doctrine of the Sabbath represented a more strict adhesion to the Bible than that of the orthodox party generally. It was not the heresy or infidelity of the abolitionists that alienated the clergy: it was the apathy and timidity and sectarian zeal of the clergy that forced the abolitionists to appeal from the Christianity of the churches to the Christianity of Christ.

The German Soldier in the Wars of the United States. By J. G. Rosengarten. Philadelphia: J. B. Lippincott Co. 12mo, pp. 175.

WHAT was originally a public lecture has here grown into a volume, after passing through several forms of publication. It contains a carefully compiled list of regiments and of officers of German birth who served on either side in the war of the Rebellion. This may be considered the chief purpose of the book, and will make it useful for reference. In addition to this, the author has gone back to the Old French War, the Revolution, and the Mexican War, and recorded the names of German soldiers, or those of German descent, who took part in them. A good many interesting facts are thus preserved, and some interesting problems are suggested, relating to the early ties between Germany and this country. When, however, the author classes as Germans Gen. Muhlenberg, who was born in Virginia in 1746, with many of the "Pennsylvania Germans" equally natives of the country; traces the Hunters of Kentucky to German *Jägers*, and claims Heintzelman, Custer, Schriver, Shiraz, Ammen, and Haupt, all graduates of West Point and of families native in the country for several generations, as soldiers of German descent, the extent of the claim becomes amusing. One asks, Why not claim the whole by going back to the Saxon invasion of England?

Thoughts. By Ivan Panin. Boston: Cupples, Upham & Co. 1886. Pp. 85.

AT the first glance one perceives that the writer before us is no Russian, at the second glance that he is no thinker; and one is inclined to draw one's pencil through the title as meaningless. But if one continued to mark out all that is meaningless in the volume every page would read "dele." The critic stays his hand, however, for a moment here and there to question introspectively. Thus: Thought 430: "Where I cannot be grateful, I can still be thankful." I cannot be grateful that I am reading this book; am I thankful?

195. "If silence is good for the wise, how much better is it for the foolish." Why, then, is not Ivan Panin silent?

84. "Tolerance saith, hate not those differing with you; Charity saith, hate not those differing from you." Am I intolerant or uncharitable—which?—toward Ivan Panin?

87. "Have patience with the foolish; even to the lot of geese it may befall to save a Capitol." What chance is there that Ivan Panin will save Washington?

94. "Sincere praise may be injudicious; sincere blame always is." How injudicious I am now forced to be!

279. "It detracts naught from the razor that it cannot cut a rock. Say not, therefore, this is false. Rather, see whether thou art not the rock." Am I a rock? Ivan Panin is not a razor. I may say, therefore, this is false.

Thus and so the poor critic questions himself, and turns to the public for sympathy in his perplexities.

The Russian Storm-Cloud; or, Russia in her Relations to Neighboring Countries. By Stepniak, Author of 'Russia under the Tzars,' 'Underground Russia,' etc. [Franklin Square Library.] Harper & Brothers. 1886.

CONSPIRATORS who enter pseudonymously the arena of political and historical discussion enjoy special advantages. They are expected to know and partly to divulge secrets unknown to those who observe and discuss things and events merely as they appear on the surface, and they are, therefore, sure of being eagerly listened to by curious crowds. They can state facts and views with the positiveness of men of action esoterically initiated. They will not be asked for their authorities, for indicating them would be betraying the secrets of the conspiracy as well as the actors in it. They have, on similar grounds, the privilege of speaking vaguely, of veiling a part of an assertion, of using ambiguities. As champions of a cause which is not strong enough to cope with its opponents in the open, they are excused for being passionate, bitter, uncharitable—especially if the cause is one which can appeal to the liberal sentiments of the world, and its defenders are victims of cruel oppression and persecution. Stepniak well knows these advantages, and profits by them without stint, though, to do him justice, without rashly abusing them. As we have repeatedly had occasion to say in these columns, in reviewing his former publications (see Nos. 945 and 1038 of the *Nation*), he is prone to color and exaggerate with the recklessness of a fanatical partisan and combatant, but not to invent and deceive. His 'Russia under the Tzars' seemed to us, in regard to the authenticity of its pictures, to fall somewhat below the level of the earlier 'Underground Russia'; the book before us, which consists of a medley of essays—almost all republished from journals—we deem superior in the same respect to both its predecessors.

And not in that respect alone. Stepniak's main fault is not lack of veracity in expounding views and facts, but lack of seriousness in reading history—contemporaneous or past, Russian or foreign—and superficiality in drawing conclusions: and he has evidently improved a little as a revolutionary student and reasoner since he wrote the preceding publication, and even while preparing the present one for the press. Of the six essays contained in the latter, "The Russian Storm-Cloud" (from which the general title has very improperly been borrowed), "The Russian Army and its Commissariat" (a revolting picture of official corruption), "The Young Poland and Russian Revolution" (written in a pro-Polish spirit which reminds one of Hertzen), "Terrorism in Russia and Terrorism in Europe," "European Socialism and the Dynamite Epidemic," and "A Revolt or a Revolution?" the last shows the most evidences of reflection, doubt, and hesitation in judgment. Here we find broad admissions as to the intellectual advance of Russia under the last Alexander—admissions which belie a considerable portion of the invectives against the Government for its endeavors to stifle all intellectual development; an instance of self-restraint as an assailant in giving a hearing to a calm view—Leroy-Beaulieu's—of the situation in

the Empire of the Czars; and some attempt at balancing the probabilities and chances of the revolutionary movement, including lines like these:

"The Russian revolution must for a certain time be the work of a comparatively small group of men, surrounded by a crowd of irresolute sympathizers. They are quite sincere in their sympathy, often willing to give occasional help to the strugglers. But they have no faith in the possibility of success, and cannot, therefore, throw in their lot with the revolution. To inspire this faith in their hearts, and to convert them into actual supporters, the revolutionists must show their strength in deeds and not in words. The great difficulty is to organize a body sufficiently strong to initiate the insurrection and to keep the field for a certain time. If not suppressed the first day, there are great chances that the thousands and thousands who are now irresolute and hopeless would join the banner of insurrection, rendering it no longer subduable. There is nothing chimerical in such an expectation in countries brimful of disaffection, and history affords some instances of the success of similar attempts. The temptation to try them is, therefore, very great—I may say irresistible. Neither disappointment nor cruel reprisals can prevent their being renewed again and again. Provided latent discontent exist, there will be always people sufficiently bold and willing to risk their heads again and again for such a golden prize."

It is clear to him who compares statements like these with the tone of former Nihilistic utterances, and with the teachings of Russian history, that the late decline of the revolutionary cause—the result of systematically rigorous and ruthless repression—has had a somewhat sobering effect even upon so inveterate workers in subversion *à tout prix* as Stepniak, and that they must do a great deal of arguing to convince themselves that this enterprise is not chimerical. In doing this they confound fierce serf risings, political assassinations, and regicidal attempts, in which Russian history abounds, with real revolutionary movements, of which in the annals of the Russian Empire there is only one solitary instance, the speedily suppressed military rising at the accession of Czar Nicholas, in December, 1825. They paint the shocking ignorance, superstition, and corruption prevailing among the one hundred million subjects of the Romanoffs, as excrescences owing their existence to an accidentally developed monster, Czardom; destroy the latter by a few vigorous blows, and there will be a Russian millennium of freedom, fraternal harmony, and enlightenment. That Czardom may possibly be a many-headed hydra, drawing its life-blood from yet unsubdued native barbarism and intellectual and moral sloth, is not deemed worth examination. Russian conquering aggressiveness is discussed in the same way: the ever-renewed "Russian cloud-storm" arises only from perturbations in the political atmosphere caused by the insatiable greed and restlessness of the Romanoffs; destroy them, and the Russian bear will hug in peace the Polish lamb, the Turkish ox, and the Afghan boar. The Jacobins, too, predicted that a reign of peace would spring from the blood of the Bourbons—just before they were silenced by the cannon of Bonaparte—and Most teaches that all misery and crime would vanish with the State and the police.

Memorials of Merton College. With Biographical Notices of the Wardens and Fellows. By the Hon. George C. Brodrick, Warden of Merton College. Oxford: The Clarendon Press; New York: Macmillan. 8vo, pp. 415.

MERTON COLLEGE, although at the present day less spoken of than several of its fellows, is historically the most important of all the colleges of Oxford. Its establishment in 1264 "constituted an entirely new departure in the academical history of the Middle Ages. Not only was it the archetype upon which all the collegiate foundations at Oxford were moulded, but the *regula Mertonensis* was expressly adopted as a model for the oldest college at Cambridge" (p. 12). The colleges of the two great English universities, with their noble architecture, their charming grounds, and their remarkable social and intellectual life, may all be said to have sprung from the creative mind of Walter de Merton. But not only does Merton College stand as the type of the English colleges, and its chapel as one of the most beautiful creations of Gothic architecture, but the student of industrial and economical history finds here also one of his chief sources of information. It was chiefly from the records of this oldest of corporations that Prof. Rogers obtained the materials for his great 'History of Agriculture and Prices.' Mr. Brodrick's history of Merton College forms the fourth volume of the publications of the Oxford Historical Society. The history is in five chapters, treating respectively of the time before the Reformation, the sixteenth century, the reigns of James I. and Charles I., the Commonwealth and restored monarchy, and the period since the Revolution of 1688. Part II. contains biographical notices of the Wardens and Fellows, while five appendices give valuable documents and additional data.

BOOKS OF THE WEEK.

Annual Register: A Review of Public Events at Home and Abroad, for the Year 1885. New Series. London: Rivingtons.
Arnold, E. India Revisited. London: Trübner & Co.; Boston: Roberts Brothers. $2.
Barns, W. E. The Labor Problem: Plain Questions and Practical Answers. Harper & Bros.
Chamberlain, B. H. A Simplified Grammar of the Japanese Language. London: Trübner & Co.
Cruise of the *Alabama*. Boston: Houghton, Mifflin & Co. 50 cents.
De Pevrebrune, G. Les Frères Colombe. W. R. Jenkins. 25 cents.
Dewey, T. H. A Treatise on Contracts for Future Delivery and Commercial Wagers, including "Options," "Futures," and "Short Sales." Baker, Voorhis & Co. $4.
Dwight, J. Lawn-Tennis. Boston: Wright & Ditson.
Fawcett, E. Romance and Revery. Boston: Ticknor & Co. $1.50.
Flint, Dr. A., sr. Medicine of the Future: An Address Prepared for the Annual Meeting of the British Medical Association in 1886. D. Appleton & Co.
Forbes, S. R. Rambles in Naples: An Archæological and Historical Guide. T. Nelson & Sons.
Fothergill, Dr. J. A Manual of Dietetics. William Wood & Co.
Holmes, Dr. O. W. The Guardian Angel. Boston: Houghton, Mifflin & Co. 50 cents.
Hunter, W. W. The Indian Empire: Its People, History, and Products. Second ed. London: Trübner & Co.
Jones, D. A. A Treatise on the Construction or Interpretation of Commercial or Trade Contracts. Baker, Voorhis & Co. $5.50.
Justina. [No Name Series.] Boston: Roberts Brothers.
Lee, V. Baldwin: Being Dialogues on Views and Aspirations. Boston: Roberts Brothers. $2.

Winter, J. S. Pluck: A Novel. Harper's Handy Series. 25 cents.

"*A very original and deeply interesting novel, full of plot, incident, spirited talk, and character, and never too improbable for belief. It deals with that question—decidedly of the earth, earthy—which novelists had much better leave entirely alone unless they can treat it as well as it has been treated here: the old, old problem of confused love and duty, passion and law. The situation has new features, however, and is admirable and noteworthy for the way the problem is solved. . . . The extreme cleverness and the innate nobleness of this conception are hardly appreciated on the first reading, when the reader is absorbed in the interest of the book as a mere story; but the fineness of it, as a study of human nature, makes it really a striking study of the conflict between good and evil. . . . Such a situation is novel in the world of fiction, and is worth dwelling upon as a bit of subtle psychology. Besides this there is a great deal in the book to hold one's interest. The character drawing is admirable. . . . All are painted with skill and sympathy, and the book as a whole is really a remarkable one.*"—THE CRITIC on

"Children of the Earth,"

The Nation.

NEW YORK, THURSDAY, JULY 15, 1886.

The Week.

An official statement of the reasons for seizing the fishing schooner *Ella M. Doughty* by the Canadian authorities has been furnished to the counsel of the United States by the law officers of the Dominion Government. It is in the nature of an indictment of sixteen counts. It does not supply any new facts or charges, but it gives us a precise understanding of the Canadian position in the fishery dispute. It sets out that the *Doughty* was procuring bait, ice, and other supplies in a Canadian port preparatory to fishing, and that this act is in contravention of the Treaty of 1818. This question must be tried in a Canadian, that is, a British, court. There are two cases on record in which the charge or libel against American fishing vessels was the same as in the *Doughty* case. Both were tried before the Treaty of Washington came in force. In one of them it was held that the buying of bait and ice in Canadian ports was "preparing to fish," and that preparing to fish was a violation of the treaty. In the other case, which was later in point of time, and was tried before another judge, it was held that preparing to fish was not in itself unlawful, but that it was incumbent on the prosecution to show that the vessel was preparing for illegal fishing in British waters. The latter of these is the only conclusion conformable to justice and common sense. The case of the *Doughty* may drag on for a long time, but its final decision can hardly be different from that announced in the second of the two cases referred to. It is impossible that a British court of last resort should make a crime out of an act which is not a crime.

The Judiciary Committee of the Senate, finding it impossible to smother the Beck bill, have done their best to defeat it by amending it to death. As originally presented, the bill made it unlawful for any Senator or Representative "to accept employment as attorney-at-law, or payment for services of any kind, from any railroad company, or any officer or agent thereof, which obtained its charter, or any grants of land, or pecuniary aid from the United States." The majority of the Committee, under the lead of Mr. Edmunds, have amended it so as to make it unlawful for any Senator or Representative "to accept employment as attorney, or payment for services of any kind, in opposition to the United States, in any case to which the United States may be a party or in which its interests may be concerned; or from or against any railroad company which obtained its charter or any grant of lands or pecuniary aid from the United States, when measures especially affecting the interests of such railroad are pending before Congress; or from or against any bank or other corporation which obtained its charter or any pecuniary aid from the United States; or from or against any corporation engaged in inter-State commerce by land or water or in the transportation of the mails; or from or against any corporation, company, firm or person, or officer, or agent thereof, engaged in the production, manufacture or sale, or importation of any article upon which a duty or excise tax is levied by act of Congress." The passage of this bill would prohibit a Congressman from acting as attorney for the defence in any case in which the United States might be concerned, from appearing as counsel in any case relating to a national bank, from pleading the cause of any railroad or steamship company whose line was not entirely within the limits of a single State, and from appearing for any person or corporation whose business is affected by either the customs or the internal-revenue service. Such a sweeping prohibition is, of course, absurd, and the country will recognize that the sole object of the majority of the Committee in reporting this substitute was to defeat the bill. The original measure, however, has been reported back by the minority of the Committee, and we trust that Mr. Beck will continue to press its passage.

The Senate has rejected the nomination of Mr. Goode of Virginia as Solicitor-General, and its action will be endorsed by the public. Mr. Goode has long borne a bad reputation for his participation in the election frauds by which he was elected to Congress years ago, and his connection with the Pan-Electric business since he went into the Department of Justice has still further discredited him. If Attorney-General Garland can interpret the signs of the times, he must see in the popular endorsement of Mr. Goode's rejection evidence of the satisfaction with which the country would hail his too long postponed resignation.

Owing to the change of rules this session, the diplomatic and consular service has received from the Committee on Foreign Relations of the House appropriations which will, doubtless, render it independent of the support of European and Asiatic bankers. For the last few years the sub-committee of the Committee on Appropriations has doled out the funds for its maintenance in such a way as to make it necessary for the Secretary of State to request, session after session, that large deficiencies be supplied. Though this is a poor kind of economy in any case, it is most culpable niggardliness and short-sightedness in the case of our foreign service. Mr. Schuyler has shown, in his 'American Diplomacy,' the ill-treatment of our ministers and consuls, who frequently are required, by instructions which they cannot disobey, to undertake some difficult and perhaps expensive work, and when it is completed, they are notified by the accounting officers that the appropriation from which they should be reimbursed has become exhausted, or, indeed, that their own salary has been stopped some six months before, by reason of a failure to continue the appropriation for their post. Personal loss and mortification are not the only results of this penny-wise and pound-foolish legislation. By a custom as old as the Union, these officers have been allowed to draw on the departments for their salaries and expenses, and to sell their drafts at their posts to the local banker or broker. To-day there is scarcely a banker in Europe who will touch this paper unless a large discount be paid for the risk. The Government appropriates every year several thousand dollars to meet these losses, a large proportion of which would never accrue were it not necessary to refuse payment of consular drafts at the Treasury because of exhausted appropriations. The discredit and disgrace cast in this manner upon the Government outweigh all the benefits of our consular service. It is almost incredible that any man should insist that salary justly earned, and expenses incurred in good faith and in obedience to instructions, should not be paid by the Government, because the heads of departments had no right to allow the original appropriations to be exceeded. Yet this was done by Mr. Burnes, who this session had charge of the Deficiency Bill, though it was abundantly proved that changes in office, accidents, war, conflagrations, and other emergencies render it impossible to keep within the prescribed limit either as respects the salaries or the expenses of our foreign service. It is very gratifying even to those who can sympathize with his views of the uselessness of the diplomatic service, and with his condemnation of the open-handedness of the State Department, that he did not succeed in his efforts to whip either over the shoulders of unoffending public servants.

The accounts of postmasters are examined and adjusted by the Sixth Auditor of the Treasury alone, and those of all other officers of the Government by an auditor and comptroller. This anomaly has been frequently commented upon and criticised. At last a bill has been introduced into Congress creating an additional comptroller, who shall be required to revise the Auditor's statement of the accounts of postmasters. This, if it becomes a law, will bring under the general system a large class of accounts which have all along been subjected to but one investigation. The question naturally arises, why all accounts should not be adjusted by one set of officers once for all, as those of postmasters have been. There is, of course, no advantage in a number of investigations carelessly conducted. Accounts settled by one set of clerks, ill qualified for the task, and conscious that reviewers will go over each calculation, will doubtless contain errors which will escape the first examiners, but this constitutes a very unsatisfactory reason for the employment of the two sets. Yet it is the only one given by those who uphold the present system of accounting at the Treasury, and who desire the Sixth Auditor's office to be included in it. One careful examination of accounts ought to be sufficient, and such an examination could easily be secured by requiring higher qualifications in the auditing clerks. Men whose competency and trustworthiness are beyond question could be got if the salaries paid for such services were as great as could be obtained by them from business houses. But in the Treasury

the character of the work has so little to do with the salary paid that the person who audits the most difficult accounts frequently receives no more than he who indexes the books in which they are recorded. A great saving would result from the merging into one of the offices of Auditor and Comptroller, which would warrant the payment of sufficient salaries to these accounting clerks. The propriety of this consolidation will be fully discussed, we hope, when the bill which we have mentioned shall be reported from Committee.

The first Congressional Convention of the year in Texas was held at Victoria on Wednesday week, the Democrats of the Seventh District renominating Representative Crain; and the gathering was rendered notable by the heartiness of the resolution endorsing the President, which reads as follows:

"That we recognize in Grover Cleveland a Democrat and patriot who, under the heavy cares of his great office, has displayed masterly ability, unimpeachable integrity, and heroic courage; and that we commend the fidelity with which he has fulfilled his pledges to the people in the face of great pressure to violate them."

In thus commending the President the Convention in the Seventh District only represented the feeling of Texas Democrats generally. The Galveston *News*, the leading Democratic paper of the State, closed a review of the political situation the other day with this emphatic statement: "Nine Democrats out of ten in the South, exclusive of office-seekers, are perfectly satisfied with Cleveland's Administration, and it is safe to say that, if the National Convention were held to-morrow, the South would be solid for Cleveland's renomination." Such deliverances as these from representative Democratic newspapers and conventions are becoming so much the rule that the Blaine organs are reduced to terrible straits in their efforts to keep up the delusion that the President is not supported by his party.

Two interesting attempts on the part of Republican managers to prevent the liquor question from making trouble in the party were reported on Tuesday. One was the anti-saloon Republican conference in Boston the day before, and the other Boss Quay's treatment of the Pennsylvania Liquor League, which opened its sessions in Pittsburgh on Tuesday. The idea of the Boston meeting was to fool the Prohibitionists by passing a set of temperance resolutions full of "glittering generalities," but the Prohibitionists in the gathering refused to be satisfied with indefinite professions of sympathy, and carried a declaration in favor of submitting the question of constitutional prohibition to the people—which is the last thing the Republican politicians want to do. In Pennsylvania some of the "Republican saloon-keepers" have been troubled by the resolution in favor of submitting a prohibitory amendment which Boss Quay considered it necessary to have his recent State Convention pass, and his present object is to convince these malcontents that the resolution really does not amount to anything. He has accordingly arranged that Maj. A. E. Montooth, who was a candidate before the Convention for Lieutenant-Governor, shall deliver an address of welcome to the delegates on behalf of the Republican Mayor and the local liquor men of Pittsburgh; while D. C. Keller, who was voted for in the Convention for Secretary of Internal Affairs and is a saloon-keeper in Reading; Harry E. Griffin, Secretary of the Republican State Committee, who is a saloon-keeper at Pottstown; and a number of other saloon and hotel-keepers in Philadelphia, who attend as delegates, are to assure the League in its secret sessions that the temperance plank in the platform does not mean anything, and promise the liquor men privately anything they want. The Pittsburgh affair is perhaps the most significant comment that could be made upon the Boston gathering, and there is every reason to believe that the Prohibitionists will interpret the two performances correctly.

The philosophy of boycotting has been studied to good purpose by the 300 employees of Mr. Ehret's brewery, who on Sunday filed a protest at the Central Labor Union against the boycott of that establishment. They deny that Mr. Ehret has done anything for which he should be boycotted, and they point ruefully to the fact that if the boycott is successful, the heaviest blow will fall upon the workingmen now earning good wages in his employ. They say that Mr. Ehret was called as a witness by the defence in the case of the Theiss boycotters, and that he only answered questions put to him, volunteering no information. Such being the facts, they put the searching question to the Central Labor Union: "Is this boycott of Ehret's beer straight, anyway?" meaning were they paid for it. The question was a puzzling one. In order to save embarrassment, a motion to adjourn was made and carried; so the conundrum goes over till the next meeting. We think that a suitable answer would run something in this way: A boycott is never "straight," but a boycott which deprives one capitalist of his profits and 300 workingmen of their means of living, is the crookedest invention that was ever devised to secure the rights of Labor.

The only thing in the British elections which is entirely clear is that the Irish gain enormously. The total of votes cast up to this writing is 1,209,874 against, and 1,118,973 for home rule, and 130 English and Scotch members have been elected pledged to the policy of giving Ireland a separate legislature. Now this is, to any one who looks back to 1880, a wonderful result. There was probably not a single member elected either in England or Scotland in that year who did not look on Irish home rule simply as the foolish dream of a small squad—about twenty-five, all told—of insignificant Irishmen in the House of Commons. There was probably not a man either in England, Scotland, or Ireland, however sanguine about it, who looked forward to seeing an English constituency carried by a home-rule candidate within the present century. The progress made by this question among English voters is not only prodigious, but unprecedented. There is nothing like it in English history. It took fifty years of agitation in England to bring about Catholic emancipation. It took fully fifty years also to secure the repeal of the corn laws. It took fifty years to get the first Reform Bill passed.

It may be said that the Irish question is older and has been before the world longer than any of these were. It is true that it is older in Ireland, but one of the curiosities of the whole subject is its exceeding newness in England. It is quite safe to say that nothing that can be called popular discussion was ever expended in England on the Irish question, as the Irish present it, until Mr. Gladstone brought in his Church Disestablishment Bill in 1869. In fact, it is not an exaggeration to assert that Parnell has won the ground he now holds within the last six years, in the face of the tremendous difficulties created by the outrages, and assassinations, and explosions of the more barbarous wing of the Irish malcontents. The lesson of this for the Irish is obvious. They have at last got a large and powerful body of English and Scotch voters on their side who sympathize with them, and are ready to work with them and for them. This fact alone makes the strongest demand ever made on the political sagacity, good sense, and self-control of the Irish race all over the world. They have now at last a chance to show that they can be good politicians as well as fiery and indefatigable agitators. They must avoid disgusting or disheartening their English and Scotch friends by violence either of language or deed, and prove they are as good men in the forum of English debate as they have always shown themselves on English battle-fields. They have two leaders in Gladstone and Parnell who have never been surpassed either as Parliamentary tacticians or as orators, and if they sustain them heartily, success in the near future is as certain as anything in politics can be.

If Sir Michael Hicks-Beach, the late Tory leader in the House of Commons, be correctly reported, the Tory programme, which he sketched out in his recent speech, promises lively times in the House of Commons when Parliament meets. He says that if the Tories come into office, their first proposals will be the suppression of the National League, the vigorous use of the clôture, and the suspension of the Irish in case they attempt obstruction. This announcement might have been serious four or five years ago, but it is foolish now, when the Irish are acting with nearly 200 English and Scotch members, who would, of course, make common cause with them and resist any exceptional measures of coercion directed against them, either in or out of Parliament. If anything of the kind is attempted, it will probably end in a prolonged row and another dissolution.

The way the English Unionists continue to "give themselves away" on the Irish question is very curious. The very foundation of their argumentation against home rule is the assumption that the Irish now enjoy perfect equality with Englishmen and Scotchmen, and are, when not dabbling in politics, respected and much-liked citizens of the British Empire. But when the Unionists get excited on the stump or in the newspapers, their real view of the position of the Irish breaks out in a most amusing fashion. They denounce the majority of the Irish people as

either assassins or the confederates of assassins. The *Spectator* declares, as a reason for not giving them self-government, that they are all suffering from a perversion of the moral sense, and cannot be trusted to keep any compact. It said only a few weeks ago that the only justification for giving them the same electoral franchise as Englishmen was that, being in a small minority, it would be of no use to them. One can find passages of this sort, teeming with contempt and dislike of the Irish, in nearly every Unionist speech and article, and they furnish altogether, to the impartial observer, the strongest possible demonstration of the unfitness of Englishmen to govern Ireland, and in fact explain the wretchedness of Irish history.

None of these admissions, however, quite equal in naïveté that of the Duke of Argyll, who has just been writing a letter to the London *Times* explaining the Irish question to the Americans, who, he says, have been led astray about it. The Duke is not a modest man, and has a great deal of spare time, so that there is hardly anything which he does not now and then undertake to explain. What he wants Americans to understand is, that the opposition to home rule in England really has its roots in love of the Irish. Englishmen are so fond of the Irish that they want to keep their representatives in Westminster Hall, and cannot bear to have dear Ireland sink into the condition of a mere province of the Empire, as proposed by the wicked Gladstone and his desperate associates. If Americans were not aware that a large majority of the Irish people desire home rule, this explanation might carry some weight; but knowing what they do know of Irish feeling about the matter, they see, what apparently the Duke of Argyll does not see, that if they accept his solution, they must also accept his assumption that the Duke and his friends know better what is good for the Irish than the Irish know themselves. In other words, the Duke really grounds his opposition to home rule on contempt for the Irish, but is apparently utterly unconscious of the fact.

The speech from the throne with which Prince Alexander of Bulgaria recently opened the extraordinary session of the National Assembly of his State betokens self-conscious firmness after victory. He expresses his joy at meeting the representatives of "the Bulgarian nation" from both sides of the Balkans—that is, from both Bulgaria proper and Eastern Rumelia; extols the heroic valor of the defenders of the honor, freedom, and "integrity" of the country, who so rapidly drove "the foe"—the Servian invader is left unnamed—back into his own land, and victoriously followed him thither; declares "the union of both Bulgarias already accomplished," as evidenced by the present common National Assembly, convoked to deliberate on the affairs of the whole fatherland; gives utterance to hopes of a brilliant future; and has not a word of allusion to either the incomplete character of the national unity, as lately settled by the Sultan in accord with the conference of the Powers, or the peculiar relations of the State to the Czar of Russia, whose father created it and intended it to be greater even than it now is, but who eventually became the passionate opponent of the union of its severed parts under its elected ruler. The speech has created a very unfavorable impression in the Government circles of St. Petersburg, and a part of the Russian press furiously attacks the Prince. He is accused of barefaced perversion of patent facts, of ingratitude toward the deliverers of Bulgaria, of arrogance toward an enemy whose discomfiture was the merit of the Russian organizers of the Prince's army, and of the impudent assumption of the rôle and tone of an independent monarch, while he is, in reality, the vassal of Turkey in Bulgaria, and its officer as Governor-General in Eastern Rumelia, and his country is without a common constitution, and his common Assembly illegally convoked. These invectives, however, are without force as long as the Sultan looks on indifferently at the new infringement of his suzerain rights, and Russia dreads to provoke a conflict in which Germany, with her Austro-Hungarian ally, might sooner or later stand on the opposite side. A revolution has given Eastern Rumelia to Alexander of Battenberg, and he means to proceed in a revolutionary way, though without precipitation.

The condition of Denmark is deplorable. The Premier Estrup has nullified the Constitution, setting it at defiance in a hundred ways. His government is absolutism, pure and simple. The press is muzzled, and any editor who ventures to criticise the high-handed action of the ministers is promptly clapped into jail for "insulting the majesty of the King." The venerable President of the Folkething, Mr. Berg—the most popular public man in Denmark—is at present serving out his sentence in prison for this offence. The docket of the courts is filled with similar cases; it seems as if no Dane outside of the official bureaucracy could express an opinion concerning the King without insulting him. In the provinces large numbers of peasants refuse to pay taxes to an unconstitutional Government, and forced sales and executions are the order of the day. Society ladies form sewing circles and bazaars for the purpose of presenting guns to the Government, while women of the people send in petitions requesting the privilege of sharing the cells of their imprisoned husbands. It seemed a year ago as if such a state of things could not last, and yet there is no indication that a crisis is near. The people of Copenhagen had even the hardihood to turn out, a few weeks ago, 100,000 strong, to celebrate "Constitution Day," and mildly protest against Mr. Estrup's methods by parading the paragraphs of the Constitution which he had violated, upon banners draped in black. The oratory of the occasion was mild and cautious, however. The adherents of the Government, who had a small and select celebration all to themselves, had a much merrier time of it. They varied the traditional programme by rejoicing, not in a free people, but in "a free king." That has, at least, the merit of originality.

The crisis through which Holland has just passed presents features of much more general interest than a mere difference in matters of finance or trade. In the course of the year 1885 the Government introduced a scheme for the revision of the Constitution. It was generally admitted that a change was absolutely necessary. Many points, such as the succession to the Crown, military organization, etc., were open questions to which neither of the opposing parties in Parliament had bound themselves in their platforms. It was confidently hoped that some compromise could be made, securing a satisfactory solution. The burning question, however, was the regulation of public instruction. Article 194 of the present Constitution secures perfect freedom to private schools, reserving to the State only the necessary control as to the capacity and morality of the teachers. But at the same time it lays down in emphatic language the principle that public schools accessible to children of all denominations shall be established by the State in every community of the kingdom. The Ministry was willing to make some concessions to the ultra-Protestant and Catholic parties, and to restrict this obligation of the State to cases where no sufficient private schools existed. The Liberal party, which submitted a proposition of its own, held fast substantially to the existing law, although it made concessions on minor points. The Clericals, however, were dissatisfied with both these propositions, and asked for a constitutional prohibition against erecting free public schools, except for paupers, and also for an express recognition in the Constitution of the right of the legislature to grant subsidies to private schools. As the parties in the Chambers were evenly divided, none of these three propositions secured a majority.

No serious fault, of course, can be found with the Clericals for trying to incorporate their principles in the Constitution. But after the rejection of their proposition they followed a policy of obstruction, and declared that they would vote against all the proposed modifications of the Constitution, irrespective of their merits. The Ministry thereupon offered its resignation, and, after the Clericals had refused to take office, dissolved the second chamber. The elections took place under the most favorable auspices for the Liberal party. Their great source of weakness of late had been their internal dissensions. Now, a general union of all the Liberal electors was formed, and with trifling exceptions all dissensions were for the moment at an end. The Clericals labored under the disadvantage that they had to carry on a defensive campaign, and to explain their strange refusal to coöperate in making changes the desirability of which was conceded by everybody. The expression used by the leader of the ultra-Protestant party in one of his electioneering speeches, "that the agitation against section 194 should be continued, even if it should consign the country to perdition," was of course eagerly seized upon by the Liberal papers. The result was a decided majority for the Liberals. Fortunately, although the Liberal Ministry which will most probably succeed to the present "business ministry," is assured of a working majority, the majority is not so large as to prevent the necessity of continued unity and strict organization. The Liberal party may now be said to be on trial.

SUMMARY OF THE WEEK'S NEWS

[WEDNESDAY, July 7, to TUESDAY, July 13, 1886, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND on Wednesday vetoed the bill granting to railroads the right of way through the Indian Reservation in Northern Montana. The President says: "The bill now before me is much more general in its terms than those which have preceded it. It ignores the right of the Indians to be consulted as to the disposition of their lands. It invites a general invasion of the Indian country. I am impressed with the belief that the bill does not sufficiently guard against an invasion of the rights and a disturbance of the peace and quiet of the Indians on the reservation mentioned; nor am I satisfied that the legislation proposed is demanded by any exigency of the public welfare."

The President has pardoned R. Porter Lee, confined in the Buffalo Penitentiary for embezzlement of the funds of the First National Bank at Buffalo while its President.

The time of the House on Wednesday quite unexpectedly was consumed with votes upon various motions relating to the veto messages. Some of the motions were of a dilatory character. The Republicans endeavored to secure speedy action either by immediate votes or by instructions as to reference. The Democrats resisted both propositions. All the votes indicated that none of the bills are likely to be passed over the vetoes. On Friday the Republicans finally abandoned filibustering, and the bills were rapidly referred to the Committee on Invalid Pensions, as the Democratic majority desired.

The House of Representatives on Friday voted by 116 to 104 to appropriate about $40,000 for a month's extra pay to the House employees. On Saturday, however, owing to vigorous speeches by Mr. Reagan and Mr. McAdoo, it sent the General Deficiency Bill to the Committee on Appropriations with instructions to strike out the clause. The vote was 165 to 57. The bill was soon after reported without the clause and passed.

Mr. Morrison on Saturday, from the Committee of Ways and Means, presented an adverse report on the Randall Tariff Bill. He used some very vigorous language against it, pointing out that Mr. Randall's estimates show a reduction of revenue whenever he changes the rate of duty, whether to increase it or reduce it, so that from the low-tariff point of view the object of the bill is to reduce revenues and not taxes. Exception is taken to the proposal to increase the duties on woollens, which are now twice as high as under the original Morrill tariff. Particular objection is made to the proposal to double the duties on cotton ties and more than double duties on tin plate. The point is made that as the bill reduces both internal and customs duties, it points towards direct taxes. The report dwells on the impolicy of lowering taxes on whiskey and tobacco when duties on the raw materials used by our manufacturers and on clothing are untouched or increased. The greater part of the internal war taxes have already been repealed, while little has been done in the way of reducing tariff war taxes.

The Appropriations Committee reported to the House on Saturday the Fortifications Appropriation Bill. The bill appropriates $620,000, as against $725,000 for the last year. The department estimates aggregated $3,396,000. For care and protection of fortifications the bill appropriated $100,000, for torpedo experiments $20,000, and for armament of seacoast fortifications $500,000.

The House Committee has cut down its estimate for the Naval Bill from $6,000,000 to $3,000,000.

During the executive session of the Senate on Thursday the Finance Committee made a report against the confirmation of Herbert Foote Beecher to be Collector of Customs for the Puget Sound district. Mr. Beecher's nomination had been before the Committee since December 21, 1885. The adverse report is based upon the charge that Mr. Beecher failed to use proper precaution in paying over a small sum of money given him by one person to pay to another. Friends of the nominee say that the whole matter settled down to a question of veracity between Mr. Beecher and the post-office clerk, and they are indignant because the Committee has chosen to take the clerk's statement.

In considering the River and Harbor Bill on Thursday, the Senate, by a *viva-voce* vote, adopted the scheme of the owners of the Portage Lake and River Improvement Company's Canal and the Lake Superior Ship Canal Railway and Iron Company's Canal to unload upon the Government the property for which they have no further use, for the sum of $350,000.

In executive session on Friday the Senate rejected the nomination of John Goode, to be Solicitor-General, by a party vote of 28 to 25. Mr. Riddleberger (Read., Va.) was Goode's chief champion, and Mr. Mahone his most vigorous opponent. The debate was very acrimonious.

In the Senate on Saturday Mr. Camden read a paper signed by himself, Mr. Colquitt, Mr. Wilson of Maryland, and Mr. Whitthorne (Democratic members of the Committee on Pensions), denying any knowledge of Mr. Blair's report attacking the President's pension vetoes. The report did not present the views of the Committee on these vetoed bills, but only the views of Henry W. Blair. The reasons assigned by the President in vetoing each of these bills separately did not call for gross criticism or for the censure of the Senate. Mr. Kenna (Dem., W. Va.) moved that the report, views of the minority, and all the papers be recommitted to the Committee on Pensions for consideration by that Committee. Mr. Teller (Rep., Col.) sustained the motion, and said that the action of the Committee in the matter was certainly irregular. Mr. Blair consented to the recommittal, which was accordingly ordered.

The Senate on Monday passed the bill which makes it a penal offence to obstruct the harbor of New York by dumping or by deposits of any kind, and the Mexican Pensions Bill as passed by the House with an amendment.

The Senate Committee on the Judiciary on Monday reported back the Railroad Attorneys' Bill, a majority of the Committee consenting. The bill has been materially amended in the Committee.

In the Senate on Monday the amendment to the River and Harbor Bill, involving the purchase of the Hennepin and Michigan and Illinois Canals, was adopted by yeas 31, nays 22.

The Civil-Service Commissioners, or some of them, will visit New York and Boston in the course of two weeks. The Commissioners are considering some rather important movements in connection with the New York Custom-house. As to the administration of Collector Hedden, they propose to ascertain for themselves whether there has been any partisanship shown in the making of the eighty-nine appointments there in the last fiscal year. The Commissioners will go to Boston to inform themselves as to the situation there also.

The Postmaster-General has issued an order by which liquids may be admitted to the mails under suitable conditions of safety.

A great deal of indignation has been excited in Maine over the fact that on last Friday night American boats at St. Andrews, N. B., fishing for herring to be canned as sardines, were driven away by the Dominion cruiser *Middleton*, and the announcement was made that no American boats are to be allowed to take herring in Dominion waters for any purpose. Congressmen Boutelle immediately appealed to Secretary Bayard, who has replied: "On the 2d of June last you called at this Department, in company with Senator Hale of Maine, and then drew my attention to a similar threat of interference with the purchase of small herring for canning as sardines from the Canadian weirs. On the same day I made representation of the alleged threats to the British Minister at this capital, and drew his attention to the alleged violation of lawful commercial intercourse between British subjects in Canada and citizens of the United States. I was in hopes that further interference with a recognized and legitimate trade would be prevented, but will again address the British Minister upon the subject. It will assist materially in all such cases of alleged violation of commercial rights if accurate and full statements of all the facts in each case are procured and forwarded to this Department, accompanied by affidavits."

The different customs officers and officers of cruisers along the Canadian Maritime Provinces coast have been instructed to make no seizures for violation of the fishery clauses of the Treaty of 1818, but as every American vessel so encroaching is also liable to seizure on a charge of violating the customs laws, to make arrests on that charge, and the Department will fine the vessels so caught $400, as provided by law for violators of customs law. The demand made by Secretary Bayard on the British Government for the release of the Gloucester schooner *David J. Adams* has been complied with. The *Adams*, which is still at Digby, N. S., will require a thorough overhauling. Notice was served on Friday upon Botsford Viets, Collector of Customs for Digby, of a suit for $12,000 damages by Jesse Lewis of Gloucester, Mass., owner of the *Adams*.

The Minnesota Prohibitionists on Wednesday put a full State ticket in the field, nominating J. E. Childs of Waseca for Governor, and J. Pinkham of Hennepin for Lieutenant-Governor. The platform contains the usual prohibition principles.

The Kansas Republican State Convention on Thursday renominated John A. Martin for Governor, A. P. Riddle for Lieutenant-Governor, and E. B. Allen for Secretary of State. The minor positions on the ticket were filled without difficulty.

A largely attended conference of anti-saloon Republicans was held at Tremont Temple, Boston, on Monday. The call was ostensibly by temperance men, but the conference was managed by active leaders of the Republican party, the object being to bring back those wanderers who, in the last Presidential election, followed the banner of St. John. A resolution was adopted by the Convention that the question of constitutional prohibition should be submitted to the people of Massachusetts to be voted upon at the earliest possible day.

The suit of J. G. Farnsworth, receiver of the Bankers' and Merchants' Telegraph Company against the Western Union Telegraph Company for $2,000,000 damages because the wires of the former company were cut by the latter on July 10, 1885, was decided on Saturday by a verdict of $240,000 for the plaintiff.

The trial of the seven boycotters of Mrs. Landgraf was concluded on Thursday by a verdict of guilty against six of them. One, a boy, was acquitted. The Judge sentenced them to terms of ten to thirty days. The jury recommended them to the mercy of the court.

Paul Hamilton Hayne, the Southern poet, died on Wednesday at his home in Georgia. He was born in Charleston, S. C., January 1, 1831, and was graduated from the College of Charleston in 1850. After studying law and being admitted to the bar, he took up literature as a profession, having a sufficient income to allow him to follow his personal inclination.

The coterie of young Southern writers of whom Hayne was easily first, established *Russell's Magazine*, and Hayne became its first editor in 1860. He had already won his spurs by three volumes of poems, published by Ticknor & Co. of Boston, between 1855 and 1860. The outbreak of the war sent Hayne to the front as a member of Gov. Pickens's staff. The young poet's health gave way, however, and, laying aside the sword, he wielded the pen with energy and effect. Such war lyrics as "My Motherland," "The Battle of Charleston Harbor," "Stonewall Jackson," "Our Martyr," and "Beyond the Potomac," helped to stir the pulse of the Confederate soldier, and give spirit to a hopeless strife. The close of the war found him broken in health and fortune. With $1,000, the remnant of a large fortune, he bought a tract of pine land some sixteen miles from Augusta, Ga., and built the cottage of unseasoned lumber which has since sheltered him and his wife, a daughter of South Carolina's most noted surgeon, William Michel, whom he married in 1852. His only child, William H. Hayne, is already known by his contributions to magazines. Hayne's poems were published in one large volume in 1882.

Representative Cole of Maryland died in Washington on Thursday at the age of fifty-nine. He was elected from the Third Maryland District as a Democrat.

Rear-Admiral Reed Werden (retired) died in Newport on Sunday at the age of sixty-eight. His record during the civil war was very honorable. He was retired in 1877.

FOREIGN.

The hope of the Gladstonians that the English counties would save the day was on Wednesday seriously impaired. The counties of Somerset, Warwick, Hereford, Derby, Denbigh, and Shropshire—in which the agricultural vote centres—returned Conservatives. Scotland continues Gladstonian. The Gladstonians rely upon the collapse of the Conservative-Unionist coalition when Lord Salisbury takes office, and they are certain that the Conservatives cannot dominate the House of Commons unless the Unionists coöperate with them. It is reported in Government circles that Mr. Gladstone is undaunted, and is determined to wage a ceaseless battle in Parliament. Political leaders of every party anticipate a period of unprecedented Parliamentary conflict.

Sir George Otto Trevelyan, who with Mr. Chamberlain resigned from the Cabiuet to oppose Mr. Gladstone's Irish policy, was on Saturday defeated as the Unionist candidate in Hawick for Parliament. In the last election Mr. Trevelyan was returned as a Liberal from Hawick without opposition. This year Mr. John Dillon stumped the district, pointing out the unreasonableness of Mr. Trevelyan's attitude in view of the fact that he had been Chief Secretary for Ireland, and by actual observation knew the merits of the issue. The result has been that out of the total of 5,016 votes polled in Hawick Burghs, Mr. A. L. Brown, the Gladstonian candidate, received a majority of 30.

Lord Hartington was on Saturday reëlected for Rossendale, receiving 5,399 votes against 3,949. Lord Salisbury has made overtures to Lord Hartington for the formation of a coalition Ministry, whose programme shall include a local government bill for England, Scotland, and Ireland; a laborers' allotment bill, empowering rural laborers to acquire small holdings; reform and extension of the Artisans' Dwellings Act, including dwellings of farm laborers; a measure for the cheaper transfer of land, and the appointment of a select committee to inquire into the administration of the Government of India, with a view to giving the natives increased local control. If Lord Hartington assents to the formation of a coalition Ministry, the Cabinet will include Mr. Goschen, Sir Henry James, and the Duke of Argyll, but not Mr. Chamberlain. The total vote polled up to Saturday night was: Unionists 1,209,874, Gladstonians 1,118,978.

The Gladstonians won another victory on Monday by defeating Mr. Albert Grey, the Hartingtonian whip, at Northumberland. Elected last year by a majority of 2,342, he is now defeated by a majority of 122. Twelve results were announced on Monday without a single Liberal loss. If the Liberals hold their own in the remaining contests, the parties in the House will be divided thus: 208 Liberals, 86 Parnellites, 306 Conservatives, and 70 Unionists. On Tuesday the Liberals were not so successful. At midnight the totals were: Conservatives and Unionists 365, Gladstonians (including Parnellites) 241.

In a speech on Monday foreshadowing the Conservative policy, Sir Michael Hicks-Beach said that the first measure would be to suppress the Irish National League, exercise clôture, and suspend Irish obstructionists.

Lord Hartington, speaking on Monday night, declared that an Irish Parliament would destroy the integrity of the empire. The Parnellites had never attempted to formulate a scheme of home rule. Mr. Parnell had worked by Parliamentary methods, but the Speaker doubted if they were constitutional ones. Besides adopting a course of obstruction, Mr. Parnell had accepted an alliance with Fenian organizations in America and Ireland. Mr. Parnell has written a letter absolutely denying any alliance with the Fenians or any knowledge of them.

Lord Salisbury has accepted Lord Hartington's home-rule policy, maintaining the full powers of the Imperial Parliament. By it the powers conferred on local councils in Ireland are delegated, not surrendered, by Parliament, which body reserves the right to control and revise the action of the councils. The appointment of judges and the legal administration are centred in the Imperial Parliament. Lord Hartington is still reluctant to join a Conservative Ministry. The Parnellites say they will never accept his plan.

The negotiations between France and England for modification of the New Hebrides Islands Convention are approaching a mutually satisfactory conclusion.

A Russian imperial ukase has been issued declaring that the port of Batum will not be free after July 29. The Porte has paid Russia a further sum of £50,000 towards liquidation of the war indemnity. Turkey has authorized free passage of the Dardanelles by Russian torpedo boats on their way to Odessa. Large orders for torpedo boats are being given out by the Porte. Fresh conflicts between Montenegrins and Albanians have taken place. Montenegro threatens to go to war unless the Porte suppresses the Albanians. The Porte has instructed the Turkish commander on the Montenegrin frontier to avoid further conflicts. Despatches agree in describing the outlook in the East as gloomy. The massing of Russian troops in Bessarabia has caused great anxiety. The London *Chronicle's* correspondent at Constantinople says there is a general belief in Turkish military circles that war between Russia and Austria will not be long delayed. The Russian Government is pressing the Porte to pay the indemnity due Russia. A despatch from Salonica says that Russian agents are swarming all over Macedonia. Russian newspapers urge Russia to intervene in Bulgaria unless Prince Alexander be speedily deposed by his own subjects.

It was officially announced at St. Petersburg on Friday that the closing of the port of Batum does not constitute a violation of the Berlin Treaty. Batum was made a free port under the influence of circumstances which have entirely changed. The present condition of the affairs of the port is onerous for the Treasury. The customs cordon on the land side is prejudicial to the material and commercial development of Batum and to the district incorporated with Russia after the Russo-Turkish war; and the naphtha trade, which is an important one for Transcaucasia and foreign consumers, has been seriously affected. The people also complain of the octroi duties. Considering all these circumstances, Russia cannot overlook the fact that Article 59 of the Berlin Treaty is exceptional, inasmuch as it was not the result of any understanding, but of a free and spontaneous declaration that Russia was willing to make Batum a free port. Russia's action is condemned by the London *News* as "a gross breach of faith and most discreditable to the Czar."

The Duc d'Aumale, holding the rank of General of Division, made on Monday a vigorous appeal to the French Council of State against his expulsion from the army. On Tuesday a decree was issued expelling the Duc d'Aumale from France. If the Duc de Chartres imitates the Duc d'Aumale in litigating the question of the Republic's right to expel him, the Chamber of Deputies will take action looking towards the confiscation of all property in France belonging to the Orleans family.

M. de Lesseps has requested Prime Minister de Freycinet to withdraw the Panama Canal Lottery Loan Bill, but he reserves the right of appealing to the public to subscribe to a fresh issue of Panama Canal shares.

Cardinal Guibert, Archbishop of Paris, died in that city on Thursday, at the age of eighty-four. He was made Archbishop of Paris in 1871, and Cardinal in 1873. Cardinal Guibert showed great activity in taking part in all legislative discussions where the interests of the clergy or the Church were involved. He urged the erection of the Church of the Sacred Heart at Montmartre as a national work, and in the debate regarding the organization of a higher education for the people in the free universities the Cardinal Archbishop took a leading part. In 1869 he condemned the secession of Père Hyacinthe in a powerful letter. The Cardinal was promoted to be an officer of the Legion of Honor in 1859. His published works are almost exclusively pastoral letters, which have been collected in the Abbé Migne's 'Collection of Sacred Addresses.' Archbishop Richard of Larissa will succeed him as Archbishop of Paris.

The greater part of Brussels University was burned on Wednesday. Valuable collections of minerals and books were destroyed. The buildings were not insured, and the loss is about $200,000.

M. Jules Malou, the Belgian statesman, is dead at the age of seventy-six. He was a brilliant orator and leader of the Catholic party, and was at one time Minister of Finance.

The steamer *Alameda*, which arrived at San Francisco on Sunday from Australia, brought particulars of the fearful volcanic eruptions in New Zealand last month, which are among the most destructive in history. The first reports of volcanic disturbances came from Tauranga, in the Auckland Lake District. Accounts state that Mount Tarawera was the first volcano to break forth, and hardly were flames seen issuing from its crater than the entire range of mountains belched forth, hurling flames of burning lava and stones over the surrounding country. For the first time in tradition the extinct volcano of Ruapehu was awakened into activity. The entire country over an area of 120 miles long by 20 in breadth was a mass of flame and hot, crumbling soil, which in places rose to the height of 4,000 feet. Numerous small native villages were totally destroyed. Twenty-one persons are known to have lost their lives, among whom were several English residents. The loss of cattle starved to death from the destruction of pasture by dust is very great, and great distress exists throughout all the Auckland Lake District. When the steamer sailed the volcanoes were still active.

THE PENSION VETOES.

It is much to be regretted that the full text of the debates in Congress upon the President's vetoes of private pension bills cannot be published in the newspapers. The intelligent reading public would then see how astonishingly weak the arguments are which are brought forward by the Republicans against the President's action. We have taken the trouble to read many pages of the debates as they are published in the *Record*, and a more wearisome task it would be difficult to imagine. From beginning to end there is not an argument brought forward which is worthy a moment's serious consideration by any intelligent mind. There is in all of them an effort, as stupid as it is studious, to make it appear that in vetoing a few of the pension bills the President is showing his hostility to all pensions for soldiers. Slight effort is made to refute his statements, or to adduce evidence to show that he is mistaken; but over and over again the changes are rung upon the puerile assertion that the President was not in the war, and has no sympathy with the men who were.

The most fluent defender of all pension schemes upon the floor of the House appears to be Mr. Jackson of Pennsylvania. Here is a sample of his style of argument in favor of passing a pension over the President's veto:

"He (The President) is in sympathy with those who are at heart opposed to pensioning Union soldiers, and he intends to limit and restrict the number of those that shall hereafter be pensioned as far as it reasonably can be done. And if this position is taken in the early part of his Administration, what may we not expect in the near future in the way of repeal of the legislation of the last twenty years, should his party be retained in power? . . . But we were told that this great and good President, who vetoes pension bills by the score, meant right. Yes, Mr. Speaker, I suspect he does mean right in the sense of attempting to please certain elements of the country; but he does not mean right in the eyes of the generous and loyal people of this land. [Applause on the Republican side.] I desire to say, sir, that the President means exactly what his vetoes show. His vetoes, by their substance, language, tone, and temper, can have no other construction than that he dislikes all pension legislation, and I do not think that he will thank gentlemen for intimating that he is only trying to save, at best, the poor little pittance of money that is in controversy in granting these pensions."

Mr. Jackson has an eager rival in this kind of debating in his colleague, Mr. Bayne. This is the way Mr. Bayne looks at it:

"Mr. Speaker, if I am correctly informed, all the Presidents of the United States before the one we now have, vetoed but one pension bill. No man among them all in the whole previous history of this country had the courage to deny to the widows, or the orphan children, or to the crippled soldiers, or dependent parents of such soldiers pensions until we got our present President. He stands out in the history of our country a conspicuous example of a disposition, a taste, a temerity, a partisanship which is unexampled. . . . The President has chosen to take the present law in regard to pensions as a sort of constitution, and if bills fall within the meaning of that law they ought to be passed, but if they are outside of that law then they should not be passed. Why should the President assume a position of that kind? Has not Congress the power to pension the widow of a dead soldier or his dependent parents, whether entitled to a pension under the existing law or not?"

A Republican speaker of slightly higher grade is Mr. Browne of Indiana. He had the fairness to put this whole private-pension business on its true ground when he said:

"These private bills are of themselves the law of the particular case. It is not a question in these cases for Congress to determine whether or not under the general law the claimant is entitled to a pension. That is not the question. If he were entitled to relief under the general law, the Pension Bureau is the place where he would secure his relief. There may be instances, to be sure, in which Congress sits as a kind of court of appeals to reverse the action of the Commissioner on the facts. There may be such cases; but in the main this Congress determines that in the particular case a pension ought to be given, not because it is covered by a general law, but because it is not covered by any general statute. It is because it has in itself equities that take it out of the general rule. It is because the facts of the case address themselves to the judgment and sympathy, if you please, of Congress. It is because, in view of the circumstances, it is the opinion of Congress that in the particular instance a pension ought to be granted."

Taking these extracts from the *Record* as fair samples of the arguments adduced against the President, what do they show? Would not the inference of every reader be that the President had vetoed the larger part of all the private pension bills which had been sent to him? There is an entire avoidance of all mention of the fact that the vetoes are exceptional cases, and are applied to bills which, if approved, would be likely as precedents to let in thousands of similar claims based upon grounds which have not hitherto been held as valid for securing any kind of pension. Instead of denying that there is any excuse for granting pensions on the ground of the "judgment and sympathy" of Congress, as Mr. Browne calls it, the President has admitted it by giving his approval to nearly 600 such pensions. Out of 665 special pension acts which have been sent to him by this Congress he has vetoed only 90. While he has used the veto power to a greater extent than any other President, and while it is true that but one pension bill had been vetoed before Mr. Cleveland became President, it is also true that more pension acts have become laws by his signature than by that of any other President.

These facts were all kept in the background in the debates until Mr. Matson of Indiana, the Chairman of the Committee on Invalid Pensions, brought them out. Mr. Matson was himself a Union soldier, and cannot, therefore, be charged with lack of sympathy for other soldiers. The full history of the record of the present Congress on this subject, as brought out by him in the debates, chiefly by skilful use of question and answer, is, briefly summed up, as follows: First, that the present House Committee on Invalid Pensions, having a Democratic majority, has reported favorably about 600 private pension bills, against about 400 by the Republican Committee of the last Republican Congress (the Forty-seventh); that the present Committee rejected as undeserving about as many as it reported; that reports from the Committee were not unanimously made, but that many of the reports were made by a bare majority, and many others by a mere majority of a quorum; that out of the 600 or more thus reported, all except 90 have been allowed to become laws by the President, some without, but the majority with his signature; and that nearly all of those vetoed by him had previously been rejected by a Republican Commissioner of Pensions.

Now, think for a moment what these figures show. The rejection of half the claims made upon the Committee shows that the very air of Washington is full of bogus claims. If the Committee rejected half, is it unreasonable to suppose that they passed some which were undeserving, especially if they allowed the decision of a few members to be sufficient? And what does that enormous increase from 400 pension acts in both sessions of the Forty-seventh Congress to 600 before the first session of the Forty-ninth Congress is over, mean? Are the pensions to increase in numbers as the veterans of the war die off? The idea is preposterous. The increase shows that the preaching of demagogues like Logan has encouraged every camp-follower and sneak in the army, and everybody else who could invent the shadow of an excuse for putting in a claim, to go down to Washington with a demand for a pension. Undoubtedly hundreds of these claims are inspired by claim-agents who are working them on shares. The Republican Congressmen who shout "solid South" and talk about the "loyal people" when the President puts his veto upon some of the most transparent of these attempts to rob the Government, are talking in the interest of fraud, and they know it.

Only the other day, in Chicago, Logan came out in favor of a pension for every man who had ever served in the Union army, on the ground that no man came out of the war as strong as he was when he went into it. If that idea were to be carried out in a pension law, how long would it be before it would be followed by another granting a pension to the widow of every man who served in the Union army? And then we should be on the road to national bankruptcy. Mr. Bayne says, in the extract which we have quoted from his speech, that all the Presidents before Cleveland together vetoed only one pension bill, but he neglects to say that it was Gen. Grant who defeated a gigantic pension scheme in 1875, called the Equalization of Bounties Bill. In refusing his signature he said: "I do not believe that any considerable proportion of ex-soldiers, who, it is supposed, will be the beneficiaries of this appropriation, are applicants for it, but rather it would result more in a measure for the relief of claim-agents and middlemen, who intervene, or would intervene, to collect or discount the bounty granted by it." If the argument that every President who opposes pensions for soldiers is a solid Southern sympathizer holds good, what shall be said of this act of Gen. Grant's?

THE DEGENERACY OF THE SENATE.

The recklessness with which the Senate is adding the most indefensible jobs to the River and Harbor Bill challenges the attention and provokes the indignation of the whole country. The Commerce Committee began by adding about $3,000,000 to the already indefensibly large amount appropriated by the log-rolling measure. The Senate itself no sooner got hold of the bill than it enthusiastically endorsed the worst jobs which the Committee had admitted. On Wednesday week an overwhelming majority was given to an amendment appropriating $150,000 for the Government's purchase of the Sturgeon Bay and Lake Michigan Ship Canal in Wisconsin from a corporation which has profited largely by its use, although Senators Edmunds and Ingalls clearly showed that it was, in the words of the New York *Tribune's* correspondent at Washington, "one of the worst

jobs which have ever been attached to a river and-harbor bill." On Thursday another amendment to the bill was adopted, approving the no less outrageous scheme of the owners of the Portage Lake and River Improvement Company's Canal and the Lake Superior Ship Canal Railway and Iron Company's Canal to unload upon the Government, for the sum of $350,000, property for which they have no further use

Encouraged by the ease with which these two jobs had been put through, the advocates of the Hennepin Canal scheme brought forward that measure with a well-grounded confidence in their success. This scheme was defeated in the House three months ago, despite an almost solid Republican vote in its favor, Mr. Browne, an Indiana Republican, characterizing it as "a measure that inaugurates a system that would lead to the most prodigal extravagance, the inauguration of a class of legislation that is in the face of the Constitution, if the Constitution means anything," since it contemplates the construction by the Federal Government of a canal entirely within the limits of a single State. Yet the Senate Committee proposed to commit the Government to the project, which at the lowest estimate will cost $7,000,000, by appropriating $300,000 for the preliminary work, and on Monday the appropriation was voted, with the aid of twenty-six Republicans.

The nonchalance with which the Senate thus endorses one job after another would be sufficiently startling if its disregard of the public interest were now manifested for the first time during the session. But in point of fact this river-and-harbor extravagance is only the culmination of a long record of the most discreditable performances in the line of legislation. Only a fortnight ago the Senate virtually defeated, by sending to an unfriendly committee, a bill which proposed to prohibit Senators from acting as counsel for corporations which have or may have legislation before Congress. This measure was aimed at a crying scandal—the practice of Senators appearing before the courts in the capacity of lawyers to plead the causes of railroads in matters which they may be called upon to consider in their capacity of legislators. Nor is this the only indecent feature of the practice. The Senatorial lawyer not merely appears before a judicial tribunal in a case which may come before him as a law-maker, but he pleads his cause to a bench which he has himself oftentimes helped to create. He first as a Senator persuades a President to nominate a friend for a Federal Judgeship, and secures the confirmation of his man; and then as a lawyer takes a fee to argue a case before the man who owes his seat to him. It is notorious that great corporations employ Senators as counsel in the Federal courts chiefly for these two reasons—that they may secure lawyers who enjoy some personal advantage with the judges, and that they may virtually bribe the Senators to favor their interests in matters of legislation. "Matt." Carpenter, who was always delightfully frank, used to joke freely about the great falling off in the number of his retainers in railroad cases before the Supreme Court after his first term in the Senate expired, and the equally significant increase of his business as soon as he was elected again a few years later. It is quite impossible to conceive of a man with high ideas of public duty, such as characterized John Quincy Adams, and should characterize every public man, doing what the leading lawyers of the Senate have long been doing; and a bill to prohibit the practice would pass without opposition in any body where high standards of action are maintained. Yet thirty-one out of fifty-two Senators voted to smother Mr. Beck's eminently proper and necessary proposition.

The theory of the Constitution was that the Senate would stand as a breakwater against extravagant schemes which demagogues in the House might be inclined to favor. Yet a few weeks ago we found the Senate passing by a very large majority a pension bill which proposed to put on the roll every soldier who served in the army three months, and who now claims to be disabled and dependent upon his own exertions—a proposition never before heard of in any other nation, and involving an increase of taxation by from $50,000,000 to $200,000,000 a year. There had never been any public demand for such an extension of the pension system; indeed, everybody knew that thoughtful people would oppose it. But the pretence was made that the "soldier vote" demanded it, and the Senate yielded almost without a protest.

A few weeks earlier a Senator who is universally regarded as a "crank," brought forward a bill appropriating $77,000,000 out of the Federal Treasury to aid schools in the various States, chiefly in the South. It was clearly shown that the inevitable effect of the bounty must be to injure rather than help the educational system of the South, just getting upon a sure foundation of self-support, and Senators privately made no concealment of their opinion that the scheme was a foolish one. Mr. Plumb of Kansas stated the notorious fact when he declared in the course of the debate:

"Now, I say, what every man knows, that I can count on the fingers of my two hands the members on this floor who are actually in favor of this measure, who will dare avow that they are for it as an original proposition or as one that commends itself to their judgment. But one man says: 'I made incautiously somewhere a speech in favor of it, and at a time wh n I did not consider the surroundings'; and another man says: 'My Legislature say they want me to vote for it'; and so on all the way round. If there could be some way of voting upon this measure without meeting these conditions, it would have practically no support. I do not believe legislation thus enacted is likely to be wise."

But Senators had got the idea that the scheme was popular with the people, and that if they did not vote for it they might be censured by people who did not understand its folly so well as they themselves did, and they passed it by a vote of three to one, with the express understanding that it would fail in the House, and that they might thus shirk the plain duty of defeating it themselves.

We think it is not too much to say that there has not been a time in the history of the country when the United States Senate occupied a lower place in the public esteem than at present. Neither party can disclaim a share in the degeneracy of the Senate, but by far the larger part of the blame must attach to the Republicans, who not only are responsible as the party in the majority in the chamber, but who have cast a solid or an almost solid vote for every one of the measures which have aroused the popular disgust. As the only branch of the Government which the Republicans controlled, it behooved the Senate during the present session to elevate its standard, and the weakness of the House gave it a great opportunity; but it has thrown away its chance.

A SIGN OF THE TIMES.

For a series of years the New York *Sun* published on every Sunday and Monday morning a detailed statement of its circulation for the previous week. It took the ground that the public was entitled to full knowledge regarding the number of copies printed by any journal, and repeatedly called attention to its own course in this particular. Thus, on the 12th of April, 1883, it said:

"It is, of course, reasonable that an advertiser should be informed as to the exact extent of the circulation of the newspaper in which he advertises. He has a right to know how much publicity he is purchaser of, so as to be able to calculate whether he is paying a fair price or not. Accordingly we print conspicuously, at the head of this page, every Sunday and every Monday, a statement of the exact number of copies of the *Sun* sold on each day of the preceding week."

A few months ago the *Sun* appeared on a Sunday morning without the usual statement of the previous week's circulation, and ever since then this statement has been omitted from the Sunday edition. Newspaper men did not fail to notice the change, and it was felt to be only a question of time when the table would disappear from the Monday edition as it had already vanished from the Sunday edition. That time has at last come, and the *Sun* of Monday last appeared without any figures of circulation for the previous week

The reason for the *Sun's* refusal to take the public any longer into its confidence in this matter is, of course, its loss of circulation within the last three years, which is without exception the most extraordinary thing ever known in the history of newspapers. Mr. Charles A. Dana came into control of the *Sun* in the year 1868, and in writing the prospectus of the paper for 1882 he made this fair summary of the transformation which he speedily wrought in its character:

"The *Sun* of 1868 was a newspaper of a new kind. It discarded many of the forms and a multitude of the superfluous words and phrases of ancient journalism. It undertook to report in a fresh, succinct, unconventional way all the news of the world, omitting no event of human interest, and commenting upon affairs with the fearlessness of absolute independence."

The *Sun* was remarkably successful in living up to this ideal. Its justifiable boast was that it gave "all the news for two cents" at a time when other papers charged twice as much, and that it gave the news, too, in the most convenient form for a busy man to get at. It accompanied the news with editorial comments which provoked attention, and its editorial articles upon matters not of a strictly news character were uncommonly well written. The day laborer, the business man, the man of leisure alike found something to interest them in its columns.

The public was quick to show its appreciation. In an interesting article published on May 21, 1882, the *Sun* said:

"The regular daily circulation of the *Sun* is now at a higher point than ever before in the history

of this newspaper. We have no doubt that it is the highest point ever reached by any American newspaper. The circulation yesterday was 149,226; the average for the past week has been 146,479; the average for the month of May up to date has been 144,423. . . . Under the present management the regular daily circulation of the *Sun* passed the round 100,000 in January, 1873."

The year 1883 showed an advance upon 1882. The new management of the *World* assumed control of that paper on the 11th of May, 1883, and the reduction of price by the *Times*, *Tribune*, and *Herald* followed in September of the same year. Nevertheless, the *Sun* printed of its daily and Sunday editions 52,231,467 copies during 1883, against 52,092,770 during 1882. On the 13th of October, 1883, the *Sun* published a well-considered editorial article reviewing the effect of the change in price by the other papers during the weeks which had then elapsed, and estimating the probable influence of this competition upon the *Sun's* circulation in the future. It pointed out that its own circulation during the week immediately preceding the revolution in the other newspaper offices was 144,434, and that during the week ending October 8 it was 137,242, a loss of only about 7,000 copies; while by an examination of the records it found that during seven years out of the preceding ten there had been a loss, between September 18 and October 8, reaching as high in one year as 3,319, and averaging 1,506. Upon these figures it remarked:

"The conclusion, of course, is that the circulation of this newspaper is too firmly established to be shaken by the strongest possible combination of circumstances. The men and women who read the *Sun* probably would continue to buy and read it if every other newspaper gave its edition away; and the *Sun* continues to shine for all and will continue."

This was a reasonable conclusion. People bought the *Sun* because it was a small paper, presenting the news compactly, intelligently, and interestingly, and there was no reason to suppose that any considerable proportion of its patrons would drop it simply because they could buy for the same money a paper twice as large, made up on a system which they did not like. We have always felt that the confidence in retaining its circulation unimpaired which the *Sun* expressed in this article of October 13, 1883, was justified by an impartial consideration of the circumstances, especially when one also takes into account the rapid increase of population and of possible readers of the *Sun* in New York and the adjacent cities. Yet its circulation has since then undergone a collapse without a precedent in the history of journalism. Below are given the total number of copies of the *Sun* printed (weeklies excluded), and the average daily circulation, for the past three years:

	Total for year.	Daily average.
1883	52,231,467	143,099
1884	44,734,054	122,224
1885	36,393,789	99,709

It will be observed that the circulation of 1884 was less than that of 1883 by nearly 15 per cent., and the circulation of 1885 less than that of 1884 by 18 per cent. The loss has continued during 1886. During the month of June just past the *Sun* printed on four Monday mornings tables of its circulation, and the totals of its daily editions during those four weeks thus compare with the totals for the corresponding weeks of the past three years:

	Total.	Daily average.
June, 1883	4,170,456	148,945
June, 1884	3,539,764	126,420
June, 1885	2,828,597	101,021
June, 1886	2,618,747	93,526

It will be seen that the circulation of the *Sun* in June, 1886, was less than 63 per cent. of its circulation in June, 1883, and, considering the increase of patronage which was reasonably to be expected with three years' growth of population, its present circulation is not more than 55 or 60 per cent. of what it should have been. In other words, it has really lost almost half its circulation within three years.

The *Sun* is still, so far as "reporting all the news of the world" is concerned, an excellent newspaper, well conducted upon the lines originally laid down by Mr. Dana nearly twenty years ago. Why is it that its circulation, which "passed the round 100,000 in January, 1873," and nearly reached 150,000 in June, 1883, has now sunk considerably below 100,000, although the field of patronage has been so greatly widened? There is but one possible explanation. The *Sun* has lost its readers because it has lost its character. Its old patrons have given it up because they have become disgusted with its political course. After pledging itself over and over again to support the Democratic candidate in 1884, even though Cleveland should be nominated, it did its best to secure the election of Blaine. Since Cleveland became President it has labored diligently to break him down, and zealously pushed the interests of Blaine for 1888. After having supported Tilden in 1876 upon a civil-service-reform platform, it is now the most thoroughgoing advocate of the spoils system in the American press.

For two years past the *Sun* has distinguished itself as the special defender of the spoils theory and the particular derider of Mugwumps. Its unwillingness any longer to print the figures of its dwindling circulation is the most eloquent testimony yet rendered to the growth of sound ideas in politics.

BUSSANG AND ITS WATERS.

If the mineral springs of Auvergne are comparatively little known to American tourists and invalids, those of the Vosges, always excepting Plombières, are no better known. One of the most attractive in its mountain quietude, and one as yet quite unfrequented by foreigners, is Bussang. Taking the road due eastward from Paris to Nancy and Épinal, one changes at the latter station for St. Maurice, in the wild valley of the Moselle, where the railroad track comes to an end in sheer discouragement at the grade, and gives up the attempt to follow the dashing waters any further towards their source. You are exactly 300 miles to a furlong from the eastern railway station in Paris, close upon Lorraine and the new frontier, and in the heart of the Vosges. Some of the finest excursions in these mountains are near at hand. If you will go to the Hôtel des Postes, and tell the chambermaid to call you at half-past three in the morning, you can easily climb to the top of the Ballon d'Alsace before sunrise. And what a vision will await you there on any clear summer morning! It is that of the western Alpine summits shining together, "mystic, wonderful"; Mont Blanc standing aloof from the rest upon the right, and glowing softly a hundred and thirty-eight miles away.

But we must not turn so far aside from Bussang as the Ballon d'Alsace to-day. Let us take the St. Maurice stage for Bussang, sitting as well in front as possible, for the better sight of this beautiful valley of the Moselle. The ranges of the Vosges unroll themselves on either hand, gaining in height and steepness as we ascend the valley until, after a half-hour's ride, we come to the village—not yet to the springs—of Bussang.

It is an ancient place, with traditions of Roman occupation, or rather of certain ruins, reputed Roman, that have now disappeared. This claim is a doubtful one. But the sleepy old village has had a curious modern experience. For many years, in the sixteenth century, it was the centre of extensive mining operations in the neighboring mountains: gold, copper, silver, and other metals were found. These mines belonged at first to Christine of Denmark, then Regent of Lorraine, and doubtless a more amiable lady, since she has made little noise in history, than the famous Christine of Sweden, who made her mark a century later in the affair of Monaldeschi. After the time of Christine a colony of Swedes and Danes were employed in the mines, and the mountains were explored more carefully and for a much longer time than those of California have been explored as yet. But they finally ceased to be profitable; in the seventeenth century they were abandoned, and the village relapsed into its secular quietude. But the sturdy Swedes and Danes left the racial record of their inhabitation behind them. The beauty of the Bussenette women and the pleasing individuality of their costumes have been remarked from that time until to-day, and these improvements of type are attributed to the crossing of races that took place in these mountains. Three hundred years ago Montaigne visited the ruins of Bussang—in 1580. One may read in his Journal how he put on canvas overalls and went down to see where the silver came from; and how on emerging he was shown the sources of the Moselle near by, and on the crags the eyries where goshawks were caught, and all the other sights of the place. But after all this, he called Bussang a "petit méchant village." It has improved since then, by virtue of a more permanent source of profit than its mines. Its true wealth is in its delicious mineral waters.

We shall reach the spring by continuing our stage-ride some twenty minutes beyond the "petit méchant village." We draw somewhat slowly up the smooth and solid road that leads toward the steep outlines of the Col de Bussang. Let us ride past the establishment for curiosity's sake. The stage plunges into a long tunnel that pierces the barrier of the Vosges and leads you from France into the sundered district of Lorraine. In the centre of the tunnel a slender black mark on a granite post shows the division between the two countries, and you see foot-passengers stop at the dividing line and place one finger in France and the finger next to it in Germany. We roll on with the stage, and emerge into the bright light and sunny landscape of Lorraine, upon the eastern side of the dividing ridge. Are we really on German territory? In spite of the granite post and the black line, the change of boundary seems a metaphysical thing. You may see a forester with the cap of a German guard, but the same peace and charm prevail as on the western side. The inhabitants are all Lorrainers, and they will tell you—in French or German indifferently—that no German settlers have come into this part of the country as yet. "Further east there are Germans," says the comely young married woman who dispenses beer at the little inn beyond the tunnel, as she points down toward the beautiful plains of Lorraine, all shining, far to the eastward, under the silver mists of the morning. "But here," she adds, "it is just as it was before the war." I ask her if she

teaches her children French or German? "Both," she says; "for they will live here in Lorraine, and they will need both languages." Her sympathies are with Lorraine, but she speaks without any bitterness of the changes that have come from the war; and indeed in her narrow life they can make little difference. I will not undertake to explain the feeling, and yet it seemed a little strange to find such absolute quiet and peace at the dividing line where the country had been sundered by war. Might not one look for some outward sign that the very edge of the wound was still bleeding? But the only seam or scar was the black mark on the granite post; no other mark of the change was visible, except the cap of the forester.

But we must return to the Vosges and to Bussang. Retracing our way through the tunnel, we find ourselves again in France, and not far from the new hotel which stands on the slope of the Col de Bussang, at a height of 2,188 feet above sea level. The hotel, the first good one that has been built since the burning of the old establishment many years ago, was opened last summer. It stands in the middle of a very beautiful landscape, so that from whichever window you look you will have a good view. I have seldom been in a pleasanter hotel. The cooking, the beds, the appointments of every kind, and the situation are of the best. Little is left to be desired except a bathing establishment; and this, so they told me when I was there in July, 1885, would be opened to the public this summer with every appliance for the external use of the water.

This external use will be a new feature in the history of the springs of Bussang. Thus far they have won their fame purely as a drinking water; for several centuries, indeed, they have been sought both on account of their delicious taste and of their reputed healing virtues. In 1718 the people of the commune of Bussang complained to the Duke of Lorraine that strangers came to the springs by night, bottled the precious waters, and deported them to sell; "even muleteers and wagon-drivers carried them off and made profit on them," thus keeping invalids from coming to the spot to drink, and greatly injuring the patronage of the place. "For," adds this memorial, verging upon therapeutics, "doctors who live at a distance from the spring pretend that its water can be transported. They say that if it be taken from the spring, put into good bottles, and thoroughly corked, it will have the same virtue upon the invalid as if he drinks it on the spot." The doctors were nearer right than the protectionists; but the Duke, regarding the scientific question in the "moist light," ordered that the waters should be drunk only *in loco* and not exported; a decision which resulted in the considerable emolument of the village during a long term of years.

I will not follow here the history of these tonic waters. It is one of a popularity steadily growing through many changes and many quarrels of administration, until now the company which bought the three springs in 1879 from the last heirs to the property, exports more than a million bottles per year, "pretending that they can be transported." The public does not share the belief of the complainants of 1718, that the waters lose their virtue by carriage, and yet the complainants were partly right: the waters of Bussang do throw down some of their iron when bottled.

It is now time to ask what the nature and what the virtues are of the waters of Bussang. The analysis shows that they contain iron, a very little arsenic, and a great deal of carbonic-acid gas. They are cold and sparkling, and their delicious taste causes them to be much used as a table water. They should not be thus used, however, without the physician's instructions, for they are after all a medicinal water. They are especially adapted for the anæmia of lymphatic persons; and in prescribing them for nervous invalids I have sometimes found it necessary to watch the effects upon the digestion. But they are a great digestive water—one of the best among many. Their physiologic effects are tonic, alterative, and slightly laxative. Their main curative uses are in the treatment of ailments which depend upon atony of the stomach and other digestive organs, and the leading complaints that are relieved or cured at Bussang are as follows:

(1) Anæmia, when dependent upon torpidity of the digestive tract, especially in lymphatic persons. There are many cases of this sort in which the sufferer has no idea of the cause of the anæmia, but lays it to some other of its several begetting conditions, when the whole trouble is gastric.

(2) Chronic diarrhœa, dependent upon engorgement of the abdominal viscera. I have known very stubborn cases of this kind yield promptly to treatment at Bussang.

(3) Dyspepsias which depend upon insufficient nerve power—the dyspepsia of delicate and lymphatic persons. Many ladies who cannot take the stronger iron waters find speedy relief in these, which are easily assimilated by delicate stomachs.

In fine, the waters of Bussang, though they are no cure-all, have, when rightly prescribed, a very real curative value, in which the surroundings of the place, no doubt, play a helpful part, as at other good mineral springs. The surroundings in this case are of the quietest. Bussang is a lovely retired spot in the heart of the hills, where one will not meet a crowd; but the society, composed mostly of quiet French families, is pleasant; and there is a good reading-room and billiard-room. But the outdoor attractions are the strongest, except for the very delicate sojourner. The rides, drives, and foot-excursions are unsurpassed; it would be difficult to find anything finer than those which lead into the heights and depths of the environing Vosges—to Gérardmer, with its beautiful lake, to the Ballons d'Alsace, Servance, and Gresson, to the Cols de Bussang and Bramont, and to the Ronde-Tête. The country is full of beauty; and what with the rambles, the waters, and the good fare at the hotel, no invalid of the classes I have described need leave Bussang without relief or cure. I will only add a word about the climate; it is "a climate of the mountains," as the French say, or much cooler by night than by day. Yet it is not more suddenly changeable, and, on the whole, it is much less trying, than that of any of our own Eastern resorts during the summer. One need only bethink himself to have warmish wraps at hand in case of driving out under the moonlight of these valleys. TITUS MUNSON COAN.

MUSIC IN LONDON.

LONDON, July 3.

WHEREAS New Yorkers had the opportunity to listen to three opera companies during the past season, London has had only two; nor has the number of performances given here been nearly as large, or the list of operas so select and varied, as in New York. The attempt to revive Italian opera has not proved a success, as may be inferred from the remarks of the two leading musical papers. The *Musical World*, whose editor is also critic of the London *Times*, remarks that "the performances at Covent Garden do not gain in interest as the season advances; nothing but the hackneyed répertoire has been placed before the patrons of the Italian opera." The *Musical Times* complains especially of the bad scenic arrangements and the repertory, and adds that "up to the 26th ult., the operas given have been 'Lucrezia Borgia,' 'Rigoletto,' 'Faust,' 'Lucia di Lammermoor,' 'Les Huguenots,' 'Un Ballo in Maschera,' 'Il Trovatore,' 'Ernani,' 'La Gioconda,' 'La Traviata,' 'Linda di Chamouni,' and 'Don Giovanni.' If three-fourths of this list were permanently removed from the catalogue of available operas, no one would complain. The attitude of the public in the matter has been significant—'Faust,' 'Les Huguenots,' and 'Don Giovanni' have drawn excellent houses, but on the other nights the appearance of things has generally been unsatisfactory."

Among the vocalists of the company have been Albani, Gayarré, Maurel, and two American girls, Ella Russell and Giulia Valda. Mr. Mackenzie's "Colomba," which was to have been given in Italian, will probably be "deferred"; but some apprehensions are entertained that a mutilated and Italianized version of "Lohengrin" will be heard before the end of the season.

Carl Rosa's season covered only four weeks, but his doings have been of special interest to those who are observing the development of English opera. The repertory includes "The Marriage of Figaro"; three French operas, "Faust," "Carmen," and "Manon"; two of the old English ballad school, "Maritana" and "Bohemian Girl"; and three of the new English school—Goring Thomas's "Nadeshda" and "Esmeralda," and Mackenzie's "Troubadour." "Carmen" appears to be Mr. Rosa's best card. Thomas's "Nadeshda" also is popular, having been given fifteen times in London in three years. Concerning this opera I can only repeat what I said last year, that it is the most dramatic and genuinely inspired opera by an English composer known to me. The novelty of this season has been "The Troubadour," text by Dr. Hueffer, music by Mr. Mackenzie, of which I heard the fifth performance. Mr. Mackenzie's orchestral works have often figured in New York concert programmes, and his oratorio, "The Rose of Sharon," was produced some years ago by the New York Chorus Society. His first opera, "Colomba," I have not heard; but, judging from the "Troubadour," he seems destined to brush away many of the lyric traditions which have retarded the growth of dramatic music and the appreciation of it in England. "The Troubadour" contains no irresistible "sublime" moments, which captivate every hearer at the first as well as at the hundredth hearing; but it has many beautiful details which will improve on closer acquaintance. The best of them are of a lyric character, although it cannot be said that the composer neglects dramatic coloring. On the contrary, he is thoroughly in sympathy with the Wagnerian spirit, as are all the young school of English musicians. His orchestration is very clever, and, like the often original harmonies and modulations, closely follows the spirit of the text. In the third act, however, the musician's desire to compose an effective interlude seems to have seduced him into the crime of writing a piece of absolute music, which, although effective and meritorious, is too gay and waltz-like to harmonize with the scene revealed by the rising curtain with *Margarida's* words, "Lone is my life as the night is, lonely."

The author of the libretto, Dr. Hueffer, having, through his influential position on the *Times*, done much to foster a taste for modern music, is cordially hated by the archaic coterie whose sympathies are limited to Handel, Mendelssohn, and Balfe. His libretto, of course, gave them a welcome opportunity to "pitch into him"; and so they have done right lustily. *Punch* went so far as to print a picture representing Mackenzie endeavoring to scale the "Wagnerian Heights," but dragged down by a weight attached to his feet with the physiognomy of Hueffer. He is also repeatedly referred to as "the Flying Dutchman"—which shows where the shoe pinches; for no one, of course, but a "Dutchman" could have

the bad taste and audacity to teach the English people that several good composers have existed since Handel, and even since Mendelssohn. Strange to say, the objections to Hueffer's libretto seem to have chiefly rested on quibbles, leaving alone its one objectionable point—the fact that the troubadour's love is a married woman. Yet, inasmuch as the troubadours almost invariably paid their addresses to married women, it would have been difficult to avoid that objection in treating a troubadour subject. Mr. Hueffer's preference for a troubadour story is, of course, referable to the fact that he has written a 'History of Provençal Life and Literature in the Middle Ages'—a very entertaining work. His libretto also stands high above the average of even the better class of operatic literature. Besides the moral objection mentioned, the weak point is an insufficiency of action. It is skilfully constructed, however, the versification is smooth, and some of the lines are worthy of a professional poet, while the local color is as true as in Wagner's dramas, which served him as a model in as many respects as they did the composer. The scene where the lovers are warned in a quaint song by *Azalais*, that the dawn is coming to end their bliss, seems a close imitation of a similar scene in "Tristan und Isolde"; but the author defends himself on the ground that both incidents are derived from the same source; the situation of a friend watching over the safety of two lovers being so common in mediæval literature that a special kind of song with a special name was invented for the purpose.

The story of the opera, in a few words, is this: Act I—A vintage feast. The troubadour, *Guillem*, is requested to sing, and, at the close of his passionate verses, kneels before the lady he secretly loves, *Margarida*, the wife of *Count Raimon*. Seeing the danger of discovery, *Margarida's* sister, *Azalais*, quickly steps up to *Margarida*, thus making it doubtful for which of the two the poet's homage is intended. Act II—In the woods. *Raimon* suspects *Guillem's* guilty passion, and has arranged a plan to kill him, which, however, is frustrated by the intervention of his wife. *Azalais*, to save her sister, claims the troubadour as her lover. *Margarida*, misunderstanding her motive, is stung by jealousy, and in Act III gives expression to her sorrow. *Guillem* overhears her, steps forward, and a reconciliation follows. Duel between *Guillem* and *Azalais's* husband, who are separated by *Margarida*, who thus reveals her passion to *Raimon*. Act IV—Final love scene between *Margarida* and *Guillem*. After the troubadour has gone down the rope-ladder, *Raimon* enters his wife's room and gives her a goblet of the wine called "the poet's blood." She suspects her lover's murder, and accuses *Raimon* of the cowardly act. A procession of hunters bring in the bier, and *Raimon* bids her behold the poet whose blood she has just tasted. *Margarida* vows that never more shall meat or drink touch her lips; and when *Raimon* rushes at her with drawn dagger, she throws herself from the window and meets her death.

From a death scene it will be permissible to turn to a mass, so I may pass on directly to the last Richter concert, at which Beethoven's Mass in D was given. The writer of the programmes mentions the fact that this work has been given seventeen times in London since 1832; the last three performances being under the direction of Hans Richter. Richter's orchestra does not contain as good material as his Vienna Philharmonic or as Mr. Thomas's orchestra, but his wonderful skill often enables it to attain an excellence little short of perfection; and as for his conception of the work, it need only be stated that Beethoven and Wagner are Richter's specialties. Yet it is difficult to enjoy any music in St. James's Hall; the seats are so uncomfortable and the ventilation so bad. At the new Pavilion an ingenious arrangement has been made for removing part of the roof and letting the heated air escape. But the Pavilion is a variety-show place, where people expect to enjoy themselves at ease. To ask for similar comforts at a classical concert would seem like an undignified and inconsistent indulgence in sinful luxury. Yet, notwithstanding such disadvantages, the Richter concerts are very popular in London, as may be judged from the fact that two series—one of six and one of three concerts—are announced for next season.

On the whole, London must yield the palm to New York in operatic and concert affairs. But in chamber music and choral organizations London is far ahead of New York. Our chamber concerts are usually given by orchestral musicians, who are very good in their own sphere, but who lack the delicacy and individuality required in a string quartet. London, being so much nearer the musical centres of the Continent, is constantly visited by such artists as Joachim, Rubinstein, Sarasate, Clara Schumann, etc.; and there are also some excellent resident interpreters of chamber music. At Mr. Hallé's last concert I had an opportunity to hear the famous quartet consisting of Mme. Norman-Neruda, Ries, Straus, and Piatti. Piatti, though not very young, still remains the best 'cellist of the period; his equal in tone, phrasing, and technical skill we have never heard across the ocean. Mme. Norman-Neruda played Beethoven's Kreutzer Sonata in a flawless and entrancing manner, while Mr. Hallé's conception of Schumann's Fantasiestücke, opus 12, was somewhat deficient in variety of accent and shading. The quartet was one by Brahms, opus 60.

It is in choral music, however, that England still strives successfully to excel all other countries. There are restaurants in London where one can eat a table d'hôte dinner to the accompaniment of English glees. On Sundays the parks are full of groups of folks who, after listening to a peripatetic preacher, unite their voices in song; and similar groups may be witnessed in some of the outlying side-streets. The regular Birmingham, Worcester, Gloucester, Leeds, etc., festivals are well known; and London has several important choral associations. The Richter chorus, though but lately organized, sang the difficult Beethoven mass remarkably well. At the Crystal Palace last week there was a great choral concert given by the London contingent of the Handel Festival chorus. Three thousand took part in it, and the precision and unanimity of this great mass were as astounding as the quality of the voices was agreeable to the ear. But as the concert was given in the Central Hall, which is more than 1,600 feet long, much of the sound was lost, and the effect was hardly more imposing than could have been produced in a smaller room by one-third that number. It was discouraging to find that the principal attractions of the programme consisted in the national anthem (the Prince of Wales being in the royal box), Handel's everlasting "Largo," and "See, the Conquering Hero Comes"—discouraging, because these seem to be almost the only pieces universally appreciated by the English people.

Another choral concert, given at the Crystal Palace a few days later, threw some light on the fact that the musical intelligence of the English is so limited. Here was a collection of five thousand voices, pupils of the London Sunday-schools, who sang with an artistic finish, a smoothness of movement, and a purity of intonation that would have honored a professional choir singing together every day. What a glorious opportunity would be afforded by all the various groups composing this great chorus, for cultivating a taste for the best music! But, if one may judge from this public performance, these Sunday-school pupils have very little opportunity to cultivate their taste for the higher grades of music, for the programme consisted almost entirely of vapid compositions by meteoric luminaries of the twenty-seventh magnitude in the musical firmament. Instead of having some richly harmonized folk-songs, so well adapted for such occasions, or soul-stirring Bach chorales, or even a Mendelssohn part-song, there were hymns, anthems, etc., by Minshall, Mann, Wiseman, Merritt, Elvey, Barnicott, Goss, Pelton, Wilson, E. Stirling, and other English doctors of music and Sunday-school superintendents. Is the selection of such music dictated by the *odium theologicum*—the determination to show that, whatever may be true in nature, in Sunday-school music the Darwinian law of the survival of the fittest does not hold good?

Two songs by Schubert and Hiller, that were on the programme, received less applause than anything else. A similar case of callous indifference to good music was displayed at the performance of Goethe's "Faust" at the Lyceum last evening. The adapters of the play for the English stage evidently felt the Wagnerian truth, which is becoming more patent every year, that tragedy in its climaxes imperatively craves music. Hence there is a great deal of music in Irving's "Faust," chiefly selected from Gounod and Berlioz. But to this the audience did not pay the slightest attention. An orchestral arrangement of Schubert's "Erlking" was played, appropriately, after the Brocken scene; but, though the band played it very well indeed, not a hand was raised. A German or an Italian, or even a French, audience would have rewarded such a performance with unanimous applause. The scenic features were better appreciated. They are, indeed, marvellous—most of them charming pictures which one regrets to see the curtain fall and hide. Mediæval Nürnberg—from the bird's-eye view of the quaint roofs to the winding, narrow streets, the interior of the church and *Margaret's* home—is exhibited with unprecedented realism. The Brocken scene is the weirdest, wildest witches' dance, amid sublime mountainous surroundings, ever witnessed on any stage. Electricity is everywhere called into service. Now it dances at will at the tip of *Mephisto's* sword, and again it adds to the vividness of his surroundings and the magic of his disappearances with *Faust*. Miss Terry was indisposed last evening, but her part was very acceptably taken by Miss Emery. Mr. Irving's *Faust* I cannot stop to analyze at this late date—for "Faust" must have had a run of about a hundred nights by this time. His *Mephisto* is certainly a wonderful impersonation—perhaps a little too conspicuous in dress and omnipresence, but otherwise a fascinating study for the physiognomist. Marvellous in its consistency is the fixed, calm cynicism of his voice and facial expression, with only the rolling of his eyeballs to indicate his diabolic intentions. Mr. Wills has made his translation less from a poetic than a dramatic point of view, and it serves its purposes well. A few details have been newly added to the dramatic action, and also a few lines of a humorous intention, the best of which is *Mephisto's* remark upon the connubially inclined and obtrusive *Martha:* "I wonder where she will go after death; *I* don't want her." H. T. F.

THE HESSIAN ARCHIVES AT MARBURG AND BERLIN.

LONDON, June 23, 1886.

IT was in the columns of the *Nation* that I first saw an allusion to certain valuable records at Marburg relating to the early history of the United States. Shortly before his death, Dr. Fried-

rich Kapp kindly gave me more definite information on the subject. The following extract from his letter may be of interest:

"The papers you allude to formerly belonged to the staff of Hesse Cassel, and are now to be found partly in the Berlin archives of the Staff of the Army, partly in the provincial archives at Marburg. Their thorough study and copy will, in my opinion, require at least a year, if not more. They deserve at least a close examination by an American student who knows German well. For access, perusal, and copying of the Berlin papers you will have to apply in a German petition to Field Marshal Count Moltke, and as for those in Marburg to Geh. Ober-Regierungs-Rath von Sybel, the director of the Royal Prussian Archives, both in Berlin. I do not doubt that permission will be granted to you at once, the more if you are endorsed by the American Minister at Berlin, or if you induce him to apply for you. For our functionaries are better trained and educated for their important trust than the gentlemen who have charge of the Washington Record Office. The man with whom I had to deal there had been a fireman, and had run with the engine before he was appointed as the keeper of the public rolls. He did not allow me access to them, as I might trump up a claim against the United States Government. Whatever I can do for you in Berlin will be done with the greatest pleasure."

Armed with the necessary credentials from the German War Department, I visited Marburg a few months ago. Picturesquely crowning the hill at whose base is the beautiful Gothic Church of Elizabeth, and on whose steep sides are perched the quaint old streets of the town, is the Schloss, commanding charming views of the Lahn valley. Here, where many a landgrave of Hesse formerly resided, and where the famous conference between Luther and Zwingli on the subject of transubstantiation took place in 1529, may now be found the Hessian archives; the old rooms of the castle being plethoric with huge manuscript folios, scrupulously arranged.

The papers relating to the Hessians in America were formerly deposited at Wilhelmshöhe ("Aus der Wilhelmshöher Schlossbibliothek durch Seine Majestät Wilhelm I. überwiesen"). They bear the following titles: The Journal of the Hessian Corps in America under General von Heister (*Journal vom Hessisch. Corps in America unter dem Genr. von Heister*, 1776 *bis Juni* 1777); "Relations" of the North American War (*Relationes vom Nord-Americanischen Kriege unter dem kommandir. Gener. v. Heister*, 1776, 1777.—*Gen. v. Knyphausen*, 1777–1782.—*Gen. v. Lossberg*, 1782–1784—5 vols. in all); Reports from Knyphausen to the Landgrave (*An Serenissimum und Collegia: Abschriftliche Berichte von Sr. Ex. dem Gen. Lieut. v. Knyphausen aus America*, 1777–1779, 3 vols.); and several large bundles of unbound papers, labelled "Kriegssachen," 1776–1792. Both the "Journal" and the "Relationes" are heavy folios (about 2 ft. x 1 ft. x 1-3 in.). The former gives a brief account of the military operations of the years 1776 and 1777, especially of Gen. Howe's movements. Under date of August 12, 1776, the Americans are spoken of as "4,000 rebels, made up entirely of peasants, gathered together at hap-hazard, who at night desert by boat to General Howe." Again, August 26, 1776: "These wretched creatures appeared singly here and there behind the trees, shot off their guns with fear and trembling, and then immediately ran away." Same date:

"The appearance and dress of the rebels are most wretched. They are barefooted, with short linen waistcoats, over which is hung a bag for ammunition and provisions. Most of the officers are no better clad; few of them have decent clothing. Among others brought before his Excellency was a man who wore a fine red coat with blue facings. The former said to him that he would certainly now repent of the step he had taken, and declare himself a faithful royalist. But the other answered that he was by vocation a schoolmaster, and would speak as his heart dictated; not only had he made his own children swear to fight against the King as long as a drop of blood flowed in their veins, but he had also instilled the same sentiment into the minds of all his pupils."

The "Relationes" are reports of the Hessian generals in America, not merely describing in detail the condition of the Hessian troops, but also giving an outline of all the important military operations of the war. In vol. i there is a "Beschreibung von denen beyden Inseln Staaten Island, Long Island und der Stadt New Yorck," written by Ober-Auditeur Motz, containing an account of the houses, streets, natural history, language, character of the people, mosquitoes, etc. In answer to a letter from Gen. von Heister, dated May 8, 1777, praying that he may send aid to the Hessian prisoners, Washington writes (May 13): ". . . I enjoy too much Pleasure in softening the Hardships of Captivity to withhold any Comfort from Prisoners, and beg you to do me the Justice to conclude that no Requisition of this Nature that may be made will ever be denied," etc. In vol. ii of these "Relationes" there is a detailed account of the capture of the Hessians at Trenton, written by J. H. Motz, and several other communications relating to the same subject.

The "Berichte," consisting of three thin volumes, are similar to the "Relationes"; only the long lists of troops and other minutiæ concerning the Hessians, appended to the "Relationes," are wanting.

The bundles of "Kriegssachen" contain, *inter alia*, many long official documents relating to the surprise at Trenton (hearings [*Verhöre*] and reports of officers, letters, despatches, etc.). Two large packages refer to the payment, quarters, etc., of the Hessians returning from America.

In the Berlin Archives (*Kriegs-Archiv des grossen Generalstabs*), eighteen private letters, bound together for my use, were placed before me. There are, doubtless, many more deposited here, but they could not then be found, as the Hessian papers had not yet been arranged and catalogued. These eighteen letters extend from 1776 to 1779. Four are from Henel, relating mainly to military affairs in America; five from Lieut. Henkelmann—the most interesting of the collection; six from the latter's brother, a clergyman in Isthe (these are short and of little importance); and three from other Hessians in America. Subjoined are a few extracts from Lieut. Henkelmann's letters:

"Although the soil is excellent here, such as one seldom sees in Germany, still in all the other provinces it is said to be even better. Clover grows here as in Hesse, and moss in the woods. In the neighborhood of Boston the soil is said to be so soft that you can push the whole length of a cane into it without any exertion. Mahogany-wood does not grow here, but there is an abundance of it in the West Indies. Campeachy-wood I have not seen. The trees known to me are the oak, cedar, beech, sassafras, etc. Of apples, plums, cherries, blackberries, raspberries, and strawberries we have more than enough. Enough vegetables, but they are barbarously dear. About two plates of peas cost £1 York; salad for one person, 1s.; a pound of beef, £1; pork, 11s. or 10M.; a pair of leather breeches, 10 and 8 Spanish dollars; a pair of boots, 8 Spanish dollars; a bottle of wine (nasty stuff), 2 English £; and so everything in proportion is terribly dear. Thus, if a person is honest, and has no partner (*keine Compagnie hat*), he can save nothing, unless he puts up, like a musketeer, with the pork, peas, rice, butter, and rum portioned out to him, ruin his health, and finally go to the grave, as many already have done. Rum is a strong drink. I can't swallow it, and yet am well—indeed, ten times healthier than those who drink it. . . .

"What, the clergymen roughly used by the rebels! By no means. The former took arms and cartridge-boxes with them to the pulpit, plainly showed their congregation how to fight, and from the church they went straightway to the field of battle. Those were their good sermons. Here at Kings-Bridge and New-Rochelle I found two empty parsonages, whose former possessors had exchanged their pastorates for commissions in the army. I do not advise them to come within my reach in a battle, or I will send them back to their churches on one leg" (Henkelmann to his brother in Isthe, dated Fort Knyphausen, June 29, 1777).

"The shoemaker member of Congress is called Heat. Another member, somewhat more worthy, is called Von Settwitz. Before the rebellion he was a chimney-sweep in New York; he left this post and went to Philadelphia, where his singing and playing on the piano recommended him to the good graces of Mr. Penn, so that the latter nominated him for member of Congress. He was elected and is still in Congress. Are these not splendid members? I should like to see the whole body" (Henkelmann to his cousin, August 27, 1778).

Probably more letters of Lieut. Henkelmann will come to light when the Hessian papers in the Berlin Archives have been arranged. Those written immediately after his arrival in America are doubtless replete with interest.

These records at Marburg and Berlin, so far as I am able to learn, have never yet been exploited. The former were examined by Dr. Kapp in April, 1882; but I do not believe that he found time to study them carefully. A student thoroughly conversant with the German language and with the history of the American Revolution, can glean from the huge mass of papers at Marburg a volume of extracts which would doubtless throw much light upon the military operations of the war, and also incidentally add to our knowledge of the civilization, the *Culturzustände*, of our country a hundred years ago.

CHAS. GROSS.

Correspondence.

MR. DABNEY'S 'DON MIFF.'

TO THE EDITOR OF THE NATION:

SIR: In a review of my novel 'Don Miff,' in your issue of July 1, you make a statement which would have been correct had the book been noticed at an earlier date, but which, as matters now stand, does an injustice to my publishers—the Lippincotts. The first and second editions of the book *were* by subscription; the third, and such as may follow, are under their control, not mine. The courtesy of a correction in their interest will greatly oblige

Yours very truly, V. DABNEY.

MIDDLEBURG, VA., July 9, 1886.

OLEOMARGARINE IN CONNECTICUT.

TO THE EDITOR OF THE NATION:

SIR: Will you allow a Connecticut farmer and dairyman a few words of comment upon Prof. Atwater's criticism of the course of the Connecticut *Farmer* in reference to the bill taxing oleomargarine; that journal having advised the farmers of the State "to strike down any man" of the representation in Congress who should not favor the bill?

Granting all that Prof. Atwater proves as to the utter indefensibility, upon principle, of the legislation, still, the course of the *Farmer* may be defended. Two-thirds or more of those who represent the State in Congress are thoroughgoing advocates of the scheme by which Government is to help all to get rich by enabling them to rob one another—"protection," they call it. The farmers' wares in general cannot be protected, as foreign quotations govern the price; but, in this instance, he has contrived a clever scheme to bag a little of the plunder, and why should he not "strike down" any public servant who does not serve him in the matter—or, to put it in better demagogic phrase, any one who is indifferent to the welfare of the agricultural wage-worker; the workingman being the supposed ultimate beneficiary of all protection?

The record shows that the politicians need the

farmer vote. The bill passed (amid gibes and jeers, it is reported); but how many other monopoly or protection grants are there on the statute-books that could have been passed separately, and without log-rolling combinations, in the manner of this? A. J. COE.

MERIDEN, CONN., July 10, 1886.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of this week there is a paragraph quoting me on the oleomargarine question. As far as my personal views are given it is *perfectly* correct, but incorrect in stating that I said the committee of which I have been chairman "was opposed," etc. I cannot and did not pretend to give the opinion of the Committee on either the taxing of oleomargarine or the prohibiting its manufacture and sale, for I do not know what the opinion of the Committee may be on those questions, as they did not come before us for consideration. Also, it might be inferred in reading the same article that I agreed with what the Dairy Commissioner is reported as saying, which I should regret exceedingly, for I believe that the creameries in this State have always been conducted most honestly, and I have never heard the first intimation to the contrary. I regret that we have good reason to believe that some individuals have been in the habit of adulterating their butter with oleomargarine, etc., and those cases the Committee were most desirous to reach, and I think the present law will fully.

Please make the correction for me and greatly oblige

Yours respectfully, J. W. ALSOP.

MIDDLETOWN, CONN., July 10, 1886.

TO THE EDITOR OF THE NATION:

SIR: In your paper a chemist speaks a word for the butter substitutes. As a chemist I approve them also. I have been over such factories and found them very cleanly and the fats used pure. I have eaten their products and liked them. I think that is the general opinion of the profession.

R. V. Tuson, F. C. S., London and Berlin, and John Attfield, the best pharmaceutical authority, in Cooley's 'Cyclopædia' (6th edition, D. Appleton & Co., New York, 1879; p. 879), article *Butterine*, say: "When fresh it is a wholesome substitute for real butter. No one can reasonably take exception to its sale."—Respectfully,

CHARLES E. AVERY.

QUINCY, MASS., July 12, 1886.

GENERAL MUHLENBERG.

TO THE EDITOR OF THE NATION:

SIR: Gen. Peter Muhlenberg was not born in Virginia, but in Pennsylvania, October 1, 1746. He lived in this State until his sixteenth year, then went to Germany to finish his education. He returned in 1772, and lived and preached in Virginia for the four succeeding years. At the close of the Revolutionary War he returned to Pennsylvania, and lived a public life till his death in 1807. Major Rosengarten could not have selected a more perfect type of a Pennsylvania German soldier than General Muhlenberg, and, in this instance at least, showed himself better acquainted with the history of the German soldier than the usually accurate *Nation*. The 'Life of Maj.-Gen. Peter Muhlenberg,' by Henry A. Muhlenberg, published in 1849, gives his life and services.

Very respectfully, WILLIAM H. BEAN.

NORRISTOWN, PA., July 11, 1886.

COMPARATIVE POLITICS.

TO THE EDITOR OF THE NATION:

SIR: Any one who takes any interest at all in politics, or in anything outside of his own immediate surroundings, must have been more or less attracted by the exciting drama which is going on in Great Britain. But, while my own sympathies are strongly with Mr. Gladstone, I wish to treat the question not at all in relation to Ireland, but only to political methods.

The first point to be noted is the intense additional interest given to a principle by embodying it in personality. Gladstone, Morley, and Parnell, on the one side; Salisbury, Churchill, Hartington, Chamberlain, and Goschen, on the other, stand out on the real, as Irving and Booth do on the mimic, stage, and excite much the same sort of interest; while the possibility of attaining such personal distinction attracts the first talent in the kingdom towards politics. In this country no man is identified with anything. What member of Congress will address his constituents as to what he or anybody has done or intends to do at Washington? They all know that it is a question of impersonal committees, whose action and motives they cannot explain, and probably would not care to if they could. There is no policy, and nobody to represent any. True, in the last Presidential campaign there was personality enough, because the people, here as everywhere, will not respond to anything else; but of what kind? What has the private character of any English statesman to do with the great struggle?—though it is worth noting that the one man whose private character is seriously tainted has promptly and completely disappeared from public life.

Secondly. Observe how personality eliminates passion. Notwithstanding that it turns upon the most embittering of all differences, that of race, there has perhaps never been a general election attended with less violence even in Ireland. The campaign is one of argument. The vast crowds who go to hear the speakers, and the still larger numbers who read the reports, really try to understand them—an education in itself; and men who on both sides set themselves to understand a question, don't fight about it. It is when they don't understand and won't try, that they resort to the *ultima ratio*. And this sobering responsibility is brought home to the people by the fact that their votes do tend directly to decide the question. They are not asked to give a decision of general principle—perfectly futile because there are no means of carrying it out. They know perfectly well that in voting for supporters of Mr. Gladstone they are voting not merely for home rule, but for such details as he may prepare; whereas the weakness of Salisbury and Hartington is that, while opposed to home rule, they are not prepared with measures for meeting a crisis which they cannot avert, and that the burden of meeting it rests upon them. In this country, appeals to the people are always in the direction of violence and not of argument. The whole history of the anti-slavery movement is one illustration. The whole Blaine campaign was just of that kind. The fisheries, the labor, the Chinese questions, all turn upon arousing a blind popular excitement, and then leaving it without any means of accomplishing its purpose. Tariff reform to-day turns mainly upon stirring up a dangerous popular hatred to protected interests. The popular will, to have any effective peaceful result, must work through leaders, and leaders are just what we have not, and, under our present system, cannot have.

But if in some aspects the English system is better than ours, in others it is decidedly worse. Mr. Gladstone certainly gave no indication of his course upon home rule before the last election. It was the almost unanimous voice of Ireland which seems, no doubt justifiably, to have produced his conviction. He at once prepares a measure which at all events involves very serious changes in the constitution of the kingdom, postpones all other business, forces it upon Parliament, and, being defeated, procures a dissolution and an appeal to the country by general election—and all within six months. That seems a quite too precipitate and violent method of dealing with so momentous a question, and English statesmen are beginning to see the danger of it. Suppose that our President, through his Cabinet, had brought forward such a measure and been defeated. The Cabinet would not resign, but would drop that question for the time and go on to something else. The English would say, "Oh! a Ministry once defeated could not command a majority or carry on the Government." We have, however, in the separate election of the President, a security for the good behavior of Congress which the English have not for that of Parliament. Though members might think the country was opposed, say, to home rule, they would be quite alive to the danger of factious opposition, and would support the Cabinet in anything which they thought likely to meet with the approval of their constituents. And then the tone of public discussion in the press and on the platform would indicate to the Executive whether it was desirable at the next session to bring the matter up again.

The moral is, that while it is of the first importance that our Cabinet should have seats, with a share in debate, in Congress, it does not appear that the other features of the English system—resignation and dissolution—being in our case so difficult as to be almost impossible of attainment, are really either necessary or desirable. G. B.

BOSTON, July 12, 1886.

AN "UN-AMERICAN" REFORM.

TO THE EDITOR OF THE NATION:

SIR: I beg to call the attention of those Senators, Representatives, and editors who are trying to convince the public that there is something "un-American" in a competitive and non-partisan system of appointment to public office, to the following press telegram:

"A despatch from Chattanooga, Tenn., dated July 5, to the New York *Herald*, says: 'Last April, during the flood times, when the Tennessee River was higher than it had been for twenty years, Thomas Blakeney, an enterprising young coal miner, learned that the Civil-Service Commission was in Knoxville. Being of an aspiring turn, he conceived the idea of standing an examination. He crossed the river on a raft of logs and tramped through the mountains to the railroad. He reached Knoxville, was examined, and had almost forgotten the matter. Yesterday he received notice that he had passed successfully, and had been appointed to an eight-hundred-dollar clerkship in the Treasury Department.'"

If there is anything "un-American" in this result of a manly effort at self-elevation, we have got far away from the Americanism of our forefathers, and not in a right direction either.

I could wish that this paragraph should fall under the eyes of President Cleveland, who has done and is doing so much to make Americans respect themselves in the conduct of their public affairs, for it might cheer him in the resistance he is making, almost single-handed, to the efforts of those (whose aid he ought to have) that are striving day and night to discredit and evade the spirit and even the letter of a law that he seems to believe in earnestly. X.

WASHINGTON, July 8, 1886.

THE BLAIR BILL WRONG END FOREMOST.

TO THE EDITOR OF THE NATION:

SIR: Outside of any other considerations, the practical impossibility of any judicious distribution of the immense amount named in the Blair Educational Bill is enough to condemn it utterly in the minds of thinking men who hate to see mo-

ney wasted. Instead of appropriating a small sum at first and gradually increasing it as larger and more exact knowledge of educational conditions should reveal the proper channels for judicious expenditure, it jumps to the front with a tremendous outlay, as if the mere expenditure of large sums of money would secure worthy results. In localities where illiteracy is at its worst, where schools and teachers are most inefficient, the causes will not be found in the inadequate payment of teachers, but in conditions for which the present scheme presents no efficient remedy. The maintaining of a poor school for six months in a year instead of four can be no great benefit to a community. The wisdom of a premium on illiteracy is at least doubtful. Those of us who believe in the possibility of wise national fostering of educational interests see in the present project a scheme likely in the long run to bring odium and distrust on all attempts to improve educational conditions by outside aid. A small appropriation, increasing year by year, distributed not according to illiteracy, but according to progress out of illiteracy, would not only insure a reasonably judicious outlay of public money, but would furnish a proper stimulus for improvement in each community. Eventually large sums of money might be advantageously spent. The present bill would not only disappoint the immediate hopes of those who urge it, but in its remote and indirect influences on the people would do great and lasting harm. B.

THE AMERICAN SCHOOL AT ATHENS.

To the Editor of The Nation:

Sir: Your correspondents on the question of the directorship of the American School of Classical Studies at Athens are in so substantial agreement on the issue raised by Mr. Stillman—the desirability of a permanent head for that institution—that there is danger lest an opportune discussion lag through unexpected unanimity. Mr. Stillman, indeed, appears indisposed to recognize that, like a surgical operation, an archæological establishment must pass through a tentative stage. While this lasts, patients who compare the treatment to which they are subjected with that they would have received in the past, rather than with that which others may enjoy in the future, will not complain of partial successes. But all will agree that it is futile to prolong unsatisfactory conditions when the way is clear. If, under Mr. Lowell's presidency, the School Committee can secure an endowment commensurate with the liberal support accorded by the French and German Parliaments to their national archæological stations, so much the better. I also am one of those who think Dr. Sterrett's appointment, say for five years, or in permanence, would do and bring America more honor than any other that suggests itself.

But even if this outcome is to remain merely the consummation devoutly to be wished for, some reform of present conditions at Athens is imperatively necessary. One director, only beginning to familiarize himself with the ground and surroundings, only on official visiting terms with his Greek and foreign colleagues, a mere stutterer in the language of the country, and bound to remain in Athens during the school term, can neither suffice for the instruction of the pupils nor derive as much profit from his own year in Greece as if he were given more leisure to learn and freedom to travel. Ulrich Köhler, who will be succeeded next autumn by Eugen Petersen as Secretary (director) of the German Institute, has two salaried adjuncts in the persons of Dr. Lolling and Dr. Doerpfeld, both specialists, the one in Grecian topography, the other in Greek architecture. Why not attach at least one permanent assistant to the American School, at a salary of twelve or fifteen hundred dollars, whose technical duties as secretary, librarian, house-warden, or what not, would be altogether subordinate to his function of maintaining the necessary continuity in its relations and endeavors? If a specialist, as he ought to be, in the archæology of art, or in topography and epigraphy, his presence would leave the Director free to counsel and instruct the students in those matters of linguistic, literary, and historical scholarship so indissolubly conjoined with archæological pursuits, and in which we need not fear that an American Hellenist will prove deficient, any more than that the run of students will be found too immoderately proficient. His presence, again, would permit the Director, occasion offering, to visit points of interest, or excavations conducted at a distance from Attica, without incurring censure for neglect of more immediate duties, or exposing his person and family to the dangers of travel in unseasonable months, more particularly to sunstrokes and miasmas.

There are several young Americans, former students in the Athens School, and others, sufficiently equipped with archæological training to fill such a position, at least until called to a more settled sphere by one or other of our colleges. Thus these institutions also would find their account under the proposed system, when a permanent directorship shall have been achieved. This last suggestion makes short work of the permanency of my assistant, to be sure; but even the President of the United States is not permanent.

I am, sir, yours sincerely,

Alfred Emerson.

Ulysses, Neb., July 4, 1886.

"HAD A HORSE STOLEN."

To the Editor of The Nation:

Sir: At page 506 of your current volume, "A. H." remarks on expressions like "Mr. So-and-So had a valuable horse stolen last night." It may be added that, occurrence or event being in like manner denoted, it is not exclusively with the past participle of a transitive verb that *have* is thus constructed. In the *American Journal of Philology*, iii, 306, will be found, quoted from Swift, "I had several men died, in my ship, of calentures." And such phrases, I have long observed, are not at all uncommon in the vulgar speech of England. That they are rarely met with in literature is no proof that they have not been in use for many generations. A short time ago I heard a person say, "I once had a dog gone mad, though he certainly had not seen another dog for six months or more." This is not, of course, parallel with Swift's "Dr. D'Avenant would fain have had me gone and drink [*sic*] a bottle of wine at his house hard by." Effecting or bringing about is here implied by *have*.

Your obedient servant, F. H.

Marlesford, England, June 28, 1886.

HOW I BECAME A BACONIAN.

To the Editor of The Nation:

Sir: The surprising revelation made by Mr. Donnelly opens a new world of research and discovery to scholars. If, as there can now be no reasonable doubt, the works commonly known as Shakspere's are one gigantic cryptograph, we may be very sure that Bacon concealed in them much more than the secret of his own authorship; and we may in confidence expect to find some of those matters "whereon I think it not now meet to open myself more largely."

Happily the photo-lithographed facsimiles of the first folio are now accessible to all; so that any one who chooses may engage in the search. For the encouragement of such I propose to relate my own experience; and if I seem somewhat prolix, it is that I may make my process of reasoning and my *modus operandi* perfectly clear.

In the first place I concluded that those pages in which a cipher was hid would have some slight peculiarity to distinguish them to a scrutinizing eye. Turning over the leaves for this purpose, I was struck by the fact that page 53 has for its "signature" E 3—the fifth letter of the alphabet and the figure 3—so that it was doubly numbered. *No other page in the whole book has this peculiarity.*

Satisfied that there was something here, I looked about me for a further clue. Bacon, in his art of writing *omnia per omnia* (*De Aug.* vi), expressly says that the significant letters or characters must be of a different type from the others so that they may be recognized. Now on that page there is one most significant character which at once catches the eye: an *italic* mark of interrogation used after the *roman* letter, contrary to all the rules of typography. I fastened on this at once; and the very word in question, "powlcats," was clearly meant as an intimation to the decipherer that he was *on the scent*. The other marks of interrogation in the same column are ten, so that I had 1-10 as my clue. The simplest explanation possible was "first column, tenth line." The tenth line from the top yielded nothing; but the tenth line from the bottom was clearly the beginning of an important disclosure. How should I next proceed?

The *parentheses* on the page in question are most remarkable, being sprinkled about absolutely in contravention of the laws of grammar and punctuation, and evidently with some ulterior purpose. There are 18½ pairs on the page, 9½ in one column and 9 in the other, an arrangement which I am confident exists nowhere else in the whole volume. But even a mole could see that one-half a pair of parentheses without its fellow was inserted for some special and secret purpose. To me, a pointing finger could not have been more significant. It meant *the eighteenth line* (from the bottom as before) and *one-half of that line*. Here I at once found the completion of the disclosure. Putting the two statements together they read:

"*I will proclaime myselfe what I am*: Bacon, I warrant you." James Gurney.

A HINT FOR TOURISTS.

To the Editor of The Nation:

Sir: As you allow, under the head of Correspondence, your readers, as it were, to say a word of common interest to each other, would it be out of place to call the attention of those in Europe, or others going next year, to one of the most unique spots in the Baden Black Forest? Although on the line of American travel, during a number of visits there I have never met an American lady or gentleman, but on the contrary Russians, Italians, French, and English of the best, most intelligent, and most affable class. While at Strassburg I accidentally met Mr. Archibald Forbes, who asked me to suggest some place near by which he could visit, and I mentioned this place—Koenigsfeld, the Moravian settlement in the Black Forest. He ran across by the famous Black Forest railway to Peterzell, whence by carriage he was comfortably landed at the "Gemein Logis," the inn (or rather hotel) kept by "Brother" Binder. Mr. Forbes wrote two exceedingly interesting letters, and warmly expressed his thanks later to me for the enjoyable trip to Koenigsfeld.

To any one interested in this most lovely and undisturbed Moravian village I would recommend 'Moravian Life in the Black Forest,' published by the Episcopal Book Concern, New York, or, in German, 'Koenigsfeld,' by E. J. Gysin, published by J. F. Steinkopf, Stuttgart. Ladies with chil-

dren will enjoy the immediate surroundings, while gentlemen will be delighted to make foot-tours from here. Merely to give some idea of the company assembled at the table d'hôte, I remember professors from Bâle, Heidelberg, etc., who were *gemüthlich* at once, "Brother" Binder endeavoring to place the *Herrschaften* at table in such a way that all should talk and feel at home. But why continue these hints to your readers? I would just say, in going or returning from Switzerland, if you want to bring back a pleasant recollection of the Black Forest and a peaceful abode of true piety, contentment, and thrift, visit Koenigsfeld. W. H. T. F.

BETHLEHEM, PA.

Notes.

A LIFE of Charles Brockden Brown is in preparation by Mr. Edward Irenæus Stevenson, of the New York *Independent*, who desires access to any literary or other MSS. of Brown, such as might lurk among the papers of his correspondents, Dr. Elihu H. Smith, John Blair Linn, William Dunlap, T. and J. Caritat, William Conrad, or William Johnson.

Extra volumes of the Johns Hopkins Studies in Historical and Political Science, edited by Dr. Herbert B. Adams, are announced. They will be uniform with the regular Studies, but each will be a volume by itself, bound in cloth, of 200 to 500 pages, with price accordingly. The rates will be reduced for subscribers to the regular Studies. Number 1, now in press, is 'The Republic of New Haven: A History of Municipal Evolution,' by Charles H. Levermore, Ph.D. An ingenious diagram shows at a glance the more immediate offshoots of the New Haven "republic" in Connecticut, Long Island, New Jersey, and Vermont.

It is now reported that the annotated catalogue of the Harris Collection of American Poetry in Brown University will contain between 3,000 and 4,000 titles. Brief biographical sketches have been attempted of all the poets represented.

The fifth volume of Bancroft's 'California' will be issued during the latter part of July; the heavy loss suffered by the author in the fire of April 30 having checked the publication of his work only temporarily. The volume referred to covers the period of gold in 1849, and will be read with very great general, as well as local, interest. A. L. Bancroft & Co. are engaged in remanufacturing their stock of volumes consumed in the fire.

The *Forest and Stream* Publishing Company, New York, announce 'Our New Alaska,' by Charles Hallock. The volume is the fruit of Mr. Hallock's personal investigations in that Territory, and takes a sanguine view of Alaska's capabilities and future.

D. C. Heath & Co., Boston, will issue in October a book on Manual Training, by Prof. C. M. Woodward, of Washington University, St. Louis, a pioneer in founding manual-training schools.

A choice illustrated edition of the late Paul H. Hayne's complete poems will be issued immediately by D. Lothrop & Co., Boston. They will also soon issue a book by a new author, 'The Full Stature of a Man: A Life Story,' by Julian Warth.

John P. Morton & Co., Louisville, Ky., have now in press a revised and enlarged edition of 'Florida Fruits, and How to Raise Them,' by Helen Harcourt.

On behalf of the Alumni Association of Harvard College, Dr. Francis H. Brown has prepared 'Harvard University in the War of 1861-1865: A Record of Services Rendered in the Army and Navy of the United States by the Graduates and Students of Harvard College and the Professional Schools.' It includes "the principal facts in the subsequent lives of the men who survived the war, but have since died." Cupples, Upham & Co., Boston, will be the publishers.

The Cambridge University Press will shortly publish the Hulsean Lectures on 'St. Austin and His Place in the History of Christian Thought,' which were delivered last winter by the Rev. W. Cunningham. The lectures deal with the Bishop of Hippo as a philosopher, as well as a theologian; but special attention is given to the question how far his doctrine is different from that of Calvin. Several points which could not be discussed in the lectures have been treated in a lengthy appendix, and the numerous passages in St. Austin's writings to which reference is made have been printed in full. The book may thus serve as a convenient introduction to the study of the voluminous works of the African doctor.

Macmillans' forthcoming catalogue of their publications will be unusually elaborate; classified and indexed. The miscellaneous works of the Universities of Oxford and Cambridge will be embraced in it.

Mr. William Winter is preparing a series of histrionic biographies akin in style to his books about Mr. Irving and Miss Anderson. Among them are volumes on Mr. Booth, Mr. Barrett, the late John McCullough and Adelaide Neilson, Miss Ellen Terry, and the Wallack family. These books will be published by Mr. George J. Coombes. Mr. Winter has a sketch of the lives of the founder and present manager of Wallack's Theatre for the third and fifth volumes of "Actors and Actresses."

Of Mr. Freeman's new series of monographs on "Historic Towns," three volumes are now in type—Mr. Loftie's 'London,' Mr. Hunt's 'Bristol,' and the editor's own 'Exeter'; but it is not likely that they will be published until the fall, owing to the derangement of the publishing trade consequent on the political excitement in England. The same reason delays the appearance of the next volumes of Mr. Lang's series of "English Worthies," in which Mr. Hannay's 'Blake,' Mr. Dobson's 'Steele,' and Mr. Gosse's 'Raleigh' are now ready for immediate publication.

The Clarendon Historical Society of Edinburgh has recently distributed to its subscribers a great curiosity in the form of a facsimile of a set of Cavalier playing cards of the time of Charles II., with devices intended to satirize the Puritans of the Commonwealth. The original was placed at the disposal of the Clarendon and Aungervyle Societies for this purpose by Lord Nelson; but as his set lacked the ace and three of hearts, these were supplied from another source. As illustration of the art and the temper of the times these cards have great value. It must be said, however, that they do not exhibit any remarkable degree of humor or inventive power. When the satire in them goes beyond the limits of the merest commonplace it consists for the most part in reflections upon the low origin of the Parliamentary leaders or insinuations of private vices—never, however, passing the bounds of decency. It is made known to us that Worsley was a weaver, Skippon a wagoner, Harrison a carpenter, Hewson a cobbler, and Pride a drayman. There is so little inventiveness in the cards that it is impossible (except in the *twos*, which are in every case a father and son—as the two Vanes) to trace any connection between the design and the name of the card, even the face-cards. Mr. Edmund Goldsmid, Secretary of the Society, has printed a description and explanation of them, in two or three cases being unable to find any explanation. For example, the three of diamonds represents a group of six men, of whom one appears to preside in a chair, another sits in the foreground, while a third is speaking with arm outstretched; the inscription is, "*Simonias slandring ye High Preist to get his Place.*" This, he suggests, may refer to "Cromwell having urged the trial of the King."

The impatient readers of Tolstoi's 'War and Peace' (and there must be thousands) can now have the concluding part in the Franklin Square Library (No. 521 *a*). It has three divisions: Borodino, The French at Moscow, Epilogue. Kingsley's 'Alton Locke' has been added to Harper's Handy Series.

Mr. F. Leroy Sargent, in his 'Guide to the Recognition of the Principal Orders of Cryptogams and the Commoner and More Easily Distinguished New England Genera' (Cambridge: C. W. Sever, 1886), in thirty-two duodecimo pages, aided by four pages of glossary, undertakes a difficult task: "for, in the first place, the plants dealt with are inherently difficult, and it is beyond the power of a book to make them easy"; and, in the second place, the size of the present primer is very small in proportion to the largeness of the subject. But the author has done what he could, under the promise of "a simple microscope magnifying twenty or thirty diameters," or, when it may be had, "a compound microscope magnifying one or two hundred diameters." It is wonderful what the old cryptogamic botanists did with much less optical assistance.

'Lake George Camp and Canoe Chats: Gossip on Canoes, Camps, Religion, Social Manners, Medicine, and Law, Gastronomy, Politics, and Marriage'—we give the full title of a quarto "published by private subscription" in this city, "with ten phototypes of beautiful views on the lake." The views are fine, except the skies of them; but they cannot atone for the insufferably vulgar and indecent text—incidents and comment. This is emphatically not a book for the centre-table.

The seventh issue of "Dramatic Notes," the little pamphlet year-book of the English stage, has just appeared nearly six months behind time. It is now edited by Mr. Austin Brereton, who is not as expert or as impartial as either of his predecessors, Mr. Charles E. Pascoe and Mr. William H. Rideing. The book is useful, in default of a better; but it is a little too flabby in style and too feeble in criticism to be received with any cordiality. The editor apologizes for his illustrations, but, after looking at them a second time, we do not think this is enough: he ought to do penance for them.

The cotton worm and the boll worm are the subject of the fourth report of the United States Entomological Commission, just issued from the Government Printing Office. It contains two maps of the cotton-raising States, many colored plates of the worms, and numerous drawings of the appliances used in destroying them.

Library Notes, published quarterly by the Library Bureau of Boston, is a cheap, practical guide in library economy, and aims to be indispensable to every librarian. It is not a rival of the *Library Journal*, but expects rather to serve it by accustoming the craft to value coöperation. Any owner of a tolerably large private library will easily find his account in taking the *Notes*.

We have a triple number as the commencement of the second volume of the *U. S. Government Publications: Monthly Catalogue* (Washington: J. H. Hickcox, 906 M St., W.). The editor summarily indicates, in prefatory notes, the chief works of value and interest which are subsequently catalogued in the usual thorough way of this publication. A table of prices current for the documents listed concludes the number. Mr. Hickcox offers his services as an agent in procuring them.

A pamphlet which will be included in Mr. Hickcox's next issue is a report from the Secre-

tary of the Interior on the distribution of public documents—the means and the cost. It shows how the present want of system makes no discrimination between costly and inexpensive Government publications; provides for no coöperation among the departments; leads in this way to absurd and wasteful duplication, as also by the reissue of the same work under different titles; and does not prefer, as should be the case, the claims of libraries to those of individuals. The Secretary regards the present regulations of purchase from the Public Printer as inadequate, and desires him to be empowered to sell at cost price any public document. He also urges the need of informing the public as to the current issues of the Printing Office, but fails to advertise Mr. Hickcox's meritorious catalogue, or to make the obvious suggestion that one who is doing Government work, as he is, should be employed and recompensed by the Government.

There is nothing sensational in Mr. Henry F. Waters's "Genealogical Gleanings in England," in the July number of the *N. E. Historical and Genealogical Register*, but in a quiet way they forge several links between the pioneer emigrants to America and their kinsfolk in the mother country. Ludlow, Symonds, Elmes, Winslow, and Stoughton are the significant names and connections of the present instalment. Mr. Waters gives the will of Gov. Edward Winslow on the eve of his fatal voyage to the West Indies, 1654-55. This number of the *Register* contains several other papers of much interest—Mr. G. D. Scull's notes and documents concerning Hugh Peters, Mr. R. C. Lichtenstein's list of early New England and New York book-plates, and the first part of the most considerable sketch of the life of Peter Oliver (the Massachusetts chief justice who tried Captain Preston and his soldiers of the "Boston massacre") that has yet appeared. Oliver's fine face is copied photographically from a portrait by Copley.

The fifth annual report of the Dante Society, Cambridge, Mass., reports progress in Prof. Fay's Concordance to the 'Divina Commedia,' of which the completion may be expected during the present year. The library numbers 864 volumes, the recent accessions being of great rarity and interest; and it now offers to the student of Dante "all the material strictly essential to that critical study of the text which must be the foundation of a thorough knowledge of the poem." A permanent value is given to this report by a reprint of Prof. Lowell's article on Dante in Appleton's Cyclopædia (1859), and by an original bit of work by Mr. Paget Toynbee, a member of the Society. In elucidating "Paradiso" xvi, vv. 14, 15,

> "Ridendo, parve quella, che tossío
> Al primo fallo scritto di Ginevra,"

which has bothered the commentators, Mr. Toynbee went beyond the printed editions of 'Launcelot du Lac' to an Old French MS. in the British Museum, where the episode is found to which Dante makes allusion. He reproduces this in the "Lingua Oil," with a translation. This is commentary to good purpose, being conclusive.

Polybiblion for June tells of the discovery at Rome, by M. Pierre de Nolhac, of the manuscript of the *Canzoniere* of Petrarch which Aldus Manutius avowedly followed in his edition of 1501, and which had been lent the printer by Pietro (afterwards Cardinal) Bembo. It is now No. 5195 of the Vatican collection. M. de Nolhac is said to prove that it is autographic, at least in part, and that Petrarch supervised the execution of the portion which he did not write with his own hand. The first Aldine edition, by the way, is precious not only as having been "impresso in Vinegia nelle case d'Aldo Romano, nel anno MDI. del mese di Luglio, et tolto con sommissima diligenza dallo scritto di mano medesima del Poeta, bauuto da M. Piero Bembo," but as the first work printed in the newly invented italic type of the house.

Collectors should have in mind a fine engraving of Cavour which appears on the front page of the *Illustrazione Italiana* (Milan) of June 20. The likeness seems masterly. The original is in the Milan Pinacoteca di Brera.

The serial story which the *Temps* of Paris is now publishing is 'La Veine du Gué-du-Diable,' by Bret Harte. Another American novel, 'Entre Deux Présidences,' by Mrs. Burnett, translated by M. Hédouin, has just been published by Hachette et Cie.

The last number of the *Nouvelle Revue* (June 15) contains as its leading article "Souvenirs de trente ans," by M. Ferdinand de Lesseps. It was given as a public lecture and reported for the *Revue*, and for this reason, perhaps, has a great want of connection and clearness. It should not be judged as if it were an article prepared by an author who had leisure to arrange his material. The direct communication of the thought from the speaker to the hearers is felt throughout. The thirty years of which M. de Lesseps here gives his souvenirs are those between 1848 and 1886, or, indeed, it might be said 1889—the arithmetic is not perfect, but the imagination and enthusiasm are all that could be desired, and the interest is never-failing. He relates what might be called the dramatic part of his embassy to Rome in 1849 and his relations with Mazzini with great animation and picturesqueness; and further on, his whole account of his connection with the Khedive of Egypt reads like pages taken at random from a romance of adventure.

At the election of officers of the French Academy for the three months from July 1 to October 1, 1886, M. Victor Duruy was made *directeur* to succeed M. Caro, and M. Sully-Prudhomme *chancelier* to succeed M. Ludovic Halévy.

The Paris papers announce that Alfred de Musset's "On ne badine pas avec l'amour" is to be made into a lyric drama, of which Gounod will write the music and M. Philippe Gille the *livret*.

The Paris publishers, Plon & Nourrit, announce that they have obtained the exclusive right to publish in French the works of Dostoyevsky. They will issue in succession 'Les Souvenirs de la Maison des Morts,' 'Les Possédées,' 'L'Idiot,' 'Krotkaia,' 'Les Pauvres Gens,' and 'Les Frères Karamazoff.'

—Mr. F. Locker-Lampson, as one must hereafter call the poet Frederick Locker, has issued a catalogue of the books collected by him and now at Rowfant. It is a sumptuous and beautifully printed volume, adorned with a frontispiece etched by George Cruikshank, with the collector's portrait by Mr. Du Maurier, with three or four book-plates by artists of distinction, and with a pair of dainty prefatory poems by Mr. Andrew Lang. Of the literary treasures of which it presents a list, we need say little or nothing beyond noting that the library is extraordinarily rich in first editions of English poets. One division catalogues the American authors, in whose first editions Mr. Locker (as became a son-in-law of Sir Curtis Lampson, the first native-American baronet) is very rich. In a presentation copy of Dr. Holmes's 'Songs of Many Seasons,' the owner has written this neat quatrain:

> "Some books are writ to sell—and don't!
> And some are read—such heavy tomes!
> But all should buy (tho' many won't)
> And read the books of Doctor Holmes."

We note, also, that Mr. Locker has a presentation copy of a volume of "Pensées" by Mr. J. G. Saxe, almost unique, for there were only two copies privately printed. Among Mr. Locker's autographs is the original MS. of the first canto of Scott's "Harold the Dauntless," the few missing stanzas in which are replaced in the autograph of Emerson, Holmes, and Longfellow, Tennyson, Browning, and Matthew Arnold. Absolutely unique is a tiny little vellum volume containing four of Mr. Locker's poems in his own handwriting, and some two-score illustrative drawings by Miss Kate Greenaway.

—The current *Century* has another "war paper" of a most valuable class—"In the Wake of Battle: A Woman's Recollections of Shepherdstown during Antietam Week," by Maria Blunt. The sufferings of wounded men, the poverty and want of system of the Confederate medical department and ambulance, the self-devotion of the women who strove to supply everything out of their own destitution, even to the tearing of their skirts for bandages—all these things are simply and graphically told, with truthfulness which is undeniable, and a modest moderation which is admirable. As historical material such papers are worth their weight in gold. Their rarity adds to their value; for passing time makes less and less the chance of our getting many more. While the strictly military reminiscences are getting to be comparatively abundant, these domestic experiences of real war are still scanty, though some of them, like this, are of a very high quality. They show, as nothing else could show, the true interior condition of the Confederacy, its weakness and its strength. The other papers are incidents of the naval capture of New Orleans, by the Confederate Captain Kennon, Mr. Baker, and Commander Kautz of the United States Navy. The "Memoranda" contain a personal sketch of Mr. Haywood, author of 'Life on the *Alabama*,' and a pointed criticism by Gen. W. F. Smith of part of Gen. Grant's campaign of Chattanooga.

—In a recent number of the *Journal des Débats* an account is given of the address delivered June 22 at the *Exposition d'hygiène* by M. Grancher, who has been the assistant of M. Pasteur throughout his laboratory experiments upon hydrophobia. So many incorrect reports of the results of these experiments have appeared that it is of interest to have at last an authoritative statement from a competent source like this. M. Grancher divides the cases treated into three classes: (1.) Persons bitten by a dog, the *système nerveux* of which, sent to the laboratory of M. Pasteur, has there caused the death by hydrophobia of rabbits who have been inoculated with it; or by a dog whose bite has caused the death by hydrophobia of animals or human beings. (2.) Persons bitten by a dog examined during its life or after its death by a *vétérinaire*, who has pronounced it mad. (3.) Persons bitten by *un chien furieux* which has not been followed up. M. Grancher has not included in the statistics of these three classes of cases any persons bitten after April 22, 1886, as the period of the incubation of the disease sometimes extends to two months. The total number of cases up to April 22 is 1,336. In the first class treated by M. Pasteur there were 96 cases and 1 death: 1.04 per cent. In the second, 644 cases and 3 deaths: 0.46 per cent., making for the two best authenticated classes 0.75 per cent. The third class of 232 cases, more or less uncertain, was not included in the estimates. From the best statistics obtainable, those of M. Leblanc, member of the Academy of Medicine and official *vétérinaire* of the city of Paris, the percentage of non-vaccinated cases of persons bitten by dogs actually mad is 16 per cent. of deaths. M. Pasteur has also treated forty-eight cases of persons bitten by rabid wolves, of whom seven have died, a mortality of 15 per cent. The best obtainable statistics of similar non-vaccinated cases give a mortality of 66.5 per cent. Comparing the efficacy of M. Pasteur's treatment for hydrophobia with vaccination for smallpox, the follow-

ing results appear: Before the vaccination of Jenner, 50 per cent. of deaths occurred, against 2.3 per cent. of vaccinated cases. Before the treatment of M. Pasteur for hydrophobia, 16 per cent. of deaths; under his treatment, 0.07 per cent. "These figures are sufficiently eloquent," says the writer in the *Débats*, Dr. G. Daremberg, "to render any commentary needless. M. Pasteur has made an immortal discovery, that of a vaccine for hydrophobia as efficacious as that of Jenner for smallpox."

—Count Tolstoi's recent religio-philosophical and moral essays are forbidden fruit to the Russian public in their entirety, but they are gradually making their way into print piecemeal, in the shape of separate articles and extracts, and under the guise of interviews with the author. In this way a sufficiently clear idea of his doctrines has been obtained to permit of criticism. The conclusion which his latest critic comes to is, that the source of all his mental and moral anguish is the same exaggerated fear of death which haunted Turgeneff during the last years of his life. It is well known that Turgeneff's special dread was the cholera. His friend Polonsky, the poet, painter, and novel writer, related a striking instance of this. Turgeneff had invited him and his family to spend the summer at Spasskoe. This was the last visit Turgeneff's health permitted him to make to his estate. In the course of the summer, cholera broke out at a spot several hundred versts distant, and Turgeneff was so thoroughly alarmed that he wanted to go directly back to Paris. He pictured the cholera to himself as an actual living being, and gave graphic descriptions of it as a frightful old yellow hag with an offensive breath. Count Tolstoi has no special delusion of this sort, so far as is known, and his critic admits that in both cases the feeling probably arose from the high-strung natures of the two great authors. The critic calls attention to the fallacy of many of his arguments, particularly those in two articles published in *Russian Wealth*, and entitled, "In What does Happiness Consist?" and "So, What are We to Do?" In the latter, Count Tolstoi says that it is silly to give away one's property aimlessly, and that it is only necessary to give to people one's personal labor: his ideas as to the bliss of beggary and the impossibility of salvation for the rich are entirely forgotten. The author repeatedly expresses his satisfaction at having "saved himself," although he has retained his wealth.

—While on the subject of Tolstoi, we remark that the Report of the Imperial Public Library for 1883, which was not ready for publication until 1885 on account of its great bulk (over 500 pages), contained in the list of its autograph treasures the MS. of Turgeneff's 'Virgin Soil,' and 'A Brief Exposition of the Gospel,' by Tolstoi, with the author's own corrections and emendations. This was obtained from the Count by the librarian. The Moscow *News* thereupon expressed an opinion that the sending of this MS. to the Imperial Library proceeded from sickly self-conceit and presumption; further, that the acceptance of it and its inclusion in the collection of autographs was a piece of exaggerated courtesy on the part of the Library, and inconsistent with the dignity of the institution. The *News's* idea of a valuable autograph is not an author's MS. all disfigured with his blots and corrections, "but a simple name, letter, note, or a few lines with signature"; hence it thinks the Library should "politely decline" the gift. This gave rise to retorts, the substance of which is that, since Tolstoi's recent writings are widely known among the people, although not yet printed in Russia, this manuscript from the hand of a first-class writer is an historico-literary fact of no little importance, and that the copy is very properly placed in the Public Library. If any one has perceived the absurdity of preserving in an Imperial institution, and in manuscript form, a work which the Imperial censor will not sanction in printed form, the fear of that censor has prevented any allusion to the anomalous fact.

—Two events, both semi-political, are at present agitating Norway, viz.: the so-called Kielland debate and the return of Björnstjerne Björnson after a residence of three or four years abroad. A year ago the novelist Alexander Kielland, who is the latest Scandinavian celebrity, applied to the Storthing for a "poet's salary," such as had already been granted his colleagues Björnson, Ibsen, and Jonas Lie. As Kielland's fame had already extended to Germany, France, and Holland, his request seemed perfectly reasonable, and would undoubtedly have been granted if the question had not been raised whether he was not an enemy of Christianity. The fact was, that in several of his novels the Lutheran clergy had fared badly, and the absurdities of the official patronage of religion had been mercilessly exposed. This critical spirit the clergy were not slow to resent, and their partisans in the Storthing avenged themselves by defeating the bill granting the "poet's salary." The debate, which was long and heated, excited violent discussion throughout the country; and one or two members who had voted in the negative failed of a renomination. This year it was regarded as a foregone conclusion that the bill would be reintroduced; and it came, endorsed by Björnson and Ibsen, the former of whom declared that if it failed to pass he should feel obliged to renounce his own stipend. If there was any tacit implication attached to it that the recipient must be an upholder of the official Lutheran orthodoxy, he could not afford to sell his liberty of thought for six hundred dollars a year. It is not unlikely that this declaration was interpreted as a threat by the committee to which the bill was referred; at all events, it reported adversely, but recommended that Kielland be granted the annual sum of four hundred dollars as compensation for the loss he suffered owing to the absence of an international copyright law. This curious report was adopted, and its recommendation accepted, after one of the most extraordinary debates which have ever taken place in the Storthing. The National Assembly seemed to have resolved itself into a literary debating society. Kielland's merits were eloquently proclaimed by some and denied by others, and particularly his attitude towards Christianity was made the subject of the most searching inquiry. The peasant members, with some exceptions, could not comprehend that a man who attacked the Church could be a good Christian, while the representatives of the smaller commercial cities maintained that he could. The Sverdrup Ministry, in spite of all efforts to draw them out, remained neutral, and the conservative minority likewise sat dumb. The vote stood 57 to 57, and the bill, as reported by the committee, was saved by the casting vote of the presiding officer.

—Björnson's return was the signal for perhaps the greatest popular demonstration which has ever been made in Norway. As was expected, "society" stayed at home; the students refused to honor him in a body, though individually many were present; but the people turned out *en masse*, and the streets about the steamboat wharves were thronged for many blocks with a dense mass of humanity. The number is variously estimated from 15,000 to 30,000. Many corporations had met, with brass bands and banners, and flags waved from the ships in the harbor. When the steamer came into view, escorted by a small fleet of excursion-boats thronged with friends who had gone down the fjord to meet the poet, the crowd burst out into the national anthem (written by Björnson), "Yes, we love our native country." On his landing he was received with speeches, music, and tremendous cheering, and his ride to his hotel was like a triumphal progress. At a popular festival in his honor, which was given a few days later, several of his political enemies were present, and vied with his friends in celebrating his virtues in speech and song. Altogether, it seemed like a feast of reconciliation. Björnson declares, however, that he is satisfied with the victory which the people have gained, and has no intention of again entering the political arena.

THE KALAHARI DESERT.

Through the Kalahari Desert. A narrative of a journey with gun, camera, and note-book to Lake N'Gami and back. By G. A. Farini. 46 illustrations (mostly from photographs), diagram, and map. Scribner & Welford. 1886. Pp. xx, 457, 8vo.

In the preface the author says that his inducements to travel in South Africa were the hopes of finding a diamond mine and land for a cattle ranch. A third motive, however, is casually revealed in the course of his story which, though little is said about it, we are inclined to think was the main object of the expedition. This was to get some "little people," said to be living near Lake Ngami, for exhibition in Europe. With this end in view he left Cape Town for the interior, probably in January, 1885. The book says "2nd June," which is, of course, a misprint, although, as he was back in London in August, the six months which we have allowed him was none too much time for a wagon journey in the African sands of nearly 2,000 miles. Mr. Farini, who calls himself an American, and is evidently a showman by profession, was accompanied by a person familiar to the circus-goers of earlier days under the name of "Lulu." This man, whose name is withheld, for some unintelligible reason, is an enthusiastic photographer, and proves more than once that he has lost neither the skill nor the daring which formerly distinguished him.

A short stay at Kimberley gives an opportunity for describing the process of diamond mining, and for discussing the burning question of the prevention of "illicit diamond buying," as well as for Lulu to photograph a blast at imminent risk to himself; his camera-stand, by which he stood, being actually broken by the falling débris. The direct route from this place to Lake Ngami passes through the Kalahari Desert, a vast region of indefinite extent, stretching probably for more than a thousand miles north from the Orange River, between the Transvaal on the east and Namaqua and Damara Lands on the west. Dr. Livingstone passed along its eastern border in 1849, and, two years after, Francis Galton got half-way across it in his unsuccessful attempt to reach the lake from the Atlantic coast. His companion, the Swedish traveller Andersson, was more fortunate in 1853. From that time till this no traveller has published any detailed account of it, to our knowledge, though the region has been continually traversed in every direction by hunters and traders. Two years ago the Royal Geographical Society published a map of South Central Africa which included the Kalahari Desert, from surveys made by Mr. A. A. Anderson during a residence of sixteen years in the country, but the promised account of his explorations has not yet appeared. It is not a mere barren waste of sand, but a plain covered with vegetation, chiefly grass and creeping plants and in many parts thick woods. There are no running streams and few wells or pools. From the accounts of natives and the appearance of the country it would seem that the amount of rainfall has been steadily decreasing for many years.

Although water may frequently be got by digging, yet the desert would be uninhabitable in the dry seasons but for the cucurbitaceous plants and tubers which grow in great profusion in almost every part. These furnish both food and drink for animals and men. It is even said that cattle which have been fed for a long time on these plants without water, have been known to refuse it when first offered them. The inhabitants are few in number, being mostly bushmen and people from various native tribes of the neighboring countries. Among the animals which graze upon the plains and frequent the pools or marshy ground near the lake, are still to be found, though with constantly increasing difficulty, every species of South African game, both small and great.

After leaving Kimberley, Farini went first to a place where his guide said that he had once found a "180-carat diamond." A day's fruitless digging and sifting in the broiling sun brought him to the conclusion that "the best thing for us to do is to go on for the little people." In the journey to and from the lake they had numerous adventures of an exciting character. Farini, pursuing some ostriches, was lost and nearly perished from thirst. Shortly after he rescued a German trader who had been robbed and all but murdered by his servants, and left to die in the desert. One man, a Bushman slave, alone was faithful, and brought Farini to his master just in time to save his life. Strangely enough, the Bushman proved to be one of the "little people" in question, and the two were invited to join the expedition. Of the hunting adventures these two specimens must suffice. While stalking gemsbok, Farini was interrupted by a lion which "bounded from behind a bush and landed on the head of one of the herd." Climbing a tree, he saw the lion "apparently sucking away the life's blood from the neck of a gemsbok, whose feet were yet kicking spasmodically, while beneath the hind part of his body lay the neck of a second gemsbok, still, like his comrade, in the last agonies." Finding that the beast did not move after receiving two bullets, he went up to it, when "imagine my surprise to find one horn of the gemsbok sticking out of the lion's shoulder, and the other through his neck, while just through his hip could be seen the tips of the horns of the other gemsbok. He had impaled himself on the horns of two of his prey and . . . was as dead as a door-nail." Another time he kills a giraffe far away from camp. As it was late in the afternoon, Farini determined to spend the night alone in a tree, to protect the game from the vultures, hyenas, and jackals. In the early morning three lions came out of the bush, and, after "roaring until the air fairly trembled, and the earth seemed to shake, as they tore up the ground with their fore-feet," they began quietly to devour the dead giraffe. At this moment the wagons drew near, and Lulu rushed forward with his camera on his back:

"At last he stopped near the crest of a sand-dune, and then the glitter of the lens in the sun's rays told me that he was focussing the group. Turning to the lions, I saw the largest of them was tearing a hole in the shoulder of the giraffe, spoiling the skin that Jan had reckoned on so much for shoe-soles. Then, glancing back at the camera, I saw Lulu working as coolly as in a studio, actually changing the shield: he had evidently taken one picture, and was going to get another."

This done, they fired into the group, and

"suddenly the old lion charged straight towards Lulu. As long as I dared I sent my bullets after him, till I was afraid of killing Lulu or 'I'll-vatch-it' [the German's nickname] instead. With quick bounds, his tail between his legs, the lion was close upon them, when they, too, ceased firing, Lulu actually making another exposure, and 'I'll-vatch-it' standing by like a stolid German soldier awaiting orders. What madness! What could possess them to run such risks! I could restrain myself no longer, and shouted with all my might, 'You fools! Fire! Shoot, or you will both be killed!' Before the words were out of my mouth, Lulu, keeping the black cloth over his head, had rushed forward with the camera, shaking its long, thin legs in front of the maddened beast. . . . Suddenly the lion stops, lashes his side with his tail, and with one bound turns tail"—

but is finally killed, though his two companions escape. It must be confessed that, before reading Mr. Farini's book, we were somewhat sceptical as to the literal truthfulness of some of the pictures of wild beasts which herald the annual coming of the "Greatest Show on Earth," but this adventure surpasses the most thrilling scenes that we ever saw on a circus-poster. The author is very fortunate in all his encounters with large game, having considerable excitement without any serious injury to himself or his companions. Among other incidents, a lion leaps into camp at night, knocks Farini into a bush, pulls down a man and then an ox before he is killed. A rhinoceros runs over him, and tries to dislodge him from the tree in which he has taken refuge; while an uncommonly shrewd elephant charges upon him, and "I felt his trunk slip over my head, and my rifle was pulled violently out of my hand . . . and trampled into the mud."

Near the lake they discovered some of the "little people," living in "lairs (they could not be called huts) formed by bending over the tops of two tall bunches of grass, and twisting or bending them together so that they formed a kind of tower, with the bare sand as a floor. . . . They were all tattooed on the cheeks, arms, and shoulders with short straight marks of a blue color; and all, down to the sucking babe, had a peculiar tribal mark in the amputation of the first joint of the little finger of each hand. . . . They are monogamous, and the only tribe we had seen among whom circumcision is not practised." They live almost wholly on melons and truffles, but, when these fail, upon the animals, which they kill by means of poisoned arrows. The author says that "the tribe was called the M'Kabba," and implies that they were not Bushmen. In most respects, however, his description of them resembles that given in the notes to Anderson's map to the Mesere Bushmen, who inhabit this region. Several of these pigmies were induced to accompany the expedition, and six of them, we learn from a German paper, were eventually carried to Berlin and exhibited. On the homeward journey they came to a settlement of the Bastards, a mixed race of Dutch and native descent, who live chiefly by hunting and trading. Here Farini was suspected of being an agent of the German Government intent on annexing the country, and some of the headman's followers endeavored privately to negotiate a sale. A few months after this time, it now appears from very recent accounts, a German protectorate was actually declared over all the territory between the Orange River and Cape Frio, extending about 500 miles into the interior, and apparently including that claimed by the Bastards.

In a hunting excursion made with these people, Farini discovered some very remarkable ruins: "We traced the remains for nearly a mile, mostly a heap of huge stones, but all flat-sided, and here and there with the cement perfect and plainly visible between the layers." In one spot they uncovered "a pavement about twenty feet wide, made of large stones. The outer stones were long ones, and lay at right angles to the inner ones. This pavement was intersected by another similar one at right angles, forming a Maltese cross, in the centre of which at one time must have stood an altar, column, or some sort of monument, for the base was quite distinct, composed of loose pieces of fluted masonry." They found neither hieroglyphics nor inscriptions, and none of their companions could give them any information in regard to the origin of the structures. We do not remember that any other traveller refers to similar ruins in South Africa, though Anderson speaks of finding in the country further to the east the ruins of ancient forts "built of hewn stone." Mr. Farini was also fortunate enough to see the mysterious process of manufacturing poison by the Bushmen. This is kept "a great secret, which only the heads of families are permitted to know, meeting once a year to mix the ingredients that they have collected during the interval." The principal ingredient appeared to be the juice of a bulb known as the *gift-ball*, about two quarts of which they collected and boiled in an iron pot. A hyena-skin was then placed on the ground, and on it were laid dried snakes' poison-bags, together with some from snakes just killed, and two reeds about six inches long containing spiders. After howling "a kind of weird song in monotone" for nearly an hour, these were added to the mixture, one man shaking the pot while "the others danced around him, now shouting and gesticulating frantically, now putting themselves into all kinds of positions, representing the contortions of various animals dying with poison." Finally "they took out of a skin bag a red-looking substance, as fine as flour, which was dropped in, and stirred it until the concoction was of the proper consistency. Up to this moment not a word had been spoken, but now they began to talk" and to smear their arrows.

"The poison was not so thick as yet but what it adhered evenly to their arrow points when rubbed on with a piece of skin. The arrow-heads are made of heavy, hard wood, about six inches long, and tipped with a flat piece of tin, let in and fastened with gut. These points are made quite separate from the shaft, which consists of a long, light, hollow reed, feathered on one side only, into which the points are inserted when wanted."

For this poison, we believe, there is no antidote, but the author relates a marvellous story of the Bushman's cure for a snake-bite. One of his followers kicked a snake which lay in the road, "and the horrible reptile bit him. Coolly taking out some dried poison-sacs he reduced them to a powder, pricked his foot near the puncture with his knife, and rubbed the virus powder in just as he had done with the cattle. In the meantime I had put a stop to the snake biting any more by a blow from the whip-stock, and the Bushman, extracting the fangs, drank a drop of the poison from the virus-sac, and soon fell into a stupor which lasted some hours. At first the swelling increased rapidly, but after a time it began to subside, and next morning he inoculated himself again. That night the swelling had disappeared, and in four days he was as well as ever." The same effect is said by the Bastards to be produced by a powder made from a lizard called N'auboo. Another singular custom which Farini describes, and to which Livingstone also refers, is the way in which the natives collect and preserve water. Girls suck up the dew on the leaves through reeds and fill ostrich shells with it, which are then buried in the sand and left until all other supplies have given out. The adventures of the travellers end at the "Hundred Falls" of the Orange River, where they scale precipices inaccessible to all except professional gymnasts, and narrowly escape being swept away by a sudden flood.

We need hardly add that we have found Mr. Farini's account of his travels very entertaining, although we suspect that some of his descriptions have received considerable color from a very vivid imagination, and a few coarse passages might well be omitted in another edition. So far as our knowledge goes, he gives a fairly accurate picture of a little-known but interesting part of South

Africa, which may be developed into a great cattle-breeding country. We ought to mention that he brought home a fine collection of the fauna and flora of the Kalahari, a description of which is given in an appendix. Among the latter, which has been sent to Kew, are considerable quantities of seeds of the various watermelons, which Mr. Farini thinks could be planted to great advantage in some of our western sand-wastes.

PUBLIC OPINION IN ENGLISH POLITICS.

Public Opinion and Lord Beaconsfield. 1875–80. By Geo. Carslake Thompson, LL.M., of the Inner Temple, Barrister at Law. 2 vols. Macmillan & Co. 1886.

THE preface in which Mr. Carslake Thompson explains the origin of these volumes recalls the account given by Pierre Gringoire, in 'Notre Dame de Paris,' of the play which he was about to exhibit. "C'est moi qui suis l'auteur. . . . C'est à dire, nous sommes deux, Jehan Marchant qui à scié les planches et dressé la charpente et la boiserie du théâtre, et moi qui ai fait la pièce." Mr. Carslake Thompson, barrister at law, discloses the fact that in the design of the work and in some degree in its execution he has had the assistance of Mr. Seymer Thompson, Fellow and now Tutor of Christ's College, Cambridge, but that this collaboration was, of force, at last abandoned, and that the completion of the book and its final form are due to the writer whose name appears on the title-page. We have used the words completion and final form; but they are not strictly applicable. For the book lacks form, and the organizing mind and finishing touch are missing. There is an elaborate apparatus of arrangement. There are parts and chapters and sections, which exhibit a minute analysis of the various topics to be treated. There is a copious collection of materials, extracts from Parliamentary debates, from platform speeches, from articles in newspapers and magazines. But the matter is not fused perfectly into thought, and the imperfectly fused thought does not flow into the channels elaborately provided for it. If we may recur to the parallel suggested by the dramatic collaborateurs of Victor Hugo's romance, we should say that though Jehan Marchant has done his part, Pierre Gringoire has fallen short in his. The planks have been sawn, the carpentry has been admirably executed, but the play is wanting. The architect has designed the plan, the building materials have been brought together, the scaffolding has been erected. The careless observer may be inclined to take for granted the house behind the scaffolding.

Closer inquiry will lead him to the conclusion that there is no house at all: at best, a frontage has been run up. In other words, Mr. Carslake Thompson and Mr. Seymer Thompson have accomplished between them the design and collected the materials of a valuable work, but the building of a shapely structure has been left to other hands. In doing so, they illustrate a habit of modern writing. The great historians of a past generation were not less industrious in their consultation of authorities than their successors are. The latest and the most hostile editors of Gibbon admit that they rarely discover in his pages a neglected or a misused source of information. But Gibbon absorbed and digested his materials. Where a modern historian displays his authorities in elaborate foot-notes or appendices of citation, dividing the page with the text, or swelling the volume with *pièces justificatives*, Gibbon informed himself with his authorities. They gave tone and color to a sentence, or were worked into the narrative in the way of allusion or illustration. The artistic form of the work was preserved, and the conception of the author was delivered in the most perfect shape which he could give to it on the mind of the reader. Mr. Carslake Thompson's volumes painfully exhibit a different process and result. The former conductor of a well-known magazine was once described by a dissatisfied critic (and contributor) as editing it with a pitchfork. Mr. Carslake Thompson and his coadjutor have used a process almost as rude.

The book is dedicated to "Prof. J. R. Seeley, whose teaching has been a stimulus to the pursuit of political truth." The author has unfortunately adopted Prof. Seeley's doctrine that historic and political writing need not be interesting, and ought not to be so if it can be helped. A reaction was inevitable some time or other from the exaggerations and falsifications of the graphic and picturesque school, but it has been pushed too far. Carlyle had his fun out of Dryasdust, and now Dryasdust is turning upon Carlyle. Mr. Carslake Thompson's aim is described in the preface. "The book," he says, "is an attempt to discuss briefly, though sufficiently to indicate the point of view adopted, the functions which the genius of the English Constitution assigns to Public Opinion. (2.) To discuss methods of evaluation of Public Opinion, and to analyze Public Opinion on the Eastern Question in particular. (3) Finally, to show that in the events of 1876-8 Public Opinion was deprived under Lord Beaconsfield of its due influence on the foreign policy of England." The method is sound. To take a general problem, such as the relation of public opinion to government, and to test it by a minute examination of the incidents of a particular controversy or a particular historic period, is a procedure which may fairly be called scientific. It is analogous to the processes of natural history, which studies the type in an individual instance. The first part of Mr. Carslake Thompson's volume is devoted to "the place of public opinion in the English Constitution." It is really an examination of the theory of Cabinet Government, of which Mr. Bagehot's work on the English Constitution gives the recognized and now classic authority, though his doctrine is little more than the development of a pregnant sentence of Macaulay's and a popularization of an argument of J. S. Mill's. The Cabinet, according to Bagehot, represents the sovereignty of public opinion, because the Cabinet is dependent on and falls or stands by the opinion of the House of Commons. A newly elected House of Commons reflects the opinion of the constituencies, that is, to apply the French phrase, the sense of the legal country. In Bagehot's time there was a large public outside the legal public, and public opinion in the more comprehensive sense might be in conflict with public opinion in the more technical one. The political system of 1832 was still in force. The extension given to the franchise in 1867-8 and in 1885, and the near approach made to equality of electoral districts last year, reduces this possibility of conflict to a minimum. Of course, it does not wholly abolish the possibility of it. The mechanism is complicated and may get out of order. Mr. Thompson seems to think that the newspaper press, the platform, and especially the caucuses, local and central, are so many instrumentalities which dispute the claim of the House of Commons to be the organ and representative of opinion. They are rather so many means of bringing public opinion to bear upon the House of Commons, and of correctly informing and inspiring it. They in their turn are liable to error, and if so will infallibly receive correction when the appeal to the country is made.

The fundamental doctrine of Mr. Bagehot's essay, that public opinion governs through the House of Commons and the Cabinet, is therefore, in our view, not less truly descriptive of the facts than it was when he wrote, but in more accurate correspondence with them. It may happen, of course, that both the Cabinet and the House of Commons will go wrong at a time when the House of Commons has still some sessions of life in it. There may be a momentary divergence of the representative from the represented. But the divergence will not be more than momentary. Indications of the popular opinion and feeling will reach a body sensitive as to its chances of reëlection. The caucuses which affect to speak in the name of the several constituencies may go wrong, but in that case public meetings and the drift of casual elections will set them right. In a word, though the machinery may for a time get out of order, and never works with instantaneous and ideal precision, it sooner or later conveys the force impressed upon it to the body to be moved.

Mr. Thompson thinks that towards the close of his Ministry Lord Beaconsfield (about whom there is nothing in the volume to justify the prominent place he occupies on the title-page) established a sort of dictatorship over the House of Commons and in the Cabinet; that he was, to use the phrase which shocked the sensitiveness of Walpole, not only the Prime Minister, but the Sole Minister. The same thing has been said of Mr. Gladstone since. This only means that each of these two eminent men had the confidence of the House of Commons, and commanded the submission of his colleagues in the Cabinet. But this is not a new feature of English political history, and does not represent any dangers to the Constitution of which former generations were not aware. Neither Lord Beaconsfield nor Mr. Gladstone was more powerful in the Cabinet or in the House of Commons than Lord Chatham, and Mr. Gladstone himself never appealed more emphatically from "the classes" to "the masses"—though the political vocabulary of the eighteenth century was not that of the nineteenth—than Chatham did.

Mr. Thompson, in what he calls "the evaluation of public opinion," enumerates the various sentiments or biases which are operative in it—"The Crusading Spirit," "The Historic Spirit," "Humanity," "Nationality," "The Anti-War" feeling, "Legalism," etc. But what he has to say, though often sensible, is rather memoranda of points of discussion than full discussion. The book, though valuable for reference, superseding on its particular subject some half-dozen volumes of the 'Annual Register,' is overweighted by the details of the controversy on the Eastern Question, fatiguing at the time, and almost paralyzing to the mental faculties now.

Memoir of Mrs. Edward Livingston. By Louise Livingston Hunt. Harper & Bros. 1886.

THERE is a delightfully old-fashioned air about this modest book. It is not only that the events it concerns recall a long-past period, though the battle of New Orleans and the crisis of nullification are old history for this generation. It is rather the pictures of simplicity in manners, of moderate ambition, of calm and tender domestic relations, that inspire regret for so much that Americans seem to have outlived.

When Edward Livingston, just after the Louisiana purchase, negotiated by his more distinguished brother, removed from New York to New Orleans, at the age of thirty-eight, to mend his broken fortunes, he found himself in a land where nothing but its new title was American. A tropical climate, civil law, Romish religion, and the traditions and customs of an alien people gave scant welcome to a Northerner. The talent and energy which were his in full measure might have struggled long in vain against such obstacles but for his fortunate meeting with a wife who brought all the conditions wanting to his success. She was a widow twenty years his ju-

nior, of high French lineage, and a refugee from the massacre of St. Domingo. The equal of her husband in mental force, and not less trained by the hard discipline of life, she shared with her compatriots their language, their faith and sympathies. With her great beauty and her inherited distinction of manner, it is easy to conceive the many ways and occasions such a wife could improve to smooth the path of an ambitious and able man in society and politics, among a people with whom personality goes for so much as it does with the French. The regard and affection for her always expressed by Jackson prove her influence over her husband's fortunes where his own countrymen were concerned.

Livingston, more fortunate than most advocates, whose fame is likened to that of actors, perishing in the hearing, left a monument of his genius and sagacity in the Civil Code of Louisiana, which became the law of the State, and in the Penal Code prepared by him, though not enacted. For the perpetuation of this in two languages he is partly indebted to a woman's aid—his daughter having supervised the production of a new edition of all his works on penal law at Paris not many years ago. In everything except the acquisition of wealth Edward Livingston reaped the full fruits of his courage in choosing what was then a foreign home. He became a leader of the bar at New Orleans, always conspicuous for men of mark. He represented Louisiana in the Lower House for six years and in the Senate for two, until appointed by Jackson Secretary of State in 1831. The old soldier saw the coming storm, and chose his political aids as sagaciously as, in the former time at least, he had chosen his military ones. Webster's terrible logic and the President's stern will were formulated by Livingston's eloquence in the famous proclamation denouncing nullification doctrines. South Carolina's attempt at rebellion was crushed, only to rise again and overwhelm her in ruin a generation later.

The position of his wife among the matrons and Senators of the earlier republic is charmingly described. Her house was officially the centre of foreign society, attracted by her fascinating manners, which disarmed even political animosity. When serious questions arose threatening our friendly relations with France, Livingston's peculiar fitness for their discussion led to his appointment, once before declined, as Minister to that country. Randolph wrote a characteristic letter, urging its acceptance, saying, "In Mrs. Livingston you have a most able coadjutor. *Dowdies* won't do for European courts, Paris especially—there she would dazzle and charm." Livingston's political importance at home and his literary repute in Europe—perhaps, too, the remembrance of his brother's great services at the same court—suggested the selection, fully justified by his firm and dignified management of delicate negotiations. These concerned a quarrel inherited from the days of the First Empire, over redress for French spoliations on American commerce. Their result is a matter of history, which continued also for fifty years to record the disgraceful delay of the country in paying over to its own citizens the indemnity recovered from France.

Here for the first time Mrs. Livingston found herself completely at home, as in her native air. Their circle at Paris included all that was most distinguished in statesmanship and literature. The language and manners of the capital were naturally her own. She never forgot that while so much a Frenchwoman she was first of all American, and amusing instances are given of her beating at their own weapon of epigram those who seemed to assail her country. Such was her retort to the Prussian Ambassador, asking what might be the population of Washington village: "A peu près celle de Potsdam." She was received as an intimate in the royal family circle, and we are given pleasant glimpses of the domestic life and simple ways of the Citizen King, whose Austrian Queen still never forgot, though she never imposed, her rank. At the Hague, where they visited her brother, who held the post of Minister at that court for seventeen years, her graciousness won the regard and attention of the most eminent, already prepossessed in her husband's favor by his achievements as a publicist.

The mention of the Hague recalls a curious anecdote (not appearing in this memoir) of Martin Van Buren, who was presented to the King of Holland during the short stay he made in England in 1831, as a Minister expectant but not confirmed. Van Buren's conversation with the King in his own language drew from him the remark that he spoke Dutch with great purity, but in antiquated style—such Dutch as his ancestors had taken with them from their home two centuries and a half ago: Dutch like that of the early Bible translators.

Livingston's return from France coincided with his retirement from public life. The remainder of his days he intended to devote to perfecting his system of criminal law, but they were closed by sudden illness within a year. His widow survived him for twenty-five years. She pursued with vigor and understanding the task of retrieving her husband's embarrassed affairs. The Louisiana property was in litigation, and the estate on the Hudson seemed threatened with sale. In correspondence with leading lawyers on these interests, and in visits to New Orleans, she showed an intelligence and energy not to be subdued even by her confirmed ill-health. Books were her solace, and works of kindness and charity her relief from trials. She died at the age of seventy-eight, outliving most of her generation, and leaving none to represent her in direct descent. The memoir closes becomingly with the words: "She was an intelligent and useful influence at several epochs of our history. American annals are enriched by many names taken from her sex. It is thought they ought to have some place for Mrs. Livingston's."

Reminiscences of Abraham Lincoln. By Distinguished Men of his Time. Collected and edited by Allan Thorndike Rice. North American Publishing Co. 1886.

THIS bulky volume of more than six hundred pages contains papers upon Lincoln by Grant, E. B. Washburne, Julian, Fenton, Usher, Boutwell, B. F. Butler, Coffin, Frederick Douglass, Weldon, Poore, Coffey, Beecher, W. D. Kelley, C. M. Clay, Ingersoll, Markland, Colfax, Voorhees, C. A. Dana, Kasson, Fry, McCulloch, Depew, David R. Locke, Swett, Walt Whitman, Piatt, E. W. Andrews, Welling, Conness, Alley, and Hicks; and there is a supplementary volume to come. Most of these are records of personal reminiscence; but that from Grant is only a few notes by Col. Fred. Grant, those by Ingersoll and Whitman are merely rhetorical, and the one by Welling is largely a discussion of the Emancipation Proclamation. The gathering of such a mass of material is an excellent service, since it contributes to make Lincoln's memory personal instead of merely a great name, and hereafter, when it is sifted for his biography, the usefulness of it will be better appreciated. The character of the contributors apparently forbade much editing by Mr. Rice; as it is, the volume is very diffuse, is marred by frequent and long repetitions of history which did not come under the eye of the writers, by anecdotes at second-hand when the original versions are to be found elsewhere in the book, and by similar defects which generally it is the duty of an editor to do away with. Mr. Rice himself contributes a paper partly of second-hand reminiscence and partly of criticism; gives a facsimile of the famous Seward despatch in the *Trent* affair, with Lincoln's corrections—a most interesting paper; and interleaves the separate articles with portraits of many of the authors.

There is a singular unanimity in the judgment of all these writers in respect to the qualities, motives, and purposes of Lincoln, and the transcendency of his character both in leadership, wisdom, and patriotic elevation beyond all other statesmen of the time. Donn Piatt is the only one whose words indicate dissent from the common views, and at the close even he confesses Lincoln's superiority. His unfavorable remarks, however, are amply challenged by the other participants in the work. Thus when he writes that, "descended from the poor whites of a slave State through many generations, he inherited the contempt, if not the hatred, held by that class for the negro," the reader need only turn to Frederick Douglass's account where it is said, "He was the first great man that I talked with in the United States freely who in no single instance reminded me of the difference between himself and myself, of the difference in color, and I thought that all the more remarkable because he came from a State where there were black laws. . . . I felt as though I was in the presence of a big brother." And when Donn Piatt says, "I doubt whether Mr. Lincoln had at all a kind, forgiving nature"; or denies that he felt the "anxiety" which would have broken down men of "delicate mold and sympathetic nature such as Chase or Seward," but, on the contrary, "lived through the awful responsibility of the situation with the high courage and *comfort that came of indifference*," one is simply lost in wonder at the writer's incapacity. The thing which Donn Piatt did remember was Lincoln's rage, which once descended upon himself, justly, as he acknowledges; and it is evident from Lincoln's tone in the conversations between the two that he had no liking whatever for Donn Piatt. Of this "rage" of Lincoln there are several instances recorded, all of them instructive, and quite sufficient to set him beside Washington in this capacity for unbridled anger on fit occasions.

It will not be expected that we should summarize even what is new in this volume, because it is anecdotal in character and is connected with many matters of detail. Much of the matter is old, but we do not remember to have seen before the remark, "I have never had much to do with bishops where I live, but do you know? Sumner is my idea of a bishop." Perhaps one should be a Westerner to appreciate all that was conveyed by that. Of what is new, it is not unlikely that some capital may be made of Lincoln's use of the public service as a politician. Boutwell takes the occasion to preach the doctrine of the "Places for the Partisans" out-and-out; Julian gives one instance in which the President used the whip in his behalf; Fenton tells the price of office for which Thurlow Weed consented to support him in 1864; and Mr. Rice, on an unnamed authority, discloses that ten thousand Pennsylvanian soldiers were furloughed from Meade's and Sheridan's commands to affect the vote in their State by the contagious patriotism of their presence. Nevertheless, it is equally plain that, while Lincoln used every instrument of power he possessed to accomplish his ends, he was also ready to lay down all power; and, in illustration of this, Mr. Rice publishes, on the authority of Col. W. H. Croffut and Thurlow Weed's statements, the story of the embassy of the latter to Gov. Seymour and to Gen. McClellan, in '62–'63, to say that Lincoln would stand aside if they would declare unequivocally for carrying on the war for the Union to the end, and of their failure to meet the require-

ment. Another interesting matter that Gen. Butler tells is, that the lieutenants of both Chase and Lincoln offered him by authority the Vice-Presidential nomination for '64, which he declined, and also that he then sent advice to Lincoln to dismiss Chase because of the latter's use of the Treasury patronage for himself.

There are, however, no disclosures that affect Lincoln's integrity, simplicity, and greatness. On the other hand, his qualities are illustrated from many sides, and the figure presented is that of a very lonely man, working out his duty with infinite patience and tact, in the midst of a conflict of strong personalities, violent ambitions, and burning jealousies, amid uncertain though mighty events, with a complete self-reliance, but none the less with weariness, intense anxiety, and suffering. The humor that was his mental safeguard is a welcome relief to that part of the story which concerns the war; and the sharpness with which it enters into the narrative at points of the deepest feeling in his own heart shows rather the strain than the frivolity (as has been alleged) of his emotions. The anecdotes of his humanity constantly light up the pages. But if one seeks for the main and permanent element in the whole, it must be agreed that the most constant impression is of a singular and partly inexplicable pathos alike in the character and situation of Lincoln, which, felt rather vaguely in his earlier life, darkened to the end. The wisdom of his public acts, as in the Seward despatch; the sagacity of his dealing with his generals and his secretaries; that quality, which Seward designated as a cunning that amounted to genius, in manœuvring subordinates and avoiding antagonisms and postponing ruptures; his masterly power of waiting upon time, and his statesman's sense of the conjunction of political necessity with popular support—these and like characteristics make him seem great; but beyond them and absorbing them lies his personality, affecting all who met him with a sense of mystery which was felt the more in proportion to their intimacy. That these reminiscences give this same impression is a proof of their veracity of character.

A Sketch of the Life of Apollonius of Tyana; or The First Ten Decades of Our Era. By Daniel M. Tredwell. Frederic Tredwell. 1886.

Mr. Tredwell's zeal is great, but it is not according to knowledge. He is not qualified by his culture or the habit of his mind for such an investigation as that on which he has entered. His grammar is bad; his rhetoric is worse; his scholarship is the worst of all. But no; his temper is a deeper deep. What cannot be denied to him is great enthusiasm in the prosecution of his task; great industry in the reading of books of the most various quality; great shrewdness in the choice of De Vinne for his printer, whereby his book is outwardly so beautiful that it is likely to deceive some of the very elect into a hasty purchase. The avowed object of Mr. Tredwell's book is to prove the folly of a "Brooklyn clergyman," whose name is not revealed, in declaring that the life and doctrines of Jesus are better known (from the Gospel of Matthew) than the life, sayings, and doings of any other person of his time. But, as he proceeds, a secondary purpose of much more importance discloses itself. It is to prove that Apollonius of Tyana is not only better known to us than Jesus, but better worth our knowing: the teacher of a superior morality and religion. Mr. Tredwell's dislike of Jesus is extreme. The iconoclasm of Col. Ingersoll and Thomas Paine is tender reverence as compared with his. For the most part this line of his advance is confined to his foot-notes, while the body of his book is taken up with a paraphrase of the biography of Apollonius by Philostratus.

Having stated the purpose of his book, he gives very little attention to the argument that is necessary to make it good. What we have a right to expect of him is that he should discuss the authenticity of Matthew and its relation to previous accounts of Jesus, and also the authenticity of Philostratus and his relation to Damis, Mœragenes, and Maximus of Ægæ, the only authorities for his biography mentioned by Philostratus. But to Matthew he gives no attention, and his discussion of Philostratus and his sources, and those not named by him who mentioned Apollonius in the second century, does not exceed the limits of a single page. Few of his readers will allow that his contention is made good. Many of them will wonder at his credulity, and think that if the criticism of the New Testament had been of this free-and-easy sort, the Neanders and Tischendorfs and others who have defended it against the Baurs and Strausses and Renans would have had little trouble in maintaining their position. It would be hard to find a Christian critic of the present time so little critical of our sources of information about Jesus as Mr. Tredwell is of the sources in the case of Apollonius. He is not critical at all. He simply accepts Philostratus for all that he assumes to be.

Philostratus was born about 172 A. D., and wrote his account of Apollonius about fifty years from that date. Apollonius, according to this account, and we can check it with no other, was born at the beginning of our era and died 98 A. D., "if he did die." Thus we have a gap of one hundred and twenty years between the life and the biography. But Philostratus is continually quoting a certain Damis, the companion of Apollonius. The reality of this Damis would be questioned by any scholar having a critical faculty ever so germinal. Mr. Tredwell rejects all his miracle stories and accepts everything else. It is certain that Apollonius had no vogue in the second century. Origen refers to the books of Mœragenes, which Philostratus mentions to disparage them because they represented Apollonius as a magician. This was probably his second-century repute. Lucian's contemptuous reference is to the same effect. In the account of Philostratus we probably have a daring idealization, somewhat akin to Xenophon's 'Cyropædia.' Fortunately we are not confined to Mr. Tredwell for a modern study of Apollonius and Philostratus. Dr. Albert Réville, a genuine scholar, has written a little monograph, 'Apollonius of Tyana: the Pagan Christ of the Third Century,' full of instruction in regard to the literary methods of the time and the religious temper of the century that brought Christianity to the foot of the imperial throne. Here was a splendid opportunity for Mr. Tredwell, if he had been the person to avail himself of it. One is often reminded by his methods of the Trinitarian who quoted against a Unitarian the text of the Three Heavenly Witnesses. "Why!" said the Unitarian, "don't you know that that is spurious?" "Oh, yes," said the other, "but I thought perhaps you didn't." Mr. Tredwell often presumes upon the ignorance of his readers and endeavors to confound them with a show of knowledge. It is hard for him to resist a proper name like that of Cujacius, page 353, where its use is utterly absurd. The book closes with a sentence from Réville which is dreadfully misleading. It is given as Réville's, when it is his paraphrase of Philostratus and by no means expresses his own opinion. But this is a fair sample of Mr. Tredwell's literary ethics.

Historical Sketch of the Distribution of Land in England, with Suggestions for Some Improvement in the Law. By William Lloyd Birkbeck, Master of Downing College, and Downing Professor of the Laws of England in the University of Cambridge. Macmillan. 12mo, pp. 100.

Professor Birkbeck's little book is in the main controversial in its object, being principally designed to defend the English land system against the assaults of the land reformers, and especially of Professor Rogers. Against this distinguished writer he appears to have made out his case in one point at least, having shown that he is wrong in attributing to "two lawyers of the Restoration, Palmer and Bridgman," the invention of the most injurious features of the modern law. The whole controversial portion of the work is conducted in excellent spirit, and with great fulness of learning and clearness of statement; it is, indeed, so excellent that we wish it had been expanded, although we cannot see our way to accepting the author's views in full. His theory is that the aggregation of great estates and the disappearance of peasant proprietorship, which are so characteristic features of the English land system, were the work of feudalism rather than of later legislation. Very well: the great estates were undoubtedly the creation of feudalism; but France and Germany had feudalism as well as England, and in those countries peasant proprietorship exists to this day. The question still remains, how it came about that England, in modern times, diverged from the countries of the Continent in this respect; and this question our author does not answer. It is customary to attribute this historical result, which is peculiar to England, to a series of legal enactments which again are peculiar to England; and, in spite of the ability of his argument, we cannot think that he has rebutted this rational presumption.

The earlier chapters, relating to the institutions of earlier times, are less satisfactory. The brevity of the treatment, which leads one to desire more expansion even in the best portions of the work, leaves these chapters very inadequate. In general, the author's view coincides with Mr. Seebohm's—that serfdom was the controlling system of labor in England from the first; and he has added some strength to Mr. Seebohm's arguments. We cannot think, however, that they have disproved, or rendered improbable, the existence of a large class of free peasants among the Anglo-Saxons of the sixth and seventh centuries. On page 37 he speaks of it as an error "to represent serfage as a feudal institution," because it has often existed without feudalism. Here there is a lack of clearness: of course serfdom has existed without feudalism, but can we conceive of feudalism without serfdom? It is impossible (p. 16) that the socmen of Domesday Book "formed the rank and file of the Saxon armies," because Domesday Book mentions no socmen except in a few eastern (Danish) counties.

The Laird of Lag. A Life Sketch. By Alexander Fergusson, Lieut.-Colonel, author of 'Henry Erskine and his Kinsfolk,' 'Mrs. Calderwood's Letters,' etc. Edinburgh: David Douglas; New York: A. D. F. Randolph & Co. 1886. 8vo, pp. 271.

Under this attractive title, and in the most elegant style of typography, we have the life of one of the most noted of the Scotch persecutors, of the time and the type of Claverhouse. It is a book well worth reading in connection with 'Old Mortality,' but belongs more directly with 'Redgauntlet,' inasmuch as Sir Robert Redgauntlet, the hero of "Wandering Willie's Tale," "is none other than Sir Robert Grierson [the Laird of Lag], the Persecutor." The title-page, too, con-

tains a fine etching of Redgauntlet Castle, by which we suppose we are to understand Rockhall, the seat of the Laird of Lag.

It must be said that the quaint title of the book, with the weird headings of several of the chapters—"A Border Mystery," "The White Horse and the Blood-Red Saddle," "Guilty or Not Guilty?" "After the Storm," etc.—lead the reader to expect something more blood-curdling than he finds. When, however, he gets over his disappointment at matter more commonplace than he had looked for, he finds that the book is one of solid value, and is far from destitute of exciting incidents. He is at all events struck with the distinct impression that Lag made upon his generation, and the associations of horror that gathered about his memory. The "border mystery" of the first chapter describes the commemoration made annually of his evil deeds in the households of Dumfriesshire and Galloway—representing him as an evil beast with enormous proboscis searching for victims. An illustration of this bugaboo is given on page 11. On page 138 we have an excellent "instance of the process by which folk-tales are propagated," in showing how the popular detestation of him took form in pointing out "the acclivities where 'Auld Lag,' not in the execution of any judicial process, but simply for his own amusement, used to roll down Covenanters in barrels into which had been fixed spikes and knives—exactly in the Carthaginian fashion." Chapter IV., "Guilty or Not Guilty?" is a careful examination of the famous case of Margaret McLachlan and Margaret Wilson, alleged to have been fastened to stakes to be drowned by the advancing tide of the Solway—the worst of the many atrocities definitely charged upon the Laird of Lag. The author is not able to come to a conclusion as to the truth of the legend, which has no positively contemporary evidence, but only the distant memory of late survivors. The event is said to have taken place in 1685, and the story cannot be traced back of 1711. The controversy upon the subject is described at some length, and we think the author leans to the opinion that the story is true.

We have mentioned the beauty and elegance of the book. It is stated that only 500 copies were printed, of which 100 were reserved for the United States.

Syntax des Französischen und Englischen in vergleichender Darstellung. Von Dr. Friedrich Brinkmann. Vol. ii. Brunswick: F. Vieweg & Sohn; New York: B. Westermann & Co.

THIS new volume of Dr. Brinkmann's great grammatical work is entirely devoted to the treatment of verbs. We note the same research and untiring industry as in the preceding volume. It is "exhaustive of detail" even more than "suggestive of principles." The author is not content with giving the rules of syntax as laid down by English and French grammarians, and their application to the German language: he multiplies the examples to such an extent that the reader or student is apt to lose sight of the principle he wishes to illustrate. Thus, after reading fifty-eight pages on the use of "will and shall" and "would and should," one feels a little confused. So with the subjunctive mood, which takes up 118 pages. The tendency of the age is towards conciseness and clearness in scientific works, and no branch of science demands these qualities more imperatively than grammar. Ten or twelve authenticated examples for each rule may prove the author's vast learning; they do not make the proof of the rule any stronger—on the contrary.

Dr. Brinkmann, who appears so familiar with the French language, might have benefited by the wisdom of the old proverb: *Qui trop embrasse mal étreint.* He would have done well, too, to leave out from his ample vocabulary of verbs those of whose meaning he was uncertain, or to give the various meanings, properly illustrated, when there is more than one. *Veiller un malade*, "to watch a sick body," can hardly be called elegant or correct; an American would probably say, "to sit up with a sick person," and a Frenchman, *veiller auprès d'un malade.* "To prevent" is only one of the several meanings of *prévenir*, and an antiquated one at that; "to forestall" would be more correct, especially in connection with the example he gives from Voltaire: "Mahmoud voulait en vain prévenir le czar et l'empêcher d'entrer dans Dervent." The difference between *simuler* and *dissimuler* is as great as that which exists between simulation, "a pretence of what is not," and dissimulation, "a concealment of what is" (Sir R. Steele). To abscond is not simply *se cacher* (to hide), but *se soustraire (à des poursuites), disparaître.* No more is "to fret o. s." expressed by *se fâcher; se chagriner* or *se tourmenter* would have been better. "To struggle" gives an idea of exertion, of efforts made, also conveyed by the French verbs *lutter, se débattre, se démener*, whereas *se fatiguer, s'épuiser*, express the exhaustion *resulting* from the exertions or efforts, not these acts themselves. A Frenchman might "woo or court a lady" without screwing up his courage to the point of *la demander en mariage*, a final act which is generally understood to mean "to propose," in English.

We might multiply examples of this sort of loose translation, but that it might be construed as cavilling at the real merit of Dr. Brinkmann's work. Whatever is open to criticism in it is to be found in the superfluous matter which, if it were left out, would detract nothing from the importance of the book, but rather make it more valuable to the student, as the overladen fruit tree gives more luscious fruit after it has been well pruned.

Fraternity Papers. By Edward Henry Elwell. Portland: Elwell, Pickard & Co. 1886.

THE Fraternity which gives a name to this volume was one of those clubs for intellectual improvement and recreation which are a common feature of mental life in our towns, and the subjects discussed by the author have the diversity which ordinarily characterizes the "reading circle," under whatever name it goes. The mode of treatment, too, is by generalization and by making abstracts from accessible authorities, as would be expected. The result is a book of essays, wide-ranging, readable, and useful within the limits of the original intention, but without any marked claim to public attention. An account of San Marco at Florence is a pleasant reminder of Fra Angelico, Savonarola, and Dante—of the kind much more interesting on the lips than in print, it is true, but done with intelligence and appreciation of mediæval types and circumstances. Essays upon the House, Dialect, Dreams, and Conversation, that follow, are less attractive; and the concluding papers on early American history in the Mississippi, White Mountains, Maine, and the Puritan settlements, are the freshest because of a tinge of local color in those which deal with the country about Portland. In the audience of the club and for the purposes of an evening's entertainment, the papers would meet with only praise from "the stranger within the gates," though a reviewer; but what is excellent in private may not rise above commonplace in the eye of a busy and wide-seeing public, and hence, without any disparagement, one may say that it is only in some pages of colonial history and tradition that this volume has anything of novelty to the world at large.

Poems of the Law. Collected by J. Greenbag Croke, editor of 'Lyrics of the Law.' San Francisco: Sumner, Whitney & Co.

THIS collection contains for its two principal poems "The Conveyancer's Guide" and "The Pleader's Guide." These are poems of a deeply professional cast, and are reinforced by notes of no mean value. The former contains an account of the origin of society and government, which is an admirable parody of the views generally in vogue among lawyers until within a comparatively recent period. After a solemn invocation to the shades of Occam, Britton, Glanville, Roe, and other lights of the law, to assist his muse in celebrating the science of conveyancing, the poet describes the early state of society in which "all mankind were honest fellows," and then passes on to the event which broke up this peaceful state of things—the erection of the Tower of Babel:

> "But when ambition, pride, and power
> Set up the famous *Babel* tow'r,
> (For the profession, happy hour!)
> In *Phaleg's* time; then noise and strife
> Destroy'd that simple mode of life;
> The language which before all us'd,
> Became a gibberish quite confus'd;
> And as they jabber'd, swore and storm'd,
> Each on his back the other turn'd.
> What *Japhet's* grandson took for tillage,
> Old *Nimrod* claimed by right of pillage;
> And war was wag'd till fear and dread
> Brought in a government instead."

"Jacob Omnium's Hoss" and "A Roman Lawyer in Jerusalem" are neither of them poems of the law in the same sense with these "Guides." They were written rather for the laity than for the profession, and hence have probably a wider reputation. Professional verse, like professional jokes, must necessarily have a limited audience; but within the limits such efforts as "The Conveyancer's Guide," or the more recent "Leading Cases," deserve, and will no doubt long enjoy, a high repute.

The Early History of Oxford. 727—1100. Preceded by a sketch of the mythical origin of the city and university. By James Parker, Hon. M.A., Oxon. Oxford: The Clarendon Press; New York: Macmillan. 8vo, pp. 420.

MR. PARKER'S exhaustive treatise comes down to the time of the Domesday Survey (1086), the eleventh chapter containing a complete analysis of the portions of that document which relate to this city. The earlier history and the legendary accounts of Oxford are given in the first ten chapters; and an appendix contains all the passages from the original authorities which are cited in them, chapter by chapter. The book is, therefore, of the highest value to the student of early English history. For municipal history, which ought to be well illustrated by so important a town as this, it is of less service, inasmuch as municipal development in England hardly began until after the period in question. Appendix A consists of forty-three pages. Appendix B discusses the name of Oxford, and comes to the conclusion that it was probably not derived, as is usually assumed, from *Ox*, but from *Ouse:* "We seem to obtain very strong evidence for the probability of the name of Ouse or some cognate form of the river-word having been applied at one time to the Thames as it flows past Oxford. That a ford over that river should be called from the river is more likely to have been the case than from certain cattle which may have crossed the river." Appendix C treats of the coins struck at Oxford in King Alfred's reign, while D describes the plates given in the volume. These are, first, a facsimile, by the photozincographic process, of the first leaf of that part of the Domesday Survey which relates to Oxfordshire. This serves as a frontispiece. At the end come

two maps—one, of the neighborhood of Oxford, to illustrate its early history (particularly interesting for the Roman roads); another, a plan of the early city. There are two indexes, one of persons and places, the other of authors cited. It is a pleasure to deal with a work so carefully and thoroughly done as this.

BOOKS OF THE WEEK.

Aldrich, T. B. Prudence Palfrey. Houghton, Mifflin & Co. 50 cents.
A Memorial of Rufus Ellis. Prepared by a Committee. Cambridge: John Wilson & Son.
Beach, D. N. Plain Words on Our Lord's Work. Boston: Cupples, Upham & Co. 50 cents.

HISTORY OF THE
LAND QUESTION
IN THE UNITED STATES.

By Shosuke Sato, Ph.D., Special Commissioner of the Colonial Department of Japan, and Fellow by Courtesy, 1884-6, Johns Hopkins University.

An original study of the formation and administration of our public domain and of the present land system of the United States.
This study, just published in 181 octavo pages, forms Numbers VIII.—IX. of the current series of STUDIES IN HISTORICAL AND POLITICAL SCIENCE. It will be sent, postpaid, bound in cloth, on receipt of price, $1 25.

EXTRA VOLUMES
OF
Studies in Historical and Political Science.
HERBERT B. ADAMS, EDITOR.

In connection with the regular annual series of monthly monographs in historical and political science, a series of EXTRA VOLUMES is proposed. It is intended to print these volumes in a style uniform with the regular STUDIES, but to publish each volume by itself, in numbered sequence and with a cloth binding. The volumes will vary in size from 200 to 500 pages, with corresponding prices. Subscriptions to the annual series of Studies will not necessitate subscription to the Extra Volumes, although they will be offered to regular subscribers at reduced rates.
The first Extra Volume is now in press and will be entitled

The Republic of New Haven,
A HISTORY OF MUNICIPAL EVOLUTION.

By Charles H. Levermore, Ph.D., Fellow in History, 1884-5, Johns Hopkins University.

The volume will comprise about 300 pages, octavo, with diagrams and index. It will be sold, bound in cloth, at $2 (and at a reduced rate to regular subscribers to the Studies). Other extra volumes will be announced when they are ready for subscription.
Orders and subscriptions should be addressed to
THE PUBLICATION AGENCY OF THE
JOHNS HOPKINS UNIVERSITY, Baltimore.

Johns Hopkins University,
BALTIMORE.
University and Collegiate Courses.

The programmes for the next academic year are now ready for distribution.

Tuition for Harvard and Oxford in New Hampshire.

By E. R. HUMPHREYS, LL.D.

Dr. Humphreys is now reading with two pupils—one a candidate for JUNIOR CLASSICAL HONORS next year, the other for ENTRANCE in June—at MT. VERNON, N. H., and he can take charge of one more. Address to him at Conant Hall, Mt. Vernon, N. H.

The Nation.

NEW YORK, THURSDAY, JULY 22, 1886.

The Week.

THE vote of the House in favor of the Morrison resolution to reduce the surplus in the Treasury would be direful if there were any reason to believe that it was taken with a serious purpose. There is very little expectation that the Senate will concur in it, and it is quite certain that the President will veto it if it ever reaches him. Sixty-three Republicans voted with 146 Democrats to pass the measure, 16 Democrats and 49 Republicans voting against it. The division illustrates once more the depraved tendencies of the Democratic party in the view they take of the public finances. A depreciated currency and a bad state of the public credit are what they most desire and strive for. The most bitter charge made by Senator Beck in his raving speech against the financial policy of the Administration was, that this policy had carried the premium on the 4 per cent. bonds up to 28 per cent. Genuine Democracy, according to Beck and his kind, would bring the bonds down to 75, and make the public securities the most precarious form of investment. There are several ways to bring about this happy state of things. The most effective would be to stop paying the interest, or to pay it in money worth only fifty cents to the dollar. By a series of judicious experiments, beginning with the Morrison resolution, it is possible to get rid of all premium on the bonds, and, when this is done, it will be possible to get the financial issue before the people in such a way that they can vote upon it, as they did in Ohio in 1875. This was supposed to be the most rotten State in the Union as regarded the issue of "soft money," and the Democrats seized the opportunity to denounce the specie resumption act and to reëlect "old Bill Allen" on that particular issue. They were soundly thrashed, losing their whole State ticket, but the lesson they learned was of little value. They have always held to the idea that the people are at heart dishonest, and that their natural tendency is to repudiate their debts. The party has been kept in order by the State of New York mainly, by the Tildens, Seymours, Mannings, Clevelands, Hewitts, and a few others, whose influence has been out of proportion to their numbers. If the time shall ever come when a test vote can be taken by the whole country on some issue involving a high or a low state of the public credit, unembarrassed by other questions—if the experiment of 1875 shall ever be repeated on a national scale—the result will, we are sure, be as crushing to all the partisans of depreciated money as it was in Ohio eleven years ago.

The *Journal of Commerce* is quite right in saying, apropos of the Morrison resolution to reduce the surplus, that

> "there will be no trouble about the pile of silver in the Treasury until the balance of trade turns against this country, and specie is more largely wanted for export. The moment that it becomes difficult to obtain gold at par on a bank check, then this metal will sell at a premium, and after that the music will begin. But as long as a bank check is payable in either at the option of the holder, there will be no financial disturbance."

The efforts of Secretary Manning have been wisely directed to the accumulation of such a surplus that an ordinary turn in the foreign exchanges would not bring on the silver crisis, or, as the *Journal* has it, cause the music to begin. His reasons were fully and very strongly stated in his reply of March 2 to the Bland resolution. The question whether the surplus ought to be large or small is an administrative question, and the answer is necessarily governed by the course of events from month to month and from day to day. This view seems to be taken by Senator Allison of Iowa, who is quoted by the *World* as saying that only thirty millions can be disbursed under the Morrison resolution before Congress reassembles, and that if it is found to be dangerous, it can be repealed! Quite true. It is related of Daniel Webster that once, when informed that a certain promissory note of his was due, he said with great firmness, "Let it be paid." Certainly it can be repealed. So also can the Allison two-millions-per-month silver bill be repealed. We suspect that Senator Allison would be glad to find himself in a Congress minded to repeal it.

The *Tribune* publishes the new extradition treaty in full, and is apparently so pleased with "the beat" thus achieved, that it approves of it, though well knowing it to be the work of a Democratic Administration. There is nothing in the text of the treaty, however, which was not already known. Mr. Phelps sends with it an explanatory letter to the Secretary of State, which shows how little there is to explain. Four new offences—manslaughter, burglary, embezzlement or larceny, and malicious injuries to property whereby life shall be endangered—are added to the extraditable list. Persons already convicted of offences are made extraditable, as well as persons simply charged with them. And, finally, the United States surrenders its claim to try persons for offences other than those for which they have been surrendered, on which the two countries have long disputed. Without this surrender, in fact, no new extradition treaty was possible, as an act of Parliament of 1870 prohibits such treaties with any Power which does not guarantee that extradited persons shall not be tried for crimes other than those for which the extradition was demanded. Dynamiters are made extraditable—that is, a man who did some blowing up in England, and got away to this country, could be demanded of our Government, but not of course a man who planned in this country an explosion in England, but stayed here. The rule that every man must be tried in the country in which he commits his crime remains unchanged. Political offenders are left as secure as they ever were, and the term "political" as applied to offences just as vague. All defaulting bankers now in Canada are safe, but should the treaty be ratified, future defaulters will be placed in a position of great embarrassment in selecting a place of refuge.

The President's warning to the office-holders against "the use of their official positions in attempts to control political movements in their localities," was, we believe, called forth by the Indiana gathering of postmasters and collectors two or three weeks ago. If this had been allowed to pass, we should undoubtedly have seen a swarm of Democratic officials in the political field this fall working like beavers for the party, in the old Republican fashion. It is none too soon to check the practice, and to point out that the partisanship of an office-holder can hardly fail to be "offensive" if publicly displayed. The reason of this is, as the President declares, that office-holders are the agents and not the masters of the people. That is to say, their salaries are paid by the whole body of taxpayers, and not by the taxpayers of one party only. Their duties, too, bring them in contact, not with the members of their own party only, but with the members of all parties. The notion that some of them have that they "get their bread and butter" from the party in power, is a sad mistake. They get it from the people of the United States. Whenever they make their appearance at primaries or conventions they carry with them whatever weight or authority their office gives them, and they therefore use the office against some of their employers. Moreover, whenever they take the stump or draw up a party platform, they almost necessarily do more or less "arraigning" of their political opponents. They cannot confine themselves to "pointing with pride" to the doings of their own side. They must necessarily also "view with alarm" the doings of the other side. This leads them insensibly often, but inevitably, to drawing dreadful pictures of the morals, manners, and designs of one-half their employers. They often have to describe a full moiety of those who pay their salaries as a corrupt gang of conspirators against the national safety and welfare, and have to paint the leading men of the other party as a collection of knaves and blockheads, whom no prudent man would trust round the corner.

We are bound to say, that we should have been glad to see the President's order a little more peremptory in its terms. We could wish he had substituted the word "must" for the word "should," throughout the warning, and that instead of saying that "the use by officials of their positions to compass their selection as delegates to political conventions is indecent and unfair," he had said that "the appearance of any office-holder as a delegate at any political convention will be taken as, *ipso facto*, a resignation of his office." This would go to the root of the matter. The truth is, indeed, that if the President would dismiss even one conspicuous Democratic office-holder, either for partisan activity or for evasion or violation of the Civil-

Service Law, he would not need to exhort office-holders at all. One application of the guillotine would do the work of a whole volume of homilies and warnings.

Acting-Secretary Fairchild has done an excellent thing in dismissing the chief of a division and two clerks in the Treasury for an attempt at fraudulent evasion of the Civil-Service Rules. The chief had been instructed to prepare examination papers for promotion among his subordinates, and he furnished the questions in advance to two of the clerks who were to compete. They were caught, however, and summarily decapitated. They ought, besides this, to go to jail with their heads under their arms. But how much more effective this will be in preventing such things than warnings or exhortations against fraud, on paper.

The Senate has passed with amendments the Oleomargarine Bill. We have had little doubt at any time that it would pass, for, though all the argument is against it, the organization in favor of it is overwhelmingly strong—as strong, in fact, as the organization of pork-breeders in France and Germany against American hams and bacon. We say that the argument is *all* adverse to the bill, for, if oleomargarine is unwholesome and hurtful, its manufacture ought to be suppressed. If it is not hurtful, it ought not to be taxed any more than butter or bread. If it is sold in deception and fraud, means should be taken to prevent such deception and fraud—such, for instance, as the steps taken by the Massachusetts Legislature to that end, which seem to be entirely adequate. The Massachusetts bill requires all dealers in imitation butter to take out a license, which shall be registered, and to put out a sign to that effect, as the dealers in imitation jewelry are required to do in France. This regulation can be enforced, and the public can be advised, without danger of error, whether the article they are buying is real butter, or oleomargarine, or what not. Moreover, this license regulation is within the scope of Federal authority. It is not so long since all or nearly all manufacturers, including publishers of newspapers, were required to take out licenses under the Internal Revenue Law. To tax an article of food merely because it is cheap and because it undersells some other article, is as despotic and indefensible as the royal monopolies of the Charleses and the Louis of the seventeenth century.

The Senate has at last passed the River and Harbor Bill after cutting down every item one-fourth. This is a ridiculous sort of a compromise. A job is no less odious because $75,000, instead of $100,000, is to be expended upon it during the next year, and it makes no difference to the promoters of such schemes as the Hennepin Canal whether $300,000 or $225,000 is appropriated to begin operations, so long as in either case the Government is committed to a prosecution of the work. The log-rolling measure remains as obnoxious to a veto as before, unless the Democrats in the House conclude that it would be better party tactics to let the whole thing drop where it is now, and not try to have any river-and-harbor bill this year.

One of the main arguments of Senators Logan, Evarts, and Teller in their report against an investigation of Senator Payne's election was, that "No action was taken by or before the Legislature which elected Mr. Payne calling in question the validity of his election, or the conduct of the same in the canvass, the caucus, or the Legislature itself." The Boston *Herald* accepts this as a good reason for sustaining the action of these three Senators. But the statement above made is not a fair one. The Legislature referred to did not order an investigation, it is true, but an investigation was proposed and was defeated only through such trickery as is often employed for such purposes. During the session of the House of Representatives of Ohio in 1884 Mr. Love, a member, offered a resolution reciting the charges of bribery that were current about Mr Payne's election, and calling for the appointment of a select committee of five to investigate the whole matter. A Democratic member named Myers at once moved to amend this by reciting that ex-Gov. Foster had "corruptly expended money to debauch the Legislature" in order to secure the Senatorship, and ordering the proposed committee to investigate this charge also. Another member moved to amend this by ordering an investigation of the charge that this Mr. Myers had obtained his seat "by stuffing the ballot-box." All the amendments were agreed to, and then naturally the resolution, in this ridiculous shape, was defeated, 21 Republicans and 14 Democrats voting yea, and 16 Republicans and 36 Democrats voting nay. If this is the only way an Ohio Legislature will treat such charges as those that have been made in Senator Payne's case, the fact furnishes a good argument why the United States Senate should take the matter in hand.

Mr. Powderly is not heard of so much nowadays as he used to be, but he does not appear to learn any wisdom in his comparative obscurity. He was at Atlantic City last week, and on Thursday addressed an association of bottle-blowers. In the course of his speech he referred to the enthusiastic reception just before given to a body of State militia, and went on as follows:

"We looked into those faces and we saw that some of them were men of means and some of them mean men. Who are they? They are clerks. They are tradesmen. Some of them were carrying arms along these streets for exhibition. If it were a branch of organized labor, the people would assemble in astonishment to see them. The men who produce wealth assemble to do honor to men who, when workingmen demand their rights without violence, are called upon to stand as a menace to them. They stand as a barrier between labor and capital. I do not say that is what they ought to be—that is what they are. Where labor has had room and time to assert itself, that array of bayonets has stood between them and their rights."

Martin Irons himself never preached more seditious doctrine than this, and the workingmen of this country have no worse enemy than the demagogue who thus incites them to revolt against the laws and the authorities.

Mr. Powderly is rapidly qualifying himself for the Governorship of Pennsylvania. In his address to the green-glass bottle-blowers at Atlantic City, he said:

"I want to see the day when not a drop of liquor, or medicine, or oil shall be poured from a bottle that is not made in America and by American workmen. They call me foolish in my own district for saying this. Any bottle brought into my house does not go back. I can't smash a beer bottle, as I drink ginger ale, but the bottle never goes out alive. That is a small thing, but if 90,000 men who get bottles were to destroy them, it would make a big hole."

Why should Mr. Powderly's benevolence be confined to the green-glass bottle-blowers? Why not smash all the windows in his house every morning when he gets up, and break all the dishes on the table after each breakfast? Work would thus be furnished to the window-glass blowers of Pittsburgh and to the potteries of Trenton. If he could prevail upon 90,000 of his followers to do the same, there would be plenty of employment in those trades and possibly an advance in wages. We would not advise pushing this policy to the extent of burning down one's house for the benefit of Labor, because the fire might spread to the houses of others not intent upon raising wages or reducing hours in the carpenter's trade; but it would be quite safe to demolish a few articles of furniture each day. Mr. Powderly has evidently been studying political economy in the speeches of Senator Warner Miller, but his moral tone is higher than the Senator's, since he sacrifices his own property to furnish employment to labor, while Mr. Miller sacrifices that of the taxpayers.

The conviction of the New Haven boycotters is a noteworthy event. This was the case in which a demand was made upon the publishers of the *Journal and Courier* that they should discharge certain compositors with whom they were entirely satisfied because they did not belong to a "union," and upon the refusal of this demand an attempt was made to bring the publishers to terms by destroying their business. The conspirators had a fair trial before an intelligent jury largely of their own selection, they were defended by able counsel, and the Judge in his charge certainly did not show any bias against them. Yet three of the four were promptly convicted, and although the case goes to a higher court upon appeal, there is no reason to doubt that the verdict will stand. The *Journal and Courier* has earned the thanks of the community by its successful resistance to the attempted tyranny, and we much mistake the temper of New Haven people if the effort to break down the newspaper does not prove in the end to have strengthened its position.

We have said that the Judge's charge did not show any bias against the accused. It would be more nearly correct to say that it unduly favored them in some particulars. One proposition which was affirmed is most extraordinary. The Judge said:

"The accused have also the right to say to the Carrington Publishing Company that if you don't accede to our terms we and our association won't trade with you. We won't subscribe to your paper nor advertise therein, but we will induce all others, so far as we can, to withdraw their patronage. They may do this if their purpose is to obtain and keep employment for themselves or their association, even if the result is that others are deprived of employment by the Carrington Publishing Company."

This would be simply to legalize boycotting, and the *Journal and Courier* is quite right in saying: "The assertion that the right of the ac-

cused is perfect to combine with others and say we demand to be employed by you, and if you don't comply with the demand, we and our associates will neither deal with you nor your customers, provided the object to be obtained by such threat, and by carrying it out, is to obtain employment for themselves, no matter if the result is to drive others out of employment—is not, in our opinion, law, and never will be held as law." The Judge, moreover, showed a very cloudy conception of business relations when he said that "the accused had the right to be employed by the company," and "the right to say, 'We ourselves and our associates demand to be employed by you.'" As the *Journal and Courier* says, "There is no such thing as a 'right to demand employment.'" That the jury promptly convicted after a charge tainted with such unsound doctrines shows how strong is the popular feeling against boycotting.

The anti-saloon movement in the Republican party has already virtually collapsed. It was a curious sort of an enterprise, which was apparently conceived originally with an honest purpose in the mind of a sincere Kansas Republican, Mr. Griffin, but was speedily seized upon by the Blaine managers as a device for avoiding trouble from the Prohibitionists in 1888. Mr. Griffin's idea was to have the party adopt a policy which should reduce dram-selling and its accompanying evils to a minimum, but the shape which the scheme took in the hands of the managers was that of a loud-sounding pronunciamiento against intemperance, and a general declaration against promiscuous liquor-selling, with a careful failure to recommend any specific measures against the saloons. The movement first took form in New Jersey, and it was thought by its promoters that a promising start had been made. But only a few days after the anti-saloon Republican conferees had adopted their long but indefinite declaration of principles, a Republican Legislature was called upon to meet the very definite question whether a local-option law should be passed, and the fear of offending "Republican saloon-keepers" proved so potent that this moderate proposition was defeated. The rejection of this bill showed the Prohibitionists of New Jersey that the anti-saloon movement amounted to nothing but talk. Last week the Conference in Massachusetts was held. The Republican managers had carefully arranged everything in advance, and the programme was to adopt a set of meaningless resolutions in favor of temperance and against drunkenness. Things ran along smoothly for a while, and the managers were just congratulating themselves upon the success of their scheme, when it appeared that the majority of the conferees were not going to be satisfied with a non-committal sort of platform, but insisted upon a very specific resolution in favor of submitting a prohibition amendment to the State Constitution. The managers were so surprised that they did not attempt to conceal their disgust, and the frankness with which they expressed their feelings opened the eyes of the most purblind Prohibitionist to the fact that his cause had nothing to hope for from that source.

At the same time with these mishaps to the movement at the East, there comes a very positive notice from the West that, if it really means any harm to the saloons, it must stop or it will ruin the Republican party. That leading Republican newspaper, the Chicago *Tribune*, after remarking that if the scheme goes no further than to aim in a general way at diminishing the evils of intemperance, there is no reason for the movement, says that it evidently does go further, and proposes to deal with the saloon (beer and whiskey alike) "as a public enemy." The *Tribune* admits that all saloons need regulation so that their evils shall be minimized, but it holds that "this can be done without going to the extent of publicly and indiscriminately antagonizing the Germans politically, and waging war upon them as public enemies—thereby consolidating the entire saloon interest against the party." Such a protest from such a source, following the New Jersey and Massachusetts fiascos, marks the collapse of the anti-saloon movement "within the party." The proposed national conference may be held at Chicago, but it will amount to nothing. The Prohibitionists everywhere recognize the utter insincerity of the movement, and will pay no further attention to it. The failure of the scheme will doubtless give an impetus to the Prohibition cause. The men who believe in prohibition hate hypocrisy, and are tired of being fooled. They "mean business," and the Blaine managers might as well make up their minds first as last that they must face in 1888 a defection to the third party far larger and more threatening than that of 1884.

All the advices seem to agree that the victors in the English election already find themselves greatly embarrassed by the prospect before them. The Unionists are already beginning to be afraid of acting with the Tories, and those who recommend a coalition cannot agree as to who ought to lead it. The Tories say Salisbury, of course, but the Unionists say Hartington. Salisbury has nothing to lose by it, but Hartington may lose his position in the Liberal party, and wreck his political future. Moreover, it is beginning to dawn on the anti-Gladstonians that the vote has not settled the Irish question; that, in fact, the agitation is only beginning, and that the Irish home-rulers, with a million English voters at their back, cannot be disposed of by any of the rough-and-ready methods which were resorted to formerly. They must now be argued down, and cannot be suppressed with horse, foot, and dragoons, unless they should supply plenty of "outrages," of which there is apparently no chance. One of the drolleries of the occasion is that the admirers of Lord Salisbury are accusing Parnell of lying.

The Duc d'Aumale has had to quit France as the result of a protest against his dismissal from the army. The Duke can hardly have expected anything else, but it will not do to write many more such letters, as the majority in the Chambers, in their present humor, might be easily induced to confiscate the property of the Orleans family. Louis Napoleon did this after the *coup d'état* of 1851 with regard to a portion of their estates, on the ground that it was property which the Orleans family had derived from the crown, and which ought to have been turned over to the State, in accordance with immemorial usage, when Louis Philippe ascended the throne in 1830. The rights and wrongs of this proved a very knotty question of French law, which was much debated, but the enemies of the Empire always treated the seizure as pure and unmitigated robbery. After 1870, what was left of the property—about half—was restored to the princes, but their taking it at such a time of national distress excited a good deal of Republican indignation. Since then the Duc d'Aumale has invested an enormous amount in the restoration of Chantilly, one of the most splendid of human habitations, and is therefore more vulnerable than he used to be, on the pecuniary side.

The excitement in France over the expulsion of the Orleanist Princes has received a fresh stimulus from the row between Gen. Boulanger, the Minister of War, and the Baron de Lareinty, a Legitimist member of the Senate, which ended in a duel. In the debate over the Duc d'Aumale's letter protesting against his removal from the army, on the ground that an officer's commission is property of which he cannot lawfully be deprived except by sentence of a court-martial for a specified offence, Gen. Boulanger characterized it as "insolent," a term which has a good deal more sting in it in French than in English. To this, Baron de Lareinty answered that it was "cowardly" to insult the absent. This is, of course, not really an imputation on the courage of a military man, for a soldier may insult the absent, and yet really be as brave as a lion. But here again the French sensitiveness about insults, of which the Anglo-Saxon race can hardly form a conception, has put down the term "*lâche*" in the lists of epithets which a man, either in society or in the army, cannot suffer to be applied to him without loss of reputation, no matter how senseless or gratuitous the application may be. If, for instance, somebody called an officer "cowardly" for taking a glass of absinthe, he would probably have to call the offender to account with as much seriousness as if he had been charged with shirking in action.

It must be admitted that, in the debate over the Duc d'Aumale's letter, Gen. Boulanger got the best of it. For although the Duc d'Aumale proved himself, during the ten years preceding the Revolution of 1848, a brave and able soldier, there was no doubt that his rapid advance to the rank of general of division was due altogether to the fact that he was the King's son. His brothers got their advancement in the army and navy in the same way. The reading of their military records, in truth, excited some laughter in the Senate, for it contained such facts as the Duc de Chartres' promotion to a colonelcy at the age of twelve. There was nothing very extraordinary in this fifty years ago in France. The promotion of royal princes in England to-day is nearly as absurd. But the monarchical traditions have been dying out rapidly in France since then, and the doctrine of equality taking firmer hold of the popular mind.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 14, to TUESDAY, July 20, 1886, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND has issued an executive order to the heads of departments of the general Government, in which he says: "I deem this a proper time to especially warn all subordinates in the several departments, and all office-holders under the general Government, against the use of their official positions in attempts to control political movements in their localities. Office-holders are the agents of the people, not their masters. Not only is their time and labor due to the Government, but they should scrupulously avoid in their political action, as well as in the discharge of their official duty, offending by a display of obtrusive partisanship their neighbors who have relations with them as public officials. They should also constantly remember that their party friends from whom they have received preferment have not invested them with the power of arbitrarily managing political affairs. They have no right, as office-holders, to dictate the political action of their party associates, or to throttle freedom of action within party lines by methods and practices which pervert every useful and justifiable purpose of party organization. The influence of Federal office-holders should not be felt in the manipulation of political primary meetings and nominating conventions. The use by these officials of their positions to compass their selection as delegates to political conventions is indecent and unfair, and proper regard for the proprieties and requirements of official place will also prevent their assuming the active conduct of political campaigns. Individual interest and activity in political affairs are by no means condemned. Office-holders are neither disfranchised nor forbidden the exercise of political privileges, but their privileges are not enlarged, nor is their duty to party increased to pernicious activity by office-holding. A just discrimination in this regard between the things a citizen may properly do and the purposes for which a public office should not be used is easy, in the light of a correct appreciation of the relation between the people and those intrusted with official place, and a consideration of the necessity under our form of government of political action free from official coercion."

The following statement is believed to be authentic: Pension-Commissioner Black has received a set-back from President Cleveland that has made him feel unpleasant. Recently, the Commissioner, after a week of labor, selected 139 names from among his clerks and employees for dismissal from office. Among the number were many ex-soldiers. President Cleveland was informed of Mr. Black's intentions, and he sent word to the Secretary of the Interior not to allow Mr. Black to make any dismissals—that such dismissals, if needed, would be made by the Secretary. Mr. Black later was summoned to the Secretary's office, and to his surprise the Secretary told him in a few words that hereafter he (the Secretary) would make dismissals and appointments in the Pension Office when he thought it necessary, and none were to be made without his order. The facts in the case leaked out among the clerks, who were all uncertain of their positions, and brought a feeling of relief.

Acting-Secretary Fairchild on Thursday summarily dismissed the chief of a division and two clerks in his office. The chief had been instructed to prepare examination papers for promotion in his office, and, after doing so, surreptitiously furnished copies of the questions to two of the clerks under him.

It having come to the knowledge of the Civil-Service Commission that in several instances private secretaries of appointing officers have been nominated to important official positions on boards of examiners, the Commission on Monday issued an order, addressed to boards of civil-service examiners, in which they say: "The Commission holds that neither the private secretary of an appointing or a nominating officer, nor the officer who in the absence of an appointing or a nominating officer acts in his place, should be either chairman or secretary of a board of examiners. In the opinion of the Commission, the confidential relations existing between the private secretary of an appointing or nominating officer and such an officer are of a character to make the reasons that have excluded appointing and nominating officers from official places on boards of examiners apply with almost equal force against the policy of allowing private secretaries to occupy official places on such boards. Therefore, the Commission hereby refuses to confirm any nomination made by any board of a chairman or secretary who is the private secretary of the appointing or nominating officer, or who is the officer that would, in the absence of the appointing or nominating officer, act in his place; and every board that has made such a nomination is hereby directed at its next regular monthly meeting to make another nomination, and without delay make report thereof to the Commission."

As to the Extradition Treaty which, it has been reported, has already been negotiated between the United States and Great Britain, the following are probably the facts: The British Government, in continuance of negotiations which have been pending at intervals for some years, has submitted a project or draft of amendments to the existing treaty to which it is willing to agree; that draft, signed or unsigned, has been received by our State Department, and sent to the Senate. The new treaty is supplementary to that of 1842, which was signed in Washington by Daniel Webster as Secretary of State, and Lord Ashburton, Minister Plenipotentiary of Great Britain. It continues in force the provisions of article 10 of that treaty, which deals entirely with the question of the extradition of criminals, and which includes, among the crimes made extraditable, murder, assault with intent to commit murder, piracy, arson, robbery, forgery, and the utterance of forged paper. To these crimes the new treaty adds four others — manslaughter, burglary, embezzlement, or larceny, involving the amount of $50, or £10, or upward, and finally malicious destruction of property which endangers the life of others, and which in either country is made a crime by law. This last provision, of course, is meant to cover the crimes of which dynamiters and socialists have been guilty. The treaty, however, specifically exempts from extradition persons who have been convicted of merely political offences. It is also specially provided for that in no manner shall the treaty be considered as retroactive in its scope. The treaty is to go into effect ten days after ratification, and is to be terminated at the pleasure of either contracting party.

Secretary Bayard has written to the British Minister stating that, if the facts in regard to the treatment of American fishing schooners are as set forth in the recently published letter of Mr. Boutelle, the Canadian authorities are unjust, and an explanation is due this Government. Mr. Bayard insists that the existing fishery difficulties can only be adjusted by a treaty.

Secretary Whitney, who has for many weeks had the complete working plans of the Japanese cruiser, the *Naniwa-Kan*, built by Sir William Armstrong, has, after consultation with the engineers of the Navy Department and several leading ship-building firms, concluded to build one of the four new vessels authorized by the act of March 3, 1885, from the purchased plans. The new ship will be exactly like the *Naniwa-Kan* in her lines, motive power, and armament.

A bond call was issued on Monday afternoon for $4,000,000 of the 3 per cent. loan of 1882.

The House on Wednesday, after a vigorous debate, by a vote of 209 to 65 passed the Morrison resolution: "That whenever the surplus or balance in the Treasury, including the amount held for redemption of United States notes, shall exceed the sum of one hundred millions of dollars, it shall be and is hereby made the duty of the Secretary of the Treasury to apply such excess in sums not less than ten millions a month, during the existence of such surplus of excess, to the payment of the interest-bearing indebtedness of the United States payable at the option of the Government." Of the 209 yeas, 146 were Democrats and 63 Republicans. Sixteen Democrats and 49 Republicans voted nay.

When the conference report on the Legislative Appropriation Bill was under consideration in the House on Friday, Mr. Holman, who had charge of it, urged the House to adhere to its disagreement to a Senate amendment providing an additional clerk for the Civil Service Commission. Mr. Cannon of Illinois moved that the House recede from its disagreement, and this motion prevailed by a vote of 123 to 111. Only 16 Democrats voted in the affirmative.

By a majority of 175 to 38, the House on Friday passed, notwithstanding the veto of the President, the bill to put Jacob Romiser on the pension rolls. The veto was based on incorrect information obtained from the Pension Office.

The Fortifications Appropriation Bill, as it passed the House on Monday, appropriates $620,000, to be expended as follows: One hundred thousand dollars for the protection, preservation, and repair of fortifications and other works of defence; $20,000 for the continuation of torpedo experiments and for practical instruction of engineer troops in the details of service, and $500,000 for the armament of seacoast fortifications, with a provision that the implements of war purchased from this appropriation shall be of American manufacture.

The House on Tuesday decided to consider the Senate amendments to the River and Harbor Bill as one entire amendment. It is believed that the bill will ultimately be passed.

The Ways and Means Committee has agreed to the resolution to adjourn finally on July 28. The Senate will probably amend this to August 2

Three reports from the Senate Committee on Privileges and Elections upon the Payne case were submitted to the Senate on Thursday. The report signed by Senators Pugh, Saulsbury, Vance, and Eustis, the Democratic members of the Committee, sets forth at length the public history of the case, recognizes the transcendent importance of throwing around the Senate of the United States the highest safeguards against seating members whose title was procured by bribery, fraud, or corruption, and describes the processes by which the signers reach the conclusion that there is no ground for further proceedings against Mr. Payne. Senators Teller, Evarts, and Logan unite in a report, in which they express the opinion that there was no evidence presented to the United States Senate which purports to prove that fraud, corruption, or bribery was employed in Mr. Payne's election affecting the votes, either in caucus or in the Legislature, whereby the election was carried; nor is there evidence that any such proof exists. Therefore, the report holds, the Senate would not be warranted under the Constitution in instituting an investigation. Senators Hoar and Frye, in a separate report, state that they cannot concur with the views expressed by the other members of the Committee. The Senate is the only court which can have jurisdiction of the question. The courts of Ohio may exercise jurisdiction of the offence of bribery, but could not decide whether the result of an election was thereby changed. For the Senate to refuse to listen to this complaint would be taken as a declaration that it is indifferent to the question whether its seats are to be in the future the subject of bargain and sale, or may be presented by a few millionaires as a compliment to a friend. The report therefore recommends an investigation.

The Senate on Friday passed the River and Harbor Bill by a vote of 41 to 14, scaled down 25 per cent. throughout. This sends it to a conference committee. On Saturday the Senate, by a vote of 15 to 29, refused to send the Oleomargarine Bill to the Committee on Finance, which is hostile to the bill.

Senator Platt of Connecticut believes that the resolution for open executive sessions of the Senate will be passed in December. Mr. Blair in the Senate on Monday offered an amendment to the House joint resolution for the use of the surplus revenue in payment of the public debt. It provides that before the payment of any part of the surplus there shall be received and set apart $79,000,000, to be known as the common-school fund, to be paid out as provided in his educational bill. Ordered printed.

The Senate on Tuesday passed the Oleomargarine Bill, after cutting down the tax from five to two cents per pound. The vote was 37 to 24. All the negative votes were Democratic, except Mr. Riddleberger's. Five Democrats voted in the affirmative.

The rejections by the Senate at the end of the session will not amount to one per cent. of the President's nominations, a smaller percentage of rejections than under any Republican administration. This fact is regarded as the highest testimony to the quality of President Cleveland's selections, remembering that the Senate started out in a spirit of the utmost hostility.

Friends of Mr. Goode, ex-Solicitor-General, announce that it has been decided not to make an attempt to reconsider the vote by which he was rejected, and that the President does not deem it expedient to challenge the Senate by renominating him.

The Prohibitionists in New Hampshire and in Kansas nominated State tickets on Wednesday. In New Hampshire Col. J. Wentworth is the candidate for Governor, and in Kansas C. H. Branscomb.

Three New Haven boycotters were on Saturday convicted of conspiracy.

By secretly getting into the confidence of the Knights of Labor, Thomas Furlong, a detective of the Gould railroad system, has succeeded in getting the confession of one of them, named Lloyd, that he and four other Knights wrecked a freight train near Wyandotte on the Missouri Pacific, on April 26. By the wreck the fireman and brakeman were killed. The five Knights have been arrested on the charge of murder.

The celebration of the two hundredth anniversary of the chartering of the city of Albany was begun on Sunday by religious observances in all the churches, historical sermons being preached. The celebration will be continued for several days.

In the steam-yacht race from Larchmont to New London on Thursday Jay Gould's *Atalanta* made the fastest time ever achieved over the course of ninety-one miles. The time was 4 hours, 34 minutes, and 57 seconds.

Edward Z. C. Judson, known to readers of sensational novels as "Ned Buntline," died of heart disease on Friday at his home in Stamford, Delaware County, N. Y., at the age of sixty-four.

FOREIGN.

All the British Parliamentary elections have been held but three. The summarized result is as follows: Conservatives 318, Unionist-Liberals 74, making the anti-Home Rule party 392; Gladstonians 190, Parnellites 85, making the Home Rule party 275. The final analysis of the pollings gives the Unionists 1,524,107 votes and the Gladstonians 1,447,652. For a correct estimate of the popular vote there must be added the electorate of 113 Unionist seats which were not contested, a total of 1,065,104 votes, and that of the 104 uncontested Gladstonian seats, a total of 805,877 votes. The popular vote thus results in a Unionist majority of 335,682.

The result of the electoral contest in South Tyrone on Monday, where Mr. William O'Brien, editor of *United Ireland*, Mr. Parnell's organ, has been running for reëlection as the Parnellite candidate against T. W. Russell, Liberal-Unionist, has caused a sensation. Mr. O'Brien represented the district in the last House of Commons, having carried it by a vote of 3,434, against 3,382 obtained by Capt. S. Marwell, Conservative. In the present contest Mr. O'Brien polled 3,382 votes, a loss of 52, while Mr. Russell polled 3,481, defeating Mr. O'Brien by a majority of 99.

The British Cabinet meeting on Saturday night was in favor of immediate resignation. This was formally agreed on at the council on Tuesday, and Mr. Gladstone's resignation was immediately put in the Queen's hands. A day or two will probably be wasted in the Queen's summons of Lord Hartington to form a ministry, which he will decline to do. By July 24 Lord Salisbury will have accepted the task and be engaged in forming a Cabinet. The new Parliament will probably be summoned to meet on August 5. It will then, it is believed, be adjourned to reassemble some time in October.

Lord Salisbury has offered to give the Liberal Unionists four seats in the Cabinet and an equal ratio of the smaller offices. He will permit Lord Hartington to be leader in the House of Commons and to select what office he chooses excepting that of Premier. Lord Salisbury proposes again to unite the Premiership with the office of Foreign Secretary. The Duke of Argyll and Mr. Goschen are willing to enter his Cabinet provided the Moderate Liberals secure a fair share of the offices. Lord Hartington, it is said, has refused, because he would lose all chance of succeeding Mr. Gladstone as Liberal leader.

Mr. Gladstone has written a rejoinder to the Duke of Westminster's reply to the Premier's charge, that his Grace struck a blow at the aristocracy by deserting Liberalism and aiding the election of the Tory candidate in his district of Chester by the use of money and carriages. Mr. Gladstone twits the Duke with "working for the Tories harder than he ever worked for the Liberals." He adds: "To disunite the classes and so impair the strength of the empire are acts as grave as to strike a blow at aristocracy, which you did when, in 1866, you took a chief part in destroying the Reform Bill and in ousting the Government. Is it not possible that what you then did you may be doing now? . . . In my eyes the gravity of the present issue involves the honor of the empire. The civilized world has stamped England's Irish policy with discredit and disgrace. The Government sought to cancel the past, on which you shut your eyes, and meet the present and future demands, thinking England's honor should be cleared. I lament that this should be prevented."

Earl of Rosebery, British Foreign Minister, has sent to Russia a precise and emphatic protest against the closing of Batum as a free port, characterizing Russia's action in doing so as a "flagrant violation of the Treaty of Berlin."

The rehearing in the divorce case of Crawford against Crawford and Dilke, reopened by the Queen's Proctor, was begun on Friday. Sir Charles Dilke, the co-respondent, was present and denied absolutely all Mrs. Crawford's allegations. The subsequent testimony went heavily against him.

The Spanish Senate on Wednesday approved the commercial convention with England by a vote of 119 to 54.

The Trans-Caspian Railroad is now open to traffic as far as Merv.

In the French Senate on Thursday, amid great uproar, Baron Lareinty declared that the expulsion of the Duc d'Aumale was an act of cowardice. Gen. Boulanger declared that he would not permit such an expression to be applied to the Minister of War, and quitted the tribune. He challenged Baron Lareinty. A duel was fought on Saturday morning. Baron Lareinty fired and missed Gen. Boulanger, whose pistol is said to have missed fire.

The French Chamber of Deputies, by a vote of 308 to 92, adopted on Thursday a credit of 5,000,000 francs for expenses in Madagascar. The session was closed by President Grévy, amid cries of "*Vive la République!*"

In Marseilles on Monday evening mobs attacked the offices of the Royalist papers. Gendarmes defended the buildings successfully, preventing the rioters from carrying out their purpose of sacking the premises. The mobs then turned on the gendarmes, and severe fighting ensued. The police and soldiers together overpowered the rioters. A number of rioters were arrested. Many of the police and soldiers were wounded.

Prince Napoleon is about to start for this city to meet his son on the completion of his trip around the world.

M. de Lesseps will in August issue Panama Canal bonds of 1,000 francs at 450, paying interest at 30 francs yearly, reimbursement at par to begin immediately by drawings every two months. In this way he hopes to raise enough to push forward the work on the canal so as to make success apparent, and then induce the Government to authorize a lottery by which to obtain the remainder of the capital on less onerous terms.

The Canadian Government has granted amnesty to all persons connected with the Northwest rebellion, except those who committed homicide otherwise than in actual conflict. This exhibition of clemency will, it is hoped, help to mollify the French Canadians in view of the coming provincial elections.

Mr. Foster, the Canadian Minister of Marine, on Wednesday denied that there had been any modification of the orders in regard to enforcing the Treaty of 1818. He asserted that Canada had the full support of the Imperial Government. He added: "It has been claimed by some persons, notably Mr. Frye and Mr. Dingley, that the Treaty of 1818 has become obsolete because of subsequent reciprocal legislation. I cannot see how that can be. The convention was for the settlement of the fisheries question alone, and the legislation that has subsequently taken place has been extended for the benefit of the commercial relations of England and the United States. For this reason I cannot see how it can affect the fisheries at all. In all customs matters there is a very distinct line drawn between merchant vessels and fishing vessels. Each are expected to pursue a different business, and to take out different papers from the Custom-house. The business pursued is totally unlike, and why then should legislation for the benefit of commercial relations be construed as affecting the action of the convention that settled the fisheries question in 1818?"

A revolution in the Mexican State of Tamaulipas is gaining headway. The Civil Governor has been deposed, and a military Governor appointed in his place. The military of the State of Coahuila have been notified, and aid is expected to arrive daily. The revolutionists, under the command of Juan Trevino, have captured the town of Agualeguas. Five citizens were killed in the fight. Gen. Reyes has ordered the Eighth Regulars to Agualeguas, with instructions to fight the revolutionists wherever he finds them. The revolutionists captured the town of Guerrero on Friday.

A body of sixty Mexican revolutionists was defeated on Sunday night. Their leaders were captured and will be shot.

THE LAW AND THE BOYCOTTERS.

Gov. Hill has submitted five interrogatories to the Committee of the Central Labor Union who have gone to Albany to "demand" the pardon of the Theiss boycotters. He wants to know as many things as Arthur Clennam "wanted to know, you know," when that individual called at the Circumlocution Office. He wants to know whether the prisoners were not properly defended, or their trials conducted fairly and impartially; also, whether it is now claimed that the prisoners were innocent of the offence of which they were convicted; also, if they were guilty, whether they are now penitent and are willing to cease the commission of such offences in the future; also, what mitigating circumstances and considerations are claimed to exist which may call for or warrant Executive clemency; and finally, whether the sentences are claimed to have been too severe for the offences charged, and whether anything has occurred since the trials to change the circumstances of their cases. We can imagine that the Committee were as much staggered as the engaging young Barnacle was when Mr. Clennam presented his interrogatories. What they wanted was the immediate release of the prisoners. In the frame of mind that the Central Labor Union and Knighthood generally have reached, reasons for doing or not doing anything are an impertinence, or at all events are only to be considered by Executive Committees and Venerable Sages in the secret councils of the Order, and made known to the public through Outside Esquires and Walking Delegates.

The demand made upon the Governor is one of a number of outcroppings or surface indications of a lot of odd fancies dominating the society of which Mr. Powderly is the head. The central idea of Knighthood is, that if the law is opposed to what they want, the law is wrong and must be set aside. Mr. Powderly himself considers the militia an interference with the rights of labor and an obstruction to freedom. The Central Labor Union have proclaimed by the Ehret boycott that if a man is summoned as a witness in a court of law, he ought either to swear to a lie or refuse to testify. The Southwestern boycotters maintained that the courts of the United States should be coerced to retain insubordinate employees on bankrupt railroads. The theory of the whole boycotting fraternity is that if a man becomes disagreeable in any way, however innocently, to a secret society, of which he is not a member and to which he owes no duties or obligations, his business may be attacked and his customers blackmailed, and his life made a burden; and that if the law interferes to protect him, the jury, and the District-Attorney, and the witnesses, and the police, and the Governor of the State should be "spotted" for future attention. In short, an idea has taken root in the cellar of the Order which was well stated by a Texas Knight during the late troubles in the Southwest, that there are two kinds of law in this country, the written and the unwritten, and that the former must give way to the latter whenever it comes in conflict with labor; also, that we are Labor, and all other persons scabs.

This idea was nurtured in the beginning by a very general sympathy with the cause of the workingman. Nowhere in the world does society extend the helping hand more freely to the poor man. So large a number of the well-to-do have themselves risen from humble conditions, they know so well what the struggle of the poor man is, that they almost instinctively side with him in his battles. Our institutions begin by expelling every thought of privilege, monopoly, inequality, and caste. To whatever extent these have acquired any hold upon society and government they have succeeded in spite of all possible public efforts to keep them down. Our institutions being the groundwork of all education, and the warp and woof of our national life, it is most natural that public opinion should side with the workingman against the capitalist as a general rule, and should put the burden of proof upon the latter to show that he is not really an oppressor and a skinflint. It is natural, also, that such a bias in the public mind should create the impression among workingmen that they are always right, and that capital is always wrong. Nor is it to be wondered at that labor demagogues succeed in advancing them from this position to the more dangerous one, that if they are right and the law is opposed to them, the law must be wrong. Only one step needs to be taken to reach the standpoint that if the law is wrong, it must be set aside summarily, not by repealing it and enacting a better law, but by trampling it under foot.

But this, we must remind them, cannot be done. Organization is a great thing in this world, and the organization of labor is one of the greatest of all forces in a free country; but it is not as great as the organization of society. This is what we call law. It represents all the inertia and all the force that mankind have studied out and compounded since the stone age. Its fundamental doctrine is that every human being is bound to obey the written rules under whose protection he draws his breath, having liberty to change them if he can, or to depart the jurisdiction if he does not like them. All the advantages that labor ever gained or can gain have come from obedience to these rules, but, whether relished or not relished, there is no escape from them.

THE TRAFFIC IN VOTES.

The New Hampshire Prohibition State Convention last week adopted one resolution which is quite out of the ordinary line. After denouncing the old parties for their tenderness towards the liquor traffic, and advocating prohibition as the only way of extirpating it, the platform refers to the Sunday and labor questions, and concludes with these words:

> "We deprecate and denounce the Republican and Democratic parties for using money to buy votes and corrupt elections, believing that an honest ballot and a pure ballot-box are necessary to protect our free institutions. We declare in favor of disfranchisement as the penalty for the crime of buying or selling votes."

This deliverance calls public attention to what has become one of the most dangerous tendencies in public affairs, and that, too, in rural New England. New Hampshire is a State chiefly devoted to agricultural industry. The largest city (Manchester) had only 32,630 people in 1880, and there were but three other places with as many as 10,000 inhabitants apiece. Three-fourths of the population live in farming towns, many of them far removed from railroad communication with the outside world. It is precisely the sort of commonwealth where one expects to find an exceptionally high standard of public virtue. That poor and ignorant men in a great city, many of them of foreign birth, should make merchandise of a ballot whose meaning they hardly comprehend, does not surprise anybody; but the idea of a man's selling his vote among the descendants of the Puritans, in communities slightly if at all affected by contact with the illiterate element of immigration, appears almost inconceivable.

Yet the most cursory inquiry by any summer visitor in New Hampshire will reveal startling testimony to the truth of the indictment drawn by the Convention. In many of the beautiful villages scattered among the lakes and mountains the practice of buying votes has reached astonishing dimensions. "There are towns right around here," said an intelligent farmer in the Winnepesaukee Lake country the other day, "where a quarter, and even a third, of the voters can be bought—and have been bought in close elections." He proceeded to instance one town after another where it is a matter of common notoriety that money has been used in large sums for the scarcely concealed purchase of ballots. In close towns, in hotly contested elections, the prices of votes have sometimes mounted very high, cases having been known where $50, and even $100, has been demanded and secured for a single ballot. The worst feature of the business has been its shamelessness. Men who were not hard pressed by necessity, even well-to-do farmers, in many towns have sold their votes and pocketed the proceeds with almost as much indifference as though they were disposing of some product of their fields, even though they knew that their neighbors were aware of their venality. Where some qualm deters a man from taking a bank bill, he often accepts a barrel of flour or some other commodity, and thus tries to compromise with his conscience.

New Hampshire is beyond question the most degenerate State in this respect. But the fact must be recognized that it has too much company in disgrace. Not to speak of Rhode Island, where elections have often been bought since Sprague introduced the reign of corruption almost a generation ago, there are parts of Connecticut where the practice of selling votes is nearly as common as in New Hampshire. And there, as in New Hampshire, it is the rural districts of the State where the system is most odious, because it exists among a presumably intelligent and high-minded agricultural population. The same thing is true of regions in Maine, and of late years the traffic in votes has attained large dimensions in some agricultural districts in New York State.

The system was domesticated in New Hampshire by the Republican ring which has long controlled that State, and it grew rapidly during the exciting political contests which accompanied and succeeded the war. The party managers found themselves threatened with a loss of the State if things were allowed to take their natural course,

and they had recourse to the bribery of voters as the only means of saving themselves. Party spirit ran high, and men were easily persuaded that any device needed to beat "the wicked Democrats" was justifiable. The same feeling which made men ready to support any rascal who got the regular nomination if he was "sound on the main question," disposed them to wink at corruption to secure his election. A man who would scorn to buy another man's vote himself, would contribute generously to a campaign fund which he could not help knowing was to be largely devoted to vote-buying. The Democrats naturally tried to fight fire with fire, and the political ambition of several rich men in their party enabled them to run the prices of votes very high in many elections. Thus matters finally reached that stage where it was well known to the managers of both parties that thousands of voters were open to bids for their suffrages.

It is one of the great blessings of the present dearth of political issues and decadence of party spirit that it offers a hope of reforming this disgraceful state of things. Even in New Hampshire, Republicans no longer believe that the country is going to be ruined by the "rebels." Men who were inclined to shut their eyes to corruption ten years ago, when it appeared to them a disagreeable necessity, are now open to reason. There are at last signs that the long-dormant political conscience is becoming aroused. The New Hampshire Prohibitionists are, therefore, to be heartily commended for their emphatic language about this disgrace, and especially for their practicality in declaring for disfranchisement as the penalty for the crime. A rigorous law with severe penalties is the only cure. England has applied this remedy during the last few years with wonderful success, and this country should not longer hesitate about following her example.

FEDERAL CRIMINAL PROCEDURE AND THE FEE SYSTEM.

The principle of paying public officers by fees, which was established in the early days of the Government, is especially pernicious when applied to criminal procedure. If we were to read of a country which made it for the pecuniary interest of its police to make as many arrests as possible, for the pecuniary interest of its magistrates to issue as many warrants as possible, and to make the hearings extend over as many days as possible; and for the pecuniary interest of its prosecuting officers to have as many criminal complaints made as possible, and to have as many convictions as possible, it would perhaps meet our idea of the way things are done in Turkey. Yet this is the case under the Federal laws, and that no more mischief is done is due to the usual high character of officers rather than to the system.

Prosecutions for offences against the laws of the United States are begun by sworn complaint before a United States commissioner whose compensation depends upon the number of warrants issued, the number of days over which the hearings extend, and the number of witnesses recognized. He and the marshal can readily play into each other's hands; the marshal by finding cases and the commissioner by giving the marshal processes to serve. It is no exaggeration to say that there are few commissioners who do not issue subpœnas for witnesses unnecessarily, for the sake of allowing the marshal to make his fees for serving them. Usually, either by arrangement with the United States attorney or by usage, one commissioner does all the criminal business for a district, although there may be several competent to act, and offenders may be taken before this one from the most remote parts of the district, at great expense to the United States and hardship to themselves, as they are called on to find bail and counsel where they are strangers. If on the hearing the commissioner finds that there is probable cause to believe the prisoner guilty (as is usually the case, for he has heard the evidence on the application for the warrant and to some extent has prejudged the case), the prisoner must find bail for his appearance at the next term of the court, which in most of the districts may be two or three months distant. Even if he admits his guilt, there is no chance for him to plead guilty and take his sentence until an indictment has been found. He may be kept in jail weeks for want of bail, for an offence the punishment for which could be merely a fine or a small term of imprisonment. If the Grand Jury find an indictment, the case is fairly in court, and the United States attorney takes charge of it. This officer, again, is paid almost entirely by fees which depend upon the disposition of the case. If the prisoner stands trial and is acquitted, the attorney gets twice as much as if he pleads guilty, and, if convicted, he is entitled to an additional fee. In other words, an inducement is held out to an officer whose duties should be performed in a judicial spirit, to take the uncertainty of a jury trial rather than a plea of guilty, and, when once engaged in a trial, to convict at all hazards. It surely is not in accordance with the spirit of our criminal laws that the compensation of a prosecuting officer who has full discretion to dispose of a case as he sees fit, should depend on his success in sending a man to jail.

Two remedies should be at once applied. In the first place, a reasonable number of United States commissioners in different parts of each State should be designated to do all the criminal business, and any person arrested should be taken before the nearest one. These commissioners should be paid salaries, and should have power to decide and sentence in case of minor offences, especially in case of violation of revenue laws, subject, of course, to a right of appeal to the court. This would very largely decrease the expense to the Government, prevent the time of courts and juries from being occupied with trivial cases which could better be settled elsewhere, and with much less hardship to prisoners whose offences in many cases involve no moral turpitude. In the next place, United States attorneys should be paid by fixed salaries, commensurate with the dignity and importance of the position, instead of by fees. Men who cannot be trusted to perform their duties faithfully without the stimulus of contingent fees, cannot be trusted not to abuse their opportunities to increase their fees. Both commissioners and attorneys would undoubtedly prefer to receive salaries, and be relieved from the task of making up a fee bill of small items, the examination and auditing of which is a source of no small trouble and annoyance to them as well as to the accounting officers at Washington.

"SUMMER RESORTS."

The English newspapers are, in their hot-weather articles, deploring the rapid disappearance of all solitude at the summer resorts. They say there is almost no place within any reasonable distance of a great city in which a tired man or woman can find relief from crowds and noises. All parts of the seashore in England, all parts of the mountains in Wales and Scotland, in which decent accommodation can be found, are already overrun with tourists and holiday-seekers. In Scotland the areas over which the tourist can enjoy himself have been greatly restricted by the immense extension of the deer forests, some of which, like that now rented by Winans, are as large as a German principality; and as many of them cover the only road to considerable mountains, and trespassing is rigidly forbidden, access to some of the most popular peaks is completely cut off. To meet this gross abuse of the landholder's power, Mr. James Bryce introduced into the last Parliament a bill bestowing on the public a right of way to the leading mountain tops; but what fate it met with we do not know. Switzerland is now in good weather literally thronged, and Norway will soon have no solitary nooks. Narrow-gauge and mountain railroads are just penetrating into the most secluded corners of the civilized world, and carrying families in pursuit of cheap board, and bands of tourists "personally conducted" by the great contractors like Cook.

What does more than anything else to ruin the quiet places, both in this country and in Europe, is the enthusiasm of the first discoverers. A man no sooner lights on a "delightful retreat," or "cosey little inn," in the mountains or on the seacoast, and enjoys himself there for a week or two, than he becomes immensely inflated with pride over his discovery, and cannot refrain from announcing it in the newspapers. This is done partly out of gratitude to his host, and partly in self-glorification, but it has the usual effect of publicity. The following year the quiet nook is gone, and the year after probably a large hotel is started, with all the accompaniments.

In Europe, however, great progress has been made in the art of summer-hotel keeping. There is increased adaptation of the buildings to the scenery, and increased provision, in spite of the crowding, for the gratification of individual tastes. With us it is difficult to see a sign of real advance anywhere. In the places, such as Bar Harbor and the Catskills, which have gained greatly in popularity within a few years, there is not, in the accommodation provided for the great public, a sign of novelty. The hotels are the old hotels of the last fifty years, only bigger. The electric light has been added in some of them, but nothing else. The erection of the Hotel Kaaterskill in the Catskills offered a grand chance

for a new departure in architecture, but nothing of the kind took place. On one of the finest mountain sites in the world a large city hotel was erected and filled with city furniture, and crowded with people who live just as they live at the New York Hotel or the Metropolitan. The unutterable dreariness of such places in the evening or on a rainy day, owing to the vast expenditure of money on useless or superfluous things, is well known to all who travel in summer for any other purpose than to show their clothes and their diamonds, and cannot listen eternally to a poor brass band.

There are two mountain hotels in the country, and only two, within our knowledge, which really try to make people comfortable indoors in the evenings or during bad weather, and give the house some slight semblance of a home, by the provision of reading-rooms, with comfortable chairs, good open fires, lamps, and plenty of books. All the hotels have "reading-rooms," which contain a few ragged and stained newspapers, a few dirty spittoons, and a few cane-bottomed chairs. But one look into them is usually enough for anybody who cares to read. What we are speaking of is a really cosey room, like that of a good club, with the best American and foreign periodicals, plenty of new books, and decent and orderly writing arrangements, and a wood fire in an old-fashioned fire-place, a clean floor, and deliverance from the brass band. Such a room in a summer hotel is really a civilizing agency, but, as we have remarked, we only know of two which have such a thing, or in which it was probably ever thought of.

ARCHÆOLOGICAL CHRONOLOGY.

ROME, July 4.

THE Note in the *Nation* (No. 1092), on the difficulty in chronological attribution in archæological research, refers to a matter in which the greatest obstacles in the whole range of prehistoric archæology are to be met. When we reach the epoch of inscription, we have at once an almost unerring test of priority within a given sphere or national communion; but in implements, in methods of structure, in pottery, etc., survivals are so common and so strange in their persistency, that there is almost no reliance to be placed on them alone. I remember, while living in Crete, that we used to get from one of the islands water-jars of precisely the form of those which are borne by the water-bearers in the Parthenon procession; and when investigating in Crete for the Institute of Archæology, I came across some archaic oil-jars, which had been found at Cnossos, so closely resembling in general form, as well as in the manner of decoration, those which are made to-day for the same purpose, that the people of Candia ridiculed the finder for bringing them to the city as antiques. I saw some of them *in situ*, and the resemblance was so close that I do not think that an archæologist could have distinguished one from the other by the photographs. Quite recently I saw some bronze axes and chisels found at Frosinone, in company with a quantity of coins of the late Roman republic, and an iron axe of the same shape as one of bronze accompanied them; and only yesterday I saw in the necropolis of Orvieto inscribed tombs which were vaulted with that form of the vousoir arch which is described in one of the reports of the American Institute of Archæology as having been found in Mexico; the courses of stone projecting each beyond the one beneath it, and closed at the top by a parallelopipedal keystone—the step between the Pelasgic vault and the Etruscan as found at Volterra and in the Cloaca Maxima. The occurrence of flint implements with much later forms of art is not uncommon, and was, no doubt, due to the fact that until the tempering of steel was understood as well as the manufacturing of it (which must have been long after iron was discovered) no metal tool would give so keen a cutting edge as flint or obsidian. The use of flint knives for circumcision is of very late record, probably for sanitary reasons as well as surgical, and may be for hieratical also.

For weapons in general, bronze was better than iron, though inferior to steel; and in archæological comparison we are too likely to confound iron with steel, and the chilling of the former (which may be what was described by some of the ancient writers) with the tempering of steel. For ornamented weapons like those swords found in the graves at Mykenæ by Dr. Schliemann, it is clear that bronze was far more desirable than iron, as being free from corrosion, and in itself more decorative, besides giving the advantage of both casting and hammering as well as engraving—facilities not combined by iron. This I believe to be the real reason why these particular bronze swords were found where they were, with articles of unmistakably later date. But the articles found in these graves offer numerous surprises, and unfortunately Dr. Schliemann's method of excavating did not give any certainty as to where a particular object might have been found, while the Greek official who watched the excavations on behalf of the Archæological Society was not a trained archæologist, but simply a guardian of what should be found. It is therefore quite uncertain now where the Corinthian coins of the third or fourth century, and the Roman pottery and other fragments of late date, were found in the diggings. Then, most of the gold vessels are of the most ancient form of workmanship, *beaten* and *riveted*, but in the midst of them comes one which is soldered; numerous gold ornaments are struck up between dies, possibly of stone (and a broken sample of such a die was found, though not in contact with the bodies or of the same design), and some of them are decorated with patterns closely resembling archaic decorations, though clearly of long traditional transmission and not of archaic workmanship, while with them was found a lion's head mask of gold, *repoussé* and engraved, of the period, apparently, of good archaic Greek work.

Again, in another of the graves is found an almost unmistakable Byzantine cross, and several ornaments which are by no kind of hypothesis to be relegated to a classic epoch, though found, as catalogued at least, with the bodies. There are some engraved stones of what we must accept as early work, from the same sources as many that we find in the Greek islands, lentoid and perforated, with engraved signet rings which seem to be Asiatic work, but as the engraving is in gold, it is impossible to say that it is archaic. That can only be determined by the method of cutting, which here indicates late rather than early work, though not conclusively; but there is also an alabaster vase of a pronounced rococo design, so extremely florid and so elaborately ornate that it can only be the work of a period of the decline of art subsequent to the good Greek epoch. It resembles sixteenth century A. D. more than anything else.

Just before leaving Athens, I was told of a grave which had been freshly opened at Corinth, having the usual appearance of Greek graves, but in which was found a medal of Galileo! The hypothesis to explain that case was that a Renaissance admirer and collector of Greek pottery had gone so far in his æsthetic paganism as to have his collection of vases buried with him, and a contemporary medal, by design or accident, had slipped in with them.

There are often found, in connection with what appear comparatively recent deposits, fragments of flint of a form so unlike the implements known for any purpose, that they are considered as only the chips of the flint thrown off in working it. The battle-field of Marathon is strewn with them, and they have most distinctly no relation to arrows, for they have invariably a slight curve and are of nearly equal width throughout. They are common in many localities where there can be no suspicion, any more than at Marathon, that they are the refuse of a flint workshop. I take them to have been used for razors, or some analogous purpose, and I have found them sometimes minutely notched along the entire edge, as if by use, which must have been of some very light nature, for they are too slight for heavy cutting. The keen edge which was given them by the vitreous fracture was, for such a delicate operation as shaving, far more effective than anything that could be got on bronze tools as we know them.

The recurrence in present use of earthenware resembling that of antique production is not uncommon, as almost any Oriental traveller can testify. Traditional forms of implements, as well, are to be found to-day in actual use in many parts of the East, *e. g.*, the saw which we see in the pyramids, the axe of the form of the classic epoch, and very little differing from some bronze forms; while Castellani's success in imitating Etruscan jewelry through processes still in use in remote mountain districts of Italy must be in the minds of many admirers of antique art. In the Greek islands the most delicate stuffs are woven with the loom of Penelope—a machine which the village craftsman makes with his axe in the nearest wood, or finishes at home with his sheath-knife. The "plough of Hesiod" is the standing joke of critics of the East, and there is no reason needed to account for all these survivals except the innate aversion for change in any part of the Old World—the dislike to learn the use of a new implement when the workman knows so well how to use the old one. The Albanian, born fighter, always armed, and of reckless courage, holds his old-fashioned flint-lock pistols and long-barrelled smooth bore as better than revolvers or Remingtons. He retorts on our joke at his old shooting-irons by confiscating us and holding us to ransom when we enter his province: his arms are good enough for his purposes. I don't think it is necessary to go to the distinction of rich and poor to account for this clinging to old forms: most of it is simple human conservatism. W. J. STILLMAN.

THE DUC DE BROGLIE'S RECOLLECTIONS.—III.

PARIS, July 1, 1886.

THE third and fourth volumes of the 'Souvenirs' of the Duc de Broglie have just made their appearance. They embrace the period which elapsed from 1818 to 1850. These twelve years are subdivided as follows by the author: From 1818 to 1822, all the efforts of the best people and the most sensible citizens tended to reconcile the Restoration and the Revolution, the old régime and the new régime. Their efforts were unsuccessful, and from 1822 to 1827 there was a growing reaction, and from 1827 to 1830 the struggle began between the liberal school and the blind royalists—a struggle which became so fierce that it ended in a revolution.

The Duc de Broglie was well placed for judging the events of this period. He belonged to the liberal school by his personal sentiments, the generosity of his character, the philosophical

turn of his mind; he belonged to the monarchical party by birth, name, the traditions of his family. In England he would have been a great Whig; in France, he became what is called a *doctrinaire:* he espoused the ideas of the little school which had for its chief Royer-Collard, and which counted M. Guizot among its first adepts.

The Allies were to occupy France for five years, but M. de Richelieu, who was Minister of Foreign Affairs, succeeded in obtaining a shorter term of occupation. The occupation, however, had not yet ceased when the elections seemed to invalidate the promises made by M. de Richelieu to the sovereigns. The Prime Minister was obliged to prepare a new electoral law, and this law was rejected by the Chamber of Deputies. M. de Richelieu was compelled to resign. The Duc de Broglie makes here a confession:

"I consider," he says, "our conduct concerning the electoral law, and, in consequence of it, the downfall of the Richelieu Cabinet, a capital error. We all, indeed, accepted the Restoration —some on principle, some from taste, some from reason. We ought then to have treated the new Government without ill-humor, without disdain, without impatience; to have taken into consideration its weakness. . . . Why should we have wondered or complained if there was in the reigning family little inclination for the constitutional régime? It was a piece of good fortune that the King considered himself seriously the author of the *Charte*, and looked upon it with the pride of an author. Why did we complain if we found the emigration full of prejudice and of folly, mad with revenge, ardent to take possession of all the good things of the world, asking for everything, ruling everything, putting everything in disorder, equally incapable of doing anything and of renouncing anything? It was a piece of good luck to have at the head of the Government an émigré—an émigré of the old school who had left France in 1789, who had returned in 1814 – a man of heart and of sense; an émigré who had been patriotic abroad, independent at court, who despised the popularity of caste as well as of faction, whose disinterestedness and fidelity were above suspicion; as good an administrator as a man could become in a barbarous country, modest where ignorant, always standing by good law and good sense. For a Restoration, for the people, and the King, for the governing and the governed, this was a priceless pearl."

There has never been a more magnificent eulogy made of the Duc de Richelieu. He deserved it, as his correspondence will show when published, as I hope it will soon be. After ten years of a purely revolutionary government and ten years of an absolute military despotism, there were few men in the country who had in their hearts a pure love of liberty and a perfect appreciation of the essential conditions of a free government. The so-called Liberals of the Restoration were, for the most part, worshippers of Bonaparte or of the Terrorist Government of 1793; their pretended love of liberty was made up of hatreds—hatred of the noblemen and hatred of the priests. How can we wonder at it when we see even now the same elementary forces struggling against each other under new names, but under the dictation of the same passions?

I shall not attempt to tell here the history of those troubled years during which parliamentary government was first tried in France under the most difficult circumstances. Government by party is not easy when there are more than two parties, and when passions run as high as they did in France. The government of the Bourbons was constantly denounced as a government imposed by foreigners; and though Louis XVIII. had succeeded in obtaining the integrity of the territory of the old monarchy, he did not obtain the gratitude of the people or of the army. Though he had accepted accomplished facts, and promised that those who had bought the confiscated estates of the clergy and of the émigrés with the paper money of the Revolutionary period, should be considered as havin a perfectly legal title, the new landlords were always uneasy, and were not contented till a new revolution had taken place.

The Duc de Broglie received in his house the remains of the salon of Mme de Staël, M. de Lafayette, Benjamin Constant, Matthieu de Montmorency, Montlosier, the principal representatives of liberal opinion in the two Chambers. "At court," he says, "and in the most fashionable society I passed for a Jacobin, but my bad reputation did not hurt my wife nor my house." His salon became one of the rendezvous of the party of the *doctrinaires*, a set of men who were trying to find exact rules for a constitutional and parliamentary government; academical politicians, men of high culture and intellect. The most famous of these was then Royer-Collard: Guizot walked in his footsteps, with Rémusat behind him, who was of a lighter disposition.

The assassination of the Duc de Berri was the signal for a great reaction. The Prince had been stabbed at the opera; he had been carried to the little room which was behind the royal box, where, to the sound of the music of a masked ball, he received his wife and saw the old King, who had been summoned in haste. The Duc Decazes had received there the first depositions of the murderer. He was the King's favorite Minister, but the royalist party and the royal family made him almost responsible for the death of the Duc de Berri. Decazes was obliged to retire, and Chateaubriand, his enemy, had the cruelty to write in the *Journal des Débats*, "Les pieds lui ont glissé dans le sang." The censorship of the press was reëstablished, and it was on that occasion that Royer-Collard said, "Exceptional laws are usury loans." The Duc de Broglie attacked in vain the new reactionary laws; the ultras, as they were called, were becoming omnipotent.

The Chambers, it must be confessed, were not reasonable. Louis XVIII. was not an ultra: he was naturally moderate in his views, but he had a great sense of the royal dignity. After the revolutionary movements in Spain, Naples, and Piedmont, and the congresses of Troppau and of Laybach, the direction given to French politics had offended the advanced party in France as well as the ultras. In the address in answer to the speech of the King, which opened the session, the deputies had inserted these words:

"We congratulate you on the continuance of amicable relations with the foreign Powers, in the just confidence that so precious a peace will not be bought by sacrifices incompatible with the honor of the nation and the dignity of the Crown."

The King refused to hear this address. He admitted to his presence only after some hesitation the President and two secretaries of the Chamber, and told them from his throne:

"I know the address which you bring me. In exile and under persecution I maintained the honor of my race and of the French name. On the throne, and surrounded by my people, I feel indignant at the very thought that I should ever sacrifice the honor of the nation or the dignity of the Crown. I like to think that those who voted this address had not well pondered all its expressions. If they had had time to appreciate them, they would not have suffered a supposition which as King I cannot characterize, and which as a father I should like to forget."

During the discussion on the events in Spain and the French expedition to the Peninsula, took place the famous incident of the expulsion of the deputy Manuel. This deputy was against the expedition, and said: "You wish to save the life of the King of Spain; do not renew the circumstances which conducted to the scaffold those who excite in you a strong and (I will express my whole thought) a legitimate interest." Manuel then recalled the misfortunes of the Stuarts and added: "Must I remind you that the dangers of the royal family in France became the greatest when France, revolutionary France, felt that she needed to defend herself in a new form, with a new energy?" These expressions were considered by the royalist Right as an apology for the murder of Louis XVI., and caused the forcible expulsion of Manuel—one of the incidents of the Restoration which created the greatest sensation in the country. The Duc de Broglie says on this subject: "I declare here (and I have always had the greatest horror of regicide) that I should have had no difficulty myself, in a given circumstance, in employing Manuel's phrase." The national guards refused to arrest Manuel on the floor of the House, and the President had to give the order to the gendarmes.

The Duc de Broglie spoke against the Spanish expedition before it was undertaken; he boldly spoke against it after it had come to a successful termination. Success with him was not good conduct; he condemned the principle of foreign intervention, and reminded his colleagues that France also had been invaded. He did not dare to say, but everybody felt it, that the memory of 1815 was the *ver rongeur* of the Restoration.

The Duc de Broglie had identified himself in the House of Peers with the anti-slavery cause; he made some motion on the subject at every session, and, in his journeys to England, had placed himself in communication with the leaders of the cause of emancipation. He had an eminently generous mind and an extraordinary sincerity. He was an honest man, much interested in public affairs, but devoid of ambition. In one of the speeches which he made he well shows himself when he says: "No, the salvation of the people is not the supreme law; no, the salvation of the princes is not the supreme law. The supreme law is virtue; the supreme law is moral dignity, whether it is a question of a kingdom or of the life of a man. It is not permitted any man to advise another to do or to say or to concede secretly what he would not avow himself; it is permitted to no man to advise another to forget his own duties,

"'Et propter vitam vivendi perdere causas.'"

The dominant impression which I have got in going over these memoirs is the extraordinary amount of interest taken by all people at the time in public affairs, and not only in the affairs of France, in those of Europe and of America. I am not sure that in our day of universal suffrage, of a free press, of telegrams, of newsmongers, the interest is as profound, as genuine, as intelligent. To be sure, we are a little *blasé*. We have gone through so much, and our curiosity is so constantly worked upon, that we may be somewhat excusable. What would be less excusable would be a diminution and deadening of the moral sentiment, of the power of indignation, of enthusiasm, of liking and disliking.

The death of Louis XVIII. left all good patriots in great anxiety. The new King was a kindly, chivalrous man, but he was in the hands of the ultras. He began by abolishing the censorship of the press, but he kept the ministry which had established it. One of the first laws sent to the Chambers was one punishing sacrilege (sacrilege was defined in the law as the profanation of the sacred vessels and the consecrated Host) with death, or with perpetual imprisonment, according to circumstances. The law was adopted after a vain struggle, and it became evident that the reaction could no longer be kept within bounds.

Correspondence.

WOMAN IN MUSIC.

To the Editor of The Nation:

Sir: I have not read Mr. George P. Upton's 'Woman in Music,' but from your notice of it in

the *Nation* of June 17th I infer that he is better acquainted with German music than French music, and that Élise Polko is more of a personality to him than Louise Bertin, C. de Grandval, or Augusta Holmès. To be sure, Élise Polko is known in America by a translation of stories about musicians in which traditional and original lies are ingeniously mixed with descriptions of that peculiarly sentimental, ultra-amorous nature so dear to that class of German women called by Heinrich Dorn "die Horde überspannter hysterischer Weiber." But to see her taken seriously and even named in the same sentence with Clara Schumann, does not of itself awaken a desire to buy Mr. Upton's book.

Your reviewer does not speak of Louise Bertin, the composer of the opera "Esméralda," given here in 1836, the same year as Meyerbeer's "Huguenots." Victor Hugo wrote the libretto. Nourrit, Levasseur, Massol, and Mlle. Falcon took the parts of *Phœbus*, the *Priest*, *Quasimodo*, and *Esméralda*. Berlioz reviewed it, and the review is reprinted in his collected works. Gustave Chouquet speaks of the originality and vigor of parts of the opera, and speaks particularly of its instrumentation. It seems, by the way, that Eug. Prévost wrote an opera on this same text of Hugo, and, according to Chouquet, it was given with success at New Orleans, but when and by whom I am unable to find out.

As for Mme. de Grandval, she is well known and esteemed by all French musicians and critics. Her "Stabat Mater," published by a Paris house, shows dramatic power and contrapuntal technique; her Variations for violin, as played by M. Marsick, is a favorite concert piece, and pages from her as yet unpublished opera were given this last winter at the Trocadéro with artistic and popular success.

Miss Augusta Holmes (or Mlle. Augusta Holmès), the writer of "Lutèce," "Les Argonautes," and "Irlande," is a remarkable character. Camille St.-Saëns, in his 'Harmonie et Mélodie,' has criticised her "Argonautes," "symphonie avec soli et chœurs," and as she is nearly unknown in America, I may be pardoned for quoting a little from his article. Following the ideas of Wagner, of whom she is a devoted admirer, she wrote for the "concours de la ville de Paris" both the text and music of "Les Argonautes"; it did not take the prize, but so many musicians were interested in it that it was performed publicly and made a profound impression:

"Mlle. Holmes a dédaigné même les tentatives sérieuses de second ordre. Il lui fallait les larges plans, les vastes horizons d'une grande composition dessinée par elle-même comme poète et compositeur tout ensemble. Elle a concouru une première fois avec un poème lyrique intitulé 'Lutèce,' beau par l'idée, si la forme en était parfois contestable: car l'auteur appartient à la race très-rare des artistes qui ont des idées. . . . Elle a montré les plus grandes dispositions poétiques et musicales. Elle a une originalité puissante, trop puissante peut-être, car cette qualité, poussée à l'extrême, la jette en dehors des sentiers battus, ce qui la condamne à marcher seule, sans guide et sans appui. . . . Elle s'est passionnée pour les conceptions Wagneriennes aussitôt qu'elle les a connues. Elle a mordu plus que tout autre à cette pomme, et a puisé dans cette communion un redoublement d'audace, quand peut-être une éducation calmante lui eût été plus profitable. Quoi qu'il en soit, son originalité a résisté à tout. Même quand elle cherche à imiter Wagner, Mlle. Holmès est elle-même. L'art est plein de ces fantasies qui n'ont rien de dangereux pour les vraies natures."

M. Saint Saëns then reviews the work at length, making many acute remarks upon the character of woman as seen in her art creations. For example:

"Les femmes sont curieuses quand elles se mêlent sérieusement d'art: elles semblent préoccupées avant tout de faire oublier qu'elles sont femmes, et de montrer une virilité débordante, sans songer que c'est justement cette préoccupation qui décèle la femme. Comme les enfants, les femmes ne connaissent pas d'obstacles; et leur volonté brise tout. . . . La grosse caisse, les cymbales, la harpe dansent une ronde folle, et l'ophicléide lui-même se met de la partie. Elle le veut!"

Does Mr. Upton speak of Mlle. Fanny Pelletan, to whose devotion and self-sacrifice we owe the only edition of Gluck worthy the composer?

Many essays have been written, it is true, upon the influence of women over composers, but it is a question whether it would not have benefited the race more had the question been "As to the Effect of Diet upon Musicians"—whether, for instance, the writer of symphonies would be more inspired by a diet of pork or by unlimited gruel; or whether there be anything in the fancy of E. T. A. Hoffmann, that church music should be written under the influence of Rhine wine, a serious opera after the drinking of burgundy, a comic opera after libations of champagne, and so on. It is pleasant to read the legend of Beethoven and Julia Guicciardi, and the story of Amalie Sebald, afterwards Frau Krause; but Mr. Thayer has shown that it is not safe to take them too seriously.

The majority of men, whether they be musicians or bellows-menders, fall in love; but, to a young composer, six years of counterpoint would probably be of more worth than six love episodes, no matter how delightfully immoral these episodes might be, or how shattering to his nerves.

Yours truly, PHILIP HALE.

PARIS, July 9, 1886.

OMISSIONS BY MR. FROUDE IN CARLYLE'S 'REMINISCENCES.'

TO THE EDITOR OF THE NATION:

SIR: In an article on Carlyle and his 'Reminiscences,' in the July number of the *New Princeton Review*, I state that the only important omission made by Mr. Froude in editing the book for the press was that of the injunction forbidding the publication of the narrative concerning Mrs. Carlyle, "as it stood" in manuscript. So far as relates to Carlyle's own writing this is correct, but I ought to have added that some pages of a diary by Mrs. Carlyle, inserted, without copying, by Carlyle into his manuscript, were also, and properly, omitted. This omission is indicated on p. 245 of the second volume of the original English edition of the 'Reminiscences.'

My neglect to state this fact was due to my attention being given while writing my article entirely to Carlyle's own work. I shall, with the leave of the editor, make this statement in the next number of the *New Princeton Review*, but I desire to make it now in order to leave no ground for cavil.

On pp. 14 and 15 of the *Review*, to the references to pages where slight omissions occur should be added the indication, "Original edition, vol. ii."—Faithfully yours,

C. E. NORTON.

July 13, 1886.

APPOINTMENTS IN THE RAILWAY POSTAL SERVICE.

TO THE EDITOR OF THE NATION:

SIR: In your issue of July 8, in the course of an editorial upon the subject of the Railway Postal Service, the following statements appear:

"Railway postal clerks who 'had become efficient and valuable men,' and against whom 'no just complaint' could be made, have been not only 'disturbed,' but removed to makeroom for new and untried men, who had nothing to recommend them but their political influence. Men who have rendered and were rendering 'meritorious and faithful service' have found that it did not protect them against arbitrary dismissal. In other words, the Postmaster-General's pledges have proved valueless, and, because valueless, a discredit instead of an honor to him and to the Administration."

I do not know the sources of your information; and it is not convenient for me to ascertain from headquarters what has been done by Mr. Vilas the country over to justify your charges. But if what has occurred in this vicinity is a fair indication of what has been done generally, then your statements above quoted are apparently without reasonable foundation.

I have made careful inquiry of the officials in charge of this district of the Department of Railway Mail Service, all of whom are Republican in politics. This district embraces more than 5,000 miles of railway; and there are 110 clerks of the Railway Mail Service in active employment therein, with headquarters at Burlington, where the chief clerk, Mr. Cole, resides. And it is the truth, and nothing but the truth, that in this entire district, since the advent of the Administration in March, 1885, but *one* postal clerk who was an "efficient and valuable man, and against whom no just complaint could be made," has been removed for political reasons. Just one removal has been made of which it can fairly be said that it was on account of politics; and in this case the partisanship came squarely within the category of offensiveness. In other words, the evidence upon which to base your broad assertions, judging from what has been experienced in this locality, is only a scintilla.

This is not saying that many vacancies have not occurred. I think that personal inquiry is necessary, in order to understand how many really voluntary resignations have taken place in this branch of the service during the past eighteen months. Many Republican clerks have undoubtedly resigned at the first opportunity for other employment, under mere apprehension of early dismissal for political reasons. The barbarous practice has been in vogue so long that it will take a four years' generation for men to realize that an honest effort is being made to abolish it. Hence, out of the 110 clerks now in service in this district there are fifty new men, that is, men who have been appointed since March, 1885; and these are almost without exception Democrats in politics. They are no more inexperienced and untried, of course, than if they were Republicans; but, on learning the facts that these new men were substantially all regarded as Democrats, I inquired for the cause. The explanation given was this: When a vacancy occurs, the Superintendent, Mr. Jameson (who, by the way, is a Republican, and has occupied the position of Superintendent for many years), informs the *Democratic* Congressman for that district, or one contiguous, and asks him to make a recommendation. We may be sure that there is no Democratic Congressman who cannot find members of his own party competent and willing to fill all such vacancies. Republicans do not apply to Democratic Congressmen for these places; and so it comes that practically there are no applicants but Democrats.

Whose fault is this? To whom shall Mr. Jameson go for recommendations? The law has provided no method, and I do not understand that a law to meet the case has been prepared and urged upon Congress in a direct way. If the practice shall result in a substantial reorganization of the Railway Postal Service from a Republican into a Democratic body of clerks, then I will say that it is a fault, and a great and positive evil, and should be remedied; but I do not believe that Mr. Vilas has any such intention. When its character as a body of Republican clerks only has been fairly modified by filling vacancies with Democrats, will not the Ad-

ministration be found vigorously urging an extension of the present Civil-Service Law or other legislation that will insure the selection of these clerks solely upon the grounds of merit and fitness, tested by competitive examination, and without reference to politics?

Let us criticise fairly and upon the exact facts, and not underestimate the difficulties under which the Postmaster-General labors, if he is really desirous of seeing this important arm of the public service placed upon a non-partisan basis. B.

BURLINGTON, IOWA, July 15.

[We are very glad to hear that the Railway Mail Service remains in such a good condition in Iowa. But our experience in New York has not been so satisfactory. Good men have been removed here in considerable numbers, and their places have been filled, on the recommendation of Congressmen, with very worthless and incompetent creatures. Our correspondent is greatly mistaken in supposing that there is need of "a law to meet the case." There is no more reason why the filling of the Railway Mail Service should be parcelled out among Congressmen than the filling of the post-office. The practice is a scandal and an abuse. All that is necessary to rectify it is an order from the President placing the Railway Mail Service under the civil-service rules.—ED. NATION.]

"WHY NOT MAKE HER AN INTELLECTUAL WOMAN?"

TO THE EDITOR OF THE NATION:

SIR: If Mr. Arnold's dictum be correct, that the true province of criticism is to seek out the best ideas and to make them prevail, then it may fairly be called a criticism of a late excellent address of Mr. C. D. Warner's, if we call attention to one passage in it, and especially to one sentence. For this certainly embodies one of the "best ideas" lately uttered on social matters, and its repetition in the *Nation* cannot but tend to make it "prevail." In speaking of the causes of discontent, Mr. Warner goes on to say:

"There exists already, what could not be said to exist a quarter of a century ago, a class who have leisure. Now what is the object in life of this great growing class that has money and leisure; what does it chiefly care for? In our experience of society, what is it that it pursues and desires? Is it things of the mind or things of the senses? What is it that interests women, men of fortune, club men, merchants and professional men, whose incomes give them leisure to follow their inclinations, the young men who have inherited money? Is it political duties, the affairs of state, economic problems, some adjustment of our relations that shall lighten or relieve the wrongs and misery everywhere apparent? Is the interest in intellectual pursuits and art (except in a dilettante way dictated for a season by fashion), in books, in the wide range of mental pleasures which make men superior to the accidents of fortune?

"Or is the interest of this class, for the most part, with some noble exceptions, rather in things grossly material, in what is called pleasure? To come to somewhat vulgar details, is not the growing desire for dress, for sumptuous houses, for showy equipages, for epicurean entertainments, for display, either refined or ostentatious, rivalry in profuse expense, new methods of killing time, for every imaginable luxury, which is enjoyed partly because it pleases the senses and partly because it satisfies an ignoble craving for class distinction?

"It is not to be wondered at, therefore, that in a time when making money is the chief object, if it is not reckoned the chief good, our education should all tend to what is called practical, that is, to that which can be immediately serviceable in some profitable occupation of life, to the neglect of those other studies which are only of use in training the intellect and cultivating and broadening the higher intelligence.

"I was talking, the other day, with a lady who was doubting what sort of education to give her daughter, a young girl of exceedingly fine mental capacity. If she pursued a classical course, she would at the age of twenty-one know very little of the sciences. And I said, *Why not make her an intellectual woman?* At twenty-one, with a trained mind, all knowledges are at one's feet."

An "intellectual woman" we should understand to be one capable of independent and competent thought on the most important topics, and habituated to the exercise thereof. In other words, she would be a woman who does her own thinking, and does it well. Now, it could not fail to cut through the knot of useless perplexities about the proper education of women if this keen question were continually applied. If it does not go into profuse detail as to subjects or methods of study, it suggests the true end and aim; and this, once seen, makes all other questions of pretty easy solution. As was shrewdly said of Carlyle, if it does not teach a doctrine, it does what is more important—it teaches an attitude. E. R. S.

MANNERS AT PUBLIC ENTERTAINMENTS.

TO THE EDITOR OF THE NATION:

SIR: In the article on "Courtesy" which appeared in your columns the other day there was no mention made of one form of discourtesy—the manners common in concert rooms, opera-houses, and theatres. They are taken note of by a writer in one of the last numbers (July 3) of the *Revue Bleue*.

M. Hugues le Roux, there commenting on a recent "reprise" of "Les Fâcheux" of Molière at the Théâtre-Français, remarks that "le fâcheux de théâtre" can no longer, as in Molière's day, impertinently place his arm-chair in the middle of the stage," but now, as then, *le fâcheux de théâtre* does not fail to talk in the boxes, to repeat familiar passages uttered on the stage, and, when the end of the piece approaches, to leave his place

"'Longtemps d'avance;
Car les gens de bel air, pour agir galamment,
Se gardent bien surtout d'ouïr le dénouement.'"

(It is not now "pour agir galamment," but "to catch a train" or a boat, that people, for the most part, hastily depart—in America at least; but it comes to the same thing as regards others.)

"I was curious to see," M. le Roux continues, "whether the public, at least for this evening, would apply the lesson which it had received indirectly, and, as it were, from behind the scenes. Nothing of the sort. The evening's entertainment closed with 'Le Malade Imaginaire,' and towards the end of the scene where *Toinette* appears disguised as a doctor, a good half of the house went away noisily, preventing the other half from hearing and seeing the end of the piece. Even supposing that the money paid for the ticket could free the public from all politeness towards the actors, . . . people eager to go out owe silence and orderliness to the spectators who have paid as well as themselves."

It is perhaps impossible to arrange at plays and operas—as is now sometimes done at concerts—that those who wish to leave the hall before the rest must go at one appointed moment; but surely, if the hands of the managers were strengthened by public opinion, something could be done to check the present license.

The matter of *talking* must be left, I suppose, to a growing (?) sense of public decorum. We do not talk at church; perhaps some day we shall feel the sanctity of *art*. Meantime, I was the other day at a representation of Gluck's "Orpheus." On taking my seat, I observed two ladies behind me busily "engaged in conversation." They "parlaient chiffons"; but when the wonderful, dim, low overture began it was chatter, chatter, chatter, still. I turned and said, "This is very beautiful music, and I am very desirous to hear it; would you be kind enough not to talk?" The lady I addressed answered me civilly enough, but her companion burst into (almost) imprecations, declaring finally, "This isn't the place for people who are so dreadfully fond of music." She was perfectly right; people who are "dreadfully" fond of music or of acting do not find theatres and opera-houses the place for them.

**

Notes.

MR. EDWARD MCPHERSON'S tenth 'Handbook of Politics,' for 1868, will be ready about August 15, and will not fall short of its predecessors in interest or value.

T. Y. Crowell & Co, Boston, will publish immediately 'The Great Masters of Russian Literature in the Nineteenth Century,' by Ernest Dupuy, translated by Nathan Haskell Dole, with portraits.

Lee & Shepard announce 'The Family: an Historical and Social Study,' by Rev. and Mrs. Charles F. Thwing; and a 'Young People's History of Ireland,' by George Makepeace Towle.

From the July number of the *Auk* we learn that Estes & Lauriat are to bring out a third edition of Dr. Elliott Coues's 'Key to North American Birds.' It will contain the new nomenclature of the American Ornithologists' Union's Committee, with all necessary corrections and additions to date. A separate style of issue, called the "Sportsman's Edition," for use in the field, will have thin paper and narrow margins, and be bound in flexible Russia-leather covers.

The lectures now being delivered by Prof. Sylvester on his new Theory of Reciprocants will be published in the *American Journal of Mathematics*. They are presented in a simple style, and will be interesting to all students of the modern algebra, or, more accurately, of the theory of invariants. The first eight or nine lectures will appear in the forthcoming number of the *Journal*, vol. viii, No. 3.

The *Church Review*, formerly a quarterly, has become a monthly magazine, and will henceforth be published by Houghton, Mifflin & Co.

Itineraries form a large part of the contents of the *Pennsylvania Magazine of American History* for July. We have a translation of Heckewelder's notes of travel to Gnadenhütten from Bethlehem, Pa., and return, in the spring of 1797. The object of the journey was to meet Gen. Rufus Putnam for the surveying of the Moravian reservation granted by act of Congress. There is also a diary of the Schwenckfelders en route from Saxony via Holland to Pennsylvania (1733); and another of a summer jaunt of a party in 1773 from Philadelphia to Bethlehem, Reading, and Lancaster.

The volume of Proceedings of the Modern Language Association of America for 1885 is before us. Besides the usual abstracts of papers read at the various meetings, it contains some tabulated information of permanent value, viz.: statistics of French and German instruction in American colleges, and lists of their modern-language professors.

The June number of the *American Journal of Archæology* (Baltimore) opens with a third paper by Mr. W. M. Ramsay on notes and inscriptions from Asia Minor. Mr. J. T. Clarke concludes his paper on a proto-Ionic capital from the site of Neandreia in the Troad, devoting his remarks no longer to the capital, but to Mount Chigri and the city on its summit. Mr. Clarke is ready to head an exploring expedition to Magna Græcia, under the auspices of the Archæological Institute of America; and the editor of the *Journal* will be glad to receive contributions to that end, the

sum of $2,000 being needed in addition to the Institute's provision.

"A Puritan Colony in Maryland," by Daniel R. Randall; and a "History of the Land Question in the United States," by Shosuke Sato, Special Commissioner of the Colonial Department of Japan, are the two latest numbers of the fourth series of the Johns Hopkins University Studies. The second of these makes a thick pamphlet of 181 pages, and Mr. Sato enrolls himself with those who would have the Government recover the unpatented lands bestowed upon railroads on conditions which have been unfulfilled.

The lamented Randolph Caldecott, who had not completed his fortieth year when he died last February in Florida, is unaffectedly commemorated by Mr. William Clough in the *Manchester Quarterly* for July. A number of his sketches are reproduced for the first time in connection with this article. Mr. Clough states that more than 800,000 of Caldecott's 'Picture-books' have been sold. He has also left some creditable modelling in terracotta and in metal.

There is no end to the surprises in portraiture within the period of the art of Daguerre. We read in the last *Photographic Times* of an ambrotype of Lincoln taken at Pittsfield, Ill., in 1858, copies of which (untouched) are now for sale by L. Jackson, Hannibal, Mo. Our memory does not serve us so that we can pronounce this the earliest extant.

In Morley's 'National Library' (Cassell & Co.) the latest volumes are Swift's 'Battle of the Books,' Crabbe's 'Poems,' 'Egypt and Scythia described by Herodotus,' Shakspere's "Hamlet," 'Tales from Hakluyt,' and Mrs. Inchbald's 'Nature and Art.'

The six neat and handy cloth-bound and clearly printed volumes which give us the whole of Tolstoi's 'War and Peace' in the edition published by W. S. Gottsberger, make a little library for the fortunate possessor. The bulk may daunt those who have never tasted of Tolstoi, but only those. Lay the work down where we will, we feel a loss as if parting with a friend. Its interest is as endless as life—that life which the author portrays with matchless breadth and mastery, with a wealth of traits and *dramatis personæ*, and with a power of characterization, which no other historical novelist has approached on the same scale. There is just one volume which might fitly be added to these six, in close historic sequence, and not inharmonious in spirit and treatment; we mean Fritz Reuter's little masterpiece, 'In the Year '13.'

A new work by Tolstoi is now in course of publication, entitled 'What My Life Has Been.' It forms the fourth in the series, 'A Confession,' 'What My Faith Is' (My Religion), and 'A Letter to N. N.'

Franz Miklosish has edited a small but important dictionary, containing Russian, Church Slavic, Bulgarian, Servian, Bohemian, Polish, French, and German. It is invaluable to students of philology, and has been prepared by the eminent editor at the command of the late Prince Peter of Oldenburg. It is the first work of the kind which has ever been published, and is absolutely indispensable to the proper study of the Slavic group of languages.

The Dashkoff Ethnographical Museum at Moscow is the only institution of its kind in Russia. A systematic description of this collection has been begun, edited by V. F. Miller. The object of the publication is to aid in the collection and diffusion of ethnographical facts relating to the natives of Russia and of neighboring Slavic tribes. Particular information is desired about the Caucasus, Siberia, and Central Asia. In order to facilitate the collection of materials, the editor has prepared a list of the points to be observed and reported on. Literary form is not an object in the reports, but accuracy, as he is careful to impress on readers, that they may be encouraged to tell what they know, fully and frankly.

M. Edmond Scherer, senator and literary critic of the highest merit, was spoken of by a writer in the *Voltaire* as a Swiss. This called forth a clever answer, in which M. Scherer said he was French, born of French parents in Paris, where he was brought up and educated. Not satisfied with this protest, his adversary returned to the charge, explaining that he merely meant that M. Scherer had, while in Switzerland, contracted the timidity and slowness of the Genevese character. He then took him to task for his French, in which he tried to find Swiss peculiarities. M. Scherer had said "L'Académie est une ambition que je n'ai jamais éprouvée." The writer in the *Voltaire*, whom his adversary calls a "Huron," would have said, "un objet d'ambition," or he would have changed his phrase: "Arriver à l'Académie est une ambition." The other was manifestly Swiss. M. Scherer closes his rejoinder by the words, "Unless, however, illustrious child of the great lakes, those are, on the contrary, the very things whereby we distinguish the Parisian from the Iroquois."

At Sceaux on the 20th of June was celebrated the seventh annual fête of Florian by the Parisian *félibres*. The coupling of the last two words may seem odd, as the name *félibre* is applied to the school of neo-Provençal writers, mostly poets, of whom the greatest is Mistral, the author of 'Mireio.' Under the "gray sky of the north" (it was a rainy Sunday), the gay sons of Provence who inhabit Paris were carried by the diminutive and winding railway to the town where Florian died, and where his bust was lately placed, there to pay homage to the author of 'Estelle et Némorin,' and other pastoral tales. The countrymen of Zola, very far on that day from his naturalism, awarded prizes for poems both French and Provençal. M. Clovis Hugues, the fiery deputy from Marseilles, read an original poem. A *félibresse*, wearing the picturesque costume of Arles, sang the songs of the south to the accompaniment of mandolins. The whole closed with a *felibrejado*, or banquet of *félibres*, and with the dancing of the *farandole* to the music of the *tambourinaires*.

M. Nourrisson, in presenting to the Académie des Sciences Morales et Politiques the 'Life of Malebranche,' by Père André, gave some interesting details about the history of this work, of which the manuscript was completed before 1724, but was lost sight of after the death of its author. M. Nourrisson related its history, and how, after many vicissitudes, it became the property of the Bibliothèque Nationale. It is now edited by Père Ingold, with judicious notes—'La Vie de Malebranche' (Paris: Poussielgue).

The *Revue des Deux Mondes* has recently published in a stout pamphlet of 200 pages its index for the years 1874-1886, a supplement to its earlier index, on the model of which this is prepared. Every article appears three times—once under the author's name, again in a subject index, and finally in a specially devised geographical arrangement. We note the extreme fewness of the anonymous articles, and also the absence from the list of contributors of many of the lights of the newer school of French fiction. M. Ernest Daudet is represented, but not M. Alphonse Daudet, and we seek in vain for the names of M. de Goncourt, M. Zola, M. Claretie, M. Anatole France, M. Guy de Maupassant, or M. Paul Bourget (save as an occasional critic). Among the American novelists whose stories have been translated for the *Revue* in these last few years are Mr. Aldrich, Mr. Bishop, Mr. Cable, Dr. Eggleston, Mr. Bret Harte, and Mr. James.

The third volume of the collected theatrical criticisms of M. Auguste Vitu, 'Les Mille et Une Nuits du Théâtre,' has now appeared (Paris: Ollendorff; New York: F. W. Christern). It covers the plays performed in Paris from March, 1874, to September, 1875, among which were a dramatization of the "Scarlet Letter" and a French adaptation of Mr. Boucicault's "Two Lives of Mary Leigh." There is also an interesting discussion (pp. 316 and 231) of Scribe's methods of play-making.

The *Illustrazione Italiana* of June 27 reproduces in color the new bank-notes issued on June 30 by the Italian Government.

Some small but interesting fragments of Sallust have lately been discovered. Prof. Brandt, of Heidelberg, while examining, in 1884, a patristic manuscript codex in the National Library of Paris, noticed that pieces of it were palimpsests, and subsequently published some remarks concerning this observation. Another German scholar, Dr. E. Hauler, received permission to continue the examination, and, after several months' scrutiny, deciphered a number of hitherto unknown fragments of the Roman historian, hidden under texts of Jerome. Most of them refer to Pompey the Great's warfare in Spain, including parts of a very characteristic bulletin to the Senate in Rome, and part of the debate on it in that assembly.

The most conspicuous name in the post-reformation literature of Iceland is that of the hymn-writer Hallgrímur Pèturssson (1614-1674), whose songs of religious praise, if the judgment of the Danish critic Grundtvig is to be credited, are unequalled in any of the Scandinavian literatures and unexcelled outside of them. In Iceland itself his popularity never wanes. His 'Passíusálmar' (fifty hymns on the sufferings and death of Christ), of which two Latin versions have been published, were issued in their thirty-second edition at Reykjavík in 1880; and his exquisite funeral hymn, "Allt eins og blómstrid eina," has been sung at every Icelandic burial for more than two centuries. A monumental edition of the poet's works is now announced by the Reykjavík publisher, Sigurdur Kristjánsson. It will form two large volumes, of which the first, to appear in the present summer, will contain the religious verse, and the second the profane poetry. The editor is the well-known scholar, Dr. Grímur Thomsen, of Bessestad, Iceland, who, for many years, has been engaged in collecting and collating the best texts, and, aided by a special appropriation of the Icelandic Althing, has been able to avail himself of every accessible source of information in regard to the life and works of the distinguished hymnologist.

The thirty-fifth meeting of the American Association for the Advancement of Science will be held in Buffalo on August 18-24.

—The extent to which a certain facility in writing prevails in this country has recently been shown in a striking manner. The publishers of a newspaper having a very large circulation offered half-a-dozen prizes of considerable value for stories for boys and girls, at the same time promising to pay for such as were fitted for its columns, although they failed of winning any of the prizes. In response to this invitation nearly 5,500 manuscripts were received within the course of a few months. While those who expect to find in universal education a panacea for most of the ills that affect society will, no doubt, derive considerable satisfaction from these figures, which are, we believe, unparalleled in the annals of literature, we must confess they fill us with mingled feelings of pity and dismay, as well as a certain indefinite alarm. It is not so much pity for the hopelessness of the contest, in which a few practised writers are sure to win, nor that most of these persons might have been better employed,

which most impresses us; but the conviction that to a great many of them henceforth useful manual labor in the field, the shop, the kitchen, or with the needle will be irksome and disagreeable. This competition has lessened, we fear, the number of men and women who take an honest pride in the work for which they are best fitted, and added to the vast army of the unreasonably restless and dissatisfied. The publishers, of course, hoped that the prizes offered would prove just the stimulus needed to awaken some true genius to a consciousness of his powers. Whether this was the case or not we do not know, but we have good reason to believe that the most of the stories received were hopelessly poor. Some, however, were so extraordinarily bad that, but for certain internal evidences of sincerity, it would be difficult to believe they were not sent in jest. Now the combination of dense ignorance with perfect self-confidence is not rare, but this is not precisely true of these persons. They have apparently received just enough knowledge to completely paralyze the judgment, in this direction at least. It is this mental condition (which, we fear,our educational system is producing in great numbers of our people) that almost makes us sigh for the old times when nearly every man in our villages and towns could discuss intelligently the religious and political questions of the day, but would rather mow a ten-acre lot than put pen to paper.

—The Convention of the American Library Association, just held at Milwaukee, has repeated the experience of all its predecessors. There were too many papers to be read, too many projects to be discussed, although the programme had seemed unusually short, and the librarians, almost without exception, have the habit of expressing themselves concisely and to the point. The most important business done—indeed, the most important step ever taken by the Association, with the exception of the coöperation in 'Poole's Index to Periodical Literature'—was the establishment of "The A. L. A. Publishing Section," a society within a society, designed to further just such coöperative work. It is intended to be carried on like the English publishing societies—as the Index, the Camden, the Cavendish—receiving annual subscriptions, and issuing volumes which will be a fair equivalent. It is hoped that many will join who have experienced the value of Poole's Index, that some will subscribe from a desire to help on a good work, and particularly that libraries will take part, because it is intended to make the long-talked-of experiment of coöperative cataloguing, and try if for the waste of doing over the same work in hundreds of libraries cannot be substituted a method of doing it once for all. The success of any such experiment is by no means assured. Even the most sanguine have their doubts; but the benefits, taking the whole country into account, would in the long run be so enormous that it is worth while to risk a little in making the trial. One thing is certain—that the chance of succeeding will be greatly increased if the body of associates is large. This is a work that cannot be well carried on upon a very small scale. Therefore, if any library has the least interest and faith in the matter, it should join the Section at once, and not postpone its adhesion to see whether the scheme works. The constitution and organization of the new Section will appear in the full report of the proceedings of the Association which is published in the *Library Journal*, and no doubt circulars of information will be shortly issued, as a preliminary subscription of one dollar was taken up to cover such expenses.

—The papers read were of a somewhat more varied character than usual. We have often thought that the contributions to the proceedings of the English Library Association might be divided into the antiquarian, the practical, and the impracticable. Hitherto the Americans have had only the second. This year they have added the other two. An account of the first convention of librarians ever held (it was in New York in 1853) furnished the first element. A scheme for a spiral library lighted only from the top, in which endless addition could be made to the open end, furnished the third, in the judgment of many. In the climate of England it might work; in this country the broiling summer sun would make it a furnace, and the winter snows, which could not be cleared from its roof, would cut off its light and perhaps crush it. In several papers the claims of scholarly librarianship were advocated, and a note of warning sounded of the danger of reducing the profession to one of the mechanical arts. On the other hand, ingenious library appliances were exhibited and devices of management advocated. The burning question of the past—fiction in public libraries—was not touched on publicly, but in private discussion proved to have lost none of its power of bringing out difference of opinion. The burning question of this meeting was close classification—whether to divide books on the shelves minutely or in a few general divisions. It is a question of degree, and yet nothing excited such a passionate interest in the debaters. Both parties accepted a degree of minuteness that would have surprised a librarian of fifty years since, and would be quite too much for many small collections of books. One asserted and the other acknowledged the difficulties of providing a suitable notation; and just where subdivision should stop and just why it should stop there, were the only questions at issue—questions on which the contending parties are the less likely to come to an agreement because they are so nearly agreed. The element of humor was not wanting this year. There were the usual hits at the absurd questions asked by the ignorant and the puzzle-headed, but the *pièce de résistance* was a continuation of the clever satire of last year on systems of classification,but by another hand. Of this its victims said that it was a sufficient testimony to the substantial reasonableness of their schemes that the writer was obliged to caricature them so much in order to render them ridiculous. The hospitality given to the visitors was worthy of the reputation of the West; it culminated in an eight days' expedition through Wisconsin, ending July 20. The interest shown in public libraries throughout the Northwest is of the most encouraging character. New libraries are constantly founded, and in some cases well maintained. Even distant Kansas is eager in the cause, and the city of Denver invited the Association to meet there in 1887; but the Association preferred the Thousand Isles.

—A new view of General Barrios, from the pen of a Guatemalan resident, in the July *Macmillan's*, sets his character in a more favorable light than that in which the public saw it when he proclaimed the Union of Central America last year. The author does not plead, or defend, or eulogize, in set terms; but he takes the reader inside the affairs of Guatemala, social, economic, and governmental, and shows Barrios as the familiar good despot in a land where nothing is to be said against that variety of "hero" except the old dictum that he "leaves no successor." He seized control by violence, and enriched himself; but, in connection with that, he put an end to priestly ascendency, established unbroken peace, dealt justice, and developed the country with a success which palliates his methods. The dramatic close of his career is still fresh in mind. This writer credits him with sincerity in his profession that he would never take the Presidency of the "Union"; and the course of events he outlines supports the view that in this matter, at least, Barrios was more the patriot than the tyrant. The Proclamation was not his self-originated and arbitrary act, but was made after negotiations with all the states and by consent of Salvador and Honduras, with intent to coerce Nicaragua only. Salvador's bad faith brought on the war; but even then Barrios delayed, though in a state of military readiness by which he could have crushed his opponent at once, and fought at last only when Guatemala was invaded. The reverse which took place when he fell by the shot of a sharpshooter, as he led his troops into the almost evacuated fortress, graphically sets forth how truly Barrios was in his own person the whole state. The article is worth reading in full, as the description of a singular state, as well as of a very remarkable man. Mr. Goldwin Smith's account of "The Capital of the United States" notes the progress which Washington is making towards being a national centre otherwise than in politics, and is crowded with facts and the observations of a foreigner upon them, most interesting to Americans. He confesses that the Capitol is impressive, though pleasantly referring to its decorations of "the præsthetic era" and to England's revenge in the pictures of her discomfitures; but the reminiscences of the men and times of the civil war, with which he begins, and the glimpse and praise of the present Administration, with which he ends, occupy his space. That was a ludicrous touch, though we suppose unconscious, by which he coupled Blaine, "the historian," and the venerable Bancroft, as the heads of "literature."

—An interesting account of the "Physical Geography of Brazil" is given by Mr. Jas. W. Wells, C. E., in the June number of the Proceedings of the Royal Geographical Society. His observations, made during extensive surveys in all parts of the empire, lead him to the conclusion that the country is not mountainous, as has generally been supposed and the maps indicate, but "chiefly a vast plateau, excavated into numerous valleys by denudations, with relatively few purely mountain chains." In describing the river systems, he shows that northeastern Brazil is practically an island, the source of branches of the San Francisco and the Pará being in the same lake. One can also go in a canoe from the Orinoco to the Plate with one carry of only a few hundred yards. "The distance from the Amazons to the Plate by this route is about 3,500 miles, of which 1,650 have already been traversed by steamers." The greater part of this region is even less developed than the Congo, although its natural resources seem to be far greater. The mining districts, formerly so prosperous, are still nearly deserted, not because of the failure of the mines, but from the scarcity of labor, both slave and Indian. This can hardly long continue, as Mr. Wells speaks of the district of São João del Rey, about 150 miles from Rio, as being very rich in gold. Many of the barrancas or ravines formed by landslips "show an upper stratum of white or yellow quartz gravel conglomerate exceedingly rich in gold, and often gold can be procured from the surrounding earth from top to bottom of the sides, making the hill as it were literally peppered with grains of gold. In that district I have even procured it from the dust of the highways." The chief obstacles to the development of this wealth appear to be the mining, land, and immigration laws of Brazil. Of the scenery in many parts of the country and the climate particularly of the high savannahs, Mr. Wells speaks with enthusiasm, saying of the latter that it "is most delightful and exhilarating." The two other papers in the number give accounts of a journey through the province of Yunnan in southwestern China, and

the island of Diego Garcia. This is one of the Chagos group lying midway in the Indian Ocean, and now of some importance as a coaling station for the Australian steamers. It is an atoll, whose most interesting inhabitants are the donkeys, which turn the cocoanut-oil mills, and the crabs. Among the latter are the palm-crabs, which climb trees not for the nuts, but "solely for shade and protection." At the May meeting of this Society, the Founder's Medal was awarded to Major Greely, and the Back Grant to Sergeant Brainard of the American Arctic Expedition of 1881-84.

—The late Julian Schmidt was regarded by many, abroad as well as at home, as the first critic of our time, after Sainte-Beuve. But his personal character and circumstances, like his writings, were not of a kind to interest the public greatly. His friends seem to have respected him thoroughly, but to have found no occasion for that display of affection which was so prominent a feature in the life of Auerbach, while, of course, he had no claim to the universal popularity of Scheffel. Schmidt died on March 27, and in a brief notice, written the day following, Mr. Rodenberg, of the *Rundschau*, after remarking on the suddenness of his friend's death, says that "he showed no signs of age; his appearance was still that of an erect, powerful man as in the days of the *Grenzboten* in Leipzig, thirty years ago." To these "*Grenzboten* days," the most important thirteen years of Schmidt's life, because in them his literary character was formed and his influence established, Gustav Freytag, his partner and fellow-editor, devotes an article in the June *Preussische Jahrbücher*. Schmidt was born in the province of Preussen, the New England of Germany, in 1818, and, shortly after finishing his university career, had become a teacher in Berlin, whence in 1847 he went to Leipzig to become the German editor of the *Grenzboten*, then the organ of the liberal German element in Austria, and published as a "messenger from over the border" because its political views were not allowed expression at home. Freytag met Schmidt in the early part of 1848, and, a few months later, joined with him in the purchase of the review, whose original *raison d'être* had ceased with the temporarily increased freedom of the press in Austria. Its new owners determined to make it an advocate of Prussian leadership and of the exclusion of Austria, which meant opposition alike to the recently overthrown despotism of the Austrian court and to the rabid democracy of the North German cities. The political training of this stormy period was decisive also for Schmidt's literary standpoint. He started with a good supply of common sense and plenty of contempt for shams, and in the political flux of these remarkable years a person addicted to pricking bubbles had plenty of opportunities for the exercise of this faculty. All this stood Schmidt in good stead when, during the eleven following years, he came to deal exclusively with literary reputations. In the reaction which followed the political storm, the literary atmosphere was full of romanticism, pomposity, artificiality, and flabbiness, on all of which Schmidt waged war, never without perfect sincerity, but sometimes, Freytag admits, without carefully weighing the force of his epithets. Yet he was by no means incapable of enthusiasm, especially for originality of idea (beauty of form having less attraction for him), and, with increasing age, his tone became milder, his sympathies wider, his power of appreciation greater. It is to be remembered, too, that Schmidt's defects, though serious enough in the eyes of a foreigner, were such as his countrymen would not perceive, and consequently would not bring home to him. He lacked the worldliness (in a good sense), the social tact, which comes to a man only through the consciousness of moving on equal terms with the leaders of a great society. And as he was inferior to Sainte-Beuve and Arnold in this respect, so was he behind his countrymen Heine and Hillebrand—not to mention Goethe, who, as Prof. Müller has lately shown us, was the pioneer in the creation of a "Welt-literatur," in the power of international appreciation.

—The death of Scheffel (already mentioned in these columns), which occurred two weeks after that of Schmidt, interested a far larger public: it is indeed true, in a greater degree than such phrases usually are, that all Germany mourned him. His popularity as a poet and romancer was universal, though the fact that his fame was so great that he and his predecessor, Hauff, for instance, each on the strength of a single novel (and, in Scheffel's case, a poem), was termed the German Scott, shows how easily acquired, in Germany, is a reputation for genius in pure literature. His career was a curious contrast to that of his critical contemporary. He, too, passed through 1848, but it affected him as little as the struggles of the Nibelungen—less, indeed, for it lacked for him the picturesqueness of the latter. A North-German, with the same gifts, would certainly not have had the same tastes or anything like the same popularity. The upper Rhine, the Black Forest, the "Swabian Sea"—the region which Scheffel loved and celebrated—are dear to all Germans; but no one not born and bred there could have turned the material to such account as Hauff, Uhland, Auerbach, and Scheffel. Add to this that he was a Catholic, though a very easy-going one—a fact which placed him in greater sympathy with the mediæval life which attracted him by its picturesqueness. A writer in the June *Nord und Süd* gives some very pleasing reminiscences of the poet, especially in describing the respect and affection with which he was regarded by the people, as illustrated during a visit incognito to the scene of his famous romance. A much better article, however, is that by Chr. Mickwitz in the current *Nordische Rundschau*. In this we find more particulars than elsewhere of Scheffel's private life; among other things, mention being made of the one shadow on his career, his separation from his wife, a very charming Bavarian lady, which took place a few years after the birth of their only child. The feeling of the wife towards her husband was embittered by being forcibly and illegally deprived of the custody of her son, whom she was never allowed to see till they met, after twenty years' separation, at the house of a common friend, an American lady long resident in Berlin, a year ago. In view of this there is additional pathos in the fact, which we learn from Mr. Mickwitz's paper, that death obliterated all hatred and uncharitableness, so that husband and wife were reunited at last.

—The lately published second volume of 'Francis Deák's Speeches,' edited by Emanuel Kónyi (Buda-Pesth, 1886), is an uncommonly valuable addition to the politico-historical literature of Hungary. No orator's speeches, of whatever age or country, have been more striking reflections of unbiassed thought and study, clear political insight, and cogent reasoning than were the parliamentary expositions of the great Magyar commoner, to whom, more than to any other man, Hungary owes the recovery of her constitutional freedom and autonomy. Less brilliant, fiery, and enchanting than Kossuth's, his oratory was equally powerful in shaping the opinion of the people. Appealing only to reason, and leading in passive resistance to usurpation, Deák moderated, instead of inflaming, the patriotic passions, taught calm perseverance, and conquered through firmness. When the nation had slightly recovered from the gloomy despondency into which the surrender of Kossuth's *honvéds* at Világos had plunged it, all eyes turned toward the retired legislator for guidance; and when Solferino, in 1859, had taught Francis Joseph the lesson, which Sadowa, in 1866, was to complete, that Austria without a reconciled Hungary was doomed to ever-recurring defeat, Deák's redeeming work—his mediation between the people and the dynasty, on the basis of the Constitution of 1848—began. The volume—which, besides speeches, includes correspondence, reports, notes, and explanatory exposés by the editor—embraces the period beginning with the revolution of that year, and ending with the first attempts at reconciliation and reconstruction in 1861. It is much to be desired that an abridgment of the work, at least, should be issued in German or English translation.

—A private letter from Berlin says that Dr. Sterrett has had a most gratifying reception in Berlin: "Mommsen and Kiepert have both given receptions and dinners in his honor, and many of the most distinguished specialists of Berlin, archæologists, geographers, and epigraphists, were invited to meet him. A recent sitting of the Imperial Academy of Sciences was taken up almost exclusively with discussions of his work. Kiepert laid Sterrett's maps before the Academy, and Mommsen his 170 Latin inscriptions. They both dwelt on the importance of the Doctor's work in Asia Minor, and the additions to the knowledge of that country that his journeys have made. The Academy of Sciences offered to publish the maps and then give the plates to the American School at Athens, but the Doctor declined the honor, preferring to leave them to the School for publication."

A VITAL QUESTION.

A Vital Question; or, What is to be Done? By Nikolaï G. Tchernuishevsky. Translated from the Russian by Nathan Haskell Dole and S. S. Skidelsky. Boston: Thomas Y. Crowell & Co.

What's to be Done? By N. G. Tchernychewsky. Translated and published by Benj. R. Tucker. Boston.

THE best way to study a nation at a distance is through the literature which is accepted by public consent as embodying the popular conceptions of duty and morality. An almost equally instructive way is to study those literary prophets who are honored by the most universal condemnation in the country of which they write, for other than purely literary failings. There was a time when Charles Dickens's 'American Notes' furnished suggestive reading of the kind last named, though a few candid persons were to be found who were willing to admit that pigs did roam the streets of New York at that epoch, and that other unpleasant statements did not emanate entirely from the traveller's imagination. It is rarely that a book presents itself which combines both of the above desirable characteristics, and one, moreover, which has made good its claim by a popularity and a condemnation which have extended over a period of nearly a quarter of a century. These conditions are fulfilled, however, by Tchernuishevsky's novel, 'What's to be Done?' On these grounds it possesses an interest for the general reader, and deserves a consideration which might be denied to it on its literary merits.

It is possible that with further practice Tchernuishevsky might have been able to overcome some of the faults which in this work seem fundamental and inherent in the man. Had he been allowed to continue his career, he might have given more proof of the "genius" which is somewhat incautiously claimed for him by his radical admirers. A worse literary style it would be difficult to conceive. It is abrupt, involved, trivial

at times, and the thread of the story is constantly interrupted by appeals to the reader, couched in terms of challenge, which introduce a personal element wholly incompatible with the demands of art in a drama where the author is supposed to be the impersonal narrator, and the reader the impersonal recipient, of a story. The mixture of styles is similar to that of a letter begun in the third person with "Mrs. Jones presents her compliments," and ends, "I am, very sincerely, yours, X. Y. Jones." It is as though an etcher were to encircle his picture with a wreath of remarque portraits of himself—a proceeding which the spectator would at once resent as an impertinence or ridicule as conceit.

If any deadly blow is aimed at the foundations of government, it is not readily discernible to the uninitiated, either in the theories of life advanced by the author or in his hazily conceived and imperfectly expressed arguments. The one idea which is at all likely to arouse controversy is the advocacy of perfect freedom of choice, after marriage, in case a man or woman finds the first choice uncongenial. When the facility of divorce in the United States and the practices of some communities which are tolerated here are considered, the objection to the book on the score of morality, which is sometimes urged, may be dismissed as immaterial. The second nominal marriages of Viera Pavlovna and Lopukhoff lack only the formality of divorce to render them perfectly regular, and they certainly are typically happy. Lopukhoff's manner of effecting the arrangement also ceases to seem strained and fantastic when the difficulty, practically amounting to impossibility, of obtaining a divorce in Russia is taken into consideration. The moral which the author seeks to inculcate is irreproachable. It is, simply, that great care should be exercised in the first choice of partners for life.

It will be difficult for the reader to understand in what consist the dangerous doctrines which cause the prohibition of the book, especially at the present day. When the book was written (1863) men's minds were in a whirl in Russia, and they were ready to accept anything which was radical and which was offered as new. But these doctrines were new only in Russia. Coöperation of labor and dwellings had not only been advocated by various European writers, with whose works Tchernuishevsky was familiar, notably by Fourier, but had been tried in various forms. The author suggested an entirely innocent but extremely practical and valuable form. Woman's equality had been asserted by others, and the study of medicine by women, though new in Russia, was centuries old in Italy. Hence, originality can hardly be claimed for Tchernuishevsky. Harriet Martineau realized the fact that the principles of political economy could be more widely disseminated in the form of stories than as solid essays whose very look is repellent to the average reader. Tchernuishevsky consciously or unconsciously adopted the same course. His merit consists in having applied, in the persons of his truly national and typical characters, principles which, though elsewhere more or less known, were new to the mass of Russian middle-class people. He has thereby won an influence which has hardly been accorded to any other one man in that country. But why the book should have been adopted by the "Nihilists" in particular it is as difficult to see as the reason for the weight which is attributed to it in general. Probably the prohibition forms the chief factor in the case, just as a certain Pope is said to have promised a friend, as a great favor, to place his book in the Index.

The story runs, briefly, as follows: Viera Pavlovna escapes from the tyranny of a coarse and calculating mother, by a marriage with Lopukhoff, a medical student. Their life is arranged on a very business-like plan, which seems fairly well adapted to the object of preserving the individuality and independence of both parties in the married state. After a few years Viera discovers, through the medium of an incoherent dream, which suggests nothing in particular and chaos in general to the reader, that she no longer loves her husband, but does love his friend Kirsanoff. After rejecting several expedients which do not seem to meet the requirements of the case, Lopukhoff pretends to commit suicide, and disappears, only to return under another name years afterwards and marry another woman. Viera Pavlovna, who has married Kirsanoff within a week, continues to work over the coöperative sewing shop and boarding-house which she has established. She also studies medicine, and becomes the first woman doctor in Russia. How she does it all is explained in the description of her occupations during one day, which proves conclusively that the days in St. Petersburg are twice as long as they are elsewhere. Rakhmetoff, the singular person who is introduced quite unnecessarily, and merely to show the author's ideal of manhood, is worth attention upon that account, and because his character is more definitely drawn than that of either Lopukhoff or Kirsanoff.

The book, as a whole, lacks form. The essential story and arguments could have been better put in much less space. With regard to the two translations, it may be said that they prove the necessity of an immediate revision of the proverb, "Two heads are better than one." The revised version should read, "Three heads are better than two." Mr. Tucker's translation is from the French. It is well made, and reads smoothly and agreeably. It is not disfigured by the eccentricities of grammar which surprise the reader of the other version. But, as usual in French translations from the Russian, the original has been extensively cut, and the style modified in conformity with French taste, with the result of producing a hybrid novel. The most important omission is Viera Pavlovna's fourth dream, which follows part 15 of chapter iv. This is to be regretted, as it is not only the most coherent of her dreams, but the one which possesses the widest interest. The other translation is from the Russian, and preserves all the peculiarities of the author's style. Marya Alekseyevna's language is a trifle overdone, perhaps, since an inelegant choice of words, not mutilation or bad grammar, is what she is guilty of in the Russian. This version is also cut, sometimes as a concession to American taste, sometimes for no apparent reason. Part 8 of chapter iv, for instance, is entirely omitted. It is silly, but not more so than other passages, and contains nothing offensive. However, any one who wishes to judge for himself can consult the other translation, where he will find what is omitted; and this holds true of the French translation also. Taken together, they represent the whole book, or nearly so. Wherever the coadjutors have blundered in translation, too, the correct version will be found in Mr. Tucker's work. One passage reads: "She had read Sakson's Grammar, which tells how *Hamlet* was tempted by *Ophelia* in the Grove." Mr. Tucker uses "tested" and "Saxon the Grammarian." This last is certainly much nearer the name of the old Danish historian, Saxo Grammaticus, than the other.

A few specimens of the coadjutors' eccentric grammar may be subjoined: "Fully all the remainder of the last half way" for "half the remaining road." "That's of no matter." "In two or three days later still." "By all probability." "Marya Alekseyevna and her similars." "The other will forget only unless you do not any longer say a single word" (only in case you do not, etc.). An "Erarovski piano" is intended for an Erard; and "Burghaf" for the celebrated Boerhaave. Georgian is translated Circassian; Chinese is substituted for Japanese. The half-hours are translated wrong in every case but one. Half-past eight (half of nine) is given as half-past nine, and so on. 1885 on page 232 should read 1855 to make sense. Notes to explain that *sharaban* is the *char-à-bancs* phonetically transliterated into Russian, and that "Pushing Market" is the old clothes mart, would be real additions. "You always used to be an off horse" should read, "You always used to rear up (rebel)." For "behind the door," read "outside the door"; for "when such good fortune is hatched there is no need of making a choice," read, "when such good fortune nibbles at the hook," etc.; for "the embroidery on the shawl," read, "the sewing on the dress." In the sentence, "I had no necessity of going to Moscow; it was only necessary for me to go as far as Moscow," some revision of grammar is required, and the last part should read, "to go away from St. Petersburg." The Vyborg quarter of the city sometimes figures as Vyborgskaya Street, district, and so on. "Roast beef" becomes "stuffed beef." "How true it is that I am always on the first floor!" is the rendering offered of "How true it is that the I is always in the foreground!" A little observation of the sentences which follow would, perhaps, have obviated this peculiar blunder, and the same is true in some other cases. "It is already a quarter past ten" is the version of "we have been standing here a quarter of an hour already." "Visits" for "versts" may be a misprint, but it occurs more than once and makes havoc with the sense. "I'd have got my husband into favor with the generals" takes the place of "I'd have made my husband a general"; and a "phial of plaster" is given for a bottle of salve. "Exile" is translated "failure." "The man whom he suspected of committing a murder" stands for "the man whom he suspected of intending to commit a murder."

The conclusion of the matter is that Mr. Tucker and his rival translators of Tchernuishevsky's novel taken together make a strong troika. Any reader who wishes to take a trip through the mazes of his style will do well to travel in that favorite Russian fashion with all three Pegasi; and when he gets upset at last, in that incoherent ending of which not even the author's most devoted admirers can make anything by any common rule of reason, he will know as much about the puzzle as it is possible for any of the uninitiated unprovided with a key to the cipher to know.

BOOKS ABOUT THE STAGE.

The Stage Life of Mary Anderson. By William Winter. New York: George J. Coombes. 1886.

About the Theatre: Essays and Studies. By William Archer. London: T. Fisher Unwin; New York: Scribner & Welford. 1886.

Memoirs of Samuel Phelps. By John Coleman. London: Remington & Co.; New York: Scribner & Welford.

Bravos et Sifflets; Aggravés d'une Preface. Par Arthur Heulhard. Paris: Dupret; New York: F. W. Christern.

De la Convention dans la Tragédie Classique et dans le Drame Romantique. Par Maurice Souriau. Paris: Hachette & Cie; New York: F. W. Christern.

Mr. Winter's sketch of the life of Miss Mary Anderson is made upon much the same lines as his account of Mr. Henry Irving's memorable vitits to America, being compounded chiefly from the dramatic criticisms written from day to day

on separate performances as occasion demanded, and now diligently revised, enlarged, and improved. Like its predecessor again, it might not unfairly be called a eulogy rather than a criticism. In his preface Mr. Winter declares that "it is better to place a wreath of roses on the living brow of genius and beauty than to cast a sad garland on their tomb"; and acting on this conviction, he has extended to the living the benefit of the motto *Nil nisi bonum*. He is inclined to forget another motto, *Audi alteram partem*, and to refuse a hearing to the Devil's Advocate. But Mr. Winter's study of the stage, of its history, and of its arts, has been so deep and so thorough, and his taste and judgment on acting are so sound, that we accept with pleasure the statement of his views of Miss Anderson's ability. Moreover, he is quite fair in suggesting that there is another side to the shield, and that, although he personally prefers to dwell on the surpassing merits of Miss Anderson's acting, he confesses that her performance is not as perfect as he could wish, and that it has its demerits on which others may dwell, if they choose.

Mr. Winter's detailed criticism, his minute chronicling of beauties, and his mere hinting at deficiencies, set Miss Anderson's histrionic gifts in the best possible light, and show that she has the faculty of artistic growth. She began on the stage with splendid physical gifts and with but little else except character and ambition and determination. Material success she won easily, for what she had by nature was rare and precious. Artistic success she has achieved more slowly, by dint of hard labor, conscientious and unceasing. What Mr. Winter wrote of her six years ago (to be found here on p. 289) explains what she had to begin with, what she lacked then; and it affords a standard for us to judge how far since 1880 she has journeyed towards perfection:

"The triumph of Miss Anderson now is the triumph of an exceptional personality shrined in a beautiful person, but not yet the triumph of a consummate actress. With a superb voice, here is a defective elocution; with a magnificent figure, here is a self-conscious manner in the attitudes; with a noble freedom and suppleness of physical machinery, here is a capricious gesticulation; with a full and fine sense of opportunity for strong and shining points, here is but an incipient perception of the relative value of surrounding characters and the coördination of adjuncts; with a brilliant faculty for stormy and vehement declamation, here, as yet, is an imperfect idea of the loveliness of quiet touches, verbal shading, and suggestive strokes; with a vigorous, and often grand, manner of address, here is a frequent lack of concentration in listening; with wonderful intuitions as to the wilder moods of human passion, here is a restricted sympathy with the more elemental feelings—from which naturally ensues a certain vagueness in the effect of their manifestations."

The quotation is long, but the passage is one of the best in Mr. Winter's book, both in the thought and in the style.

'About the Theatre' is a collection of ten essays, of which only one has to do with acting, the rest being devoted to the drama at large, and especially to dramatic authorship. The three essays which deserve elaborate consideration are the first, "Are We Advancing?" (1882-1886); the second, on the "Censorship of the Stage" (of only remote interest to us Americans, fortunately); and the seventh, on the "Stage of Greater Britain." In the first of these Mr. Archer considers the progress which has been made by the contemporary drama of England since he published his exhaustive study of the 'English Dramatists of To-day,' some four or five years ago; and he comes to the conclusion that there has been an advance, and that the outlook is more hopeful now than it was then or than it has been any time these twenty or thirty years. With this conclusion any one who is really acquainted with the facts can hardly disagree. The decline of the drama, of which we hear so much, really dates from the overwhelming success of the novel in Sir Walter Scott's hands, followed shortly by the abolition of the patent theatres and by the perfecting by Scribe of the admirably constructed play depending for its interest chiefly on the ingenuity of its plot. Now, after fifty years, there are signs of a healthy revival: there are in London and New York theatres with well-trained companies, well proportioned and used to playing together; the novel has reached its extreme limit of extension, even if it has not lost some of its old magic; and the French play of the Scribe type is out of fashion in France. The best new French plays are almost as local in their interest as one of Mr. Harrigan's, so that they do not often repay adaptation, and, if adapted, they must now be paid for. This new condition of things has called into existence a most promising band of dramatists—Mr. Gilbert, Mr. Pinero, Mr. Merivale, Mr. H. A. Jones, Mr. Sydney Grundy in England, and Mr. Bronson Howard in America—men who have the literary sense, and who are not mere stage-hacks writing an accompaniment to the stage-carpenter and the scene-painter. Their work is but an earnest of what may be expected in the immediate future: and even in the present it is far better than those unacquainted with it might suppose. All this is skilfully set forth by Mr. Archer. Our author is learned, thorough, and acute. His style is vigorous and epigrammatic. He has a firm grasp on the facts as they are, and an insight into the future. This last quality is shown especially in the essay on the "Stage of Greater Britain." In this he proves that there is at present a complete theatrical reciprocity between England and America, and that, although just now there are more English plays and players in America than there are American plays and players in England, yet there is already a strong tendency to an equilibrium of export and import of theatrical wares between the two countries. Having proved this, Mr. Archer proceeds to consider what effect this broadening of the theatrical market will have on the dramatic literature of the future. It is pleasant to note that Mr. Archer is not a cockney, but a citizen of the world, as much interested in Greater Britain as he is in the British Isles, and wholly free from the insularity, not to say parochialism, which mars so much contemporary English criticism. His book is well printed, with marginal notes and an adequate index.

It is with something of a shock that we turn from the well-written pages of Mr. Winter and Mr. Archer to the rambling, scrambling chapters of Mr. Coleman's happy-go-lucky and devil-may-care book about Phelps. It is called the Memoirs of Phelps, but it is quite as much the memoirs of Coleman. It is written partly in the first person, at second-hand. It abounds in dialogue such as Mr. Coleman thinks Phelps probably used. It has a few anecdotes which were well worth saving, and not a little profanity and vulgarity which had far better have been cut out. Its rollicking recklessness is quite superior to dates or facts or exactness of any kind. As a portrait of Phelps, as a record of the impression he produced on Mr. Coleman by his acting, by his character, and by his conversation, the book has its value; but as a history of the life of an eminent English actor it is sadly deficient. Sainte-Beuve tells us that "le lecteur aime assez à se croire plus sévère que le critique; je lui laisse ce plaisir-là," and we cannot do better than follow so great an example.

M. Arthur Heulhard is a Parisian critic of music and the drama, who has published several works of erudition and of fantasy, and has now gathered together in a volume some forty of his occasional essays, most of which have to do with the recent works of contemporary French composers. They are none of them of any great worth, being disfigured by a forced and factitious humor, which has found its chief vent in the preface. "Les Frères Laurison" is an amusing little tale of two circus clowns, and "Le Percegraine" is a really ingenious little fantasy, reprinted from one of the early numbers of the new *Revue d'Art Dramatique*. Those who do not like M. Victorien Joncières, and those who do like a castigation of an incompetent and obnoxious personality, may be recommended to the perusal of the paper on that composer's "La Reine Berthe"; they will find it an excellent specimen of what the French call an "éreintement de première classe."

M. Maurice Souriau is a professor at Caen, and his study of the conventionalities of the classic tragedy and the romantic drama of France was apparently prepared first as a series of lectures. It has the thoroughness and the elaborate critical apparatus of the college professor's work, and appeals to those who are familiar with the facts and the fictions of the revolt of 1830, and who wish to see a careful discussion of the exact differences between the two schools in the work actually accomplished, as well as in the programmes proclaimed with the blare of trumpets. Mr. Lowell tells us that the *odium æstheticum* may burn more fiercely than the *odium theologicum*; and we know that the Classics and the Romantics hated each other as Guelf hated Ghibelline; but, after more than half a century, the fires are burnt out, and their ashes are not even dust in our eyes to prevent our seeing clearly the causes, the circumstances, and the results of the fight. M. Souriau shows that, although the Romantics declared for a return to nature, their chief effort was to be unlike the Classics, and that, in fact, they did little more than substitute one set of conventions for another. M. Souriau writes calmly, without prejudice, and with close logic.

Recollections of Mr. James Lenox of New York, and of the Formation of his Library. By Henry Stevens of Vermont. London: Henry Stevens & Son. 1886.

BESIDES the sketch which forms its main subject, this little volume contains much that the author describes as "mere bibliographical gossip, interesting only to those far advanced in bookhunting." The rest of it is interesting to all readers who care to follow the methods and details of a pursuit which Mr. Lenox, by his persistence and generosity, raised from a mere private amusement to the dignity of a public benefaction; and it abounds in proofs of that curious learning and critical keenness which made the name of Mr. Stevens famous among bibliophiles in both hemispheres.

If one must yield to the temptation when "Some demon whispers, Visto, have a taste," he will certainly find a wide field and a succession of contests and surprises in the chase after literary bric-à-brac. The great picture, or the rare curio, is a single thing, and, once authenticated, its value is secure. But a book is seldom the only one of its kind. Often a newly-found duplicate or triplicate destroys its glory as an unique, and the collector is happy who possesses the best of five or six copies. "The truth seems to be that few books remain unique long, when their attractions have once been noised abroad." On the other hand, a book-collector enjoys this advantage, that the prize has often, not always, an intrinsic value, apart from its singularity.

Mr. Lenox's first absorbing penchant was for collecting early editions of the Bible and parts of it, in all languages. Then he took to books relating to North and South America, and was led to collecting everything in any language pertain-

ing to the great Age of Discovery. Editions and translations of John Bunyan followed, and next all the editions of Milton. Shakespeariana had their share of his attention. In some subjects his collection is astonishingly rich, but the subjects and authors totally neglected are astonishingly numerous. In Mr. Stevens's words, "the result of all Mr. Lenox's enormous study and labor, to say nothing of his vast expenditure, it must be confessed, is a 'patchy library.'" And to render it a complete public library would require three or four more lives like his.

Accident often has much to do with a collector's success, though fortunate accidents only benefit those who are on the watch for them. Stevens gives some striking instances. One is the story of a child's plaything, a little copper globe picked up as an oddity in some foreign town, which, falling under the expert's notice, turns out to be as early in date as 1510, and second to hardly any other globe in historical and geographical interest. Another is a request made to him by Mr. Lenox that he would find him a copy of a certain woodcut map of the Holy Land, dated 1574. On a chance visit to a friend in New Hampshire two or three weeks later, he found the very map, fine and perfect, in a dilapidated copy of the folio Bible of that date, and has never since been able to procure a duplicate of it.

Of course the collector who buys to sell again becomes much better known among book-people than the Mæcenas who takes his wares. The story of the lucky finds of dealers, their rivalries, stratagems, exchanges, mistakes, and restorations is told by Mr. Stevens with amusing variety and fulness. The profession has its solid compensations, too, for the leaders of experience and authority. For instance, the 'Bay Psalm Book,' the first English book printed in America, in 1640, was bought in 1855, after a long and silent hunt of seven years, for twenty shillings, and sent to Mr. Lenox, under his order, for $400. A second copy, sold to another American amateur in 1868 for $600, passed, on the sale of his library in 1878, for just double the sum to its present owner, also an American.

From the nature of the case one might suppose that this field must at last be worked out, and all the great literary prizes discovered and permanently lodged. But this is far from being true. No one knows what may yet be revealed by palimpsests in unsearched nooks. The hope of a resurrection for Livy's lost books is encouraged by the late discovery of some of Sallust's. The Archives of Simancas of late years astonished historians; the records of the Council of Ten have teemed with surprises; and church collections both in Mexico and Asia have yet to say their last word. And besides the hidden things there is much that is known and placed, awaiting only the slow but certain process of distribution. Political troubles, such as have dispersed famous collections in Italy and France, are gathering for the disintegration of private fortunes and museums in England. Every now and then a gallery or a treasure of family plate comes to the hammer. America in its turn becomes a collector, as sudden fortunes ask the crowning touch of letters and refinement. Not immigrants only, but a steady flow of books, pictures, curios, streams across the sea, and, on a grander scale, *Græcia capta ferum victorem cepit, et artes Intulit agresti Latio.* This breaking up and reconstruction of special collections promises perpetuity to the book-hunter's pursuit, and the taste for it will never fail so long as human nature is curious. Nor is the contest a hopeless one even when a slender purse is pitted against the millions of a Hertford or a Rothschild, or, still more boldly, against the wealth of public institutions. How much knowledge and craft may win, aided by the parsimony which only a passion inspires, is told in Balzac's wonderful story of the old collector, Cousin Pons.

It will not be very long before permanent national institutions must, by the law of attraction of the greater body, have drawn all minor collections to themselves. The Lenox Library, at least, is placed beyond this risk. Alongside the splendid charities which will make its founder's name forever fragrant among the poor and the unhappy, this museum will endure for the scholar's delight, as a monument to his taste and his liberality.

Mr. Stevens's book is prettily printed, and has portraits of the lamented author and of his patron.

Parliamentary Government in Canada. A Lecture read before the Law School of Bishop's College, Sherbrooke, by C. C. Colby, M. P. Montreal: Dawson Bros. 1886.

It would probably excite astonishment and even indignation in the Congressional statesmen who are managing the affairs of the nation with so much skill and discretion at Washington, to be told that the Dominion of Canada is in any way politically superior to the United States. Mr. Colby, however, does not hesitate to make this assertion in the most unqualified manner. The Canadian system is a simple duplicate of the British, with trifling necessary differences, such as an elected Senate instead of a House of Lords, and a Governor-General instead of the Queen. It is based, therefore, on the principle of ministerial responsibility, and we have here the testimony of a gentleman who is described in the preface by the late Mr. Alpheus Todd as "an experienced politician, as well as a close observer, and an earnest student in the region of political knowledge," that the working of that principle as transplanted is satisfactory in a high degree. Indeed, Mr. Colby is so absorbed by it that he omits to give any account of the constitution and procedure of the two houses of the Legislature, which would have been an interesting complement.

Since the civil war, foreigners, and especially Englishmen, perceiving that the United States, which they had always treated with contempt, have become a considerable item in the world's affairs, have given a good deal of study to our institutions; but as they generally do not get beyond the Constitution, and know little or nothing of the real working of the Government, their comments are practically worthless. Mr. Colby, whether from propinquity or some other cause, has penetrated deeper, and is not backward in expressing his opinion. After a review of our procedure, which is far from laudatory, he sums up:

"That one of the most intelligent and progressive nations on the earth should, in this nineteenth century, continue to adhere to a system of irresponsible government, fraught with so much inconvenience and peril, a system which has been outgrown by France, Austria, Italy, Belgium, and other nations and states, and which exists now only in Russia, Germany, Turkey, Brazil, China, and a few other countries, is a most glaring anomaly and anachronism."

One proposition we are tempted to quote, because the writer of this review has always maintained the same thing in substance ever since the outbreak of the war, though he has never seen it stated by any other writer:

"James Buchanan was a Democratic President. During the last two years of his term the majority in Congress was Republican. Had our system of responsible government existed there, whatever might have been the personal opinions or preferences of the President, he would have been obliged to act under the advice of a Republican Cabinet. The great offices of state would have been filled by Republicans responsible to Congress. The policy of the Administration would have been Republican. Every act of the Government would have been a subject for inquiry, criticism, and constitutional censure, and the great peril which was then impending over the nation might have been averted. But, under the system of irresponsibility, the President was surrounded by advisers who were inimical to the majority in Congress and in the nation. History tells the result. The Cabinet of Buchanan was the hot-bed in which the seeds of rebellion first germinated. Secretly, traitorously, the men who had sworn to uphold the Union and the Constitution plotted their overthrow. Had Republican counsels prevailed in the Cabinet as in Congress, the great rebellion might have been indefinitely postponed, perhaps rendered impossible."

But if we are prepared to make large concessions to Mr. Colby, we are not disposed to surrender the whole ground, nor shall we seek our revenge in writing of the Queen with a small *q*. The practice of requiring the Cabinet to resign upon a defeat in the House of Representatives, and of giving it the corresponding means of self-defence in a dissolution of that house, would be quite impossible without serious changes in our Constitution; and we set far too high a value on the restraining influence of that instrument (an influence which English statesmen are beginning to regard with envy), and on the difficulty of altering it, to advocate or even wish for any such revolutionary action. But we do not think it is proved to be necessary, and have a suspicion that responsible government has not yet reached its highest form. As the Queen does not and cannot appoint the Ministry in Great Britain, that function devolves upon the Parliamentary majority, the people having no direct voice in the matter. The whole power of Parliament is, therefore, directed to making and unmaking ministries. Again, the ministry being a purely voluntary association, the premier can only find colleagues by promising to stand or fall with them, which may well be an artificial reason for the tradition of "solidarity." Ours, on the other hand, is the only great constitutional nation which has a chief magistrate elected, to all intents and purposes, directly by the people. A Cabinet appointed by him would have to be handled by Congress in a much more gingerly manner than the Ministry is by Parliament, and both sides might wait for general approval in the biennial elections of Congress or the quadrennial of President. A defeat in the House of Lords does not involve a resignation of the Ministry, nor does a defeat in the Senate, according to Mr. Colby, in Canada. Why, more than they do now, should our Cabinet resign because they cannot get what they want? Single unsuccessful officials, moreover, could be much more easily changed than now. However this may be, if the measure which is occasionally spoken of, of admitting the Cabinet officers to the floor of Congress, should ever be adopted, some political developments of exceeding interest could not fail to follow.

Praise-Songs of Israel: A New Rendering of the Book of Psalms. (New and Revised Edition.) By John De Witt, D.D., of the Theological Seminary, New Brunswick, N. J.; a Member of the American Old Testament Revision Company. Funk & Wagnalls. 1886.

We have already incidentally, in reviewing the Revised Old Testament (No. 1042 of the *Nation*), expressed our appreciation of the excellence of Prof. De Witt's rendering of the Psalms. We are now very glad to find that the unstinted favor bestowed on it both by the Bible-loving public in general and by competent critics, in this country as well as in England, has encouraged the translator to bring out a second edition within less than two years from the first issue. In preparing for and executing this new edition, Prof. De Witt subjected the whole work to a severe scrutiny, in which, he assures us, "every

word has been challenged anew, and the structure of every sentence and phrase carefully pondered." The leading idea, from the start, was to have "the thought of the original put forth in the clearest, strongest, and best English expression," and thus "render the original more faithfully, and yet more poetically" than either the Authorized Version or the Revised was able to do, owing to reasons partly ecclesiastical and partly inherent in collective work. To make it clear to our readers how far the 'Praise-Songs' here and there deviate from the accepted versions, we pick out a few verses of probably the most obscure—as in form, the most archaic—song of the Psalter, the sixty-eighth, which affords ample room for exegetical divergences and diversity of diction in rendering.

In the Authorized Version we read:

4 Sing unto God, sing praises to his name: extol him that rideth upon the heavens by his name JAH, and rejoice before him. . . . [Revised: *Cast up a high way for him that rideth through the deserts. His name is Jah; and exult ye before him.*]
11 The Lord gave the word: great was the company of those that published it. [*The women that publish the tidings are a great host.*]
12 Kings of armies did flee afraid, and she that tarried at home divided the spoil.
13 Though ye have lien among the pots [*Will ye lie among the sheepfolds?*], yet shall ye be as the wings of a dove covered with silver, and her feathers with yellow gold.
14 When the Almighty scattered kings in it, it was white as snow in Salmon [*it was as when it snoweth in Zalmon*]. . . .
24 They have seen thy goings, O God; even the goings of my God, my King, in the sanctuary. . . .
25 The singers went before, the players on instruments followed after; among them were the damsels playing with timbrels. . . .
27 There is little Benjamin with their ruler [*Benjamin their ruler*], the princes of Judah and their council, the princes of Zebulun and the princes of Naphtali.
29 Because of thy temple at Jerusalem shall kings bring presents unto thee.
30 Rebuke the company of spearmen [*the wild beast of the reeds*], the multitude of the bulls, with the calves of the people, till every one submit himself with pieces of silver [*trampling under foot pieces of silver*]: scatter thou the people that delight in war.

The corresponding lines in the 'Praise Songs' run thus:

4 Sing ye to God, strike the harp to his Name!
Make a highway for the rider through deserts!
I AM is His Name; oh exult ye before him. . . .
11 The Lord giveth the word;
The women heralding gladness are a great host.
12 Kings of armies—they flee! they flee!
She that bideth at home divideth the spoil.
13 When ye are in your camps among the sheepfolds,
They are as a dove's wings, covered with silver,
And her pinions with yellow gold.
14 When the Almighty scattereth Kings there,
They are like the driving snow on Zalmon. . . .
24 They saw thy triumphal entrance, O God!
The triumphal entrance of my Mighty God—
Of my King, into the sanctuary.
25. The singers went foremost, behind them the harpers,
In the midst of the damsels, beating their timbrels.
27 Benjamin, the youngest, is their leader,
Princes of Judah are their throng—
Princes of Zebulon—princes of Naphtali! . . .
29 To thy palace above Jerusalem,
Unto thee, the Kings bring their gifts.
30 Rebuke the wild beasts of the reeds,
The herds of strong cattle, with the steers of the nations,
That come crouching with bars of silver;
He hath scattered the nations that have pleasure in war.

It will be seen at a glance that Prof. De Witt's rendering is immeasurably superior to the old in vigor, rhythm, and intelligibility, and that his most striking deviations from King James's Bible are such as have been already adopted by more modern exegesis, as represented by the collective scholarship of the British and American Revisers. A closer examination will show that, where the requirement of intelligibility was imperative, he allowed himself insertions of words not contained in the original text and not distinctively marked (such as "in your camps," in verse 13, and "driving," in verse 14). Of more questionable propriety are the substitution of "I AM" for "JAH," in verse 4, and of "*To* thy palace," for words faithfully, though more or less conjecturally, answering to the Hebrew expression. Whether these latter changes are founded on hypothetical emendations of the Hebrew text —substituting *ehyeh* for *b'yāh*, and *lh'ē . . .* for *mēhē . . .*—or on other grounds, will be seen when the promised annotated edition appears. Such changes are, however, rare in the new translation, which, when closely weighed in critical scales for which literalness is not the strictest criterion of fidelity, will be found to justify, on the whole, the claim of reflecting the original both "more faithfully and more poetically."

Socialism and Christianity. By A. J. F. Behrends, D.D. Baker & Taylor. 1886.

THE contents of this volume, originally a course of lectures to theological students, represents the attempt of a clergyman to understand the industrial and social situation, and to determine the claims of the reformers to Christian sympathy and support. The author has perused the books of authority upon both sides of the questions at issue, and his criticisms of the facts and the economic doctrines of the hour, though not distinguished by any striking originality, display intelligence and humanity, and are of especial interest to those who are close observers of the course of church sympathy. No one need expect any revolutionary vigor in these pages, any insistance on the communal and unworldly elements in Gospel teaching, or any suggestion that the wisdom of this world is not entirely competent to render judgment. Socialism is soon found to be atheistic, materialistic, and inimical to the institution of monogamic marriage; its economical principles are readily discredited; and, of course, it meets with its due of denunciation. The present economy of society is, in its turn, sustained, and its various elements passed in favorable review. The law that one must live by the sweat of his brow is frequently reiterated; the blessed effects of the "fear of want," the responsibility of each man for his own happiness, the right of the individual to all he can appropriate by labor of hand or brain, and, in general, all the commonplaces of conservatism, are rephrased, with the single restriction, in criticism of the laissez-faire school, that these elementary truths are to be held in a humane spirit, and the workman to be treated as having a moral value plus his worth as a producer of wealth.

It would be useless to follow the author through his discussion; he accepts the organization of society as it is, and asks only for some carefulness in running the machine, or, at most, for the insertion of a bolt or the tightening of a screw. High license, local option, indefinite penal sentences, legislation against overcrowding in tenements, and especially a stringent Scriptural divorce law, are his nostrums. He declares that the suggestion that a graduated income tax should be used to make five million dollars the maximum limit of private fortunes "involves the right of the state to prescribe to the Almighty how much brains a man shall be permitted to have"; that the Vanderbilt fortune was "as legitimately earned as the wealth of any great inventor," and "to denounce it as theft is to invite the contempt of business men and to advertise one's ignorance of modern progress"; and that the national debts of Europe are justly liable to repudiation by the generation that inherits them. These opinions illustrate the capitalist sympathy of the author, with his occasional lurch to windward; but perhaps the "commonsense" strain in his thought is most vividly shown in his revised version of a famous text which he reads, "Bear ye one another's burdens; *yet in such a way that every man shall bear his own.*" It would be a pleasure to hear Count Tolstoi comment, from the standpoint of a primitive Gospel Christian, on the words which we have italicized.

Norsk Forfatter-Lexikon 1814-1880. Paa Grundlag af J. E. Krafts og Chr. Langes 'Norsk Forfatter-Lexikon, 1814-1856,' af J. B. Halvorsen. Christiania. 1885-86. 8vo.

SOME forty years ago Jens Edvard Kraft, who had been Rasmus Nyerup's assistant in the preparation of the useful 'Almindeligt Litteraturlexicon for Danmark, Norge og Island,' undertook the preparation of a 'Dictionary of Norwegian Authors,' to embrace the years 1814 to 1856. But it was not until after his death, which occurred July 21, 1853, that his materials were arranged by the archivist Christian Lange, who, adding to and continuing the work, published it, in parts, from 1857 to 1863. The period of twenty years since that time shows a vigorous growth in Norwegian literature; that short term having sufficed for the birth and development of the entire school of modern writers founded by Henrik Ibsen and Björnstjerne Björnson, the former having but four titles recorded in Kraft's book, and the latter none. Mr. Halvorsen has adopted the same title for his work, and, with noticeable modesty, announces upon his title-page that it is founded upon that of Kraft and Langi, but a comparison of the two shows that every line of the old work has been subject to a careful scrutiny and painstaking revision, and that, as a result, scarcely a half-dozen entries are retained *verbatim*, and in reality his is a new and independent labor. This fact is best shown, perhaps, by a comparison of the extent of the two works. Kraft's book contains 1,550 names and filled 719 octavo pages, while Mr. Halvorsen's work will include the names of about 4,000 persons, and his first volume, containing the first two letters of the alphabet, 156 names in A, and 365 in B, has 569 pages, these being about one-tenth larger than the pages of the earlier book; whereas the letters A (81 names) and B (198 names) occupied but 128 pages in the old work.

The biographical notices are concise in statement, though proportioned in length to accord with the importance of the subject, but are almost stereotyped in form, giving in an invariable order the parentage of the author; date and place of birth; education, with college degrees; official positions held; a notice of such travels as may have been undertaken in connection with literary labors; honors conferred; and, finally, if married, a brief record, giving the date of the event, and the name, parentage, and date of birth of the person married. Each detail is carefully considered; for example, when an author is living the form of record of birth is "born ——," but if at the time of printing the author was dead the form is changed to "was born ——." Following the biographical notice is given a list of references to biographies and to articles in periodicals which give fuller information concerning the author, or which contain critical summaries of his literary work, while following the titles of his own works are references to reviews of the particular books. These references show an extraordinarily wide range of search among books and the leading periodicals of nearly every country in Europe, England, and the United States. Among the American periodicals referred to are the *Atlantic Monthly*, the *Century*, the *Christian Union*, *Harper's Weekly*, the *Nation*, the *National Review*, and the *North American Review*. The article upon each author includes a list, giving in chronological order the titles of all books which he has written, edited, or translated. The various editions of his own works are given, and translations of them are mentioned. The titles are not printed at great length, but are abbreviated with care, and in all cases the place of publication, date, size, and number of pages are stated; and further bibliographical value is given to the work by the care taken to indicate anonymous and pseudonymous books, and by supplying the names of a great number of authors, editors, and translators, when these do not appear in the titles. In addition to the list of books, whatever of importance each author has contributed to newspapers, periodicals, or the publications of societies is enumerated, often at great

length; as, for instance, in the article upon Björnson, where this list fills sixteen closely printed pages, and, with the catalogue of his books (nearly thirty pages more), forms a remarkable witness to the truly titanic energy of this great writer. The extraordinary length of the article upon Björnson, sixty-two pages, brought upon the author the charge of showing political bias, but he deemed it a sufficient answer to point to the great mass of material.

The period covered by this in every respect most admirable work is, according to the title, from 1814 to 1880, but this must be understood to mean, that every Norwegian author is included, one or more of whose books has been printed within those years; and all works written by the authors included are enumerated, though printed before 1814 or since 1880. The information, also, concerning the authors contained in the book is completed to as near the time of printing as possible; and as each signature bears the date of printing, which is equivalent to the date of final revision, it is possible to know up to what time the account of each author is completed. A few foreigners are included by reason of having resided in Norway, and, during such residence, published works there. The first volume contains the names of the Rev. Mordaunt Roger Barnard, who was from 1858 to 1862 in charge of the English Church at Christiania, and published there during the latter year 'Sketches of Eminent English Authors, with Extracts from their Works,' and of Mr. Thomas Bennett, widely known to tourists in Norway, and the author, among other works, of a 'Handbook for Norway,' the twenty-first edition of which is recorded. The Danish critic, Georg Brandes, is also included by virtue of his various contributions to the Norwegian journals. The work, so far as published, through the letter D, gives evidence of very few female writers in Norway, only nineteen names being presented. Of these but two are authors of note, Mrs. Adolphine Marie Colban, who wrote several good stories, and helped to translate Victor Hugo's 'Les Misérables,' and who, a resident at Paris after 1859, died in Rome in 1884, and was buried there by the side of Norway's great historian, P. A. Munch; and Mme. Camilla Collett, the poet Wergeland's sister, and the author of Norway's best-known novel, 'Amtmanden's Döttre' (The Magistrate's Daughters). She, too, has spent the last twenty-five years upon the Continent, and is yet, in her seventy-fourth year, a vigorous and entertaining writer, celebrated as the most zealous champion of women's rights in Scandinavia.

Earthquakes and Other Earth Movements. By John Milne, Professor of Mining and Geology in the Imperial College of Engineering, Tokio, Japan. With 38 figures. Pp. 363. [International Science Series.] D. Appleton & Co. 1886.

THE literature concerning earthquakes is rich in chronological accounts and scientific treatises, but there has hitherto been no work well suited to the needs of the general reader. In this little book Prof. Milne has endeavored to bring together all that is known concerning the nature and causes of earthquake movements. His task was one of much difficulty: few parts of the field of natural science are so encumbered by irrelevant observations and abandoned theories; no portion of the science of geology requires to the same degree a mathematical presentation of its laws.

Prof. Milne's excellent work in the science of seismology has been done in Japan, in a region of incessant shocks of sufficient energy to make observation possible, yet, with rare exceptions, of no disastrous effects. He has had the good fortune to be aided by Mr. Thomas Gray, a gentleman of great constructive skill, as well as by Profs. J. A. Ewing, W. S. Chaplin, and his other colleagues in the scientific colony which has gathered about the Imperial University of Japan. To these gentlemen we owe the best of our science of seismology, for before their achievements we had nothing of value concerning the physical conditions of earthquakes except the great works of Charles Mallet, and Mallet, with all his genius and devotion to the subject, had few chances to observe the actual shocks, and so failed to understand many of their important features.

The general reader, whether he be interested in the science of seismology or no, will find in this little book an excellent illustration of the ingenuity which is lavished on the experimental work of modern research. It is a common notion that the greatest feats of the contriving faculty appear in our economic devices; the fact is, that far more technical skill and inventive power is now given to apparatus desired for pure research than are devoted to inventions connected with practical life. It appears, indeed, as if modern science were developing a race of men in whom the passion of winning abstract truth had become stronger than the old gainful desires. The chapters "on seismometry" and on earthquake motion, as deduced from experiment, show something of this fact, though seismology is a very limited field for experiment.

The closing chapters of the book, which treat of "Earth Tremors," "Earth Pulsations," and "Earth Oscillations," give an excellent résumé of the evidence which shows us that this *terra firma* is in a condition of incessant movement, throbbing with the blows to which it is subjected by the titanic forces of its deeper parts.

It would be easy to criticise this really valuable treatise. Its style is poor; the arrangement of matter leaves much to be desired; there is a sad lack of all the arts of the bookmaker; but a good deal can be pardoned to a zealous worker who writes from the other side of the world, and who has done a substantial service to popular science. There are many errors of print. W. T. Bingham, on page 334, is W. T. Brigham. In the index, "Wenthrop on the *New Zealand* earthquake of 1855" is really Winthrop on the *New England* earthquake of 1755! In the text, also, it is "Wenthrop." It is not easy to pardon this error, for the reason that Prof. John Winthrop was probably the first to apply accurate computations to earthquake movements, and thus to obtain the rate of movement of the shock. He is really one of the founders of the science of seismology, if not the very first who approached the subject in the scientific way.

Fortuny. Par Charles Yriarte, Inspecteur des Beaux Arts. [Les Artistes Célèbres.] Paris: J. Rouam.

THE story of an artist's life, begun in poverty and ended in wealth and fame, is told in this volume with the charm of style and critical insight to which M. Yriarte has long accustomed us. The Spanish painter commemorated in its pages, Mariano Fortuny (José-Maria-Bernardo), who was born in 1838 at Reus, a small town in the province of Tarragona, showed marked artistic talent at a very early age. Left an orphan in his fifteenth year, he went with his grandfather, a cabinetmaker by trade, on foot to Barcelona, and there by his clever sketches and wood carvings attracted the notice of a sculptor, through whose intervention with the Alcalde he obtained a pension of forty francs a month from the municipality. This enabled him to enter the Academy of Fine Arts as a student. After four years of diligent work, during which he increased his slender resources by decorating village churches with paintings in distemper, Fortuny competed for and won the Prix de Rome, instituted in favor of Catalonians of remarkable promise, and in May, 1857, left Barcelona for the Eternal City. That he should have begun to work there, as M. Yriarte affirms that he did, after the manner of Overbeck's school, must have been due to accidental circumstances, for it is impossible to conceive anything more uncongenial to the nature of the young Spanish painter than the cold, colorless, neo-mystic style of the Nazarenes. Fortunately for his future development in that path which nature indicated, he was selected by the municipality of Barcelona, in 1859, to accompany the Spanish army under Gen. Prim to Africa, in order to make sketches for a large picture of some important military event incident to the campaign against the Emperor of Morocco. Thus it happened that at a most impressionable period of life, he came into contact with the pomp and splendor of the East, and under its influence returned to Rome conscious of his vocation, which was to be the painter of the surface of things rich in color and brilliant in tone.

In Africa he had learned to delight in magical effects of light shining upon jewels, arms, and rich stuffs, and these he strove to keep in mind by filling his Roman studio with all things that emit, reflect, or retain it. He draped its walls with Oriental stuffs, and crowded the glass cases which stood at intervals around it with Persian and Spanish tiles, Hispano-Moresque dishes, irridescent Majolica plates, Venetian glass, and costly weapons from the East. "One asks one's self," says Fortuny's biographer, "how it was possible for an artist to work in such a *milieu*, where the eye was distracted by so many objects which shimmered in the light, and caught luminous points. . . . But, after all, such are the materials of Fortuny's art, and when he uses them in pictures which rival Oriental carpets and spangled stuffs in brilliancy, he will perhaps know how to soften and temper their brilliancy, and blend them into a harmonious whole."

The studio museum of Fortuny, once seen never to be forgotten, was one of the sights of Rome. It formed part of a large brick building of the sixteenth century, situated in a *vigna* on the right-hand side of the Via Flaminia, which leads from the Porta del Popolo to the Ponte Molle. The building stands, or stood (for, alas! "Roma non è piu com' era prima") on the corner of a lane which, branching from the main road, leads, or led, to the Villa di Papa Giulio III., and thence, under the Arco Scuro, past the Acqua Acetosa, to the broad Campagna. Among the objects in the studio which attracted attention was the huge unfinished canvas, over forty feet in length and about twelve in height, of the taking of Tetuan, which Fortuny had engaged to paint for the city of Barcelona in commemoration of the Spanish invasion of Morocco. The task proved to be beyond the strength of one who, being accustomed to deal with picturesque subjects in which the human figure played a subordinate part, found himself involved in ever-increasing difficulties when he attempted to treat an historical subject on a great scale. At last, to his extreme relief, the compact was annulled by mutual consent, and he was left free to work according to his will. Picture replaced picture on his easel, each more glowing with color than its predecessor; each showing an increasing disposition to make the decorative accessories of greater importance than the main subject, which was, after all, but an excuse for a brilliant *entourage*. To quote the merited criticism of his biographer, "Most of Fortuny's works were inspired by their backgrounds." As an instance, take the "Supplicés," painted in 1870-72, during his residence at Seville. This picture grew out of a study of

the Gate of Justice in the Alhambra, in which he had endeavored to render the effect of sunlight falling on white walls; the tones of transparent shadows cast by their projecting planes; the subdued lustre of gold hidden in the stucco stalactites of their cupolas; the quality of light reflected from glazed tiles, arms, and brass lamps half hidden in shadow, and to express that lethargy peculiar to the East. All this found place in the picture which it suggested. There, in the cool shadow of the great arch, sits the Arab judge, dozing away the slowly creeping hours, with the murmur of running water in his ears, while two miserable negroes, with their legs fast in the stocks, lie prone at his feet in the burning sun, and a third, with head and legs thrust through the sacrificial plank, roasts under its pitiless rays.

Knowing this picture and its history, we know Fortuny, with his qualities and his limitations. Four years before he painted it he had contracted with Messrs. Goupil & Co. of Paris to sell them as many water-colors as he could paint at 100 francs a piece, and the relations thus opened in 1866 brought him for the first time to Paris, where he became intimate with Gérôme, Meissonier, Zamacoïs, and Regnault. On leaving the French capital he went to Madrid, where he married Cecilia Madrazo, daughter of the Director of the Royal Museum, before returning to Rome. Although his name was previously known to the artistic world in France, it was not until 1870, when Goupil exhibited his picture of a marriage in the sacristy of a church at Madrid, known as La Vicaria, that his reputation was firmly established. It was strengthened by subsequent works, such as the "Reception of a Model at the Academy," the "Halt of the Travellers," "The Drunken Harquebussier," and "Les Suppliciés," all of which hang on the walls of the Stewart gallery in New York, with other masterpieces from the same hand.

The last summer of the gifted painter's life on his return to Italy from England, which he visited with his friend Baron Davillier in the spring of 1874, was spent in the Villa Arata at Naples, with his wife and two children. At its close he returned to his Roman studio ill and unfit for work. The place had lost its charm, and he talked of leaving it for Spain; but this project was not to be realized. Seized with a second attack of tertian fever, he breathed his last on the 21st of November, at the age of thirty-six.

The world remembers him by his pictures, but comparatively few persons are aware that he was one of the most skilful metal workers of his time. The sword in the Moorish style which he designed, forged, and damascened during his residence at Grenada, is spoken of by M. Yriarte as a masterpiece which resumes all the art and all the processes of fabrication practised by the Moslem *espaderos* and azzuminists at Cordova in the fifteenth century. Gifted in so many ways, founder of a school, "l'école de la main," as M. Yriarte happily styles it, in which brilliant execution and color ranked above purity of style and depth of spiritual insight, Fortuny cannot be said to have exercised a happy influence upon modern art. By his marvellous execution and perfect command of every artifice of color, he gave a magic charm to his works which none can resist; but the pictures of his imitators, in which the master's defects only are reflected, reveal the fact that their prototypes depend greatly for their effect upon superficial qualities, calculated to fascinate the senses rather than to convince the judgment.

The Yeomen of the Guard: Their History from 1485 to 1885, and a Concise Account of the Tower Warders. By Thomas Preston. London: Harrison & Sons. 12mo, pp. 198.

THE Yeomen of the Guard—better known as "Beef-Eaters"—are a corps organized by Henry VII. for his protection on the day of his coronation, October 30, 1485, and which has served as a bodyguard of the sovereign ever since. The four hundredth anniversary of its organization affords occasion for a brief and readable history and description of this famous body. It is well illustrated with representations of the costume of the different grades of officers and men, several of them in the form of portraits, as, Viscount Grandison (a colored plate), Viscount Barrington (the present captain), Sir Christopher Hatton, and others. The frontispiece is a striking picture of the Yeoman, after Sir John E. Millais. Mr. Preston questions the generally accepted derivation of *beef-eater* from *buffetier*, "inasmuch as the Yeomen never had had charge of the buffets at the royal banquets." He says there is a bird called beef-eater, with a strong, thick bill, and asks why they may not have got their name from a resemblance of their partisans to the bill of this bird: "The English yeomen were often referred to as bill-men, because they carried a weapon with a hook resembling the beak or bill of a bird." The appendix upon the Tower Warders is appropriately added, because these, although an entirely different body from the Yeomen of the Guard, are uniformed like them, and, like them, called popularly "Beef-Eaters."

The Saunterer. By Charles Goodrich Whiting. Boston: Ticknor & Co. 1886.

"THE Saunterer" is one who loves New England the year through, especially as seen among the hills from "the fence-corner," or even within that delectable rustic museum of grass, flower, and bug, snakes, and weeds. He originally wrote these up-country or seashore glimpses of nature and the New England "native" for a newspaper, and this, perhaps, excuses the fragmentary character of his book. It is not to be read except by moments; and taken in this way, like a book of devotion, one finds pleasure in its suggestions of rural landscape, its quiet moralizing, or even in its too-labored rhetoric. The writer is not a naturalist, but a poet; he is much more given to sentiment than to observation, and meditates on human things more than on the scene before him. At intervals of a few pages he interjects into the history of the annual round of nature a poem, either related or unrelated to the paragraphs between which it lies, and this gives a peculiar effect of spontaneity to the lyrics or sonnets as the case may be. The pleasantest impression one gets in reading it, however, is that it expresses again that delight in quiet nature which is so much a New England trait that every country village has its wood-wanderer, of whom Thoreau is the type.

BOOKS OF THE WEEK.

After-Dinner Stories from Balzac. New ed. George J. Coombes. 50 cents.
Arnold, T. Clarendon's History of the Rebellion. Book VI. Macmillan & Co. $1.10.
Barbey d'Aurevilly, J. Les Critiques, ou les Juges jugés. Boston: Schoenhof.
Blavet, E. La Vie Parisienne. Boston: Schoenhof.
Boisgobey, F. du. A Fight for a Fortune. Rand, McNally & Co. 25 cents.
Brooks, H. M. Olden Time Series No 4: Quaint and Curious Advertisements. Boston: Ticknor & Co. 50 cents.
Clement, Clara E. A Handbook of Christian Symbols and Stories of the Saints as Illustrated in Art. Edited by Katherine E. Conway. Boston: Ticknor & Co. $2.50.
Coulter, J. Mr. Desmond, U. S. A. Chicago: A. C. McClurg & Co. $1.
Danforth, P. Not in the Prospectus: A Novel. Houghton, Mifflin & Co. 50 cents.
Dostoïevsky, Th. Souvenirs de la Maison des Morts. New York: Christern.
Fabre, Ferdinand. Monsieur Jean. Boston: Schoenhof.
Hollister, O. J. Life of Schuyler Colfax. Funk & Wagnalls.
Houssaye, A. Les Comédiens sans le savoir. Boston: Schoenhof.
Issaurat, C. La Pédagogie; son évolution et son histoire. New York: Christern.
Jefferies, R. The Open Air. Harper & Brothers. 25 cents.
Killikelley, Sarah H. Curious Questions in History, Literature, Art, and Social Life. Pittsburgh, Pa.
Kingsbury, Mrs. J. D. Bradford Academy, and Memoir of Harriette Briggs Stoddard. Boston: McIndoe Brothers.
Life of Cassius Marcellus Clay. By Himself. Vol. I, Cincinnati: J. F. Brennan & Co.
Loti, Pierre. Pêcheur d'Islande. Boston: Schoenhof.
Mackenzie, M. The Hygiene of the Vocal Organs. Macmillan & Co. $1.50.
Pisemsky, A. Th. Mille âmes. New York: Christern.
Pomegranate Seed: A Novel: Harper & Brothers. 20 cents.
Rambaud, A. Histoire de la Révolution française 1789-1799. Boston: Schoenhof.
Reeves, Marian C. L., and Read, Emily. Pilot Fortune, Boston: Houghton, Mifflin & Co. 50 cents.
Rickoff, A. J., and Davis, E. C. Numbers Illustrated. D. Appleton & Co. 42 cents.
Roberts, B. T. First Lessons on Money. Rochester, N. Y.: Published by the Author.
Rolfe, W. J. Byron's Childe Harold. Boston: Ticknor & Co. 75 cents.
Ross, J. M. Poems by John Milton. Edited with Life and Notes—Critical and Philological. T. Nelson & Sons. $1.25.
Sargent, F. L. Guide to the Recognition of the Principal Orders of Cryptogams, and the Commoner and More Easily Distinguished New England Genera. Cambridge, Mass.: C. W. Sever.
Schopenhauer, A. Le Monde comme Volonté et comme Représentation. Traduit par J. A. Cautacuzène. 2 vols. 8vo. New York: F. W. Christern.
Shoppell's Modern Houses. Vol. I. No. 3. Coöperative Building Plan Association. $1.
Siddons, J. H. The Shakespearian Referee: A Cyclopædia of 4,200 Words Obsolete and Modern Occurring in the Plays of Shakespeare. Washington: W. H. Loudermilk & Co.
Souriau, M. De la convention dans la tragédie. Boston: Schoenhof.
Southworth, Mrs. E. D. E. N. The Missing Bride. Philadelphia: T. B. Peterson & Bros. 75 cents.
Spaulding, R. First Lessons in Amateur Photography. Chautauqua Press.
Stanley, Jane. A Daughter of the Gods. Harper & Brothers. 25 cents.
Stephen, L. Dictionary of National Biography. Vol. VII. Brown-Burthogge. Macmillan & Co. $3.25.
Stuart, Esmé. A Faire Damzell. Harper & Bros. 25 cents.
Talmage, Rev. T. de W. The Battle for Bread. J. S. Ogilvie & Co. 25 cents
Tolstoi, Count Leo. War and Peace. Part 3, Conclusion. Harper's Franklin Square Library. 25 cents.
Tolstoi, Count L. War and Peace. 6 vols. W. S. Gottsberger. Paper, $3. Cloth, $5.25.
Tourguéneff. I. Au Bulgare (à la Veille). New York: Christern.
Vallès, Jules. L'Insurgé. Boston: Schoenhof.
Ventura, L. D., and Shevitch, S. Misfits and Remnants. Boston: Ticknor & Co. $1.
Wade, W. P. Law of Attachment and Garnishment. 2 vols. Bancroft, Whitney & Co.
Weld, M. C. The Percheron Horse in America. In France, by C. Du Hays. O. Judd Co. $1.
Whiton, J. M. Six Weeks' Preparation for Reading Cæsar. 3d ed. Boston: Ginn & Co. 45 cents.
Winchell, A. Geological Studies, or Elements of Geology. 367 Illustrations. Chicago: S. C. Griggs & Co. $3.
Wood, De V. The Luminiferous Æther. D. Van Nostrand. 50 cents.

THE LEISURE SEASON SERIES, the third of Messrs. Henry Holt & Co.'s "Leisure" series, will be inaugurated at once by the publication of a cheaper edition of MISS McCLELLAND'S 'OBLIVION.' The second number will be a new novel by Thomas Wharton, author of 'A Latter-Day Saint,' entitled HANNIBAL OF NEW YORK. The series will be in flexible cloth at 50 cents per volume.

TAUCHNITZ COLLECTION
of British authors in half morocco binding, at $1.25 a volume. Send for catalogue to

The Nation.

NEW YORK, THURSDAY, JULY 29, 1886.

The Week.

THE amendment proposed by the Senate Finance Committee to the Morrison surplus resolution deprives that measure of its power for producing mischief. The amendment fixes a maximum of $130,000,000 and a minimum of $110,000,000 for the Treasury reserve, and authorizes the Secretary to suspend the operation of the act in cases of emergency. If the resolution passes in this shape, it will be merely the expression of "a pious opinion" on the part of Congress that the surplus should not under ordinary circumstances exceed $130,000,000 nor fall below $110,000,000. There is no objection to the resolution as thus amended. The objection to it as passed by the House lay in its mandatory and inflexible cast, no discretion being allowed to the head of the Treasury Department to vary it according to circumstances. In a similar exigency in the year 1837 President Van Buren was obliged to call Congress in extra session to repeal a resolution providing for a distribution of the surplus. A bill had been passed in 1836 providing that all the money in the Treasury exceeding a certain fixed sum should be "deposited" with the several States in fixed instalments. The first instalment was paid in January, 1837, the second in April, the third in June, when suddenly the panic of 1837 set in, and the Treasury was left without means to pay the current expenses of the Government. The fourth instalment, which was due in October, was never paid. On the contrary, Congress was hastily reassembled in order to repeal the surplus resolution, and was reduced to the mortifying expedient of borrowing money in time of peace to meet its ordinary expenses. Nor did the borrowing cease for five years afterwards.

The Morrison resolution in its financial aspects differs in nowise from the resolution of 1836. The one provided for the distribution of the surplus among the States. The other provides for its distribution among the bondholders. As regards the situation of the Treasury and its ability to cope with an emergency the two run to the same end. But there was much more plausibility to support the resolution of 1836 than there is in the present instance, because in the former case the Government was out of debt, and was overflowing with money, and it might be reasonably concluded that no circumstances of a commercial character would occur which would produce a deficit in place of a surplus for a Government which had no interest to pay, and no war or other extraordinary expenditure in prospect. The result gave new force and meaning to the adage that in the business world it is the unexpected that happens. Nothing could have been more unexpected than the panic of 1837. To those who look back at it of course it seems the most natural thing in the world. But if it had seemed so to those who were looking forward, and who were in the midst of the apparent bounding prosperity of the time, it would never have taken place, because they would have avoided the follies which produced it. Quite certain is it that if the Treasury had kept the $37,000,000 which it distributed to the States in 1837, it would have ridden the storm in security. National bankruptcy, signalized by an issue of Treasury notes which were not redeemed until 1842, was the climax of the surplus resolution passed in the last year of Jackson's Administration.

Gen. Logan showed little wisdom in taking his stand against an investigation of the charges that Senator Payne's election was procured through bribery, but his Republican assailants made a great mistake in charging him with cowardice and a desire to cover up his action so far as possible. The Illinois Senator's convictions are often wrong, but he always has at least the courage to assert them, and he was quite justified in his indignation against the Republican politicians and editors in Ohio who accused him of having been bought to oppose an investigation. The real significance of these personal attacks upon Logan and the equally personal attacks in his reply last week is the evidence which they furnish of the growing dissensions among the Republican leaders. The various factions in the party are so intent upon "killing off" everybody capable of being a Presidential candidate who does not belong to their side that, at the present rate, the work of beating whoever may get the nomination in 1888 will be largely accomplished without the necessity of any help from the Democrats.

The following tale, supposed to have a bearing upon Senator Beck's bill prohibiting members of Congress from appearing as counsel in behalf of railroad corporations before the Supreme Court of the United States, is communicated to us in confidence. We communicate it to the public in the same spirit. The receiver of a once bankrupt but now reorganized and highly successful Western railroad, soon after entering upon his trust, found himself in disagreement with another connecting and powerful railroad corporation in respect to the interpretation of certain contracts. As the parties were unable to agree, the matter, which was one of great importance to the stock and bondholders of the bankrupt road, was taken by the receiver into court for adjudication. The tactics of the opposition from the first were evidently not so much to depend on the merits of the case as to procrastinate, on the theory that the receivership could not last indefinitely, and that the receiver, sooner or later, would consent to compromise or yield in order to settle and terminate his trust. The case, although the proceedings were uniformly in favor of the receiver, was accordingly delayed and appealed, until it reached the United States Supreme Court, where, after the further and usual long delay, the time came for its hearing, and where, under ordinary circumstances, it might be expected that the litigation would terminate. When the docket was called, however, a Senator of the United States who was not previously known to the receiver to have any connection with the case, arose and said to the Court that he expected to appear for the defendants, but that his pressing Senatorial duties had interfered with his preparations therefor, and, further, that his absence at that particular time would greatly delay important legislative business. Under the circumstances, therefore, he asked the indulgence of the Court, and that it would consent to a postponement of the hearing. This modest request—with one judge on the bench who undoubtedly owed his nomination to the Senator, and with two others whose confirmation the Senator had favored—the court joyfully and immediately granted. The result was just what the defence anticipated, and which the Senator, beyond doubt, was hired to effect. The receiver, feeling unwilling to submit to a further and indefinite delay, promptly settled with his adversaries by giving up what he felt that, both in law and equity, he was entitled to have; while the Senator pocketed a rich fee for about five minutes' court service, which none other than himself could possibly have rendered. The receiver, in telling the story, added that all the consolation he got from his friends to whom he stated his grievances was, that he ought to have known enough to have anticipated his adversaries in retaining the Senator, or to have headed him off with a larger fee.

Now that Congress has sent to the President the Oleomargarine Bill, we beg leave to suggest to Senator Warner Miller another subject on which he may expend some of his surplus stock of statesmanship. We refer to picnic ice cream. The press keeps recording every week the fatal effects of this food substance; how it distributes cramps and nausea not only among whole families, but among whole church congregations and Sunday-schools, and threatens not only to make the name ice cream odious, but to put a stop to the holding of picnics. A moment's thought will convince any one how serious a blow to the industries of the country such a result would be. As the consumption of ice cream decreases, not only will the demand for cream (mayhap milk) grow less, but in the train of this will come a falling off in the sale of ice, salt, patent freezers, and the whole list of flavoring extracts. Butter is a simple commodity compared with ice cream, and if a tax on oleomargarine was worthy of many weeks' consideration by Congress in behalf of butter, a tax on picnic ice cream ought to be considered in a special session in behalf of the innocuous article. Herein lies the Herkimer County Senator's opportunity. Let him introduce a bill putting a liberal tax on all ice cream made for picnic purposes, with a special clause defining a picnic so clearly that there will be no danger that any judge of the Donohue temperament will grant an injunction. The passage of such a bill would give a fitting rounding up to Mr. Miller's public career. Then, when his loving admirers want to erect a monument to his fame, the

design will occur instantly to the artist employed. It will only be necessary to place a life-sized figure of the Senator on the roof of a wood-pulp mill, with one foot in a butter tub and the other resting carelessly on an ice-cream freezer, and holding in one hand the manuscript of his address advising young men to stand by their party. The whole world will at once recognize the statue without any inscription.

The summary of the changes in post-offices during the last fiscal year shows the great progress that has been made in overthrowing the "clean sweep" tradition. The Democratic Administration has been in power for sixteen months, and yet more than half the post-offices in the country are still filled by the old Republican incumbents. The total number of appointments made during the twelve months ending with June 30 was 22,747, of which 3,482 were made upon the establishment of new offices, 587 to fill vacancies caused by death, and 9,112 upon resignations and the expiration of commissions, leaving 9,566 cases in which the change was due to removal or suspension of the old incumbent. Comparing these figures with the corresponding totals under a Republican Administration, it appears that the changes correspond very nearly in most particulars, allowing for the increase in the number of offices, appointments upon resignations and expirations of commissions aggregating 7,346 in the year ending June 30, 1882, against 9,112 for the year ending June 30, 1886; the deaths, 461 in 1881-82, against 587 in 1885-86; appointments on the establishment of new offices, 3,166 in 1881-82, against 3,482 in 1885-86. Removals and suspensions aggregated 1,021 in 1881-82, and 9,566 in 1885-86, and this very moderate increase is the only thing that swells the total number of appointments from the 12,343 under a Republican Postmaster-General in 1881-82 to a few thousand above what might have been expected with a Republican Postmaster-General in 1885-86. The showing is exceedingly creditable to the Administration.

The Internal Revenue Bureau makes an excellent showing for the first fiscal year under a Democratic Administration. There has been an increase of about $4,500,000 in the amount of revenue collected, and a decrease of $155,000 in the cost of collecting it. Commissioner Miller has conducted the bureau upon strictly business principles, retaining old and experienced employees, and resisting the most determined efforts of the spoils-seekers to convert his department into a mere political machine; so that this record is peculiarly significant.

The immigration during the fiscal year ending with June shows a slight falling off from the record for the previous year, the aggregate at six ports which always receive about 95 per cent. of the whole number being 328,917 souls, against 349,030 in 1884-85. This is not much more than a third of the total in 1881-82, when no less than 788,992 immigrants arrived in the United States, but it is almost people enough to make a State with a population equal to that of New Hampshire or Vermont. There has been a falling off of about one-third in immigration from Germany during the last year, as compared with the previous one, which unhappily has not been accompanied by a similar decrease in the less desirable classes of new comers from Bohemia, Hungary, Poland, and Italy; the latter nation, indeed, having largely increased its contribution, from 13,587 to 21,503.

The formal call for the "National Anti-Saloon Republican Conference" at Chicago on September 16 has appeared, and a most amusing document it is. It begins with the statement that the promoters of this movement think that "the party should not be asked to commit itself nationally to or against any specific law," but should announce as its settled policy that it will everywhere strive to reduce the businesss of dram-selling, and the evils resulting from it, as much as possible. It proceeds to affirm that "whatever is done must be done honestly, and with such emphasis that the men engaged in the liquor business will recognize the party as their enemy and leave its ranks," since nothing short of this would satisfy the temperance men; but declares that "that line of policy need not, and, if properly managed, will not, alienate the mass of drinking men." In other words, the scheme is so to "manage" things as to fool the Republicans who believe in prohibition, without "alienating" the other sort. The necessity of doing something is emphasized by this frank confession as to the desperate condition of the party:

> "The very existence of the party is at stake. That it is now losing at both ends of the line and gaining nowhere is admitted by all, and it needs no argument to show that the current must, in some way, be changed, or a long series of disasters, if not ultimate ruin, are inevitable."

The determination of the Central Labor Union to promote both the cause of labor and temperance by refraining from Ehret's beer, because he was "mainly instrumental in bringing about the conviction and harsh sentences of the Theiss boycotters," is, as it stands, as silly as most of the other performances of these labor unions. If it provided for abstinence from all beer, one might welcome it, however unpleasant it might be for brewers, but the boycotting of Ehret's beer will probably simply lead to increased consumption of other beer; for it is a melancholy fact that boycotters seldom get together to talk over the "tyranny of capital" without imbibing large quantities of some stimulant. The Third Avenue strikers used to deliberate with a jug of beer, called "the growler," on the table, and the more of it they drank the more eager they were for the forfeiture of the charter of that road. We are greatly afraid that most of the elaborate arguments showing the abstract injustice of boycotting Ehret, which are addressed to the boycotters, are as much thrown away as if they were produced in a kindergarten. The mass of the boycotters appear to be big children, rather than adult members of a free State. They want to annoy and injure Ehret, and care as little what Lieber, or Bentham, or John Stuart Mill would say to their doings as a parcel of bad boys engaged in stoning a cat.

The strike against a Tenth Avenue ribbon manufacturer because he will not allow his weavers to send out and get a pint of beer apiece in the middle of the afternoon is, so far as we know, the first organized movement of the sort, but it is quite in harmony with the revolt against discipline which characterizes so many strikes. It casts a little fresh light upon the difficulties of any coöperative enterprise among such men, since their first principle would be that anybody should be at liberty to leave his work and go out for a drink whenever he felt like it.

The July number of the *Nineteenth Century* contains an interesting article entitled "What the Working Classes Read." Among other things the writer says that "the working classes concern themselves little about any newspaper save those issued on the Sabbath," and he points out the low tone of the matter furnished by these weekly Sunday papers, declaring that "there is nothing in it to elevate, to ennoble, to inspire with a desire for truth and right living." He proceeds as follows:

> "The working classes, in point of fact, are written down to. This is the mistake frequently made by educated men who take up subjects and deal with them for the uneducated. It will, of course, be urged that the Sunday newspaper is a business concern, and that the journalist produces what he finds is read. The excuse is unworthy and unwarranted. The working classes have made no demand for the ephemeral matter placed before them on Sunday mornings."

The excuse of the men who make Sunday newspapers of a poor grade in England is the same which is put forward by the men who make low-toned newspapers every day of the week in this country—that a newspaper "is a business concern," and that "the journalist produces what he finds is read." But in neither country has any evidence ever been presented to establish the claim that the readers want the sort of matter which is thrust upon them. The *Nineteenth Century* writer believes that the excuse is as unwarranted as it is unworthy, which, of course, is only his opinion; but nobody can dispute his statement that "the working classes have made no demand for" such matter as is furnished them. The statement would hold equally true regarding this country. No proof has ever been furnished that the people "demand" the scandalous, salacious, and indecent matter which most newspapers have been publishing in such profusion since the two-cent revolution of three years ago.

The *Independent* discourages the movement of progressive Georgians to develop their school system without Federal aid by such remarks as this: "The Savannah *News* is on the right track in spurring up the State to do more; but it will not succeed this year nor next, nor for ten or twenty years to come, in persuading the State to provide actually for six months of schooling, to say nothing of building schoolhouses, of which it has had the most beggarly supply." Fortunately the *Independent* is now the only Northern journal of any consequence which supports the "bill to promote mendicancy," and its endorsement of the Blair scheme does not count for much with intelligent Southerners against the almost unanimous conclusion of the press that national appropriations would be harmful

and must not be made. If the *Independent* were to examine into the facts, it would learn that of all Southern States Georgia has the least claim upon Federal bounty. It has almost three times as much wealth as Arkansas, and yet it does not raise as much money for schools. This is chiefly because Georgians have accepted the assurance of such people as the editor of the *Independent* that the nation would foot the bills for educating their children. On the other hand, the motto of Arkansas has been, in the words of the State School Superintendent, "We must be willing to help ourselves, be self-sustaining and independent"; and in this spirit the people have gone on until, as Gov. Hughes said in a recent speech, "the five-mills district-school tax is voted annually by the people in nearly all the school districts in the State," and the schools are in a most encouraging condition. All that is needed to give Georgia an equally good educational system is a readiness on the part of the people to tax themselves in the same way as the Arkansas people do, and that will come as soon as they make up their minds that the rest of the country is not going to give them the needed money. Fortunately there is growing evidence that the majority of them have already reached this conclusion, and, despite the *Independent's* incredulity, we have perfect faith that in much less than "ten or twenty years" such papers as the Savannah *News* will have succeeded in securing six months of schooling in good schoolhouses.

It is rather curious to find, on looking through the various obituary notices of the late Mr. Hubert O. Thompson, that no matter how eulogistic they may be, not one of them ever speaks of his devotion to the public interests or the interests of the city, while much is made of his devotion to the County Democracy and to his "friends." The same thing was observable in the notices of the late John Kelly. In fact, it has ceased in this city to be the custom to expect from a political "chieftain" any special care for the health, cleanliness, good order, or light taxation of the municipality. It is never this which makes a man great in local politics. It is his success as a manager of factions, which would be a good thing if it were used for good ends; but it seldom is. The sign of success is never the improvement of the city government, but the wresting of salaried offices, either by intrigue, escalade, or ambuscade, or barricade, from rival politicians. One of the good signs of the times is to be found in the admission that Mr. Thompson lost his "prestige" when he got neither the Collectorship of the Port from the President nor anything else from Mayor Grace. There was nothing against him, it was said, but they "could not afford" to give him anything. This means simply that the standard of fitness has been so raised by public opinion that a man must be something more than a "chieftain" to get a fat office.

The verdict of the jury in the Crawford-Dilke case confirms the finding of the court in the former trial. It is now adjudged that Mrs. Crawford's story was true, and by consequence that Sir Charles Dilke has added the crime of perjury to the other offences with which he was charged. Worse than that, the perjury was not to shield the reputation of a woman, but to blacken it more deeply. The reopening of the case has been a great public and private calamity — a public calamity because the new revelations reach the proportions of an assault upon the common faith in education and good breeding as props to virtue; a private calamity because both the inculpated parties now stand in a worse light than before, and a number of persons not previously inculpated are now put in the pillory for life. Public sympathy, though seldom accorded in proper measure to the innocent sufferers from such scandals, must be extended to Mr. Crawford, and still more to Mr. Eustace Smith, the father of one unhappy woman and the husband of another. The only persons who have come well out of the Dilke scandal are the counsel who advised him after the first trial to let bad enough alone. They were much censured at the time, and he was much ridiculed for listening to them.

It is not often that anything so amusing in the way of a correspondence appears in print as a letter of Mr. Hubert de Castella to Mr. J. A. Froude, the historian, which we find in the Sydney (Australia) *Morning Herald*. It appears that when Mr. Froude was in Australia Mr. Hubert de Castella entertained him at dinner, and Mr. Froude was delighted with his host, and serves him up as "a most amusing companion" in his last volume, 'Oceana.' In this, Mr. de Castella figures as having served in the French Army, and also as a French detective employed in the Praslin murder case; as having fought behind the barricades in February, 1848, then serving on the police, and as having again fought on the side of the insurgents in June, 1848, and finally, as having married "a Sydney lady, moderately rich, who would have been much richer if she had pleased her friends better in the choice of a husband." Mr. de Castella now says that the only grain of truth in all this is that he did witness the Revolution of 1848, being at the time an art student in Paris, and did join a French cavalry regiment, but all the rest has been "built up" by Mr. Froude's imagination out of anecdotes told in an after-dinner chat. This would be a serious charge to bring against any man, but brought against an historian it is terrible. How can we trust among "the archives" a man who cannot be trusted to listen to a host's reminiscences at a dinner-table?

The exposure of John Bright's tergiversation is melancholy reading, coming so soon after the exposure of similar though far bolder and more unblushing tergiversation on the part of Mr. Chamberlain. It now seems that Mr. Bright in 1866, in the full maturity of his powers and of his fame as a statesman—he was then over fifty, and two years later took a seat in the Cabinet—went to Dublin, and there made a speech to the Irish in which he stated the case for home rule as strongly as it has ever been stated. Since then every reason he gave in its favor has been strengthened by events. Every year has added to their force. Nevertheless it was, of course, open to Mr. Bright to change his mind in the interval, to say that he was persuaded he had made a mistake. But think of his turning on Mr. Gladstone and holding him up as a madman, or worse, and treating his plan of home rule as a scheme for the dismemberment of the empire, and abusing the Irish as unfit for self-government. It is not wonderful that in some of the Liberal clubs his picture has been turned with its face to the wall, as that of a "lost leader."

The difficulties of forming a Tory Cabinet continue, as was anticipated, to increase, as the task comes nearer. It is now acknowledged that no Liberal Unionist will take a place in it, not even Goschen, who within a year expressed his dread of "giving a blank check to Lord Salisbury." Nor can any pledge be extracted from them not to oppose Lord Salisbury on questions of domestic or foreign policy other than the Irish. One of the curious, and for Mr. Gladstone, justificatory, incidents of the crisis, is the expectation, which is said to be current both among the Unionists and the Tories, that they have got rid of the Irish question and can turn their attention to something else. This determination on the part of Englishmen not to be bothered with the Irish question whenever it can possibly be avoided, furnishes the Home-Rulers with one of their strongest arguments.

The London *Economist* supplies late information regarding the wheat harvest of India for the current year, from which it appears that the out-turn of British India and the Native States together is about 7,750,000 tons against 8,400,000 tons the previous year. According to the best calculations available, there is a profit of about 1s. 9½d. per quarter to the Indian grower when wheat brings 32s. in the London market, as it did when the last year's crop was marketed. But the price has now fallen to 31s. The margin of profit on exportation is thus narrowed to 9½d. per quarter, or little more than one penny per bushel, if the estimates of cost of production are correct. But these estimates are not to be depended upon altogether, since the Indian ryot does his own work mainly, and seldom hires labor even at the low price prevailing there. The extension of the railway system is nevertheless causing a steady increase in the number of acres under wheat cultivation, despite the falling prices.

Panama Canal shares declined 33 points, *i. e.*, from 428 to 395, on the Paris Bourse during the week ending July 15. Suez Canal shares fell from 2,030 to 2,000 in sympathy, showing something like a panic among the *petites gens*, who mainly hold both kinds of securities. If the bears could borrow Panama shares for "short" sales, the fall would undoubtedly be much greater. The bonds, of which there are three classes, fell heavily also. M. de Lesseps has called in 75,000,000 francs as an assessment on the share capital, which is expected to last until some kind of new loan can be raised. Meanwhile, the excitement among the investors has communicated itself to the political world, the dimensions of the failure, if it should turn out to be such, being without assignable limits,

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 21, to TUESDAY, July 27, 1886, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND visited Albany on Thursday to take part in the exercises of the last day of the bi-centennial celebration. He was enthusiastically received.

The President on Saturday transmitted to the Senate a report from Secretary Bayard, made in compliance with the Senate resolution respecting the seizure of American fishing vessels in Canada. It sets forth the legal proceedings begun, and says: "Concurrent with these events correspondence has begun and is still proceeding between this Department and the British Minister at this capital, and also between the Minister of the United States in London and the Foreign Office of her Britannic Majesty's Government, to obtain suitable recognition and enforcement of our rights under treaty and international law, and the laws and commercial usages of both countries which are brought in question by the action of the Canadian authorities in making seizures and detentions of American fishing vessels herein referred to and described. Pending this correspondence, which, it is believed, must soon terminate in an amicable settlement mutually just and honorable, and therefore satisfactory to both countries and their inhabitants, the undersigned is unable to recommend the President to communicate its contents in its present incomplete status, believing that to do so would not be compatible with the public interests as connected with the transactions referred to."

The brief of Minister Phelps's argument on the fisheries question before the British Foreign Secretary has been submitted to the State Department, and is warmly approved. The United States claims that the seizures of the schooners *David J. Adams* and *Ella M. Doughty* were not legal acts; and the release of the vessels, or the suspension of proceedings against the vessels' masters or owners, together with the payment of damages, is demanded. The United States will not yield the point that the three-mile limit is a distance of three marine miles from the shore at the point where the vessel may happen to be. The United States insists that the fines imposed in the other cases were excessive and not in accordance with international courtesy. The United States is anxious to secure by diplomacy the final and honorable settlement of the controverted points, but failing in this will not consent to see its citizens outraged and insulted. While the markets and ports of the United States are open as of old to the subjects of England, a settlement of the vexed question of the three-mile limit is first of all to be sought for.

On account of the non-release of an American editor, Mr. Cutting of El Paso, confined at Paso del Norte, Mexico, there is considerable warlike talk in Texas. Secretary Bayard has made an imperative demand for the immediate release of Mr. Cutting, which has not been complied with. Cutting was arrested because he alluded to Emilio Medina, a Mexican-Spaniard, as a "fraud and a dead beat," and heaped other abuse upon him through his own Spanish paper in Paso del Norte, and also in the *Sunday Herald* of El Paso. On his arrest he was not even offered the privilege of bail.

The House of Representatives on Wednesday passed the concurrent resolution for adjournment on July 28, by 145 to 36.

On Friday the House concurred in all the Senate amendments to the Oleomargarine Bill, thus avoiding the necessity for a conference. The bill went to the President, who on Monday referred it to the Attorney-General. It is supposed that the question of its constitutionality will be decided by him.

The House on Saturday passed the bill for increasing the navy.

The Senate on Thursday finally disposed of the Naval Appropriation Bill, and then proceeded with the Payne debate, deciding on Friday, by a vote of 17 to 44, not to investigate Senator Payne's election. All the affirmative votes were Republican.

The clause of the Sundry Civil Bill referring to silver certificates as finally passed by the Senate on Saturday reads as follows: "And the Secretary of the Treasury is hereby authorized and required to issue silver certificates in denominations of one, two, and five dollars; and the silver certificates herein authorized shall be receivable, redeemable, and payable in like manner and for like purposes as is provided for silver certificates by the Act of February 28, 1878, entitled 'An Act to authorize the coinage of the standard silver dollar, and to restore its legal-tender character; Provided, that said denominations of $1, $2, and $5, may be issued in lieu of silver certificates of larger denominations in the Treasury, and to that extent said certificates of larger denominations shall be cancelled and destroyed." The bill appropriates an aggregate of $24,418,375, or an increase of $3,106,850 over the amount appropriated by the bill as it came from the House. The items added by the Senate are $717,545 for public buildings, $516,750 for lighthouses, $106,652 for the Coast Survey, and $1,765,902 on account of miscellaneous items.

The Senate Committee on Finance agreed by a majority vote on Tuesday to report the Morrison surplus resolution with an amendment. The text of the resolution remains as it came from the House, but the following proviso is attached: "That no call shall be made under the provisions of this resolution until a sum equal to the call is in the Treasury over and above the reserve herein mentioned; and provided further, that the Secretary of the Treasury in his discretion may have in the Treasury over and above the foregoing sum a working balance not exceeding $20,000,000; and in the case of any extraordinary emergency, and when, because thereof, in the opinion of the Secretary of the Treasury, the public interest shall require it, he may by written order suspend the further call for the payment of such indebtedness for such period of time as shall be necessary to maintain the public credit unimpaired."

Gen. Wells, Collector of Customs at Burlington, Vt., suspended, has resigned, and Col. B. B. Smalley, who many months ago was appointed Collector to take the place of Wells, and who is the incumbent of the office, but who has not been confirmed, has been again nominated Collector to fill the vacancy caused by the resignation of Gen. Wells. Of the confirmation of Col. Smalley under this new appointment there can be no doubt. This was one of the conspicuous cases in which Senator Edmunds took a special personal interest.

Post-office inspectors have discovered that Col. Bolton, Superintendent of second-class matter at the Chicago Post-office and the Chief-Weigher Stuart, have defrauded the Government out of several thousand dollars. Both were arrested. These men would report one weight of newspapers and collect from the newspapers for a much larger weight.

The Postmaster-General has caused to be prepared a statement of the operation of the railway mail service for the last fiscal year. In this service there was a reformed system established by George Bangs, one of its first superintendents, which, in its essential features, has been continued to this day. The system does not apply to admission to the service, which has generally been almost entirely political, but after a clerk is admitted he is classed as a probationer, and is required to maintain a certain standard of excellence to retain his place. The total number of clerks in the railway mail service at the beginning of the present fiscal year was 4,563. The total number of appointments by increase during the year was 176. The vacancies by resignation were 437. There were 459 removals, of which 227 were for partisanship manifested by the clerks appointed under the Republican Administration, and 232 for other causes. Of the clerks appointed under this Administration only one has been removed for partisanship.

The recent vigorous orders of the Civil-Service Commission have the full approval of the President. He is determined that the law shall be executed in letter and spirit, has been thoroughly advised as to every movement of the Commission, and has approved it. The Civil-Service Commissioners are considering the propriety of taking charge of the examinations for promotions in the departments. This fact gives the clerks who have long been in the service some concern.

The internal-revenue collections for the fiscal year ended June 30, 1886, were $116,902,845; for the previous fiscal year $112,421,121, an increase of $4,481,724. The Commissioner thinks there will be a further increase for the coming year.

The Vermont Democrats on Thursday nominated S. B. Shurtleff of Montpelier, for Governor. The platform warmly approves the Administration.

The great rolling-mill strike, involving 1,500 men in the five largest establishments of Philadelphia, has been settled by arbitration in favor of the employees.

William Hunter, Second Assistant Secretary of State, the oldest official in continuous service of the United States, died on Thursday in Washington of a complication of diseases incident to old age. He was born in Newport, R. I., in 1805, and entered the State Department as a clerk in 1829. He was appointed chief clerk under the Administration of Fillmore, and Assistant Secretary ad interim under the two Democratic Administrations of Pierce and Buchanan, and was regularly commissioned Assistant Secretary when Andrew Johnson was President. There was probably no man of his day whose knowledge of the diplomatic moves of the Government was so thorough as that of William Hunter. There is little in the secret history of the affairs of state of the United States with which he was not familiar. His most celebrated work was the letter which he wrote to the Austrian Government in the Koszta case, which was signed by Daniel Webster while sick in bed. In politics Mr. Hunter was always a stanch Democrat. After the breaking out of the war Assistant-Secretary Treshold, who was a North Carolinian, resigned and went South, and Mr. Hunter was given the place until a permanent Secretary could be appointed. As a reward for his services in this position, at the conclusion of the war the office of Second Assistant Secretary was specially provided, and in 1866 Mr. Hunter was commissioned as such, and retained the position until his death. During a short interval of four days between the relinquishing of the Secretaryship of State by Everett and the appointment of Marcy, Mr. Hunter was the acting Secretary of State.

Charles F. Conant, Assistant Secretary of the Treasury under Secretary Bristow from 1874 to 1877, died at Cambridge, Mass., on Monday, at the age of fifty-one.

Hubert O. Thompson, ex-Commissioner of Public Works, was found dead in his bed at the Worth House, in this city, at 9:35 o'clock on Monday morning. He died of cerebral apoplexy. His age was thirty-seven years. Mr. Thompson was the leader of the County Democracy in this city, a firm believer in "practical politics," and one of their most skilful manipulators. His education was acquired in the public schools, being finished at the Free Academy, now the College of the City of New York. After ten years passed in Wall Street, in brokerage and railroad business, he was appointed chief clerk in the Water Purveyor's office, and soon afterward Deputy

Commissioner. He filled the latter position with credit for three years, resigning to accept from Gov. Robinson the appointment of County Clerk. His term as Commissioner of Public Works began in 1880, and lasted until the appointment of the present Commissioner, Mr. Squire. He withdrew from Tammany Hall in 1877 because of hostility to John Kelly. It has been generally understood that Mr. Thompson's notoriety as a practical politician was the reason why his services in the field of national polititics in 1884 were not more openly recognized by the Administration. It has also been understood that, after he gave up hope of obtaining the Collectorship for himself, his influence was potent in securing the appointment of Mr. Hedden, as being, through their common friends, in some sort his representative. Since that event he has generally been regarded as "the power behind the throne" at the Custom-house in cases where the civil-service rules did not absolutely prevent the exercise of political patronage.

FOREIGN.

Mr. Gladstone on Wednesday received from the Queen her acceptance of the resignations of himself and Cabinet.

Commenting on the political situation, *United Ireland*, Mr. Parnell's Dublin organ, says: "The Marquis of Salisbury will be compelled ere long to produce his manacles. During the past year the Irish people have submitted to the bitterest privations and extortions patiently. The judicial rents are becoming daily more impossible for the tenantry to pay, and more unbearable. It is absolutely hopeless to expect any redress from an English Parliament. It is not in human nature for the Irish tenantry to longer refrain from helping themselves. Landlords will fight for their rents with fire, sword, or crowbar, thus obliging Lord Salisbury to pray Parliament to assist the landlords by some new-fangled coercion act. Then will come the tug of war."

Mr. Gladstone, replying recently to inquiries as to which were the best books to read on the historical side of the Irish question, said that at present there was a great lack of any complete work. He recommends Lecky's 'Leaders of Public Opinion in Ireland,' and 'History of England in the Eighteenth Century'; also many portions of Froude's 'English in Ireland in the Eighteenth Century'; Lord Cloncurry's 'Personal Recollections of His Lifetime, with Extracts from His Correspondence'; but above all, Burke, especially his writings on America as applied to Ireland. As regards the recent history of the land question, Mr. Gladstone recommends the perusal of Barry O'Brien's articles in the *Nineteenth Century*.

Lord Salisbury called upon Lord Hartington on Saturday morning and held an hour's conference with him. Lord Hartington promised him a friendly support, but declined to join the Conservative Government. Lord Randolph Churchill subsequently held a conference with Salisbury. Lord Salisbury at 11:30 A. M. started for Osborne to receive the Queen's command to form a government. It was reported that the Queen on Sunday made a direct personal appeal to Lord Hartington to form a Ministry. On Monday, however, Lord Salisbury formally assumed the task of making a Ministry. On his arrival in London he was received with great enthusiasm.

The London *News* on Tuesday said: "Lord Salisbury has proffered to Lord Randolph Churchill the position of leader of the House of Commons, combined with the office of Chancellor of the Exchequer, a post which involves less office work than any other in the Government, and has, therefore, been habitually associated with the position of leader. Churchill has accepted this proposal."

Lord Salisbury outlined his programme at a meeting of Conservative members of Parliament on Tuesday. He said that Lord Hartington and the Liberal-Unionists would support the Conservative Government "on every question concerning the maintenance and integrity of the Empire." The Ministry, he said, would forthwith prepare a bill to "grapple with the Irish difficulty in the direction of extended local self-government." To protect the Loyalists in Ireland, they would "vigorously enforce the existing laws and apply for additional powers if necessary." Parliament would at once be summoned, and would sit during August for the purpose of proving the estimates.

Mr. Goschen has finally declined to act with the Conservatives on any terms.

The British War Office announces that in consequence of an article published in the London *Times* of July 19 charging the officials of the Ordnance Department with corruption, Gens. Campbell, Reilly, and Alderson, successively chiefs of that department for the past eleven years, demanded an inquiry before a competent tribunal, and that Mr. Campbell-Bannerman, War Secretary, refused to grant an inquiry, because the charges were vague and were not supported by any statement of facts. The *Times* article declared that it had long been manifest that the War Department was incompetent, and that now it was openly said to be corrupt.

The case of Crawford against Crawford and Dilke was given to the jury on Friday afternoon. They were out only twenty minutes. Their verdict was that Mr. Crawford was entitled to divorce from his wife on the ground of adultery with Sir Charles Dilke, as decided *nisi* by Justice Sir Charles Butt on February 12 last, the present case being simply a rehearing at the intervention of the Queen's Proctor.

Sir Charles Dilke has ordered the sale of his house at Chelsea, and will live permanently in the south of France. He has issued an address to his Chelsea constituents, in which he says: "I have always known how difficult my cause would be, even if it were presented as I had reason to suppose it would be by my own advisers, and I have never concealed it from you. But the method of procedure ordered by the courts intensified the difficulty. As far as my public life goes I have no option but to accept the verdict. While protesting once more against its justice, I can only assure you, as I have already often solemnly assured you, and with equal solemnity sworn in court, that I am innocent of the charges brought against me, and respectfully and gratefully bid you farewell."

John Ruskin's illness has changed for the worse.

Cyrus W. Field, in his action in London for libel against James Gordon Bennett, has obtained a verdict for £5,000 damages and costs.

The Irish team won the Elcho Shield at Wimbledon on Friday with a score of 1,471. The Scotch team scored 1,408, and the English team 1,385. The English Team won the Kalapore Cup on Wednesday.

France denies absolutely that she has any intention of annexing the New Hebrides.

Admiral Lafont of the French Navy, before the Budget Committee on Wednesday, said: "The French fleet can vie with the navy of any Power. If to-morrow the Government should undertake a naval war, I should sail at the head of my squadron without the slightest anxiety and without doubt of our success, even though the war were directed against Great Britain."

It is reported that China has intrusted French engineers with the construction at an early date of railways in the empire.

The Paris *Figaro* contains a sensational article warning the country that Gen. Boulanger is plotting a *coup d'état*. The writer, M. Lavedan, says: "This is not mere idle speculation. it is a serious forecast, based on surer information than that of official agencies like the Agence Havas. Yes, the General wishes for war, and I am assured that this phrase has been uttered: 'That the new Fructidor would only be a preface to a new Marengo.' Gambetta dreamed the same dream, and hoped to realize it by the same means. He, too, dreamed of rising to power by war. He, too, while he was posturing on the balconies, knew that, though a mountebank, acting might be useful to build up a reputation and popularize his name, if it could not consolidate a dictatorship. Windy talk could not stand for glory, and but for the mysterious bullet of the Ville d'Avray, who can tell into what new disasters the Carnot defeat might have plunged us? *Eh bien!* A military Gambetta, a soldier-adventurer, is trying to play the same game. Public opinion is warned. Let the national security be looked to. Let us measure the whole consequence of the events which may surprise us."

The French Republicans have organized a committee for the propagation of republican principles among the people of France and the extirpation of royalism. The Committee has framed an appeal to Frenchmen to generally support the movement.

The Rothschilds some time ago gave M. Marcel Deprez unlimited credit for the prosecution of researches in the problem of the electrical transmission of force. The results of the researches have just been submitted to a committee of inspection composed of thirty-eight scientists, and the Committee by a unanimous vote have approved the report, and pronounce the results obtained by M. Deprez worthy of the highest congratulations.

M. Désiré Médéric Leblond, the eminent French advocate and statesman, is dead at the age of seventy-four. He was a leader at the Paris bar and Attorney-General of the Court of Appeals. He was elected to the National Assembly in 1871 and became leader of the Republican side. In 1879 he was elected Senator.

There was serious rioting in Amsterdam on Sunday and Monday because of the prohibition of certain popular games on Sunday. On Monday night the troops fired into the mob, killing ten. Socialists fomented the disorders. Twenty-eight persons have been arrested, including two Socialists. It is reported that twenty persons have been killed and eighty wounded in the riots.

It is said that the Emperors of Russia, Germany, and Austria will meet at Gastein on August 8.

Carl von Piloty, the German painter, is dead at the age of sixty-two. He stood at the head of the modern realistic school of Germany. Among his great historical works are "The Elector Maximillian adhering to the Catholic League in 1609," "A Scene before the Commencement of the Battle of Prague," and "Nero after the Burning of Rome."

Maximilian Wolfgang Duncker, the German historian, is dead at the age of seventy-four. He became professor of history at Halle in 1842, a member of the German National Assembly in 1848, professor at Tübingen in 1857, and received an appointment in the Prussian Ministry in 1861. Among his works are 'Origines Germanicæ' (1840), and a 'History of Antiquity' (1852).

Herr Scaria, the great basso, who visited this country with Materna in 1884, died on Thursday at Dresden. He was born in 1840, and made his début in the "Huguenots" at the age of twenty.

The opening performance of the Wagner Festival at Bayreuth was successfully given on Friday under the personal superintendence of Frau Wagner.

The Canadian Government will send a steamer from Quebec to the coast of Newfoundland and Labrador to carry such donations as charitably disposed persons may desire to send to the starving people there. The suffering and destitution are terrible. More than 1,500 people have already died.

THE "CAPITAL" BOGIE.

MR. ANDREW CARNEGIE, who has had a long experience in the relations of both labor and capital, prints in the last number of the *Forum* an article on the late strikes, in which he corroborates strongly the protests which we have addressed to clergymen and others who approach the labor problem from the moral and religious point of view, against the practice of generalizing the owners of capital into an abstraction called "Capital," and the laborers who live by weekly wages into an abstraction called "Labor." Probably nothing has done so much to embitter the long-standing feud between laborers and employers as this practice. The Socialistic doctors of the Karl Marx school, it is true, began it, and those somewhat ridiculous professorial Socialists of the German school, of whom we have a feather-headed variety among ourselves, help the Christian moralists in keeping it up; but all who care about peace and good-will on earth ought to avoid it and reprobate it.

A more striking illustration of the mischief that may be done by the misuse of words it would be hard to find. It has resulted in creating in the imagination of poor men all over the civilized world to-day a very odious but fictitious person, wallowing in luxury and self-indulgence; absolutely indifferent to the sorrows of those who have little money; charged with the responsibility of making the world happy and peaceful, but utterly neglecting his duty; and wielding the immense power which the possession of most of the spare cash of an entire community naturally gives. With this person, named "Capital," all employers of manual labor are supposed to be in some mysterious manner connected, and are believed to participate more or less freely in his vices and selfishness. Whenever a strike takes place, he appears promptly on the scene, bloated with pride and arrogance, and refuses to let Labor (for a band of strikers, however small, is in like manner generalized into "Labor") have its just share of the fruits of its industry or to make the smallest reduction in the hours of toil, and, if worst comes to worst, summons the militia to his aid and shoots Labor down. In the pulpits he is freely denounced, too, for his too rigid adherence to the doctrines of political economy and for not carrying on his business in a more humanitarian spirit, for not paying Labor more liberal wages, which he is always presumed to be able to do simply by drawing a check on the immense stores of gold which he keeps in banks and such places, and for not occupying himself more with the clothes and food of Labor and his wife.

Now, if Capital were only called Savings, this misunderstanding might be avoided. There is no such person as Capital. Neither Jay Gould, nor Vanderbilt, nor any other number of very rich men are Capital. Capital is simply a much-abused name applied to the whole sum of money which each generation in every community saves by hard work and self-denial. Very few, indeed, of those who make it and hold it are rich people or live in luxury.

Not only is this true of nearly every branch of business conducted by individuals, but it is largely true even of the great railroads and other corporations. The Pennsylvania Railroad is owned by 19,340 shareholders in lots of from one fifty-dollar share up. The New York Central is owned by 10,418 shareholders, of whom about one-third are women or executors of estates.

"The entire railroad system of the United States," Mr. Carnegie says, "will show a similar wide distribution of ownership among the people. There are but three railway corporations in which capitalists hold a considerable interest, and the great interest in two of these is held by various members of a family, and in no case does it amount to the control of the whole. Steel-rail mills, with only one exception, show a like state of affairs. One of them belongs to 215 shareholders, of whom 7 are employees, 32 are estates, and 57 are women. Another of these concerns is owned by 302 stockholders, of whom 101 are women, 29 are estates, representing an unknown number of individuals, and 20 are employees of the company. A large proportion of the remaining owners are small holders of comparatively limited means, who have, from time to time, invested their savings where they had confidence both as to certainty of income and safety of principal. The Merrimac Manufacturing Company (cotton) of Lowell is owned by 2,500 shareholders, of whom 42 per cent. are holders of one share, 21 per cent. of two, and 10 per cent. of three shares. Twenty-seven per cent. are holders of over three shares; and not less than 38 per cent. of the whole stock is held by trustees, guardians, and executors of charitable, religious, educational, and financial institutions.

"I have obtained similar statements from other concerns which need not be published. They prove without exception that from one-fourth to one-third of the number of shareholders in corporations are women and executors of estates. The number of shareholders I have given are those of record, each holding a separate certificate. But it is obvious, in the case of executors, that this one certificate may represent a dozen owners. Many certificates issued in the name of a firm represent several persons, while shares held by a corporation may represent hundreds; but if we assume that every certificate of stock issued by the Pennsylvania Railroad Company represents only two owners, which is absurdly under the truth, it follows that, should every employee of that great company quarrel with it, the contest would be not against a few, but against a much larger body than they themselves constitute. It is within the mark to say that every striking employee would oppose his personal interest against that of three or four other members of the community. The total number of men employed by the Pennsylvania Railroad Company is 18,911—not as many as there are shareholders of record. And what is true of the Pennsylvania Railway Company is true of the railway system as a whole, and, in a greater or less degree, of mining and manufacturing corporations generally."

Of course, if we analyze the capital engaged in farming, and in shopkeeping, and the smaller industries, we should find in a still greater degree that it consisted of the painfully-made savings of poor and industrious people.

Nevertheless, in the teeth of all this, which is one of the plainest facts of modern society, we find, in the same number of the *Forum*, an article by the Rev. George Batchelor, predicting a speedy and terrible but very mysterious "revolt of the majority." Against whom the revolt is to be, he does not distinctly intimate, but we presume it is to be against those rascals—"The Few"—who save something every year out of their wages. At first sight it would seem as if such a revolt would be short, for the Few would soon be robbed, and their savings wasted, and then the curse of "Capital" would be lifted from suffering humanity. But Mr. Batchelor will not let us off so easily. He insists on making it a good long rebellion. "They will reckon without their host," says he, "who suppose that this is only a passing breeze of dissatisfaction with the wages paid by capital to labor, for this is the first great ground-swell of universal human society coming at last to a consciousness of itself." We doubt very much whether Mr. Batchelor when he wrote this knew exactly what he meant by it. Had he thought his subject out a little more thoroughly, he would probably have seen that what he was predicting, if he was predicting anything, was a return to the savage state, for it is only in the savage state that there is no Capital, and Labor consumes the whole product of the labor. But then the product is not worth much, and Labor there is a disgusting and contemptible object.

MR. EVARTS ON OLEOMARGARINE.

THE *Daily Commercial Bulletin* has interested itself in an examination of a legal opinion written two years ago by the Hon. Wm. M. Evarts on the oleomargarine controversy. The question presented to him at that time was whether the act, already passed by the State Legislature, "to prevent deception in the sale of dairy products," was or was not constitutional. Mr. Evarts had not been previously committed by a retainer to any particular view of the question in dispute. His legal opinion was sought by the dealers or others interested in oleomargarine in the customary way. Being sought and given in this way, it was an opinion which a lawyer ought either to stand by in all conceivable cases, or publicly to disavow if he no longer holds the same opinions. Here is what Mr. Evarts said in 1884 and a synopsis of what he said in the Senate the other day:

EVARTS IN 1884.

"If this Act shall be construed not as protecting the public against 'deception in sales of dairy products,' but as protecting dairy producers in a monopoly of human food, against the manufacture and sale of the genuine products of other oleaginous substances suited as wholesome human food, in greater or less degree, to compete with or take the place of dairy products, *I am of opinion that such legislation is repugnant with our Constitution.* Legislation in this sense no longer adheres to the protection of guaranteeing a lawful product against simulation and deception, or protecting the public against fraud and imposition, but *stands upon the avowed and unlimited discrimination in favor of monopoly, to the injury of other honest and useful producers, and the oppression of the public.* It is quite plain that the moment this legislation departs from the theory and justification of this Act as limited to 'prevent deception in sales of dairy products,' no proscription on the mere ground of protective monopoly of one industry can be limited by any rule of discretion in this line and style of discrimination among the people of this State and their pursuits (?). *Hitherto, until recently, the maxims and instincts of public liberty have discountenanced all such methods of legislation.* I am unwilling to tolerate the pretension that the provisions of our Constitution offer no barrier to such an innovation upon freedom and equality as the creation of monopolies at the discretion of the Legislature."

EVARTS IN 1886.

"Mr. Evarts described the condition of alarm into which the dairy interests of the country had been thrown by the introduction of oleomargarine, and said he should have supposed that, on the mere statement of that existence of things, everybody would have sympathized with this interest, so vast, so simple, so necessary, and so historical. The question was whether one good and honest product, one good and honest trade, one good and important element of foreign commerce was—in its body and substance—to be attacked by fraud, and reduced, not only, in its gain, but threatened in its existence. *He argued that, within the eye of the law, the bill was Constitutional.* The Senate was now to confront the question whether this mischief, this injury, this stigma, this danger to trade abroad and at home should be suffered to exist because of a difference between the two houses as to the amount of the tax. He himself should forego his own judgment as to what the tax should be, and would accept the bill as passed by the House. In conclusion, he made a strong appeal for sympathy in behalf of the great class of dairy farmers."

Mr. Evarts's "strong appeal" for sympathy

for the dairy farmers has been published is quite as intelligible as his Boston speech on the silver question. It combines the bucolics of Virgil with the martial themes of Homer, and pictures all that we owe to the farmer as the bulwark and sheet-anchor of society in war and peace.

It may be said that Mr. Evarts in 1884 was arguing against an act of the State Legislature, and that what is unconstitutional for a Legislature may be constitutional for Congress. This is true, but the opinion of 1884 went deeper than technicalities. It touched "the maxims and instincts of human liberty," which he said were assaulted if the act went one step beyond the aim of protecting the public against deception. Now this is just what the bill in Congress does. It takes measures not only to protect the public against deception, but also to tax the article oleomargarine in order to give the butter-makers an advantage in the market. All who have had anything to say on this question are agreed that the severest measures should be taken to guard against fraud and deception. The makers of oleomargarine offer no objection to the bill on that score. They contend merely, as Mr. Evarts did two years ago, that a discriminating tax on their product is an infringement on liberty and an oppression of the poorer classes of society.

It is a relief to turn from the gymnastics of the Senate Chamber to the studies of a man of science. Prof. Atwater of Bangor, Me., whose name is widely known as an original investigator of the constituents of human food, sends to *Bradstreet's* a searching answer to the analyses of oleomargarine which were made by the Department of Agriculture at Washington, at the instance of Mr. Warner Miller, and used by him in the debate. These analyses showed that the samples submitted, upon being boiled, gave off the odor of decomposed cheese (casein), and were exceedingly offensive to the smell and taste, and that all were unfit for human food. Prof. Atwater states that the casein which decomposes and produces the bad smell and taste when subjected to heat comes from the butter used in the manufacture of oleomargarine, and nowhere else, as the fatty substances which make up the bulk of the article oleomargarine contain no casein whatever. He says that the amount of rancidity and fermentation in oleomargarine is generally in proportion to the amount of real butter used in making it, and that if ordinary "strong" butter had been used by the Department of Agriculture in making the tests, the results would have been the same. In other words, a true scientific demonstration would have shown that oleomargarine is less liable to become rancid than real butter. "Imitation butter and real butter," he continues, "as sold and used, are about equally nutritious; both are generally wholesome, but are liable to be badly made at the outset, and to become unwholesome on keeping. Objectionable specimens of both materials are only too frequent in the market and in the household. Imitation butter can be produced with a flavor equal to that of the common sorts of butter, and at much lower cost." This, it must be admitted, is no argument to a Senator who is defending the home and the family, and who finds inspiration in the gallant deeds of embattled farmers when the republic was in danger; but it ought to have great weight with the lawyer who seeks to guard the threshold of liberty against the encroachments of an insidious despotism.

THE REPUBLIC AND THE PANAMA CANAL.

THERE is a vague but growing belief in European circles that the French Republic is nearing its end. This is founded, of course, mainly on the fact that it is approaching the term of twenty years beyond which no French Government within the last century has lasted. The first Republic, after various mutations within that period, ended in the first Empire, the first Empire within that period ended in the Restoration, the Restoration within that period ended in the Monarchy of July, and the Monarchy of July in like period gave place to the second Empire, and the second Empire to the present Republic. Why the revolutionary cycle should be twenty years is, of course, hard to explain; but the probable reason is the appearance of a new generation on the scene every twenty years, which is apt to be dissatisfied with the political work of its predecessor.

In the United States or in England this dissatisfaction would find expression simply in the formation of a new party, or the restoration of the Opposition to power. But in France there are no parties loyal to the same constitution. Each French party has a form of government of its own, and does not think it has succeeded until it has imposed it on the country. Moreover, a change in the form of government is not the serious matter in France that it would be in other countries. It is hardly more serious than the substitution in the Presidency of a Democrat for a Republican is with us. It brings with it very little change which affects people in their daily lives. Until the present Republic came into power there were very few removals among the office-holders. The law, and the army, and the Church, and the judiciary have always hitherto remained untouched. A new set of men get to the head of the great departments of state, and their chief is sometimes called an Emperor, sometimes a King, and sometimes a President, but all else goes on pretty much as before.

There are, however, just now some new reasons for looking for a revolution beyond the mere running out of the usual governmental term. The Republic has gone beyond all its predecessors since 1795 in the number and magnitude of the changes it has made in what may be called the French Social Constitution. It has attacked the Church as no other Government has ventured to attack it since the Revolution. It has laicized the public schools, with a good deal of harshness and brutality, or, as religious people say, "has expelled God" from them. It has made immense modifications in the constitution of the army, has for the first time removed large numbers of the judges on the ground of their political opinions, and introduced "office-seeking" on a scale never before witnessed in France. Moreover, after having inherited an enormous debt from the Empire, it has not only done nothing to reduce it, but has added to it, and has persisted in the makeshift ways of concealing from the nation the growth of its liabilities which the Empire began. The increase of popular dissatisfaction with the Republican experiment, was plainly revealed at the last election by the return of a very powerful monarchical minority to the Chambers; but it is not the custom of French parties to take warning from electoral defeats and modify their policy. One of the traditions of the first Revolution which they cherish most strongly, is the rule that if your enemies appear to be growing stronger, you must be all the more strenuous in pursuing the courses which most displease them.

French discontent is, however, always like a powder magazine. It has enormous explosive power, but needs to be started by a spark of some kind; and those who believe we are about to witness another great political change in France, when asked what this spark is to be, are beginning to say that it will be the collapse of the Panama Canal scheme, which they declare to be near at hand. This enterprise has already absorbed about $140,000,000 of French capital, mostly held by French people of small means, or "petites gens," as the great capitalists call them. When they subscribed, the prospectus of the enterprise represented that $120,000,000 would be sufficient to complete the work. But it is doubtful if it is yet half done. M. de Lesseps now says he needs $120,000,000 more, and he asks the authorization of the Government to raise this sum by a gigantic lottery, and a bill for that purpose has been before the Legislature for some time, but the Ministers have been afraid to press it.

The reason they are afraid is, that although they have had the works on the Isthmus examined by a Government engineer, he has not been able to give any very strong assurance that $120,000,000 will suffice to complete them. In fact, the chances are, even if the company had no use for the money but to dig with it, that it would not suffice. But it has other uses. M. Leroy-Beaulieu, in an article in the *Économiste Français* which has sent a tremor through French investors, shows that if the company succeeds in getting all the money it asks, it will have to pay in annual interest and expenses of administration about $85,000,000 before it will earn a cent, supposing it to be open to traffic in 1892, as the more hopeful believe. But supposing it to open only in 1895, as the less sanguine fear, the total of its annual charges will be $127,000,000. Now, a Government permission to open a lottery for this purpose, although it is not a Government guarantee, will be considered by the "petites gens" as at least a Governmental endorsement of the enterprise; and if it breaks down, there will result, M. Leroy-Beaulieu says, "the most gigantic disaster the modern world has seen since the fall of the John Law system." And that it will break down if the canal be left dependent on French capital alone, he evidently expects.

It is this breakdown (which the death of M. de Lesseps, now a man of over eighty, may precipitate any day) to which the alarmists are looking to bring about the overthrow of the Republic. But the precise manner in which it is to bring it about, as long as the Chambers are

mainly Republican and the army in Republican hands, we confess we do not see. The strength of the Royalists is in the provinces, and no revolution has yet been wrought by the provinces. There is plenty of hostility in Paris to the present Government, but it is the hostility, not of those who think France has had enough of the Republic, but that the Republic has not been Republican enough for France.

THE READING HABIT.

In the hearing in January last before the Committee of the Senate on the Copyright Bill introduced by Senator Hawley, there was a good deal said about the rapid decline in the demand for American books under the competition of the cheap reprints of all sorts of books by the American pirates. But Mr. Henry Holt added:

"This is not the whole question. It is rapidly becoming a question whether with rare exceptions we are going to have any serious books at all. Consider this a moment: the competition of books issued by these cheap libraries is ruinous to all books that are not in these cheap libraries. It is not a question of the competition of an English book, which is reprinted for 20 cents, with the same edition of a book which is reprinted for a dollar. It is the competition of this cheap reading matter that a man can pick up and throw away, with all the substantial books. It is ruining the sale of all books. It is not ruining the sale merely of books of fiction, or the sale of mere trash."

He then cited as an illustration the failure in the American market of Sir Henry Maine's two or three last books, the early ones having sold very well; and continued:

"In the old days of trade courtesy, the pet extravagance of many a substantial citizen in an out-of-the-way place was to step in the bookstore of an evening, glance over the stock, and take something substantial home in a shape which he could hand down to his children and his children's children. Now, except in favored places, there is no bookstore for him to go to. Its place is taken by a toy shop, with a few school-books in one corner and a great counter full of cheap pamphlets. The book-buying habit is dying out. It was never confined to those who read. Books are largely bought by people who fancy books, who take them home intending to read, but don't."

The complaint now comes from England that even the novels are no longer selling well; that there is "no money" even in cheap reprints of very popular ones. A long wail in the *Fortnightly Review* by Mr. Alexander Innes Shand, over the great depression in the fiction market, proposes as a remedy the issue of first editions, even, in a cheap paper-covered form, as an experiment. If it or something like it does not succeed, "sooner or later," he says, "some future annalist will have to write the history of the decline and fall of English fiction."

We have ourselves little doubt that the decline in serious reading, which Mr. Holt says interferes with the sale of solid works, is now to be witnessed in continuous reading of any kind, and that it is from this that novels in a book form are suffering. To read a book—any book whatever—with pleasure or even comfort, the attention has to be so disciplined that it can pursue one line of thought for at least an hour or two. Keeping one's mind on a book of any kind needs practice, just as much as keeping one's mind on a speech or sermon. The capacity for listening well is now rarely found except among judges and lawyers, and even among the judges it is said to be falling off under the influence of printed briefs and arguments. But it has to be cultivated in order to be either attained or retained, as everybody knows who only occasionally goes to hear a sermon or lecture. The untrained attention runs hither and thither like a restless child, and nothing but a very determined effort of the will keeps it fixed on the words of the orator or wards off sleep, in which, again like a restless child, it is very apt to take refuge on the slightest approach of fatigue. Curiously enough, too, the incapacity for sustained attention or mental effort is one of the most marked characteristics of the savage, as distinguished from the civilized man. All who have had to do with the savage in any part of the world testify that the greatest difficulty in communicating new ideas to him is that of getting him to listen long on any one subject His mind is as prone to wander as that of a child.

The capacity for reading a book—that is, for keeping the mind fixed on one argument or narrative for a period more or less prolonged—has always in modern times been much more widespread than the capacity for listening, owing to the fact that we all get our earliest mental training through books. As long, too, as books were the only sources of entertainment, and large numbers of more or less cultivated people lived in the country, and there were no newspapers or other periodicals, and few amusements, and travel was rare and expensive, the habit of reading was kept up. But there is great reason to fear that, what with the newspapers, and the magazines, and the art galleries, and the museums, and the theatres, and facility with which we can get other people to gossip with us when we are both idle and lazy, the number of those who can or ever do read a book—even a novel, even a poor novel—is rapidly declining. In fact, we fear that any one who inquired among his friends, outside the professors and professional literary men, would find that the number of those who now ever read a serious book of any kind is exceedingly small, and that those who read even novels is growing smaller. Most men who have not kept up the habit of reading, in fact, go to sleep over a serious book almost immediately, and throw down a novel after a few pages if the plot does not thicken rapidly, or the incidents are few. The thoughtful novel, such as George Eliot's, filled with reflection and speculation, would fare much worse now, even coming from an author of her powers, than it did thirty years ago. The newspaper is fast forming the mental habits of this generation, and, in truth, even this is getting to be too heavy, unless the articles or extracts are very short. The reader begins more and more to resent being asked to keep his attention fixed on any one subject for more than five minutes. In short, any one who flatters himself during the busy years of an active career, when he does no reading but newspaper reading, that he is going to become a reader of books at a later period when he gets more leisure, may rest assured that he is greatly mistaken. When leisure comes he will find that a serious book will tire him or send him asleep in ten minutes, just as a dumb-bell would tire a long unused arm. To be able to read continuously for long periods, at any time of life, just as to be able to row, or walk, or ride, one must keep in practice year after year, by doing more or less of it every day or at least every week. The man who finds that he shrinks from a book and longs for a Sunday paper, may feel as sure that he is mentally "out of condition" as the athlete who cannot bear to leave his easy-chair without a cocktail.

The falling off in the practice of book-buying, even among those who mean to read but do not, of which Mr. Holt speaks, we think is due in a considerable degree to the superior attractions of what we may call other kinds of furniture. For books, whether old or new, are to the collector—that is, to the man who buys books without seriously meaning to read them, and without feeling much interest in what they contain—books are furniture rather than literature. Thirty years ago, before the æsthetic movement, that is, before the days of "art" and bric-à-brac in this country, a "substantial citizen" who had made money and wanted to show it, ordered a library as a matter of course when furnishing his new house. It filled some of the vast spaces on the walls of his parlor, which in those days the upholsterer, who used to be wholly occupied with the carpets, tables, and chairs, did not reach. Moreover, it fell in with the traditions of the time, when not only in New England, but all along the seaboard, a gentleman was expected to have a library, and there were sets of books which every gentleman's library had to contain. But about 1860, the painters and sculptors began to get hold of the rich men, and pictures and statues began to take the place of books as evidences of wealth, and the hold of the author on him has ever since been steadily loosening. The æsthetic movement has loaded him with wood carving, china, Japanese ware, rugs, tapestry, bronzes, gems, and *bibelots* of all sorts, which call for every inch of room he has in his house, and tickle the pride of his wife and daughters as much as his own, which the books never did. Consequently he has ceased to be a book-buyer, and has become, either mildly or furiously, what is called a "collector." With literature in any sense of the word he has now little connection, except through the monthly reviews, and these his wife is more apt to read than he is. Of serious books he knows little more than the knights knew in the middle ages, and the "literary feller" stands to him very much in the position of the "clerk" at that period, as the possessor of a curious art, but one which was of little practical use, beyond occasionally keeping the possessor out of jail when brought up for felony.

BETWIXT GLADSTONE AND SALISBURY.

London, July 15.

Mr. Gladstone returned to town yesterday and proceeded to place himself, after his usual fashion, in relations with society by arranging a breakfast party for Saturday. Mr. Gladstone's breakfasts are institutions. There a guest may meet on occasion any one who is fortunate enough to excite his host's quick and universal curiosity, from the Comte de Paris and the Duc d'Aumale to Mr. Irving and Mr. Toole, Mme.

Sarah Bernhardt and Mme. Marie Rôze. But Mr. Gladstone's breakfasts are also political functions. They discharge a double office. Mr. Gladstone has adopted the system which in James II.'s time used to be known as *closeting*—that is to say, of talking over opponents one by one; and his breakfast table has been the counterpart of the King's withdrawing room. Dissenting ministers and Radical members arrived at Downing Street doubting and left it converted. But Mr. Gladstone needs to inform himself as well as to direct others. The late Lord Houghton, who had a high though a qualified regard for him, used to attribute to him the sin, which he deemed unpardonable in a politician, of never looking out of window. In a quatrain which has not, I believe, been published, but which he used occasionally to recite, he contrasted Mr. Gladstone as a statesman who knew mankind but did not know men, with Lord Beaconsfield as a statesman who knew men without knowing mankind. Mr. Gladstone has always, however, had about him men whose business it was to supplement his knowledge of mankind by a knowledge of men—to look out of window for him, to tell him what the men on the streets are saying. The late Mr. Abraham Hayward, *Quarterly Reviewer*, diarist, and diner-out, used to perform this function, and he did so with great skill and address. It may now be said to be in commission. To Mr. Gladstone, unfortunately, as in Lord Lyttelton's parody of the verses of Frederick Prince of Wales, that is the all-persuasive tongue which never puts him in the wrong.

No one, however, can tell Mr. Gladstone anything which even he can have failed to learn from the results of the elections. This discrimination between the classes and the masses (or them asses, as haughty Masherdom divides the words), has completely broken down. The classes and the masses have gone together in rejection of his scheme. They have not voted necessarily and in all cases against home rule, but in favor of the Parliamentary Union, which it was Mr. Gladstone's fault to put in jeopardy.

The Cabinet which is presently to assemble will probably have decided on the course to be taken before these lines reach you. The composition of a new ministry may be completed. Into whose hands soever the task of forming it may be committed, and whatever its individual constitution, the autumn is likely to see considerable changes in the personnel of English politics. It is not likely that even in the event of Mr. Gladstone's remaining in power, Lord Granville would continue at the Colonial Office, or would retain the Liberal leadership in the House of Lords. The sacrifice was great which led him on the formation of Mr. Gladstone's present Government to give up the Foreign Office to Lord Rosebery, and to return to the titularly equal but practically inferior post of Secretary for the Colonies. It was one of many surrenders which Lord Granville has generously made of legitimate personal pretensions to the exacting demands of Mr. Gladstone's policy and tactics, and to his personal ascendency. It was thought necessary to conciliate Prince Bismarck, and if possible to maintain with him the friendly understanding which Lord Salisbury had succeeded in establishing. A combination of Mr. Gladstone as Prime Minister with Lord Granville as Foreign Secretary would revive old controversies, or the bitter memory of them; and though Prince Bismarck's dislike is concentrated on Mr. Gladstone and scarcely extends to Lord Granville, still Mr. Gladstone was not removable and Lord Granville was.

"It is a great pity," said an Englishman to an intimate friend of Prince Bismarck, "that the Prince and Mr. Gladstone hate each other so much." "Bismarck does not hate Mr. Gladstone," was the uncompromising reply; "he despises him." The feeling is certainly misplaced, but it is real. Freudenstein, as Prince Bismarck playfully translates Mr. Gladstone's name, being no favorite of the German Chancellor's, and Lord Granville having been the instrument of Mr. Gladstone's policy, the expediency was obvious of finding another Foreign Minister. Lord Rosebery is a very intimate personal friend of Count Herbert Bismarck; he has become pleasantly known to the Prince himself during his visits to Berlin. His views as to the position of England in Europe are those rather of the Chatham, Canning, and Palmerston school of statesmanship than of the Peel, Aberdeen, and Gladstone type. His conception of the relation of England to her colonies is in almost precise antagonism to that of the author of 'Kin beyond the Sea.' In other words, Lord Rosebery was a sort of apology from Mr. Gladstone to Prince Bismarck, and was a very proper person to interpose between these two eminent and mutually uncongenial statesmen. Lord Rosebery's foreign policy has consisted hitherto in little more than in saying "Ditto" to Lord Salisbury, but he has made the remark an original one by the clearness and vigor with which he has uttered it. In the actual work of the Foreign Office he has won the not easily earned esteem of the permanent officials of that somewhat lofty-minded and disdainful department. He is a capital debater, fluent, ready, and witty, not the less acceptable in an assembly of elders for a certain boyish ingenuousness of manner and tone. In the event of Lord Granville's declining to face another Parliament as leader—and the long illness from which he is only now recovering makes this possibility only too probable—Lord Rosebery is marked out for the leadership. No doubt, Lord Kimberley and Lord Spencer have claims, and Lord Spencer has merits. Lord Kimberley, whose knowledge of all that belongs to the red-tape, the pen, ink, and paper, sealing-wax and wafer side of public business is minute and profound, and who possesses an inexhaustible flow of chatter called readiness in debate, is the reverse of an impressive person. Lord Spencer is business-like and sagacious; but his health is not strong; duty rather than inclination keeps him in public life, and he is little capable of coping in debate with Lord Salisbury or the Duke of Argyll. Lord Rosebery is therefore marked out for the Liberal leadership in the Lords should Lord Granville's retirement anticipate Lord Hartington's elevation to the peerage.

Whatever may be the Ministerial arrangements which will immediately follow on Mr. Gladstone's resignation, the Conservatives look forward with desire rather than with confidence to an ultimate coalition between Lord Hartington and Lord Salisbury. Lord Salisbury is not likely to repeat the experiment by which twelve months ago he united the office of Prime Minister with that of Foreign Secretary. His health broke down under the double strain, and it is not yet recovered. Lord Salisbury suffers from one of the most painful and irritating forms of gout—that in which it affects the skin. He is now visiting Royat-les-Bains, in Auvergne—a health resort formerly visited with happy effect by Sir Charles Dilke under similar conditions—and has declared that not even a Ministerial crisis will bring him back until the period of his treatment is over. Lord Salisbury, it is known, would willingly renounce his claims to the Premiership, now, or at some future date, taking the office of Foreign Secretary under Lord Hartington, as First Lord of the Treasury, if such an arrangement, could be effected. A similar arrangement, with practical equality between the two statesmen, was nearly brought about in 1784, when Fox all but consented to take the Foreign Secretaryship with a peerage and the leadership in the House of Lords, Pitt remaining in the Commons as Prime Minister. It was actually accomplished with a distribution of the parts between the two houses, when Fox in 1806 took the Foreign Secretaryship and leadership in the Commons, with Lord Grenville as First Lord of the Treasury in the Lords. But it is not likely that Lord Hartington, if he refuse to be a party to such an adjustment now, will afterwards be brought to assent to it. Mr. Gladstone alone divides the Liberal party. With every month that passes, the prospects of reconciliation and reunion increase. The cry of nature for repose will some day or other be heeded.

Literature is as silent at election times and during Ministerial crises as laws amid the clash of arms. The only two books of much note which have been announced—and the announcement of them is not new—are a new volume of poems by Mr. Browning and the 'Life of Charles Darwin,' by his son Francis. With respect to the former, I may say, in correction of some current misstatements, that Mr. Browning's poem or poems—for there are two—are not yet in type or in the hands of the printer. They are still in manuscript and in his own desk. The two poems are on kindred subjects, such as would go well enough together, and the question of publishing them in one volume or apart has not yet been decided. They are not, as has been stated, upon any social topics. They do not turn on the elections, or on home rule, or on the patriotism or treason of Mr. Gladstone. Mr. Browning leaves that field to Mr. Swinburne and Lord Tennyson. Mr. Browning is always eager to have done with work that he has finished, to get it into the booksellers' shops and forget it, turning to some new performance unencumbered by the clinging manuscript of old poems. But though every season is bad for the publication of poetry, there is none so bad as election time. Mr. Browning, who is as young as he was in body and mind five and twenty years ago, is unfortunately detained in England from his favorite retreat of Gressoney St. Jean, by the illness of his sister, at one time serious, and from the palace in Venice which is being reconstructed for his own and his son's habitation, of whom, in spite of the promise of the younger man, one cannot yet say, as was said of the two Ramsays,

> "Names of equal note,
> Of whom one paints as well as t'other wrote."

The task of writing the life of Charles Darwin has been confided to the third of his five sons, Francis Darwin, who, in association with his elder and better-known brother, George, now the Plumian Professor of Astronomy at Cambridge, assisted his father in the researches which occupied his later years, and in the preparation of the works in which those researches were embodied. Mr. Francis Darwin, who is, like his grandfather and great-grandfather, the celebrated Erasmus, a physician by profession, though he does not practise, resides at Cambridge, being a Trinity man, like most of his family through generations. He is the author of papers on botanical subjects, and in conjunction with Mr. George Darwin has been engaged in experimental researches in the Cavendish laboratory there, the value of which has been acknowledged by his election as a Fellow of the Royal Society. Mr. F. Darwin's tastes have directed him to those studies in natural history which are especially connected with his father's name and fame, whereas Mr. George Darwin has directed himself mainly to astronomical and physical inquiries. In this fact probably lies the reason of the former's selection as the biographer of his father.

K.

Correspondence.

MR. SCHUYLER ON AMERICAN DIPLOMACY.

To the Editor of The Nation:

Sir: Pray allow me a word with regard to the accusation brought against me by Mr. W. H. Smith in a recent number of the *Dial*, and commented on in the *Evening Post* of June 11. I stated in my 'American Diplomacy,' page 8, referring to Mr. Washburne, that in six days he "removed the greater number of consular and diplomatic officers," and "filled their places with new and inexperienced men, appointed solely for partisan political services." Mr. Smith quotes my enumeration (on page 86) of 707 consular officials, denies my statement, and asserts that Mr. Washburne made only three or four foreign appointments.

If we exclude the consular clerks, who are irremovable, and the consular agents, who are appointed by the consuls and not by the State Department, we shall find in 1869 about 300 consuls and commercial agents appointed by the President. But of these more than one hundred did not receive compensation either by salary or fees amounting to $1,000 per annum, and are of too little importance to be considered. There were then about 200 consular officers with a salary of $1,000 or over, and about 50 diplomatic officers. In using the words "greater number" I did not have in mind a mere numerical majority, but meant the "more important." I should certainly have expressed my meaning better if I had said "removed the chief and most important officers, and those whose salaries seemed to promise lucrative positions."

But even here I may be wrong; and if I am wrong, I shall gladly alter the statement and apologize to Mr. Washburne for having made it. I must admit that I trusted to my memory without verifying my very strong impression on the subject. Exact verification is difficult. It would be possible to obtain from the State Department the dates of the commissions, but these are no criterion of the dates of the original nominations to the Senate. Those are filed away in the Senate archives. But, while impossible for me at this distance, it would be easy for any of your readers who is interested to verify my statement roughly by the lists of the nominations sent to the Senate between March 4 and March 12, 1869, published in the chief New York daily papers of the time. By those lists I am willing to abide.

May I, in turn, make two or three observations on your criticism of my book in your number for June 10? I nowhere state, as my critic represents, "that the management of our foreign relations involves a grave departure from constitutional theory," nor do I imply that the change in the working of our Government has had any appreciable effect on the methods of the State Department. Quite the contrary. It is because Congressional leaders have as yet devised no way of undermining and counteracting the old and essential functions of the Secretary of State and the Secretary of the Treasury that those officers still form part of the real inside working Government. It is because these two secretaries still possess independent powers that their offices seem to me better worth studying than the more clerical and administrative duties of the War, Navy, and Interior Departments. Every branch, however, of our Government demands exposition, and none more so at the present time than the offices of the First and Second Comptrollers, and the evolution of these nominally subordinate officials of the Treasury Department into uncontrolled, independent officers; judges who decide without a hearing and from whom there is no appeal; who are able, if so disposed, to stop all the wheels of government.

Further on, by a partial quotation and by a misapprehension of what I wrote, my critic makes me seem to approve of abolishing the diplomatic service and of intrusting diplomatic duties to consular officers. I really stated exactly the reverse, and thought that my meaning was clear. My whole book is intended to show the necessity of a diplomatic service, and I endeavored to make plain the distinction between conferring consular functions upon diplomatic officers, of which I approve, and of intrusting diplomatic duties to consular officers, which does not seem to me feasible or advantageous.

I may add here that within the last few weeks the Italian Government has decided to suppress its consuls at St. Petersburg, Belgrade, Shanghai, Yokohama, and Tangier, when the consular duties will be performed by a secretary of legation or a clerk. It is proposed to transfer the seat of the legation in China from Pekin to Shanghai.

I must confess that I do not understand the references in the final paragraph of your criticism to the "ponderous volume of instructions." The last edition of the 'Personal Instructions to the Diplomatic Agents of the United States' (1885) is a foolscap pamphlet of seventy-seven pages, of which twenty-four are forms, index, etc., and relates chiefly to accounts, the forms of despatches, and to special duties imposed by our laws and the regulations of the Department. This pamphlet is considered confidential, as I stated on page 132, and I should therefore say that the edition of which I speak was published after I left the service, and was never officially communicated to me. The 'Consular Regulations,' a small octavo volume of about 600 pages, two-thirds of which is taken up with extracts from treaties and the Revised Statutes, and with the necessary forms for consular acts, consists of the instructions issued at various times by the State Department, which, owing to the requirements of our laws, are sometimes very minute and detailed. The book is not only useful but necessary to even the most experienced consular officer. It is similar to the consular handbooks of other countries, whether they are published officially by the Government or privately by one of the officials (as in England); but it is better than these, and, instead of exciting "amazement," calls out the admiration of foreign diplomats and consuls for its method and thoroughness.

I am, sir, your obedient servant,

Eugene Schuyler.

Alassio, July 2.

[At Mr. Schuyler's request, we have ourselves examined the files of the daily papers for March, 1869, expecting to find some confirmation of the statement about Secretary Washburne's appointments, as this has been a very general belief. To our surprise, between the dates specified (March 4-12), but a single nomination was reported from the Department of State. Moreover, on March 10, the *Tribune* correspondent at Washington telegraphed: "Secretary Washburne to-day stated an interesting fact in reply to the personal application of an office-seeker. He said he should make no appointments whatever while he remained in office, and that he could only receive the papers and place them on file; that his stay in the Department would be limited to a few days, and he did not intend to interfere in the question of appointments in that Department." No nominations were, in fact, forthcoming up to March 17, when the same correspondent reported Mr. Washburne formally relieved by Mr. Fish's taking the oath of office, nor, with a single exception, until April 3, when three nominations were sent to the Senate, and there were no more till April 12, when the weightier appointments of Motley, Curtin, Jay, etc., with others, to the number of thirteen in all (making eighteen to date), were handed in. Further we have not searched.—Ed. Nation.]

THE COUNT OF PARIS AND THE PANAMA CANAL.

To the Editor of The Nation:

Sir: It would be rather curious if the Panama Canal affair were to end in placing the Count of Paris on the French throne; yet things much more unlikely have come to pass.

The canal shares are still at par, kept there by Lesseps's wonderful prestidigitation. The collapse must come, and Leroy-Beaulieu predicts that the resulting financial panic will be greater than anything that the world has seen since the time of Law. Great numbers of intelligent Frenchmen feel that the republic is a failure. It has made a vast expenditure of treasure and blood, and has very little indeed to show for it either in Tunis, Tonquin, or Madagascar. It expels royalist leaders, but fears in any way to molest the anarchists. The status of the municipality of Paris is a continual danger. There exists a widespread dissatisfaction and uneasiness to which the maladroit Government has virtually presented a leader and chief in the person of the Count of Paris. Now let a great financial crisis come in which multitudes of small investors in canal shares find their ruin result from the collapse of an undertaking sanctioned and promoted by the republican Government, and what is more probable than that that Government, already weakened in the affections of the French people, should be overturned for the benefit of the Count of Paris? M. C. Lea.

Bar Harbor, Me., July 18, 1886.

COMPARATIVE POLITICS.

To the Editor of The Nation:

Sir: Having drawn one illustration from Great Britain, I should like to take another from France. There has been nothing finer in history, hardly even excepting our Constitutional Convention, than the way in which, after the fall of the Second Empire, the country rallied its force, elected an assembly, paid the fine, and got the Germans out of the country. It was done, as in the case of Washington and Victor Emmanuel, by following a leader, Thiers, and there is something deeply pathetic in the history of his struggles to hold the jarring elements together. But after his death executive power began rapidly to decline. The Chamber was broken up into groups, the finances managed by a budget committee, weak ministries continually falling from power; while the President, M. Grévy, seems to think his duties are summed up in self-effacement. As always happens, the control of the Chamber falls into the hands of the most violent and irresponsible portion. One fatal step was the removal from Versailles to Paris. Just as the Jacobins got control of the old Legislative Assembly, so the leaders of the Paris mob are again slowly but surely getting the upper hand. The expulsion of the Princes, the quarrel with the Church, the treatment of the strike at Decazeville, are unmistakable symptoms. The Comte de Paris sees what is coming, and his manifesto is a bid for the succession, but he has probably

too little vigor and too much scruple. The talk about Gen. Boulanger has something of the old flavor of Bonaparte, but there is a long gap yet. The prize is almost inevitably awaiting some military adventurer; but that does not prove that the country wants him, or that France does not prefer peace and economy to the hazards and disasters of military rule. It only proves that she has not learned to organize executive power strong enough to hold a legislature in check without dispersing it by force of arms.

It will be said, "But France has what you so earnestly plead for—a responsible Ministry, with seats in the Chamber." Very true; but observe that they are too much responsible to the Chamber and too little to the nation. The English have learned by two centuries of practice to carry on a ministerial executive system which is directly responsible only to Parliament, and only indirectly to the people. Even there the danger of Parliamentary usurpation is manifesting itself. But in France the system is clearly unworkable. Not even the President is elected by the people, while the Ministers are the mere tools of Parliamentary faction. In Germany we see a Minister who holds his own in spite of Parliamentary defeats, and the result is at least favorable to steadiness of administration. It is an interesting illustration of putting the veto where it belongs—with the legislature and not with the executive. God forbid that I should hold up the German empire to imitation! But there is a vast difference between an irresponsible, divine-right, bayonet-supported Emperor and a President elected, in effect directly, by 10,000,000 of votes of a free people. I have a strong conviction that there is something splendid ahead of us in a President supporting his Cabinet against an adverse Congress, until both sides carry the issue, fully discussed and defined, to the impartial tribunal of the national will. But unless we do provide for this, unless we furnish to the executive some means of holding a domineering legislature in check, the warning is as plain as the handwriting on the wall at Belshazzar's feast. What French Chamber was ever more impotent, more completely in the hands of factious intrigue, than Congress has been during the last session? Certainly the circumstances and the character of the people are vastly different, but this does not change the principle. Anarchy has led us once into civil war already. How many such experiments the country can stand may be a question. They will, however, be much worse in the form of social disintegration than of sectional secession, and that sooner or later they must come, with the present state of things, is as certain as any demonstration in mathematics.

G. B.

Boston, July 24, 1886.

THE MORRISON SURPLUS BILL.

To the Editor of The Nation:

Sir: As a Democrat, I have no desire to deny your impeachment of the Democratic party for its financial heresy, as shown in its support of the Morrison resolution. That the execution of this measure would be a public calamity, there is little room for doubt; and it is fortunate that the President and the Treasury Department can be relied upon to use all their power against it. An analysis of the vote, however, shows that the friends of sound financial legislation have more to contend with than the Democratic Congressmen. A majority of the Republican votes were cast in favor of the measure; and of more than fifty Republican votes from Western States, only six were cast against it. How the Senate will deal with the matter will have been decided before this is in print, but it will be remembered that that body has already demonstrated its unsoundness on the silver question.

It seems to be the opinion of the *Nation*, and is probably the opinion of Eastern men in general, that Western and Southern Congressmen are misrepresenting the people of their districts in their action on this question. It would be fortunate if this were so, but it is a mistaken view of the case. If the Morrison resolution could be submitted to a vote of the people, the South and West would give an overwhelming majority in its favor. There is no ground for comfort in the fact that "Bill Allen" was defeated in Ohio in 1875, on a soft-money platform. That vote has no significance as a test of the opinion of Ohio on the silver question. Outside of the New England and Middle States, the popular feeling in favor of the silver dollar is probably stronger today than when the Silver Bill was passed. It may as well be recognized that there is a long, hard fight ahead of us, and it will be fortunate indeed if the masses can be won over to the support of sound currency without going through the ordeal of financial disaster. W.

Parkersburg, W. Va., July 23.

THE AMERICAN SCHOOL AT ATHENS ONCE MORE.

To the Editor of The Nation:

Sir: The letters of Prof. Goodwin and Mr. Fowler in reply to mine on the American School at Athens differ in the sense of their attacks on it, and to a certain extent are opposed to each other. Prof. Goodwin does not in the main disagree with me in the designation of the end to be attained, but he takes exception "to the spirit in which it is done." If by this he means that this spirit is one of anything but good will towards the School, I would gladly have had him express his idea more definitely, that I might repudiate it more formally. As for Mr. Fowler's letter, I can only say that his opinions on the School have the *prima-facie* relation to mine that those of an undergraduate of a university may have to those of a man who has watched classes come and go, and seen them in and out of the school bounds. I have had the good fortune to be a good deal in Athens, and to have been there at various periods of the School's existence, hearing what is said by disinterested outsiders about it and its work and prospects. I have heard, too, the evidence of a number of its pupils. The letter of Mr. Fowler, as a reply to mine, is, to borrow his own phrase, "simply absurd." Simultaneously with the *Nation* which contains these letters came to me here a private letter from an American scholar, who has every right to express an opinion on the School at Athens and its work, saying how glad he was I had written the letter, and "wishing only that you had spoken in stronger terms about the recent management."

In reply to Prof. Goodwin's implied accusation of my motives in writing, I can only say, as I have always said, that I most earnestly desire the advancement and pecuniary prosperity of the School, and am at all times ready to do what I can, if I can do anything, to contribute to its prosperity. But it is useless to attempt to conceal that I regard the recent management to have been carried on on wrong lines, and such as will not lead the School to success so soon as a sounder policy might. I will not attempt to discuss Greek grammar or education in ancient or modern Greek with Prof. Goodwin or any of his colleagues, but I am capable of forming the opinion, from what I see of education, that the especial object to be gained, and the only one, so far as I can see, by having a School of Classical Studies *at Athens* is to give the students a chance to study archæology in a practical way; because, as I have said before, Greek grammer may be better learned at a German university or at Oxford. And this I do not say with any disparagement of the admirable Hellenists who have been delegated by the managers of the School to conduct it, but simply because, in the nature of things, it is not merely what a veteran literary Greek scholar can give that is wanted to conduct this School at Athens to such a position as will command support by showing success of a practical kind, but the demonstration that something can be done for American culture there which cannot be done elsewhere. And as to this the testimony of the students whom I have known is almo t unanimously negative. And, if Prof. Goodwin will permit me to say it, his statement of "my principal argument" (paragraph 1 of his letter) is a *reductio ad absurdum* which sins by absurdity. His consequence is neither implied in my words nor involved in my opinion. There is no necessary connection between Greek scholarship as such (excluding epigraphy, of which I hold the absolute necessity) and the study of archæology. I know some very clever archæologists who are not good Greek scholars, and I know at least one admirable Greek scholar who detests archæology.

Now, I believe this plan of sending directors to the School for one year a mistake which is fatal not only to the progress of the School itself, but to its securing the public support which will follow its having gained any ever so slight distinction in that special ground for which Athens, as a *locus standi*, is peculiarly fitted, and for which, therefore, the managers can appeal to the general public for support. The whole cultured world is to a certain extent interested in Greek archæology and its results—in museums and a knowledge of ancient art; while the number of those who are interested in the progress of Greek literature is comparatively small, and less able, or disposed, to give. You begin to teach a child to swim by putting him into water, and you make archæologists by teaching archæology; and it is only, in my opinion, by a school of actual archæology, achieving some results which shall confer honor on the American name, that that enthusiasm will be excited which is the only efficient patron of the higher culture in America. Therefore, I say that the first thing to be done to win public support is to put at the head of an archæological school at Athens some one whose position there *is*, and is likely to become *still more so*, a matter of national pride; and so far as I know, or so far as the general opinion of archæologists whom I know goes, Dr. Sterrett is the only man we have who occupies this position. And I much mistake my countrymen if an appeal for funds to prevent this brilliant scholar, who has already won himself a European reputation in the most difficult branch of archæology, from being relegated to the obscurity of a Western college, instead of being put at the head of a (in some sense) national institution, would not bring in more contributions to the funds of the School than the project for a building of which the ostensible use excites no enthusiasm. You cannot excite enthusiasm in the American public for an abstraction. One brilliant discovery in things tangible and comprehensible, and which serve to raise the American national pride, will call out more contributions than the making a dozen good Greek scholars, even if this could only be done at Athens.

"There is," says Prof. Goodwin, "little or no real difference of opinion between Mr. Stillman and the managers of the School as to the ideal to be aimed at," but there is immense difference between our opinions as to what is to be done to realize that ideal. The managers apparently propose to go on with the plan at present followed, until funds offer enough to endow a permanent directorship; but the object of endowing an

indefinite and permanent directorship is far less likely, *me judice*, to attract the support of the public than that of keeping a man who honors the country in a position to increase that honor and emphasize our position among cultured nations. My plan is, then, to secure the proper head to the School and then appeal to American public spirit to support him; and this, I believe, would not only give the fund, but also construct the school building, if the funds for that were to be asked for still. The conclusion which might be drawn by outsiders asked to contribute is (I am not supposing that there is any such plan), that it is intended to secure a fund which may be devoted to putting some person indifferent to the contributors into a permanent comfortable position where no public sentiment is gratified by seeing him; and as the success of the present system has not been all that is needed, I suggest that a change be tried. My acquaintance with Dr. Sterrett is very slight, and there must be many scholars who know him far better than I do, and who are better able to recommend him; but I am in a position to know that his appointment as the head of the School at Athens would give it at once a European recognition which, in my opinion, it could not expect in a long time with any other head that I know of.

I was informed at Athens, and by the head of the Archæological Department of the Ministry of Instruction, that a new archæological law will be introduced this winter (one which I have for years labored for in Greece, and as a friend of Greece), which will facilitate excavations for foreign societies, museums, etc., and permit the retention and exportation of such of the objects found as are not necessary to the completion of the history of Greek civilization. If we might greet this enlargement of Greek liberalism by an appropriate appeal to American patriotism, it would give every American interested in classical culture (and me not the least) a pleasure which Greek literature will be long in furnishing; and I mistake my countrymen if this appeal for Dr. Sterrett's retention in that field would not be a success. He is a poor man, and has already expended all he possessed, and contracted debts in his researches. He cannot refuse a professorate should he not see his way open to some more congenial position to which he is entitled. My practical opinion is that it were better to devote the money raised (if the giving made it possible) to the support of a permanent head, even if it be not Dr. Sterrett, than to the building of which there is no absolute need, while of the head there is. These are the general and particular grounds for my difference with the managers of the School, not any want of interest in it.

Yours truly, W. J. Stillman.

THE INTELLECTUAL WOMAN.

To the Editor of The Nation:

Sir: Apropos of the interesting letter of "E. R. S.," entitled, "Why Not Make Her an Intellectual Woman?" I heard a remark the other day of a lady connected with Vassar College that is worth considering. Said she: "Do you know one cause of the many divorces nowadays among Americans? It is this: the husband, coming constantly in contact with the world, with men of business, men of ideas, men of inventions, and with the new ideas in the newspapers, magazines, etc., is constantly *growing* intellectually; while the wife, confined within her narrow circle at home, remains *stationary;* and the husband *grows away* from her, and finally is compelled to leave her. How often you find wives complaining that their husbands are taken up with their books, and have not a word for them. This is because the wives don't care for what the books contain; they have no liking nor knowledge of these things, and their husbands find nothing to say to them. Now, let our young women get a good classical education, and this complaint will cease; their husbands *will never grow away from them.*" Robert Waters.

West Hoboken, July 30, 1886.

"WOMAN IN MUSIC."

To the Editor of The Nation:

Sir: I am very glad that Philip Hale, your correspondent whose letter appeared in the *Nation* of July 22, has replied to some statements which were published in the *Nation* June 17, in a review of Mr. Upton's 'Woman in Music.' Your correspondent not only places the women composers of France in their true light, but he gives to French musicians their just praise: a distinction too seldom accorded them by critics living at a distance from Paris. It is to be regretted that the French performers and composers are so little known and consequently unappreciated.

Among the galaxy of talented composers of Paris to-day Mlle. Augusta Holmès is recognized for her ability and originality. I lived in Paris the year Mlle. Holmès entered "Les Argonautes" in the "concours de la ville de Paris." M. Ernest Giraud, the composer, told me that Mlle. Holmès's poems and musical composition indicated great talent and originality, but he considered her style as somewhat *bizarre*, and, in her effort for musical "effects," she used an exaggerated manner of composition. This meant that Mlle. Holmès had departed from the more frequented path of rule and tradition. However, this has often before been the course of genius.

The compositions of all the competitors had been thrown aside, excepting two, "Les Argonautes" and "La Tempête"; the judges were slow to decide to which of the two candidates the prize should be awarded. Paris was excited over the delay, and the daily papers were full of the "concours." If I remember correctly, Mlle. Holmès failed by only one or two votes to obtain the "prix du concours." It was given to M. Duvernoy, the author of "La Tempête." The city of Paris voted a sum of money for the performance of Mlle. Holmès's work, a worthy testimony of the respect in which her composition was held.

I should like to add to the list of women composers the name of a young musician of this city, Miss Helen A. Clarke. This young lady is not only a distinguished pianist, but a composer of more than usual promise. She has written charming songs, and piano pieces of decided merit. Recently she composed a sonata for piano and violoncello, which discloses the artist's knowledge of counterpoint and melody. This sonata was performed in public a season ago by Miss Clarke and Mr. Charles Schmidt.

The reviewer of Mr. Upton's book says: "But perhaps the chief reason of woman's failure lies in the fact that music is an impersonal art." Impersonality is a quality that either man or woman should possess in order to succeed in any line of intellectual labor, whether artistic or scientific. It depends in a measure upon the kind of education the person receives, if his or her mind regards things personally or impersonally. The physical sciences are the best means of cultivating the intellect to think on any subject impersonally. The introduction of scientific studies into women's schools and colleges will have telling results, and we may prophesy that the ranks in all departments of science, philosophy, and art will be crowded with women thinkers.

The position of woman, with few exceptions, for centuries has not been one to develop her intellectual faculties to their fullest extent, and until the influence of the present educational advantages are felt, it is premature to claim personality or impersonality as the exclusive property of one or the other sex, or to advance the thought that impersonality is a sex distinction and the cause of the fundamental difference between men and women composers.

The great Novalis says: "Effort is towards the higher; man's effort is towards woman; and woman's towards—what?" In reply, it can be said that woman's effort is certainly not towards the personality incorporated in mankind, but to those lofty peaks of Spinoza and to the impersonal. "And though the way thereto be steep, yet it may be found: all things excellent are as difficult as they are rare."—Yours truly,

Helen C. De S. Abbott.

1509 Locust St., Philadelphia, Pa., July 22, 1886.

Notes.

Frederick Warne & Co. will issue in the fall an entirely new edition of Napier's 'Peninsula War,' in six volumes, uniform with their Chandos Edition of 'Knight's Half-Hours'; also, in the "Chandos Classics," a new edition of 'Sháh Námeh of Firdausi,' carefully revised by the Rev. J. A. Atkinson, M.A., son of the original translator.

Henry Holt & Co. signalize a new invention in flexible cloth book covers by starting "The Leisure Season Series," of which the initial volume will be Miss McClelland's 'Oblivion,' borrowed from "The Leisure Hour Series." No. 2 will be a new novel, by Thomas Wharton, author of 'A Latter-Day Saint.'

Cupples, Upham & Co., Boston, have in press 'The Winnipeg Country; or, Roughing It with an Eclipse Party,' illustrated with heliotypes, wood-engravings, and a map. They will also publish, by arrangement with the *Pall Mall Gazette*, a third pamphlet edition of 'The Best Hundred Books.'

'An Introduction to the Study of Robert Browning's Poetry,' by Prof. Hiram Corson, of Cornell, is announced by D. C. Heath & Co., Boston. A bibliography of Browning criticism will be given in an appendix.

Our readers will remember an entertaining account by our French correspondent of the recently published life of Éléonore d'Olbreuze (*Nation*, Nos. 1038 and 1040). This interesting work, by the Viscount Horric de Beaucaire, has been translated and published in handsome form by Remington & Co., London (New York: Scribner & Welford), under the title 'A Mésalliance in the House of Brunswick.' This French girl, maid of honor to the Princesse de Tarente, married Duke George William of Zell, and was mother of Sophia Dorothea, Queen of George I. of England. The "mésalliance" is therefore an event of considerable historical importance, seeing that from it are sprung the royal families of England and of Prussia. The translation is in general easy and idiomatic, but is marred by the persistent use of French forms and titles and even of mixtures of French and English. We have "Georges-Guillaume, Duke de Zell," while on his brother, "Duc Ernest-Auguste," becoming titular Bishop of Osnabrück, we are told that "M. d'Osnabruck and Madame l'Evéque left Hanover, etc." So we have (p. 16) the "Elector de Brandebourg," and the statement that "all the counties north of the Elbe, the Hante, and the Basse-Saxe of the Bavière belonged" in olden time to the House of Brunswick. What this means we are really at a loss to understand.

The Superintendent of the New York Department of Public Instruction is establishing at Albany a permanent educational exhibit, to which nothing comes amiss in the shape of text-books, periodicals, reports, school apparatus—even pho-

tographs of prominent educators and school-buildings. Everything received will be duly labelled and preserved.

The collection of geographical apparatus made by the Royal Geographical Society, and exhibited in London, Manchester, and now in Edinburgh, has awakened much interest in the subject of geographical education in England. The Society, through its President, the Marquis of Lorne, in his annual address published in the July Proceedings, proposes to do still more to promote proper methods of instruction, principally by courses of lectures. It is also suggested that a "travelling scholarship be offered every year alternately to Oxford and Cambridge, to be awarded, under suitable conditions, to a graduate who has shown marked ability in geographical subjects, and who may desire to visit some little-known district, and communicate the results of his explorations in physical and historical geography to the Society." During the past year fifteen intending travellers have received instruction in surveying and mapping, to which subjects are henceforth to be added geology, botany, and photography. The only paper in this number of the Proceedings is by Mr. Farini, descriptive of his journey in the Kalahari Desert.

The principal paper in the *Scottish Geographical Magazine* for July is an interesting account of the Portuguese district of Tette, on the upper Zambesi, by Mr. W. Montagu Kerr. A melancholy picture is given of the once prosperous city of Tette, which is now in ruins and almost deserted, save by its garrison. Commerce, under the twofold influence of the failure of the ivory supply through the extinction of the elephants and the suppression of the slave-trade, has almost ceased. The country generally has fallen into the hands of half-castes, who are practically independent, and plunder indiscriminately all travellers and traders. Mr. Kerr discovered some regions very rich in gold, though he discourages any attempt on the part of Europeans to utilize this discovery. To the opposition of the natives and the scarcity of water must be added a still greater obstacle in the tsetse fly, which "swarms to an incredible extent" and renders the region practically inaccessible for wagons. In the Geographical Notes of this magazine, which begins its second volume with the present number, the highest mountain in Massachusetts is printed "Grey Cock," for Greylock—an obvious printer's error.

The August *Art Journal* (New York: International News Company) has a full supplement illustrating the Colonial and Indian Exhibition, which is now one of the sights of London. The photographic engravings of carved screens, wares, and stuffs are very effective.

Perhaps the most important paper in the *Antiquary* for June is the opening one, by Mr. J. J. Foster, "on some miniature painters and enamellists who have flourished in England." It is illustrated with portraits of two of these painters. Mr. J. H. Round, in "Is Mr. Freeman accurate?" points out, as he has done before, certain mistakes of detail made by Mr. Freeman in his deductions from Domesday Book. Mr. Round has proved his point, but has not, it seems to us, seriously impugned Mr. Freeman's accuracy on the whole. A rather long illustrated article on the Streets of Derby belongs to a class of papers of great value and interest. The July number is rather a dry one, and contains very little of interest for American readers.

The July Bulletin of the Library Company of Philadelphia contains a supplement to its January Bibliography of the Regimental Histories of the Civil War. A second appendix gives a list of books on trees and forestry.

Polybiblion for May has the following item: "The *Nation* announces that a sum of fifteen thousand dollars has just been given to Harvard University at Baltimore for the foundation of a chair of political economy"!

M. Jules Verne, without discontinuing his contributions to the *Magazin d'Éducation et de Récréation*, is publishing a story in the *Journal des Débats*, called "Robur le Conquérant." The scene so far is laid in the United States, in Philadelphia, which city M. Verne duly praises, giving details or rather general statements of American life calculated to edify French boys and to surprise Americans as novelties. The new story, though given as the *feuilleton* of a very serious paper, is, judging from the first numbers, not addressed to older readers than those for whom this entertaining author usually writes.

M. Alphonse Daudet is still busy with his dramatization of 'Numa Roumestan,' which is to be entitled "Nord et Midi." He has already read the first three acts to M. Porel, *directeur* of the Odéon, where it is to be produced. The play is to conform to the novel except in its political aspect, which M. Daudet considers an obstacle in the way of seeing clearly "le vrai roman psychologique et social, le fond philosophique des choses." The political accessories will be replaced by something with which the author declares himself to be extremely well pleased, but which he does not make public. It will be interesting to see how M. Daudet will transform the ardent legitimist, Numa Roumestan, who, in spite of his politics, was said to be a portrait of Gambetta, into a non-political personage.

The project of M. Carvalho, director of the Opéra Comique, for a lyric drama by Gounod, taken from Alfred de Musset's 'On ne badine pas avec l'amour,' has met with a sudden check. The sister of the poet, Mme. Lardin de Musset, refuses to authorize any adaptation from her brother's works. This is not the first time that the family of Alfred de Musset have interposed when there was a question of interference with their rights. For many years they would not allow the publication of selections from his poems, however limited. In certain cases only one poem, the beautiful stanzas, "À la Malibran," was all that was allowed to appear in collections of French poetry. But now (July 8) the *Débats* says that while Mme. Lardin de Musset has renewed her objections to the proposed work, she has said that she would make no opposition to the representation of another opera taken from her brother's works, which has been ready for a number of years. This is "Carmosine," which M. Paul de Musset authorized M. Poise to set to music, and regarding which the *Voltaire* quotes M. Poise as saying that it is the joint work of himself and of Paul de Musset.

The work of the eminent critic and publicist, M. J. J. Weiss, on Germany and Alsace-Lorraine is very different in its tone from the numerous other French books that have been issued of late on the same subject. Fragments published in the Paris journals are sufficient to show that the author has not been blinded by his patriotism. The work is entitled 'Au Pays du Rhin' (Paris: Charpentier).

A very important publication is the first complete French translation of Schopenhauer's 'Le Monde comme Volonté et comme Représentation,' in two thick 8vo volumes. The translator is M. J. A. Cantacuzène, and the work is published simultaneously in Leipzig, Paris, and Bucarest (New York: Christern). We have lately done justice to this masterpiece in the case of the English version.

M. Schuré has just published a second edition of his recent work upon Wagner, 'Le Drame musical' (Paris: Perrin; 2 vols.), to which he has added a chapter upon "Parsifal."

M. Catulle Mendès has recently published a volume, 'Richard Wagner' (Paris: Charpentier), in which he speaks with enthusiasm of the creations of the master, both in their musical and literary aspects, and gives interesting details of his own personal relations with him.

The seventh volume of the *Annuaire de la Presse française* still bears on the title-page the name of Émile Mermet, who died just before the completion of the volume for 1884. The present volume is introduced by M. Alexandre Hepp. Though slightly increased in size, it does not keep the promises of previous years. The *Annuaire* gives a complete list and a summary description of the various French newspapers and periodicals, 1,540 in Paris and 2,819 in the rest of France. Of these 505 are designated as "nouveaux journaux," of which some are merely titles legally registered, and many are destined never to appear, or to die after a few numbers. After a few very scanty notes on the foreign press, only twenty-one English papers being mentioned and three American, the latter part of the volume is taken up by generally very interesting articles, selected from the best contributions to the daily newspapers, avoiding political and religious subjects. Under the headings, "Littérature et Beaux-Arts" and "Le Théâtre" the selections are so made as to give a fair idea of the principal events of the year as presented by the leading critics who write for the Paris papers under their own signatures. A large number of advertisements, all relating to newspapers and book-making, swell the volume to more than a thousand pages.

Señora Emilia Pardo Bazan has been called a "Catholic Spanish Naturalist." Besides fiction she has written critical works of various kinds. One of these, entitled 'Cuestion palpitante,' aims to make the Spanish public acquainted with the state of naturalism or realism in France and England. This has just been translated into French by M. Albert Sabine: 'Le Naturalisme' (Paris: Giraud).

The 'Vita di Giuseppe Mazzini,' written by Signora J. W. Mario (Milan: Edoardo Sonzogno), is now completed. It makes a quarto volume of 500 pages, very freely illustrated on a large scale, and sold for ten francs. It has been with the author emphatically a labor of love.

Brockhaus, the Leipzig publisher, announces, as in preparation, a collected edition of the works of Moritz Carriere, the well-known writer upon philosophic and æsthetic subjects. It is estimated that the writings on the philosophy of the beautiful and the history of art will occupy the first nine volumes. They will be followed by the works treating of the history of philosophy, religion, and ethics.

Germany (*Deutschland*) and things German have full swing in the fourth volume of 'Meyer's Konversations-Lexikon,' fourth edition (Westermann), occupying some 180 pages with the several divisions of literature, history, etc. These articles are accompanied by a corresponding abundance of maps of Germany—physical, geological, political for many epochs; maps of Jew, Catholic, and Protestant, and of simple density of population. China and Denmark likewise receive due attention, and are mapped in turn. The Congo Free State is delineated and essentially described. Among general topics, Cholera, Darwinism, and Steam take the lead in point of fulness. President Cleveland is of course included in the list of the world's notables, though the bare facts of his rapid rise to eminence are all that is given here. Under Henry Clay we notice that Mr. Carl Schurz's forthcoming Life of that statesman is set down as already published in 1885, and as if among the authorities either consultable or consulted.

With Part 38 of the popular 'Allgemeine Weltgeschichte' of Flathe, Hertzberg, Justi, etc.

(Berlin: Grote; New York: Westermann) is begun a History of the Middle Ages, by Dr. Julius von Pflugk-Harttung, which is to form the fourth volume of the series. This and the three succeeding parts are rich in curious illustrations of weapons, implements, ornaments, buildings, manners and customs, etc.

Of the 'Allgemeinde Naturkunde' (Westermann) we have now sixteen more parts (25 to 40), in which Man is concluded and Geology begun. They present an extraordinary array of engravings and chromo-lithographs, of a high order of excellence, and drawn (for the geological chapters) from a great variety of sources. Our own country furnishes its share of marvellous formations, but has little to offer to the section on volcanoes, which is exceptionally rich in photographic and other records possessing a singular interest.

A critical history of Russian literature ('Geschichte der russischen Litteratur von ihren ersten Anfängen bis auf die neueste Zeit—1886'), by Alexander von Reinholdt, has just been published at Leipzig by Wilhelm Friedrich (New York: Christern).

A valuable addition to the existing collections of Russian folk-songs will be furnished by B. Romanoff's work on the popular poetry of White Russia, the first volume of which has recently been published at Kiev. White Russia has not been very thoroughly studied, up to the present date, and several early collectors of folk-lore were beguiled into publishing spurious productions. Beszonoff's collection (1871) and Schein's (1874) are the most trustworthy thus far published, but Mr. Romanoff's will be on a much larger scale, embracing four volumes. They are divided, as is customary in such books, under certain heads; but the author discovered too late that most of the songs were not only appropriated to certain seasons of the year and ceremonies, but were also set for particular days. It is thought that if this discovery is followed up diligently it may throw light upon the customs of pre-Christian worship, with which these songs were connected, and which have not yet lost their significance for the White Russian of to-day. It is intended to include in the collection some specimens of a legendary nature dating from the eighteenth century, which are partly of literary, partly of popular origin.

While the Serb nation has been, of late years, rather overactive in the use of arms—fighting not only the Turks in a legitimate warfare for independence, but also the kindred Bulgarians in opposition to their equally legitimate efforts to secure freedom and unity—the cultivators of Serb literature have not been idle either. Among other institutions of national culture, the stage has received praiseworthy attention, and it is almost surprising to find that classical dramatic works of the Teutonic nations are favorite plays of the South Slavic race. Not only Schiller's "Mary Stuart" and "Don Carlos," Shakspere's "Romeo and Juliet" and "Othello," and similar dramas, are acted in the Serbo-Croat idiom on the stages of Belgrade, Agram, and Neusatz (in Hungary), but Goethe's "Faust" has recently also been produced in the Serb theatre of the last-named city. The translation, in the metre of the original, is from the pen of Dr. Milan Savić, a novelist of repute.

—The account of Detroit in the August *Harper's* is hardly up to the high average of the series of monographs on American cities which is now one of the excellent features of the magazine. In its architectural appearance, the general expression in its streets and squares of public spirit and of private wealth and thrift, and in the beauty of its natural surroundings (especially its admirable park), Detroit offered one of the finest subjects, while its history is long and attractive, and has an individuality altogether exceptional in the West, and its business development furnishes an excellent example of safe enterprise. One misses in the article, though it is by no means a failure, the sense of the material interests of the city, and of what, for lack of a better term, must be called local patriotism—that indefinable sentiment which brings out and gives value to provincial details, as they are felt by a village antiquarian, for example; of this color the paper has none. Of the things in Detroit, past and present, the author seems best acquainted with C. B. Lewis's ("M. Quad") office: and, of Detroit enterprises, to be most impressed with the London edition of the *Free Press*. Mr. William Winter adds a chapter to his irregular contributions to American dramatic history by a sketch of Jefferson and his ancestry, which contains a hasty glimpse of the strollers of the Mississippi in early theatrical days in that region, and a delightful view of, and from, Jefferson's Louisiana manor. Dr. Ely continues his papers on the railroads, but with a lack of concentration and continuity which must greatly impair his effectiveness, and suggests to the reader that even the best-informed of young economists may reform the world quicker if he takes more time to it. There is also a curious article upon the captains of the transatlantic service, in which the writer allows himself considerable liberty of speech and personal comment. The portraits show a fine set of men.

—The *Atlantic* for August has two specially interesting American articles. One presents the Indian problem from the point of view of an army officer, and is of the nature of a protest, not so much against the humanitarian sentiment of the East as against the condition of affairs which results from its ascendency in the national policy. The difficulty in the case seems to be that this sentiment operates mainly in a negative way, and is summed up in the dictum, "Whatever happens, never hurt the poor Indian." The *modus operandi* of the Apache raids, and the immunity practically secured to the young braves engaged in them, are set forth in a startlingly simple statement: the Government appears as a conniver before the bloody pastime and a condoner after it; it gives neither protection to the settlers nor justice to the offenders. The author urges an Indian code, and the granting of land in severalty inalienable for ninety-nine years; otherwise, the Apache will continue to be a privileged criminal, a savage in the most blissful state of nature ever known—namely, that in which he fights with an enemy who, he is sure, will under no provocation "hurt" him if he is captured, but bid him go in peace to his Government rations until life grows tedious once more, and he repeats his festival of slaughter, plunder, and torture. The second article is a very excellent sketch of "Domestic Economy in the Confederacy," with particular reference to North Carolina, which sets the daily privations of life under the blockade in a partly humorous, partly pitiable light. The lack of salt, leather, iron, coffee, sugar, etc., takes up most space; the "substitutes"—a word which keeps its place in the negro dialect as a synonym for all that is worthless—are described; there are some instructive paragraphs on speculators, country trade, and the currency—indeed, the whole field is covered with some detail. The author notes the extraordinary fact that, though the South became "a nation of Crusoes," and invention was taxed most thoroughly and persistently by the wants of nature and rudimentary civilization, the number of permanently useful inventions was insignificant. He ascribes this to Southern "incompletiveness,"

—M. Edmond Stoullig, to whom all lovers of the stage are indebted for the active part taken by him in the publication of 'Les Annales du Théâtre et de la Musique,' is the director of the new *Revue d'Art dramatique*. This review, of which the first number appeared on January 1, 1886, has now completed its second volume; and if general excellence and utility can give it success, it is sure to keep a high place in periodical literature. It is a bi-monthly, and besides unusually good theatrical criticisms, and correspondences from London, Berlin, Brussels, etc., it contains articles of high literary worth from some of the first critics of Paris upon the æsthetic and historical side of the stage. Broad as its able director seeks to make it, the new review meets a want felt even in France, where theatrical criticism and discussion have always flourished. It is to be hoped that with its growing success it may become more international, and do on a larger scale what the Parisian reviewers have done for the French stage. But even in Paris the *lundistes*, as the Monday theatrical critics like Sarcey and Jules Lemaitre are called, are fast being replaced by *soiristes* or *lendemainistes*, who put together a few hasty remarks about a new play, written perhaps before the representation. A new medium for serious and well-pondered notices of stage events is, therefore, timely and acceptable. The aim of the *Revue d'Art dramatique*, if not higher than that of the weekly or bi-monthly reviews of MM. Sarcey, Gandarax, and others, is at least more comprehensive. The veteran critic, M. Francisque Sarcey, gave in the first numbers interesting articles under the title "L'Acteur," and he has continued since to give it the benefit of his experience. M. F. Lefranc wrote on "La Critique nouvelle," which he accuses of being over-indulgent. Several writers feeling personally hurt, M. H. de Lapommeraye answered in a tone scarcely courteous; arguing with much force that theatrical criticism should be rather encouraging and laudative than aggressive. M. Lefranc in subsequent articles has tried to carry out his own theories, notably in the one headed "1802," in which he shows himself relentless towards both Renan and Victor Hugo. There is much of general literary and historical interest in the *Revue*, of which less than half is devoted to current theatrical criticism. M. Georges Pellissier has instructive remarks upon the Shaksperian drama on the French stage. M. Léonce Person writes as only a specialist can on "Le véritable Saint Genest de Rotrou et le *Fingido Verdadero* de Lope de Vega." "Notre plus ancien Monologue" is a graceful chapter on mediæval literature. M. Charles Barthélemy writes about Mme. Deshoulières under the heading "Les Femmes auteurs dramatiques," in a way that shows his intention of making this only the first of a series. The unjust and very *chauvin* tone of the writer who spoke of Paul Lindau in the number of June 1 is the only thing that could be found fault with in the pages of the *Revue d'Art dramatique*.

—The report which recently appeared in several Italian journals, that Ferdinand Gregorovius, author of the 'History of the City of Rome in the Middle Ages,' was engaged in investigations among the archives of Southern Italy, for a forthcoming 'History of the Hohenstaufens,' is corrected by the Berlin *Börsencourier*, and the true object of these researches is made public. Gregorovius, it seems, is now at work upon a 'History of the City of Athens in the Middle Ages,' and in the prosecution of his studies has found it necessary to search the archives of Palermo, Naples, and other Italian cities for documents relating to Athenian history in the thirteenth and fourteenth centuries. It is understood that the author's design is to trace the for-

tunes of Athens from the end of the fourth to the beginning of the sixteenth century, and to show that during this period, in which the name of the city alone seemed to survive, a mere shadow of bygone greatness, though no longer taking a leading part in the political or intellectual movements of the time, or exercising that far-reaching influence upon European civilization and culture which it was Rome's fortune to do, the history of Athens is very far from being devoid of interest and importance. It is not unlikely that some years may elapse before the completion of this work, but its appearance will be eagerly awaited by scholars, and it will undoubtedly prove to be a worthy companion to the 'History of Rome,' which is held in such high esteem that an Italian translation of it was published at the expense of the city of Rome, and procured for its author the honor of Roman citizenship, which was conferred upon him in 1876. The exceptional success of this work in Germany is shown by the fact that, though it is less than fifteen years since the publication of the concluding volume, a fourth edition is now in press. As a further evidence of the growing popularity of Gregorovius among general readers may be noted the announcement that a volume containing a collection of his minor historical writings will be issued in the course of the present year.

—Every lover of Alt-Heidelberg, whose heart will be by the Neckar during the festal days of the first week in August, will welcome the exquisitely printed and illustrated *Festchronik*, the "Ruperto-Carola," now appearing under the editorship of Karl Bartsch. It will be issued in twelve parts during this and the following month, and the sum of seven and a-half marks forwarded to the address of the publisher, Otto Petters of Heidelberg, will secure the regular sending of all the numbers as they appear. The reading matter will deal with the history of the university in the famous five centuries of its existence, offer sketches of prominent characters, and a full account of the doings of the anniversary week, while the illustrations from the hands of leading German artists will represent scenes from the progress of the festival, characters from the historical procession of August 6, portraits of distinguished alumni, and views of the city and environs. The celebration occupies the week from August 2 to 7. For the sober mind the chief interest will centre about the *Festakt* of Wednesday, when Kuno Fischer delivers the anniversary oration in the Heiliggeist Church. For the masses of the festival-makers, however, Friday will be the great day of the feast. The historical procession of this day has been most diligently planned, and will set forth with greatest exactness of arrangement and costuming scenes from the academic life of earlier days, and will be followed in the evening by a great and general *Commers*, the full import of which every one who has had experience in German university life will know how to value. The harmonious coöperation of otherwise conflicting elements in the University is a decided feature of the occasion, and augurs well for the success of the festival. For the first time in many years, the two opposing elements among the students, the *Corps* on the one hand and the *Burschenschaften* and various *Verbindungen* on the other, have united under a general students' committee, and the long-standing schism in the faculties, which manifested itself again unmistakably in the contest for the coveted prorectorship of this year of jubilee, has been, at least to outward appearances, closed by the magnanimous act of the successful candidate, the jurist Bekker, in surrendering the prime honor of the *Festrede* to his rival, Kuno Fischer.

—The Heidelberg historical procession of August 6th promises to be a most imposing pageant. It will consist of fourteen scenes or tableaus representing as many periods or phases in the life of the University. A decorated vehicle forms the centre of each tableau, and nine hundred persons and three hundred horses find place in the procession. The scenes are as follows: 1. The founding of the University under the Elector Ruprecht I. (1386). 2. Triumphal entry of Friedrich the Victorious after the battle of Seckenheim (1462). 3. Cultivation of the arts and sciences under the Elector Otto Heinrich (1556 59). 4. The Folk-life in the "fröhlich' Pfalz" at the close of the sixteenth century. Vintage festival. 5. Entry of the Elector Friedrich V. with his bride, Elizabeth of England (June 17, 1613). 6. Bohemian Embassy (1619). 7. Period of the Thirty Years' War (1618–48), and the war of the Orleanist succession (1688–97). 8. Elector Ludwig and train (1632–80). 9. Times of the Elector Karl Philipp (1716–42). Hunting train. 10. Elector Karl Theodor (1742–99). 11. Reëstablishment of the University by Karl Friedrich of Baden (1803). Student types of the nineteenth century are represented by the two following scenes: 12. The *Burschenschaften*. 13. The *Corps*. 14. The new German Empire. The whole has been planned and arranged under the direction of Prof. C. Hoff of the Art School at Karlsruhe.

—All that our latest work of reference, Thomas's revised 'Biographical Dictionary,' has to say about Count Leo Tolstoi is, that he belongs to the same family as another Tolstoi, and is the author of two novels. Many more particulars of his life are given in the introduction to Mr. Dole's translation of 'Anna Karénina,' and in Miss Hapgood's preface to 'Childhood.' Still later is a fourteen-page article in the July number of *Westermann's Monatshefte*, which is accompanied by a rather pleasing portrait, decidedly more prepossessing than the one prefixed to the last-mentioned translation. Though not holding the highest nominal rank, the Tolstois are one of the best Russian families. The present Minister of the Interior is a relative, and Alexei Tolstoi, the author of 'Fürst Serebrjany,' as the novel is termed in the German translation, was his cousin. Lyof Nikolayevitch Tolstoi was born in 1828. He was only two years old when his mother died, and nine at the death of his father. After three years of university study he retired to his estate at the age of eighteen. Early in the fifties he entered the army, and served through the Crimean war, but resigned when everything pointed to a successful military career. In 1862 he married the daughter of a Moscow physician of German origin, having shortly before become an enthusiast in the cause of education, and founded a model school on his estate. His first writings were also in this direction. He soon became widely known as a philanthropist, but this reputation gave way to the less enviable one of dreamer and mystic, due to his becoming absorbed, some eight years since, in religious studies. The newspaper story of his being insane at this time was without foundation. Tolstoi's first book, 'Childhood,' was published thirty-three years ago. This psychological (and autobiographical) tale was continued, in 1854, as 'Boyhood,' and in 1857 was finished as 'Years of Youth.' Four volumes of military tales followed in the years 1854–58; 'The Cossacks' in 1863. Other volumes published during these years dealt with serfdom and the life of the nobility. 'Domestic Happiness' was a longer and more ambitious tale, and shortly after his marriage he began work on what was to be a voluminous novel called the 'Dekabrists,' and dealing, as the name indicates, with the men and ideas of 1825. But further study made it seem desirable to begin further back, so that, instead of the 'Dekabrists,' we have 'War and Peace,' which breaks off on the eve of the conspiracy against the reaction that followed the overthrow of Napoleon.

—The *Nuova Antologia* for June 1 contains an interesting article on the old architectural monuments of Italy and the vexed question of their repair and restoration, by Camillo Boito (the brother of Arrigo, the composer of "Mefistofele"), a well-known professor of art and a practical architect. In a book published in 1880, 'Architettura del Medio Evo in Italia,' Boito had discussed the restorations of St. Mark's, the accusations of foreigners, the system pursued by the Austrians, the changes demanded, the immense practical difficulties of the work, and the impossibility of satisfying at the same time the conditions of stability, the requirements of the archæologist, and the desires of the mere lover of the picturesque. He shows that the practice of restoration has been gradually perfecting, and that things can be done now which seemed impossible a few years ago, and which still seem impossible to an old architect who has not kept up with the times. Even the precepts in such matters laid down by Viollet-Le-Duc have given way to others. The great French architect, who had and has a wide influence in Italy, said: "To restore an edifice is to reëstablish it in a complete state, which may perhaps never have existed at any given moment.' Now Boito recommends, and not only Boito, but the Third Congress of Engineers and Architects advises, and the Italian Government approves, the doctrine that "it is better to strengthen than to repair, better to repair than to restore, better to restore than to embellish; in no case is it right to destroy." Changes have already been made in the methods employed at St. Mark's. Not only is vastly greater care used in the work of repair and consolidation, but, among other things, the old mosaics, which had been preserved by the pious care of a subordinate, have been replaced in the vaults of the Cappella Zeno, and the modern copies done away with, and the retro-altar has been put back, which had been removed on the pretext of being a work of the sixteenth century. Boito's article, while rich in suggestions, barely touches on the rights of the general public in a building, as distinguished from those of archæologists and artists, and especially of the propriety of completing unfinished buildings, as, for example, the cathedrals of Cologne and Florence. Whether rightly or wrongly, the new front of the Duomo at Florence is finished, and will be uncovered in October, during the celebration of the fifth centenary of the birth of Donatello. Preparations are being made for a grand festival, in which the King and Queen will take part.

BANCROFT AND HITTELL ON CALIFORNIA.

History of the Pacific States of North America. By Hubert Howe Bancroft. Vol. xvi, California. Vol. iv, 1840-1845. San Francisco: A. L. Bancroft & Company. 1886. 8vo, pp. xv+786.

History of California. By Theodore H. Hittell. Volume ii. San Francisco: Pacific Press Publishing House, and Occidental Publishing Co. 1885. 8vo, pp. 823.

We have previously noticed the earlier volumes of both these works; but the present volumes tell us of more interesting events, and introduce us to graver crises in the early history of California.

Mr. Hittell's second volume closes with the admission of the State, and includes in its earlier portions the whole period of Mexican republican government in California. As before, Mr. Hittell's industrious reading and conscientious use of what he happens to regard as the authoritative

sources of information, are plain. But this volume, even more than the previous one, shows the risks that his work runs, when compared with Mr. Bancroft's, by reason of the limited range and the frequently arbitrary choice of his authorities. Dana, Robinson, and De Mofras, he tell us (p. 289), are the persons from whom "the most of the reliable information in reference to the social life of the old Californians has to be derived." "The Californians," he continues, "were as a rule not educated; and those who could write were not authors." He then mentions the manuscript histories of Alvarado and Osio (whereof both himself and Bancroft possess and frequently cite copies), but declares the most important writings of the Californians to be, after all, the contents of the California Archives. "Of private letters and papers," he finally asserts, "few of any importance remain." The reader of Mr. Bancroft, accustomed to minute citations of the extensive collections of business letters, of family archives, and of mission records and correspondence in Mr. Bancroft's library, reads this meagre catalogue of authorities with surprise, and finds frequent occasion in Mr. Hittell's pages to distrust the critical judgment with which even these have for some purposes been used. The first half of this volume, in fact, based as it is alternately upon the elaborately cited archives and the extensively summarized Alvarado and Osio manuscripts, must be described as an imperfectly organized union of erudition and gossip, nearly always very readable, and seldom quite satisfactory. If Mr. Hittell could only have waited awhile, one says, and if he could only have read Mr. Bancroft! In his haste to be the first original investigator in the field, he has doomed himself to very serious imperfections; and yet he certainly has the ability to have made for himself, by waiting for a time, a place after Mr. Bancroft in order of publication, but not in the least beneath Mr. Bancroft in literary rank. As it is, this imperfect doing of original work that somebody else has the means to do far better, produces a melancholy impression of wasted effort, as the reader examines all the earlier chapters of this volume.

The test case in this part of the work is the history of Alvarado's political career. This young adventurer became prominent in the revolution of 1836. He represented better than any other man the self-consciousness of the little Californian community, and its desire for self-government. In particular, however, he represented the party of the north, viz., of the region from San Francisco and Monterey to Santa Barbara, in its struggle against the party of the south. Therefore, as a revolutionary leader, he had to play a double game, on the one hand against the Mexican authority, and on the other hand against his southern rivals. He played it very well indeed, especially when one considers that he was not yet thirty years of age at the outset, that he was quite innocent of the ways of the great world, and that he had little education, save what he had given himself. Such a career merits a large place in the history of Mexican California, and both Mr. Bancroft and Mr. Hittell are well aware of its significance. Mr. Hittell has to depend on the archives and the Alvarado and Osio manuscripts. But Alvarado had aged sadly and had degenerated seriously before he wrote his manuscript of reminiscences. He had neither the power nor in all cases the desire to tell the whole truth concerning some matters; and his contemporary letters, preserved in Mr. Bancroft's library, give far better evidence of his real ability as a leader than his own untrustworthy memory, after thirty years, could furnish. Bancroft's account of the revolution of 1836, with its consequences, is not too diffuse for the purposes of his work; but it fairly bristles with citations and quotations of the contemporary correspondence of Vallejo, Alvarado, and the other prominent leaders. One may, indeed, feel that few political movements, occurring under purely provincial conditions, have ever been so fully described as is here the case. The whole forms a really admirable study of human passion, intrigue, vacillation, and success. But Mr. Hittell's account is, by comparison, fragmentary, accidental, and disconnected. Important episodes, such as the appearance of Castillero as real or pretended Mexican Commissioner, together with Alvarado's intrigue with him, and the consequences of this whole matter for the subsequent history of the revolution, are imperfectly known to Mr. Hittell and in part misunderstood by him; so that one feels, in passing from his pages to those of Mr. Bancroft, that one is in the first case learning from a man who sees through a glass darkly, and in the other case from a man who does not indeed see quite face to face, but who does see a great deal very clearly, and who tells you very frankly just what his records fail to let him see. The Alvarado revolution is in fact one of the best narratives in Bancroft's work, so far as it has been published.

But, after all, it is the conquest history, as described by Mr. Hittell, that will so far most interest American readers. Bancroft's volume on this period is yet to appear, and Mr. Hittell is here the first in the field. The story of the conquest of California in 1846 is not altogether creditable to our nation. We had determined upon the Mexican war, but were in 1845 still uncertain how soon it would break out. Therefore the Secretary of the Navy in the Polk Cabinet, Mr. George Bancroft, instructed Commodore Sloat, commanding our fleet in the Pacific, to wait for news of the beginning of war, and then forthwith to seize upon the Californian ports, without, however, beginning hostilities against the inhabitants of the Department of California themselves, unless Sloat should find himself absolutely obliged to proceed to extremities. For the Californians were understood to be nearly defenceless, and quite alienated from the mother country. The seizure of their ports was to be represented to them as a necessity of our warfare against Mexico, their unkind ruler, and not as an act of enmity against themselves. They were to be for the time under our protection, so to speak, and were to be encouraged to observe a strict neutrality during the contest. This plan, perfectly obvious from the since published instructions that were sent to Sloat, was thwarted, in the sequel, by the operations of Capt. Frémont, who happened to be in the territory at the time, in command of a United States exploring party, consisting of well-armed surveyors and trappers. Under pretence of beheving the American settlers in the Sacramento Valley to be in danger of assault from the authorities of California, Capt. Frémont incited these settlers to revolt, and thus so distracted the country that when Sloat, in pursuance of his instructions, appeared at Monterey, in July, 1846, the possibility of a friendly seizure of the territory, under the name of a rescue of the people from Mexican oppression, was past. Sloat himself soon gave over his command to Commodore Stockton, who, in company with Capt. Frémont, began a course of conduct such as later led to a revolt on the part of the Californians, and so to further bloodshed and to yet greater ill-feeling. The consequence of all this was that our Government, in the course of the affair, was made to appear before the native Californians in two inconsistent characters, viz., as a would-be friendly protector of the land from the Mexicans, and as a violent assailant of the peace of the country for our own private ends. The Californians never understood this double-dealing, and have never forgotten it, nor forgiven it.

This story of the conquest, which so far is a matter of public record, since Sloat's instructions and Capt. Frémont's aggression are both of them well-known things, furnishes a serious problem to the historical student. Capt. Frémont was understood by nearly everybody to be acting under orders from Washington; yet the same Cabinet which instructed him also ordered Sloat to conciliate the Californians. How was this double plan possible? Mr. Hittell feels the nature of this problem, although he deals with it as lightly as possible. What the precise instructions were which Lieut. Gillespie, bearer of Government despatches, brought and made known to Capt. Frémont at Klamath Lake on the occasion of their meeting in May, 1846, Mr. Hittell feels himself quite unable to say, and he very wisely refrains from the worthless conjectures which have been for years current in the books that have touched upon this affair. As to the consequences, however, Mr. Hittell, following the accounts of Capt. Frémont's purposes which the latter gave at the time to the settlers and to others, believes that the Captain, after the meeting with Gillespie, intended for the first only to begin a quarrel with the Californians, and then to return to the United States forthwith, in order to lay his case before the Government, and thereby to increase the difficulties of the diplomatic position of Mexico. Mr. Hittell even attributes to Capt. Frémont the same purpose before the meeting with Gillespie. "His actions," says Mr. Hittell (p. 419), "on any other supposition, would have to be regarded as unreasonable and absurd." That this endeavor to provoke the Californians to an assault upon the United States flag actually led to the "Bear Flag movement," *i. e.*, to the revolt of the American settlers, and to an attempt to secure the independence of the Territory under a new flag, and under a settlers' government, Mr. Hittell regards as an accident, neither foreseen nor desired by Capt. Frémont. The Captain, thinks Mr. Hittell, wanted to provoke a quarrel between the authorities and himself, without compromising the American Government any more than necessary. He used the settlers as his tools for accomplishing his purpose. But they went too far, raised the Bear Flag, and proclaimed independence. This, as tending to produce too much confusion, and as possibly hindering the seizure of the country by our forces when the Mexican war should break out, Capt. Frémont opposed. He therefore did his best to get control of the new movement, and after a time succeeded. Such seems to be Mr. Hittell's theory of Capt. Frémont's conduct. "Instead of being in any respect the author" of the Bear Flag movement, says Mr. Hittell (p. 443), "Capt. Frémont would have done anything to prevent such a project. It interfered with, and in fact defeated, his own project." He, namely, wanted the settlers merely to seize the most prominent men at Sonoma, and to bring them to his camp. Then Castro, the Commandante General at Monterey, might try to rescue the prisoners, and so the quarrel would be ripe, since Capt. Frémont could somehow make the Californians appear as the aggressors. Therefore no movement for independence was contemplated at the beginning by the Captain, whose purpose was to prepare the way for the Mexican war.

Such is Mr. Hittell's view of the motives of this remarkable affair, and certainly, if we only knew about the matter what the settler Ide tells us, in his deliciously naïve narrative, which his family have in later years published, and which Mr. Hittell has extensively cited, this theory would seem the only plausible one. There is good reason for believing, however, as we think, that from the beginning Capt. Frémont meant to go

further than merely to provoke a quarrel and then return to the United States. At all events, from the very moment of the conclusion of the Bear Flag episode to the present day, Capt. Frémont and his friends have always represented the matter in a more significant light. For it was in any case to the young Captain's interest to present himself thenceforth to the world as the "conqueror of California," and his friends have always assured us that a well-founded dread of Californian hostility required him, in May, 1846, to take serious measures against Castro and the Californians; that the instructions brought by Gillespie authorized, if they did not command, some very vigorous action; that his own private letters from Senator Benton were to the same effect as concerning the purposes held at Washington; and that, in fine, the settlers of the Bear-Flag movement were merely carrying out, in a more or less bungling fashion, plans which the Captain had formed. According to this view, his announcement to the settlers at the beginning of the troubles that for his part he was going back to the United States, would appear to be only a device to excite them still more, or else to deceive the Californians. His disapproval of the Bear-Flag movement would seem to have extended only to such elements of the affair as threatened to carry it beyond his control. He would himself still appear as using the settlers for his tools, but he would be distinctly responsible for undertaking a revolution. And one must indeed say, as against Mr. Hittell and the Ide interpretation of the business, that unless Capt. Frémont understood, when he sent the settlers to Sonoma to seize the prisoners, what would result in the way of an independent movement, he must have been incredibly short-sighted. What were these settlers always boasting about and threatening, but a coming revolution? If Capt. Frémont encouraged them, by his mysterious words and by his reports of Californian hostility, to go down to Sonoma, after seizing the horses of the Arce party, and to take possession of the place, what did he expect them to do when they once got there but proclaim some sort of independence? Mr. Hittell is surely unfair in making Capt. Frémont so blind a man as to have begun the Bear-Flag affair without knowing any better what he was doing. He must have known, we think, that he was beginning a revolution, and that the only facts which could give the affair any sort of apparent justification would be the early outbreak of the Mexican war, the belief meanwhile of the settlers and of the Cabinet at Washington that the Californian authorities were actively and aggressively hostile, and the popular impression that he himself was acting under secret instructions from Washington.

Mr. Hittell is himself far enough from believing the old reports about the hostility of the Californians as a sufficient cause for Captain Frémont's outbreak. He is too well informed for that, and shows us plainly how defenceless the country was. Without making any special conjectures about the Gillespie instructions, however, Mr. Hittell seems still disposed to think it probable that they in some way authorized Captain Frémont's conduct (p. 421, "they were sufficient to induce Frémont to retrace his steps," etc.). As a fact, however, it is not the case that they authorized any aggression. So, at least, it appears from Bancroft's statement in the biographical sketch of Frémont ('Pioneer Register,' vol. iii, p. 748), and from the text of the Gillespie instructions, of which a considerable part has been now for the first time published, *verbatim*, by Mr. Bancroft, in vol. iv, p. 596, *seq.* While the full result of Mr. Bancroft's investigations of this topic has not yet been published, enough has already appeared in the third and fourth volumes to show that Mr. Hittell's account, with all its caution and intelligence, is in so far incomplete as he has been unable to see those documents, now in Mr. Bancroft's hands, which prove that the Frémont hostilities were as unauthorized and unprovoked as they were mischievous.

The fourth volume of Mr. Bancroft's history brings the account of the political situation down to the close of 1845; and the discussion of the foreign relations in 1845, as given in chapter xxv, throws a great deal of light on the condition of the various foreign schemes for the acquisition of California, and upon the behavior of the Californian authorities and of our settlers in the Sacramento valley towards one another, just before the crisis. We must advise any one who desires to know how much truth there was in the accounts later circulated of the violent hostility of the Californian Government towards our settlers, to read the facts carefully collected in this chapter. The Californians were not saints, but neither were they tyrants, nor yet altogether fools, and they did absolutely nothing to warrant Capt. Frémont's hostility in June, 1846; just as, on the other hand, the researches of Mr. Bancroft seem to have made sure that the Government which instructed Sloat in the fashion above described, certainly did not authorize Capt. Frémont's aggression by the Gillespie instructions, or by any other channel. The attack was simply his own choice and folly.

We have left no space for following Mr. Hittell's excellent account of the condition of the territory between the conquest and the admission of the State. The admission itself is, we must remark, a very arbitrary stopping-place for an historical work, and it may be hoped that Mr. Hittell will some day proceed further with his book. If he does so, may he recognize with greater generosity, and use in greater fulness, the researches of his contemporaries; for no historian can gain by blindly stubborn independence, or by ignoring fellow-students merely because their books are published at nearly the same time with his own. An index is, moreover, very seriously needed by Mr. Hittell's readers, and the book suffers severely for the lack of it. As for Mr. Bancroft, one can never forget, nor cease to regret, the fact that he is a composite person, and that his devoted collaborators ought to be prominently named. How much of authority, of dignity, and of genuine fame would be added to this truly noble monument of patient scholarship if the unwise resolution that still leaves the public in the dark about the actual division of the labor were to be frankly abandoned! Above all ought this to be the case in respect of the 'California,' by far the best of the whole series, both as to plan and as to workmanship. Whoever wrote any part of this book ought to be named on the title-page.

RECENT NOVELS.

Aspirations. By Helen Hays. Thos. Whittaker.

The Man Who Was Guilty. By Flora Haines Loughead. Boston: Houghton, Mifflin & Co.

Children of the Earth. By Annie Robertson Macfarlane. Henry Holt & Co.

Fellow Travellers: A Story. By Edward Fuller. Boston: Cupples, Upham & Co.

Who is Guilty? By Philip Woolf, M.D. Cassell & Co.

Marion's Faith. A Sequel to 'The Colonel's Daughter.' By Capt. Charles King, U.S.A. Philadelphia: J. B. Lippincott Co.

The Destruction of Gotham. By Joaquin Miller. Funk & Wagnalls.

A Moonlight Boy. By E. W. Howe. Boston: Ticknor & Co.

Marc le Nihiliste. Par Gontcharof. Traduit du russe et adapté par Eugène Gothi. Paris: Plon. 1886.

THERE is a perfunctory tone about Mrs. Hays's novel, a lack of earnestness and enthusiasm which—rather than the obvious skill of a practised writer—determine the attitude of the critical mind toward 'Aspirations.' It is one of the novels characterized by the magazine writer in 'A Pair of Blue Eyes' as neither good enough nor bad enough for review. The story, characters, style, incidents are all commonplace, and yet not noticeable for being either lifelike or, on the other hand, unnatural; there is nothing that directly offends and nothing that greatly pleases, and in the end the reader's impression is bound to be one of dissatisfaction with the book and impatience with the writer.

The central thought, as the Sunday-school lesson sheets say, of Mrs. Loughead's novel is the nobleness of a man, essentially honest and high-minded, struggling to recover the consideration of his friends after serving a just sentence in the penitentiary. It is the history of one of those anomalies of complex imaginative natures which we are called upon now and then in real life to accept without explanation; and the chief error in Mrs. Longhead's handling of her story is attempting to explain away the incongruities of Philip King's career. There are natures—notwithstanding Balzac and George Eliot—that morally are above the laws of growth, that are much better or much worse than is made manifest by acts. Philip King was one whose nature was of this sort; and, in spite of the novelist's omniscience, he may not have been prompted to embezzlement by the idle words of a careless girl—the motives of one's acts are often beyond even one's own knowledge. As a story simply, 'The Man Who Was Guilty' is often dull entertainment. It is with no sudden éclat that a man can erase the stigma of ten years in prison, and there was nothing for Philip but a long, persistent, tedious struggle—often hopeless, frequently uninteresting in the recital. The strength of tradition, too, both in life and in novels, helps to prevent the story from being pleasant. Though one sees the hero free from moral degradation, one would much rather it transpired at the last that he never did it after all.

Miss Macfarlane has chosen well the materials of her story. The children of the earth to whom she introduces one are indeed not altogether indifferent; nor is it beyond doubt that they are happy in that they are not overhappy. But they are children of the earth, nevertheless, and appeal to the fellowship of mankind through weakness. Miss Macfarlane has chosen well by choosing little; there is but one thread to the story, and the material is exactly suited to spinning it. Vivien Langstreth, Brooks Eastman, and Ned Brownlow are not impossible people—they are even scarcely unique; but they are drawn with such decisive strokes, with an absence of superlative explanation and a presence of unobtrusive but intense feeling, as to make the little drama of their lives interesting and, in a general way, worthy. The case with Vivien, whose pitiful life is the one thread of the story, is entirely one of character, as it was with Philip King; not the artificial character of growth and accident, but the nature given her as a birthright—one much worse than her actions indicate. Miss Macfarlane has made no mistake by explaining; Vivien sees Ned go from her, giving her up to her nature, and waits for Eastman, her evil spirit, with gladness and involuntary song. She accepts her moral death almost deliberately; and though saved from its visible degradation by fate, she is nevertheless inwardly and spiritually subject to it. It is a sad story, and, perhaps, in particular ways, demoralizing; but it is well told. One grows impatient, however, with the author for postponing the final catastrophe, which, when it does arrive, is as near inevitable as anything short of actual tragedy can be.

One is unpleasantly reminded of William Black in reading 'Fellow Travellers'—unpleasantly, because Mr. Fuller falls so far below the English novelist in attempting highly wrought descriptions, and associating the tense moods of his characters with the state of the weather. The story is very lacking in substance, full of the spirit that turns mole-hills into mountains, accurate as to streets and squares and the rules of etiquette in Salem, but unsuccessful with the rural New England dialect and in exciting the reader's interest.

In Mr. Woolf's tolerably ingenious but impossible story, the reader is mystified, along with clever detectives of both sexes and a susceptible old doctor and scientist, concerning the murderer of a man who committed suicide. What merit there is in sprightliness and unblushing disregard of probability, the book possesses.

'Marion's Faith' is a dashing military novel with a dashing military hero, full of the breezy Western prairies, Indian fighting, garrison intrigue, and good-natured banter. Mr. King is not a finished writer; he gallops through a paragraph as he would make a cavalry charge, careless of the way if he but get safely to his goal after driving his meaning home. Yet he manages, in his impetuous manner, to give one a very clear picture of army life, to make his characters alive with individuality, and bring them through the regulation amount of trouble to a happy ending. The tone is healthy and pleasant, like all of Mr. King's novels; 'Marion's Faith,' indeed, is a sequel to 'The Colonel's Daughter,' and one who has read the latter meets with many old acquaintances.

One can forgive Mr. Miller his extravagance, for his sincerity. 'The Destruction of Gotham' is the passionate protest of a simple and noble-minded man against the sin of the age—Dante's unredeemable sin—the contention for riches; and if a vicious literary style has led him away from simplicity of expression, his indignation at the sight of Plutus stalking the streets of New York has kept his enthusiasm at forging heat. Mr. Miller's case, of course, is hopeless: there is no chance for him when Ruskin and Carlyle have failed, nor for the highest preachers against the spirit of contention and competition; but his earnest pleading cannot be without some weight.

In the face of the claim made for Mr. Howe by his friends that 'A Moonlight Boy' was to be the best of his books thus far published, and was to receive his best efforts, it is somewhat surprising to see what a wandering, purposeless novel he has really written. The charm of his straightforward, homely style still remains; but the unusual elements of interest which made 'The Story of a Country Town' remarkable are wanting. One cannot help but see that Mr. Howe has made a mistake in laying the scene of his story partly in New York. He is more at home in his Western towns, with their illimitable prairies for a background, and the pathetic mixture of the limitations and advantages of their people for a theme, than in Bleecker Street and the Bowery. Besides the question of Mr. Howe's fitness for giving us life in New York, is the question of novelty. A glimpse of New York, in one aspect or another, is quite a common thing with American fiction in these times; while no one, until Mr. Howe, had given us the Western town—the towns between the Mississippi and the Rockies—without the glamour of border romance and extravagance. If Mr. Howe intends to insist on training with the naturalistic school, he must trust to his familiar surroundings for the materials of success.

'Marc le Nihiliste,' one of the newest of the new books, is an oldish one. We gather from the short, foolish, and every way unsatisfactory preface of the translator that it is of the date of Turgeneff's earlier writings; and this impression is confirmed by the tone of the story. But, old or new, it has the delightfulness at once of freshness and enduringness; and, spite of its having been evidently "adapted" by the translator to an (unavowedly) extraordinary extent (for it cannot be questioned that long and important chapters have been simply "dropped"), the broken portions he has been good enough to give us excite a deep interest and the liveliest enjoyment. The simple enjoyment belongs to the early pages; the interest deepens as the story progresses, and at moments it has too much of the painfulness which attaches to all true pictures of life for any light emotion to be excited by it.

The author is the author of 'Oblomoff,' and the same admirable quality of thoughtful observation which is the foundation of that tale exists in this. But this is altogether higher and nobler in character. To vigorous imagination and delicate humor Gontcharoff has here associated a lofty rectitude of tone, an uprightness of sentiment, sometimes gay, sometimes tragic, which is inexpressibly charming—and more than charming; it is consoling. The central *motif* of the book can only be rightly set forth by the book itself; the most difficult of social questions is treated with a justness and a compassionateness beyond praise. The principal figures are three sweet, tender, passionate women; and the representation first of their affectionate, mirthful household companionship, and, later, of the anguish of suffering felt for and with each other, is a picture exquisitely touched with great naturalness and great originality. It is worthy of a compatriot of Turgeneff and Tolstoi (what womanly women they must all have known!); but much of it, outside the woe of the central scenes, has a serious light-heartedness, so to say, to which we are unaccustomed in Russian literature, or in any other. There is a love scene between a simple young girl and her honest lover which is like the song of birds and the odor of flowers—and how much more *real* than the "realists" it is; while the desolating storms that sweep over her sister and her aunt are not less nature, not less true to human experience everywhere and always. All the scenes of this book are of a world of very real, very normal human emotions; but it is a world one would be glad to live in. Though fate is cruel and the cup of life is bitter there as elsewhere, to the persons of this story the result of moral struggle, of moral torture, is the power to endure bravely and generously; and Heaven rewards them by enabling them to forget as well as to forgive.

Flights Inside and Outside Paradise. By G. C. Pearson. G. P. Putnam's Sons.

"The Penitent Peri" who of old wrote of his "Flights" inside and outside "Paradise" in the *Japan Herald* of Yokohama, has collected his revelations of things heard and seen into a dainty summer book of less than three hundred pages. The Paradise in which he and his boon companions revelled is the country so long yclept by its inhabitants, in all seriousness, the "Land of the Gods." Sundry exiled Bohemians have diligently striven, in American newspapers, to keep up this impression abroad long after the enlightened natives have discarded both name and idea. One has but to re-read the correspondence which from 1869 to 1875 ran through the *Tribune*, overflowed into the magazines, reappeared in the amazing *Atlantic Monthly* article, "The Martyrdom of a Nation," and in 'Japanese Episodes,' to trace a long-sustained effort to teach polemically as a sober fact what here the "Penitent Peri" treats as amusing fiction. The same pen, we suspect, now dominates the *Japan Mail*, which still laboriously endeavors to prove that "the trail of the serpent," so visible in Europe and America, is somehow absent from "fair Japan."

In the little book before us, the author, with infinite jest and unfailing good-nature, pictures things as they are. He made many excursions into the country back from the treaty-ports. Nature, as contrasted with the "civilization" imported yesterday, rules beyond the shadows of the ships; and this, without a trace of guide-book or a hackneyed phrase, the pilgrim describes. Every page is gay with the prismatics of fancy, and the whole narrative is shot through and through with the subtle wit of the thorough man of the world. He treats of men, manners and customs, art and morals, diet and clothes—or the lack of them. He tells us of Japanese meals, baths, hotels, modes of travelling, and ways of living and thinking, spicing his story with moving incidents of personal adventure. His humor is rather too broad for the fastidious. He tells a good many things, and in a way, too, that a missionary would not relate. These explain, however, only too well, why "fair Japan" is such a Paradise to unmarried young men, or husbands not too rigid (*katai*, the Japanese would say) in their notions. His minute, almost photographic, observations will probably explain why a certain class of emigrants from Christendom are needed in the once "holy country," and their labors are robbing the islands of their old-time attractions. Humdrum morality and whole suits of clothes are alike fashionable, and already the Japan Paradise pictured by our author seems to belong to ancient history. Churches and school-houses are ruining the former "Paradise."

Most laughable are the well-told experiences with chop-sticks, sliced raw fish, snails, and the nameless messes of the native cooks. The trivial details of life in a native hotel, meals, baths, beds and their tenants, are given with the pains and fidelity of a Dutch artist, but with the subtle wit and eye for the ludicrous possessed by a Zamacoïs. To home readers seeking for the truths about travel in Japan, and to old residents returned to home comforts, this unique book will afford a long hour or two of fun. The last three of the seven "flights," dealing with experiences in Italy and Asia Minor, are in the same vein of keen observation and mildly cynical philosophy. Several capital stories heard from subjects of the Mikado are finely rendered into English, and adorn the text. That of the two misers (p. 161), and of "A Woman's Hate" (p. 209), are not only well told, but in details are faithful pictures of life in this fascinating country. The book is rightly dedicated to Hoffman Atkinson, the accomplished author of 'Exercises in the Yokohama Dialect,' whose mastery of "pidgin English," combined with the power of transferring it to cold print, have made so much merriment for quondam dwellers in Old Japan.

The Rear-Guard of the Revolution. By Edmund Kirke. D. Appleton & Co. 1886.

The author of this work is more fortunate in his title than in his preface, which is misleading. In it he says, "The materials for the following history were principally gathered from old settlers during a recent residence of some length in East Tennessee and Western North Carolina. Several of these were descendants of characters who appear in the narrative, and one of them was . . . Dr. J. G. M. Ramsey of Knoxville, the venerable author of the 'Annals of Tennessee.'" This leaves the impression that the author has made use of much original material. In fact, however, the bulk of the work is taken from Dr. Ramsey's 'Annals of Tennessee' rather than from his conversation or that of any one else. Mr. Kirke says that Dr. Ramsey "proposed that I should write out a full and connected history of the

early settlers beyond the mountains." What this means no one who has read Dr. Ramsey's book can understand. He would certainly have heard with surprise that his own was not a work of this description. The book under review is unfortunately very far from supplying his deficiencies.

If Mr. Kirke's history contains anything not already accessible in book form, a careful perusal has enabled us to overlook it. Haywood's two works, Dr. Ramsey's 'Annals of Tennessee,' Draper's 'King's Mountain and its Heroes,' Monette's 'Valley of the Mississippi,' and the State histories ordinarily found in the library of every student of Southern history, furnish every fact of any importance in Mr. Kirke's book. This, however, does not destroy its value as a pleasantly written narrative of a series of stirring events which had a marked influence on the history of this country. The author has drawn a graphic picture of the British schemes to use the Indians of Western North Carolina and Virginia for the purpose of creating a diversion in the rear, while themselves making fierce onslaughts on the front of the Continental Confederacy. The frustration of these designs by the Western pioneers, the successive blows that broke the strength and spirit of the Indians,and the gradual revival of the American Cause, culminating in the victory of King's Mountain, are well described, and give the book a coherency that makes it a real contribution to Tennessee history.

The author's style is clear and flowing. Its real charm is too often dissipated by sententious reflections that better become the pedagogue than the historian. He is also slovenly at times, as when he says "hitherto mentioned" for "heretofore mentioned." We waive discussion of the point of literary propriety involved in using a fictitious name in historical compositions.

The Peace of Utrecht: A historical review of the great treaty of 1713-14, and of the principal events of the War of the Spanish Succession. By James W. Gerard. G. P. Putnam's Sons. 8vo, pp. 420.

THE opening chapters of Mr. Gerard's 'Peace of Utrecht' are by no means the best. They contain introductory matter upon the balance of power, the reign of Louis XIV., religious intolerance, etc.—all important subjects, and appropriate to the work, but treated in a manner somewhat deficient in force and directness. The author is much better when he gets to his subject, which he handles clearly, with cogency and in an interesting style. The diplomatic portion of the volume—the question of the Succession; the intrigues before and after the death of Charles II., the efforts during the war to agree upon terms of compromise, and the final negotiations at Utrecht—these, which form the real subject of the volume, are discussed fully and very well, while the brief sketch of military operations, and the more elaborate account of the political changes in England, from which so much resulted, receive satisfactory treatment. We are surprised not to find the full text of the treaty itself, which, even if long, would appropriately have a place in a volume like this.

The question of the succession in Spain is a very peculiar one, and one which we have seldom seen stated clearly. It rests upon the fact that both Philip III. and Philip IV. had each one son and two daughters; and that in each case the elder daughter married the King of France (Louis XIII. and Louis XIV.), and the younger daughter the Emperor (Ferdinand III. and Leopold I.); that in each case the elder daughter renounced her right of succession in the fullest and most formal manner, so that the issue of the younger daughter in each case by right received preference. Thus Joseph Ferdinand, the Electoral Prince of Bavaria, the son of the younger daughter of Philip IV., justly received the inheritance by the will of Charles II., and, upon his untimely death, the succession by right belonged to the Emperor Leopold, son of the younger daughter of Philip III., who transferred his claim to his own younger son, the Archduke Charles, in order that the imperial crown and the crown of Spain might not rest upon the same head. Mr. Gerard is one of the few writers who have made plain the relations of the parties and their respective claims; but he would have done well to illustrate it by a genealogical table. That in spite of the two-fold renunciation of the French queens, the succession was given to the French heir by the final will of Charles II., and secured to him as the result of a war in which his armies were beaten at every turn, is a curious illustration at once of the strange turns which affairs take, and of the impossibility of controlling national and dynastic needs by personal bargains and promises.

It is not always easy to decide in just what form to use foreign names, and Mr. Gerard says in his preface that he has not found it practicable, and therefore has not tried, to be consistent. We will not therefore criticise such French forms as Limbourg and Gueldres; but how can he justify the use of the French term (misspelt) "*Comptés* of Holland," etc. (p. 5), or the curious mixture, Joanna la Folle? On page 59 the *Marys* and *Marias* are curiously mixed up. On page 234 we find *Mentz* for *Metz*. On page 7 the circles of Germany are said to have been established "for purposes of protection and concord among themselves," but we do not understand this to have been their object: they were simply judicial circuits, with no political functions.

There is an "historical map, showing Holland and the Low Countries and the French frontier about the year 1697, partially taken from a map prepared by H. Jaillot for the Duke of Burgundy." Any correct historical map is interesting and valuable, and this will be of service for understanding the military events described in the volume. But we do not see that it illustrates the main subject of the work. A map of western Europe, or rather a series of them (on a small scale), giving, with colored lines, the boundaries proposed by the several treaties of partition, and those finally agreed upon, would have been really to the purpose.

Judge Richard Reid. A Biography. By Elizabeth Jameson Reid. Cincinnati Publishing Co. 1886.

JUDGE REID was the Kentucky gentleman who suffered a brutal and cowardly assault from one Cornelison, in consequence of a judicial decision (which, however, was wrongly attributed to him), and who refused to take vengeance in the approved fashion by shouldering his shotgun and gathering his clan. As a lawyer and a Christian he left his vindication to the State and Church; but within a short time he was found dead one morning, and the coronor's verdict was suicide. The case, which happened two years ago, will be readily recalled, because of its singularity in the annals of Kentucky justice. Of Judge Reid's life there was little to tell; it was the uneventful career of a scholarly boy, a practising lawyer, a judge of the Superior Court at forty-five years of age; a man of unusual education, literary tastes, humanity, a devout Christian, a kind husband and father, of inexhaustible hospitality, the centre of many excellent social influences, rich in friends and in their respect. That is what the biography amounts to. It was only the end of this life that made it known to more than his own community. He was invited to a business conference in a secluded place, given a document to read, and then struck from behind, beaten with a cane, and, on his escaping into the street, the assailant pursued him with a cowhide. This is the fact with which most of this large volume is concerned. What would Judge Reid do? He could shoot or mob the offender; or he could follow the unprecedented course of defying old custom, and leave the criminal to the constituted authorities. The matter was complicated by the fact that he was canvassing for a new term as judge, and to go contrary to public opinion and common prejudice might defeat him. This means that his fellow-citizens might have voted him a coward. He took his course, and set the State a conspicuous example of respect for the institutions of civilization. The discussion of his decision on the stump and in the papers was a practical education in reverence for the laws, of no inconsiderable value; and was useful also in that it compelled men of position and influence, who were his supporters, to make public their approval of his forbearance and his silent appeal to society as it is organized in courts.

But it is difficult to realize the nature of the social contempt he braved. One of the curious things in this volume is the repeated insisting on the fact that the offender owes his life to Judge Reid, that he could have been killed at almost any time without any danger of anybody's being called to account for it, and so on. Judge Reid's adopted son, who is a well brought up, dutiful, and Christian youth, writes from Princeton College: "A wrong done a family can only be righted by a member of the family," and begs his mother to call him home in case of "farther need." The niece in California writes: "I could kill him with far less compunction than I could shoot a dog." *Many*, it is said, offered to go with Judge Reid and stand by him, nor need he "soil his own hands—mere connivance would insure his revenge." From four quarters offers to mob Cornelison were sent to Mrs. Reid, during her husband's absence. Another very curious thing is the part played by the church. Cornelison was a fellow-member with Judge Reid, and had it not been for this fact he would have used "other means"—that is, he would have shot instead of beating him, which seems an odd instance of Christian fraternity. Furthermore, Cornelison did not attend church previous to the assault, "lest Judge Reid should break the loaf." The most extraordinary thing in the religious history of the case, however, is the plea made by an elder in favor of Cornelison, whose father-in-law was a minister and had "influence," to the effect that "the son-in-law might in due time repent, but that he could not repent until he had completed his published defence"! Under these circumstances it took some weeks to expel Cornelison from the church, but it was done at last. In fact, were it not for the large number of letters here printed, which express sympathy for the Judge and support him in his stand, from lawyers, clergymen, teachers, and other citizens, one would think that the state of morals on the subject of murder in Kentucky was the same as among the Apaches.

Judge Reid, by his choice, became the centre and head of the civilized sentiment of the State, and respect for him is continually increased in view of his temptation to do the easy thing, his opportunity for common revenge, and his sensitiveness to opinion affecting his personal reputation. Whether he broke down under the weight of his trial, or whether his brain was permanently injured by the blows he had received, or whether he did in fact commit suicide—for this is not admitted by the family—he died by a pistol-shot before his canvass was completed. This gave new emphasis to the case. The tragic end, the eminent character of the victim, and the atrocious nature of the assault, combined to

make a moral object-lesson where it was much needed. Many will hope that the death of Judge Reid marks a step of progress in the public morals of Kentucky; there, at least, he ought to be long remembered. Cornelison was condemned to three years' imprisonment, but the sentence is still before the appellate court. It is a sign of public feeling that six of the jurors voted to give him twenty years.

A Chronicle, together with a Little Romance regarding Rudolf and Jacob Näf, of Frankford, Pennsylvania, and their Descendants, including an Account of the Neffs in Switzerland and America. By Elizabeth Clifford Neff. Cincinnati: Robert Clarke & Co. 1886. 8vo, pp. 351.

WITH every inclination to deal gently with a book devoted entirely to family history, published not for gain but for the gratification of a small circle, it is impossible to give any praise to this volume, beyond that due to the evident zeal of the author. The style is turgid, the general arrangement confused, and the genealogical tables are on a system elsewhere unknown and utterly incomprehensible. We dimly discern that Rudolf and Jacob Naf or Neff are supposed to have come from Switzerland, and that there are many other Neffs here, descended from others of the name. The book is a magazine of facts, but it needs to be reëdited before any one can use it.

BOOKS OF THE WEEK.

Manual Training in Education

By James Vila Blake. Introduction by Prof. C. M. Woodward, Director of the St. Louis Manual Training School. This little book of 94 pages discusses the training of the hand as properly an integral part of education. The relation of general and special education, the need of hand-training for all classes, the dignity of hand-work, its influence on personal character, the relation of manual training to immigration and to the apprenticeship problem, and the present condition of the subject, are among the points treated—all in a very condensed way. Price in paper, 25c.; cloth, 50c., postpaid. Address CHARLES H. KERR & Co., 175 Dearborn Street, Chicago.

D. G. FRANCIS, 17 ASTOR PLACE, N. Y., dealer in valuable new and old books. Rare and curious second-hand books.
Foreign books imported to order.
Bookbinding in any style carefully attended to.
Catalogues, issued from time to time, forwarded to any address.

Ranch Property For Sale.

ON THE LARAMIE PLAINS, WYOMING TERRITORY.

Twenty thousand acres with buildings, sheds fences, ditches, etc, etc. One of the best watered ranges in the county.
Ten thousand sheep with the ranch if desired.
The land with the improvements will be sold for $2.50 per acre, the cheapest ranch ever offered in Wyoming.
Ample time given.
For full particulars address
H. B. RUMSEY, Omaha, Neb.

BOOKS FOR SUMMER READING.

NATURE SERIES.

Flowers, Fruits, and Leaves.

By SIR JOHN LUBBOCK, Bart., F.R.S., M.P., &c.

With numerous illustrations. 12mo, $1 25.

With 'Flowers, Fruits, and Leaves' in one's hand when the fields and woods are clad in green once more, many a happy hour can be passed.—*New York Times.*

An excellent little volume of the "Nature Series"; will interest man, woman, and child in the elucidation of practical botany.—*Chicago Tribune.*

An altogether charming volume in the Messrs. Macmillan & Co.'s "Nature Series." . . . The study of function in separate parts, of the development of form and the mimicry of design in plants was never more delightfully nor more scientifically carried out.—*Independent.*

Reads like a fairy tale for amusement, though it is really the simplest and most direct statement of the latest discoveries of scientific observers. One need not be a botanist, or care anything about botany, to read with pleasure this wonderful little tale of fruits and flowers and leaves. It is simple enough to be clear to the merest child and astonishing enough to send a thrill along the most *blasé* of nerves.—*Critic.*

A series of lectures delivered by the author on botanical subjects, and is as interesting as a novel. . . . A model of what a popular scientific should be.—*Popular Science News.*

FORMER VOLUMES OF NATURE SERIES.

The Colors of Flowers

As illustrated in the British Flora. By GRANT ALLEN. With numerous illustrations. 12mo, $1.

It tells in a very simple way the story of the discoveries by which naturalists have been able to answer the old question of why flowers have distinctive colors.—*Philadelphia Ledger.*

The subject is one of remarkable interest even to those who are not botanists.—*Boston Transcript.*

THE ORIGIN AND METAMORPHOSES OF INSECTS. By SIR JOHN LUBBOCK, M.P., F.R.S. With illustrations. 12mo, $1.

ON BRITISH WILD FLOWERS CONSIDERED IN RELATION TO INSECTS. By SIR JOHN LUBBOCK, M.P., F.R.S. With illustrations. 12mo, $1.25.

NEW YORK, THURSDAY, AUGUST 5, 1886.

The Week.

THE votes taken in the Senate on the Morrison surplus resolution as amended by the Finance Committee, and on the various amendments offered by individual Senators, do not furnish much text for political discourse. In a broad way it may be said that if the Senate had been under Democratic control, the resolution would probably have passed as it came from the House, although this is not certain, the Democratic members having divided equally, 14 to 14, on the test vote. Twenty-three Republican Senators voted for the Finance Committee's amendment and 13 against it. The aggregate vote, 37 to 27, in favor of the amendment, is a very gratifying result, showing that no very bad financial measure can be carried through Congress until the composition of the Senate is very much changed. Perhaps the most gratifying exhibit is that made by the Southern Democratic Senators, twelve of whom voted for the amendment. While it is true that twelve Senators from the late slaveholding States voted the other way, the expectation was that there would be a considerable majority in favor of "cheap money." The debate at its close exposed the true character of the resolution. Everybody understood that it was a last desperate effort to force the silver standard on the country. The Senate has put upon this attempt a negative of so decided a character that Mr. Bland and his party in the House may well consider the question, whether they are likely to live long enough to see the silver standard established solely by the operation of the two-millions-per-month law.

Each party gave a slight majority in favor of the extraordinary amendment to the surplus resolution proposing that the Government pay 100 cents apiece for the 75-cent trade dollars; the Republicans standing 19 to 16 and the Democrats 15 to 13. Mr. Evarts voted with the majority. At the present price of silver the trade dollar is worth only 75 cents. It is not legal tender. It is an ingot manufactured expressly and exclusively for sale to the Chinese. It never had any circulation in this country until the price of silver fell so that 420 grains of it were worth less than 25 8 10 grains of gold. Then speculators began to buy them up in China and reimport them to the United States, and palm them off as the equivalent of gold. They had a brief and fitful circulation until business men refused to receive them. Then speculators bought them up a second time, and have been holding them, together with the stock that they were unable to get rid of, and besieging Congress to take them at par as the equivalent of gold dollars. The importation from China naturally ceased when the business community threw them out, but it will spring up with amazing rapidity as soon as it is learned that 75 cents' worth of them will bring a dollar at the United States Treasury. It is simply amazing that such a measure could have passed, except in the way of burlesque, in order to put a fool's cap on the Morrison resolution.

The President's message approving the Oleomargarine Bill is an unusual but not an unprecedented proceeding. President Lincoln, we believe, set the example of stating his reasons for signing a bill which he did not altogether approve of, and the example was followed, if we recollect rightly, by President Johnson. The Constitution contains no warrant for such a method of procedure. At the same time it does not prohibit it. It must be held allowable because there are no means to prevent it, but it would be more consonant with the spirit of the instrument if the President would simply approve or disapprove the measures before him, and state his opinions regarding legislation in his annual messages to Congress. The reasons given by him for signing the bill will not be satisfactory to those who, like ourselves, consider it a very plain case of class legislation, and the most offensive specimen of its kind to be found on the statute-book. That this is its true character in the President's estimation is made plain by the following paragraph in his message:

> "If this article has the merit which its friends claim for it, and if the people of the land, with full knowledge of its real character, desire to purchase and use it, the taxes exacted by this bill will permit a fair profit to both manufacturer and seller. If the existence of the commodity taxed and the profits of its manufacture and sale depend upon disposing of it to the people for something else which it deceitfully imitates, the entire enterprise is a fraud and not an industry; and if it cannot endure the exhibition of its real character which will be effected by the inspection, supervision, and stamping which this bill directs, the sooner it is destroyed the better in the interest of fair dealing. Such a result would not furnish the first instance in the history of legislation in which a revenue bill produced a benefit which was merely incidental to its main purpose. There is certainly no industry better entitled to the incidental advantages which may follow this legislation than our farming and dairy interests, and to none of our people should they be less begrudged than our farmers and dairymen."

Obviously the "revenue measure" which gains more or less support from the fact that it gives incidental advantages to a worthy class of people, is a crooked measure, a dangerous measure, and a blot upon the spirit of modern legislation. Although it bears striking likeness to the principles of the protective tariff, it differs from the latter in lacking the element of supposed patriotism, which constitutes the largest part of the sophistries underlying that system. It is a plain, unvarnished game of grab, taking from A to give to B, because B is an industrious man with a large family, and has a hard time to make a living.

The President makes the suggestion that the second section of the bill leaves some doubt whether the article oleomargarine is taxable unless it is made "in imitation or semblance of butter, or, when so made, calculated or intended to be sold as butter or for butter." There can be no doubt that the intention of the framers of the bill was to tax oleomargarine even if it were made as black as tar. There can be little doubt that when the bill comes before the courts the latter will try to find some way o construing it so that it shall be conformable to justice and liberty. The bill certainly leaves a wide door open for construction. The first section defines the article butter and the second defines the article oleomargarine. The definition of the latter ends with the words quoted. Would a court impose a fine upon a man who made or sold untaxed oleomargarine not in imitation or semblance of butter, and not calculated or intended to be sold as butter? Probably not. How much "semblance" of butter will serve to warrant the imprisonment of an American citizen in the latter part of the nineteenth century? What facts shall be relied on to show that an article which is not butter is "calculated" to be sold for butter? These questions will certainly come up for adjudication. They present a fruitful vista for lawyers.

The President sent in two vetoes on Friday. One was of a bill proposing to erect an expensive public building in the little city of Springfield, Mo., where the only quarters required by the Federal Government are for the employees of the Land Office, now accommodated at a rent of $300 a year, and the half-dozen employees of the post-office, now housed in rooms furnished the Government free of expense. The average taxpayer is sure to endorse the President's conclusion: "Upon the facts presented, I am satisfied that the business of the Government at this point can be well transacted for the present without the construction of the proposed building." The other veto was of an act to authorize the construction of a railway bridge across that part of the waters of Lake Champlain lying between the towns of North Hero and Alburgh, in the State of Vermont, regarding which the President says:

> "On the 10th day of June, 1884, a bill was approved and became a law, having the same title and containing precisely the same provisions and in the exact words of the bill herewith returned. The records of the War Department indicate that nothing has been done toward building the bridge permitted by such prior act; it is hardly possible that the bill now before me is intended to authorize an additional bridge between the two towns named, and I have been unable to discover any excuse or necessity for new legislation on the subject."

The President's latest pension veto furnishes a most glaring illustration of the recklessness with which this sort of legislation is enacted. The act proposed to grant a pension to Mrs. Jennette Dow, on the ground that her husband's death from apoplexy on the 17th of December, 1882, was due to a gun-shot wound in his left knee received in September, 1863. It appears that Mr. Dow served for years after the war as a railroad conductor; that there was no medical testimony which attributed death to the wound, "and it would be hardly credible," Mr. Cleveland remarks, "if such evidence was found"; and that the widow's claim was rejected by the Pension Bureau last year upon the ground that her husband's death was not caused by the wound. "I am sure," says the President in conclusion, "that in no case, except in an application for pension, would an attempt be made in the circumstances

here developed to attribute death from apoplexy to a wound in the knee received nineteen years before the apoplectic attack." If Republican stump-speakers want to go before the country on the platform of condemning a Democratic President for blocking such claims as this, the Democrats ought to consider themselves very lucky.

Mr. Evarts's speech on the silver question has resolved all doubts regarding his position, and must be gratifying to the business men of the country. His idea is that the President should correspond with European governments between the present time and the reassembling of Congress, in order to find out what their views are in reference to international bi-metallism. Then, when Congress does reassemble, we shall know where we stand, and "if satisfied that there is no reliable determination in that regard, Congress can take up and debate and settle the whole basis of currency and coinage." This is so rational and hopeful that we wonder still more why Mr. Evarts held us so long in suspense.

It is not easy to get at the real opinions of Mr. T. V. Powderly on the various points in the "labor problem," for they seem to vary from day to day. But he has at all events made it quite clear that he is by no means the "moral suasion" apostle which some of his friends tried to persuade us he was last April. He talks like one now and then, but just as often talks like a striker and a boycotter. The other day he denounced the militia for "standing between the laborer and his rights," although the only interference with the laborer of which the militia has ever been guilty has consisted in preventing him from smashing other people's property, and hitting people for entering into lawful contracts. Mr. Powderly does, however, seem to approve cordially of the boycott. He has written to Mr. James Redpath, denying that he "opposes it altogether." He says "he regards it as too good a tool to be dulled by botch workmen; it should be used only where actually necessary, and then effectually." The phrase "actually necessary," of course, means that it should be used only when the laborers have failed in persuading an employer to hire them against his will on their own terms. Powderly would then, but only then, employ intimidation and violence against him—that is, threaten him with the ruin of his business if he did not submit; and he would not threaten him unless the boycotting arrangements were so perfect that he would be sure to accomplish it. The truth is, that behind all the philanthropic preambles and constitutions of the Knights of Labor there lies the fixed determination to use violence to gain their ends whenever they think it can be done with impunity, or, as Mr. Powderly calls it, "effectually." But every such utterance, we think, increases the determination of all good citizens that neither Mr. Powderly nor any of his followers shall be permitted to be "effectual" on American soil. If they want to revel in boycotting, they must start for some still unsettled region, and boycott each other.

The struggle between the Knights of Labor and the two other organizations, known as the International and the Progressive Cigarmakers' Unions, for the control of the cigar manufactories of the country is a very interesting one. At present the manufacturers appear to adhere firmly to the Knights, and declare their willingness to have their shops continue in the control of that organization; but the other two unions are so firmly united, and control so large a number of cigarmakers, that the Knights are experiencing great trouble in filling the shops with men. Of course the contest derives its chief public interest from being a struggle of one body of laborers with another. The employers are not directly interested except as they take sides with one party or the other. There is no attack upon capital involved, but simply a question of whether one union or the other two combined in one shall control. The men who are locked out are not strikers, but are refused work because they decline the authority of one union in order to submit to that of another.

"The increase in the production of iron and steel in the United States," said the *Tribune* recently, "is an encouraging indication of returning business prosperity. The production of pig-iron in the first half of this year amounted to 2,954,209 tons, which is considerably more than was ever before produced in the same length of time. According to the official report of the Iron and Steel Association, more steel also will be produced in 1886 than in any previous year." If Mr. Blaine had been elected President in 1884, the *Tribune* would have attributed this unprecedented showing to the influence of his "brilliant" administration. It is hardly to be expected that it should ascribe any of the credit as the case stands to Mr. Cleveland, but even the *Tribune* will find it hard to convince its readers that the country is going to ruin under a Democratic President, when it is called upon to print such facts as these.

The nation has a special cause for thanksgiving this year. For the first time there will be no "October election" in Ohio. Last year the voters ratified a constitutional amendment changing the time for the annual State election from October to November, and hereafter the country will be free from the demoralizing performances so often enacted in the past in order to secure the "moral effect" of a party victory for use in other States which voted later. Indiana made the same change earlier than Ohio, and Maine would have changed from September to November before now if Mr. Blaine had not wanted to save the chance for getting up a boom by fixing public attention upon an early campaign in his State. But the September election in Maine is of little consequence, and the November contests in the country at large will hereafter be hardly at all affected by earlier elections in the very few States which still cling to the folly of voting for State officers in the summer or early fall.

The post-office at Gloucester, Mass., employs a number of clerks to receive and distribute mail matter, to attend to money orders, etc., and a number of carriers to deliver letters, postal cards, and papers throughout the city and bring back the contents of the street letter-boxes. These various employments have no more connection with national politics than have the employments of men engaged in receiving and sending telegraphic despatches or express matter for one or another of the corporations engaged in those lines of communication. A few months ago a Democrat was appointed postmaster, and, upon assuming charge, he investigated the condition of the office precisely as a man would do who should take charge of a telegraph office or an express office provided with a full force of employees—that is to say, he set out to discover whether they were capable and efficient workmen, knowing that, if they were so, their experience would make them more valuable to their employer than green hands could be. He found that his predecessor had left the office well organized, and he determined to retain the force of subordinates which he found, exactly as any sensible superintendent of a telegraph or express office would have done under similar circumstances. When the Democratic managers came around and insisted that he should discharge these old employees simply to make room for a lot of new men who needed to be "taken care of," he refused to comply, and told them the simple truth, that the business of the Government could not be conducted with equal despatch if he should turn it over to a set of men who knew nothing about it. For this sensible application of business principles the Postmaster has been formally "arraigned" by the Democratic City Committee, who have adopted resolutions declaring their belief that it is "for the best interest and prosperity of the party"—not, it will be observed, of the people of both parties who are taxed to support the post-office—"that immediate changes should be made in the Post-office Department in this city"; and that "no branch in any department of the Government can be carried on systematically and with efficiency while men holding positions are antagonistic to the Administration." They ask for the present postmaster's removal because he believes in retaining as clerks and carriers efficient men who are not Democrats. No "mere theorist" could possibly expose the utterly ridiculous character of the spoils system of administering the Government so forcibly as these "practical politicians" have done by thus formulating it.

A compilation of the Vermont school statistics for the year ending March 31, 1886, furnishes an interesting basis for comparison with the Southern State which most resembles Vermont in the character of its territory and population. The last census showed that there were in Vermont 99,463 children between the ages of five and twenty years, while the whole number of children enrolled in the public schools last year was 71,667, or 72 per cent., and the average daily attendance of those enrolled was 46,625, or 65 per cent. In West Virginia there are 228,185 children of the school age, of whom the last report showed 166,272 enrolled, or 73 per cent., and the average daily attendance 102,012, or 61 per cent. It will thus be seen that the proportion of all children in West Virginia who attend a public school at some time

during the year already slightly exceeds the proportion in Vermont, while the ratio of average attendance is nearly as large in the Southern as in the Northern State. The school year is still decidedly longer in Vermont, the average number of days being 136, against 100 in West Virginia; but the latter State is steadily lengthening the school year, and the last report of the School Superintendent advocates as entirely feasible a legal provision that the minimum term shall be fixed at six months, whereas in Vermont, the Superintendent states, "the session in many districts is limited to twenty weeks." The absurdity of the Blair bill is fully perceived only when one makes such a comparison as this, and then reflects that that scheme proposed to tax the people of Vermont for the benefit of a State which already makes nearly as good a showing as itself, and is steadily improving its educational system.

The *Tribune* on Thursday revealed "a case of suffering and distress," as "deserving of immediate attention from charitably disposed people." It is the case of a young dry-goods salesman and his family of four children, who are in want of the necessaries of life and in danger of eviction for non-payment of rent. "The young man," it says, "is known in business and political circles, and his name is withheld out of regard for his feelings." It then adds:

> "His troubles date from the last Presidential campaign. He worked zealously for Mr. Blaine's election, organized clubs, and, like many other enthusiastic Republicans, bet heavily on the result. He lost $2,000 and this crippled him for a time. But he was getting over this all right when he lost his place, and that, together with sickness in his family, has driven him almost to desperation. A position is open for him in Philadelphia, but one of his creditors, to whom he owes $42, threatens to put him in jail if he attempts to leave the city."

This young man is, however, by no means the only Blaineite in this city whose "troubles date from the last Presidential campaign." There are scores of them who have never been able to get their heads above water since they "worked" for Blaine and betted on his election in 1884. They were led into their troubles by the extraordinary confidence of the charlatans who had charge of the Blaine canvass in this city, and thought they had made his election sure by the arrangement between Jay Gould and Johnny O'Brien and Tammany. We think the editor of the *Tribune* is himself bound in morals to take charge of this young man and his four children, for the present at all events, for he is one of the principal authors of his woe.

Lord Hartington, as well as Chamberlain and Sir Henry James, have, it is said, promised Lord Salisbury their support in maintaining "the integrity of the Empire," and he is reported to find some comfort in this; but why, it is hard to see. As parties now stand in Parliament, no assaults on the integrity of the Empire can possibly come from anybody but the Ministry, so that the promise is really a promise to stand by the Ministry in *not* doing something—probably the oddest pledge ever offered in politics. It is as if Lord Hartington were to say: "I promise you my support and that of my colleagues in not attempting to alter the existing legislative union between Great Britain and Ireland." A promise of this kind is, however, of no value to a Ministry. What it needs is support in what it does, and not in what it does not do. As matters stand, when it moves in any direction it will move in complete ignorance of what the Unionists will say. The course of the new Ministry towards the Irish is not yet shadowed forth. But they will probably shrink from coercion as long as possible, and get up some scheme of local government, "the autonomy of gas and sewage," as John Morley called it. The difficulty of making the Irish accept this as anything but an instalment of their claim, will probably soon begin to be seen. Either the Irish will not accept such a scheme at all, and will go to work to insure its failure if carried out, or they will accept it and then use the bodies it creates as aids in the agitation for home rule. The latter is the more probable supposition. With twenty-eight county boards in their hands, possessing considerable powers of taxation, and the right to meet and debate, the National Leaguers would be more powerful than ever. To silence them, the boards would have to be suppressed or the members put in jail. But then, suppression and imprisonment are temporary processes. They would soon have to come to an end, and then the old work of "pacifying Ireland" would have to begin over again.

Judging from an abstract of the speech from the throne with which King Milan of Servia on July 19 opened the newly elected Skupshtina, he has learned little wisdom from his disgraceful defeat in the late conflict with Bulgaria. He not only declares that in taking up arms he merely accepted, in accordance with the national desire, the state of open hostility created by the Bulgarian Government, but expresses his determination further to obey the popular will by jealously watching the equilibrium of the Balkan States, and protesting against any one-sided infringement of it. If this means anything, it means that in case either Bulgaria or Montenegro should attempt a further extension of her boundaries, or the former proclaim her perfect independence of Turkish dominion, he would again be ready to plunge his people into a fratricidal war and a deeper abyss of misery and public debt. That he meditates no such rashness in case Austria-Hungary proclaims the final annexation of Bosnia and Herzegovina is clear, for on the protection of that powerful neighbor he relies for his dynastic safety against the machinations of the partisans of the exiled house of the Karageorgevitches, the revolutionary leanings of a large portion of his subjects, and the secret hostility of Russia. The foolish utterance we cite is, in fact, a new bid for the good will of the Austro-Hungarian Government, which, unfortunately for Milan, is now very anxious to show itself friendly to Alexander of Bulgaria, since he has made himself so obnoxious to the Czar of Russia.

The result of the Congressional elections in Mexico, announced as showing a large majority for the Administration, was to have been expected under the present political conditions of that country. Whether so designed or not, the electoral machinery of Mexico is admirably adapted to the work of suppressing rather than expressing the will of the people. All voting is indirect. The votes of the people simply elect electors, who then fill the offices with persons agreeable to themselves; successful candidates before these electoral boards never having been mentioned, often, at the time of general voting. Thus the public voting in the last election took place on the last Sunday in June; but, at that time, no candidates for Congress were mentioned. When the boards of electors, then chosen, proceeded to the choice of Congressmen two weeks later, it must have happened in many cases that representatives were chosen for districts where they were practically unknown. All the advantage of a personal canvass, with the possibility of direct and intelligent voting, is in this way destroyed. It is obvious, too, that the work of the political manipulator is made far easier in the case of such an intermediary electoral body than when he has to deal with the voters of the country as a whole.

All the traditional methods of a political contest in Mexico are also such as to make the overthrow of a Government in a peaceful manner exceedingly difficult, if not impossible. Public political discussion is unknown. Attacks, however guarded and impersonal, on the policy of the Administration, can be made only under danger of arrest for disturbing the public peace. Revolution used to be the remedy most resorted to. That being now out of the question, with the aid furnished the Federal authorities by a large standing army, by telegraphic communication, and by railroads facilitating the rapid massing of troops at distant points, the only resource left to the Opposition is intrigue. It should be added, as giving another reason for the triumph of the Administration, that for the past year the most stringent measures have been adopted for the suppression of all public agitation against the policy of the Government. Obsolete laws of doubtful constitutionality, impairing the liberty of the press, have been revived and enforced to the letter. The right of public assembly has been practically denied. Since the 6th of July of last year no less than forty-four editors and students have been imprisoned in the City of Mexico alone, charged with no other offence than that of publicly dissenting from the policy of the Administration. A rigid censorship is maintained over the press, extending not merely to editorial comments, but also to matters of news. For example, the capital was flooded, a few days ago, with copies of the pronunciamiento of Gen. Negrete. It was a harmless document, as Negrete is known to be a man of chronic grievances, feeling that his country has not been duly grateful to him for the part he bore in the famous fifth of May battle of Puebla. But the *Diario Oficial* promptly came out with the warning that any paper so much as publishing the pronunciamiento would be prosecuted. We shall have to wait until the assembling of Congress in September to see how much is left of the small but determined Opposition, which for two years past has, with so great popular approval, assailed the favorite measures of President Diaz.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 28, to TUESDAY, August 3, 1886, inclusive.]

DOMESTIC.

THE President on Thursday transmitted to the Senate, in compliance with a resolution offered by Senator Ingalls, statements from the heads of the executive departments relating to the changes in the classified service during certain periods. Summarized they make the following showing: The number of clerks now embraced within the provisions of the Civil-Service Act removed from July 16, 1883, to March 4, 1885—Department of State none, Treasury Department 20, Department of the Interior 28, Department of Justice none, Post-office Department 6, War Department 29, Navy Department 1. Number of appointments during the same period (not including those excepted from examination by rule 19, Civil-Service Rules): State 4, Treasury 159, Interior 204, Justice 5, Post-office 41, War 82, Navy 10.

President Cleveland on Friday vetoed the bill providing for a bridge across Lake Champlain between the towns of North Hero and Alburg, Vt., because there is a law already in existence providing for this bridge; and the bill for the erection of a public building at Springfield, Mo., saying: "No Federal courts are held at this place, and apparently the only quarters which the Government should provide are such as are necessary for the accommodation of the post-office and land-office situated there. The Postmaster reports that six employees are engaged in his office. The rooms used as a post-office are now furnished the Government free of expense, and the rent paid for the quarters occupied as a land-office amounts to $300 annually."

President Cleveland on Monday signed the Oleomargarine Bill, and accompanied it with a long letter in which he said: "This, upon its face and in its main features, is a revenue bill, and was first introduced in the House of Representatives, where the Constitution declares that all bills for raising revenue shall originate. The Constitution has invested Congress with a very wide legislative discretion, both as to the necessity of taxation and the selection of the objects of its burdens. And though, if the question was presented to me as an original proposition, I might doubt the present need of increased taxation, I deem it my duty in this instance to defer to the judgment of the legislative branch of the Government, which has been so emphatically announced in both houses of Congress upon the passage of this bill." He also specially points out that he does not view the bill as class or protective legislation, but as incidentally a defence to the consumer against the sale of imitation for genuine butter.

The President sent the following nominations to the Senate on Wednesday: Alvey A. Adee of the District of Columbia, now Third Assistant Secretary of State, to be Second Assistant Secretary of State, vice William Hunter, deceased; John B. Moore of Delaware to be Third Assistant Secretary of State; E. Spencer Pratt of Alabama to be Minister Resident and Consul-General of the United States to Persia. On Thursday he nominated George A. Jenks of Pennsylvania to be Solicitor-General, to succeed Mr. Goode. Mr. Jenks was recently Assistant Secretary of the Interior. The nomination is highly commended.

The Senate on Wednesday passed the Fortifications Bill. As the bill came from the House it appropriated $620,000, although the estimates of the Department were about $3,000,000. The amount added in the Senate was $6,010,000, so that it now appropriates $6,630,000

At the close of the debate on the Morrison Surplus Resolution on Friday it was passed by the Senate—yeas 42, nays 20—as follows (Democrats in italics): Yeas—Messrs. Aldrich, Allison, Blair, *Brown*, *Call*, *Camden*, Cameron, Chase, Conger, Cullom, Dawes, Dolph, Edmunds, Evarts, Frye, *Gibson*, *Gorman*, *Gray*, Hale, *Hampton*, Harrison, Hawley, Hoar, Jones of Nevada, *Kenna*, McMillan, *McPherson*, Mahone, Miller, Palmer, *Payne*, Platt, *Pugh*, Riddleberger, Sabin, Sawyer, Sewell, Sherman, Spooner, Van Wyck, *Walthal* and *Wilson* of Maryland—42. Nays—Messrs. *Beck*, *Berry*, *Blackburn*, *Butler*, *Cockrell*, *Coke*, *Eustis*, *Harris*, Ingalls, *Jones* of Arkansas, *Maxey*, Mitchell of Oregon, Plumb, Stanford, Teller, *Vance*, *Vest*, *Voorhees*, *Whitthorne*, and Wilson of Iowa—20.

The joint resolution as passed is as follows: "Resolved, That whenever the surplus or balance in the Treasury, including the amount held for redemption of United States notes, shall exceed the sum of $100,000,000, it shall be and is hereby made the duty of the Secretary of the Treasury to apply such excess, in sums not less than $10,000,000 per month, during the existence of any such surplus or excess, to the payment of the interest-bearing indebtedness of the United States payable at the option of the Government. The surplus or balance herein referred to shall be the available surplus, ascertained according to the form of statement of the United States Treasurer, of the assets and liabilities of the Treasury of the United States employed on June 30, 1886; provided that no call shall be made under the provisions of this resolution until a sum equal to the call is in the Treasury over and above the reserve herein mentioned, and provided, further, that the Secretary of the Treasury in his discretion may have in the Treasury, over and above the foregoing sums, a working balance not exceeding $20,000,000; and whenever in the case of any extraordinary emergency, and when, because thereof, in the opinion of the President, the public interests shall require it, he may, by written order, direct the Secretary of the Treasury to suspend further call for the payment of such indebtedness for such period of time as shall be necessary to maintain the public credit unimpaired; and that such suspension and the reasons therefor shall be reported to Congress within ten days after its next meeting, or immediately, if Congress shall be in session." The resolution as it passed the Senate also contained a provision for the redemption of trade dollars at their face value, which was, however, struck out in conference with the House Committee, who have agreed to the other Senate amendments.

The House on Friday resumed consideration of the vetoed pension bills, the first being that one granting $50 a month to the widow of Gen. David R. Hunter. In advocating the passage of the bill over the President's veto, Mr. Butterworth (Rep., O.) cited the various precedents where the widows of general officers were granted $50 a month, and he protested against the House making fish of one and flesh of another. The trouble in this case, he thought, was that Gen. Hunter had presided at the Fitz John Porter court-martial. If it were not for that, the President would have signed the bill. The House refused to pass the bill over the veto—yeas 111, nays 108—not the constitutional two-thirds in the affirmative. Others of the vetoed bills were put over till next session. The House on that day rejected the Senate Inter-State Commerce Bill offered as a substitute, and the bill brought forward by Mr. Baker of New York, and passed the House bill by a vote of 133 to 104.

On Saturday the House, by a vote of 102 yeas to 135 nays, refused to agree to the conference report upon the River and Harbor Bill. This is the final defeat of the bill unless the Senate shall recede from its amendments by which the Hennepin and Michigan Canals were put in the bill.

The House on Saturday passed, 209 to 6, the Alien Landlord Bill. On Monday the House concurred in the Senate amendments to the Naval Establishment Bill. It now goes to the President.

Congress on Monday and Tuesday rapidly hastened business with a view to adjournment at four P. M. on August 4. The House passed the Senate bill increasing the pension of soldiers who have lost an arm or leg in the service. The conference committees reached agreement on the Deficiency Bill (appropriating $6,850,000) and the Sundry Civil Bill. They disagreed, however, on the Northern Pacific Forfeiture and Timber Culture Bills, and they were abandoned. An incident of Tuesday was a partisan harangue by Senator Hoar, which called forth vigorous replies from Southern Senators.

Gov. Ireland of Texas received on Friday a report from the American Consul at Piedras Negras, Mexico, of the unlawful arrest at Eagle Pass, Texas, of Francisco Arresures, on a trumped-up charge of horse-stealing, his immediate delivery to the Mexican authorities, and his summary execution by them. The Consul says: "A protest against being delivered to the Mexican officers was strongly made by Arresures, who insisted that he should be killed by Mondragon (Captain of the State Rangers in Coahuila), his personal enemy. He appealed to me for protection on the morning of July 27, and I at once demanded his return to Texas on the ground of his being kidnapped, and also had Sheriff Oglesby to demand the prisoner's return on the same ground. Both demands were refused by Mondragon. At one o'clock at night Arresures was taken from jail and brutally murdered by three of Mondragon's troops. In 1873 Arresures made declaration of citizenship in Maverick County. He lived with his family in Eagle Pass at the time of his arrest." Gov. Ireland immediately wrote to Secretary Bayard, saying: "While no possible excuse can be given for the part taken by the Texas officers in the illegal arrest and delivery to the Mexican authorities, still nothing in palliation of the foul murder has or can be offered by the Mexican authorities. The persons, whoever they are, who were engaged in the illegal arrest will be prosecuted, and I demand in the name of the State and its people that this wrong by Mexico be atoned for and punished. If this State and her people must depend upon themselves for protection, the necessary redress can and will be obtained."

Secretary Bayard, on Monday, sent to Congress the Department correspondence in the Cutting case. The Secretary says that he made a demand for the release of Cutting, and was answered that Cutting was being tried for a violation of a Mexican Federal statute, which provides for the punishment of a foreigner who, in a foreign country, commits an offence against a Mexican citizen To this Mr. Bayard replied that our Government could not tolerate the application of such a law to American citizens, and renewed his demand for Cutting's release, which has not been complied with. The charge against Cutting is that he published in Texas a libel upon a Mexican citizen living in Mexico. In calling the attention of Congress to the Cutting case and the Mexican Government's failure to release him on demand, the President says he has exhausted his powers, and the case now rests with Congress. The House Committee on Foreign Affairs have drafted resolutions approving the action of the Administration in this case, and asking it to renew its demands for Cutting's release.

A statement prepared at the Post-office Department shows that the total number of officers and employees of all grades of the Department on June 30, 1886, was 577. Of this number eighty-nine have either resigned or been removed, and their places filled by appointment since March 4, 1885.

Prohibition tickets were nominated on Wednesday in Wisconsin and Michigan. Gen. Gordon was nominated for Governor by acclamation in the Georgia Democratic Convention on Wednesday. For the other offices the incumbents were renominated. A resolution endorsing the administration of President Cleveland was adopted.

The Connecticut Prohibitionists have nominated the Rev. Samuel B. Forbes for Governor.

At a caucus of the Republican members of both houses of the California Legislature on Wednesday it was resolved to elect a United States Senator to fill the unexpired term of Senator Miller, to whose seat Gov. Stoneman appointed Senator Hearst.

At the meeting of the Aqueduct Commissioners in this city on Wednesday afternoon, Secretary James W. McCulloh was removed and John C. Sheehan was appointed in his place. Mr. Sheehan is a brother of Assemblyman Sheehan, thirty-seven years of age, and has been an active Democrat of Buffalo. The Board decided to employ Mr. McCulloh at a salary of $6,000 per annum for two months to assist in land purchases. The whole move is outrageously political. Mr. McCulloh was a very competent and useful Secretary.

Charges prepared by the Commissioners of Accounts, at the instance of Mayor Grace, were served at four o'clock on Wednesday afternoon upon Rollin M. Squire, Commissioner of Public Works, with a notification to appear at the Mayor's office on August 4, at eleven A. M., to show cause why he should not be removed from his official position. The following are the charges: First—Mutilation of records. Second—Certifying to false pay rolls. Third—Failure to comply with the Civil-Service Law and regulations, under which twenty-three specifications of evasions of the law in the making of appointments are given. Fourth—Neglect of duty and unfitness for office. Fifth—Violation of the law and gross and culpable neglect of duty in reference to the Fifth Avenue pavement contract. Sixth—A corrupt and illegal bargain with Maurice B. Flynn to resign the office of Public Works Commissioner when called upon to do so, and to conduct the department as Mr. Flynn should dictate. Seventh—Entering into a corrupt and unlawful conspiracy with Mr. Flynn, a contractor having large dealings with the city, by placing the Department of Public Works absolutely in the control of Mr. Flynn. The last two charges are supported by an autograph letter of Mr. Squire's.

FOREIGN.

The following British Cabinet appointments have been made public: Prime Minister and First Lord of the Treasury, the Marquis of Salisbury; Chief Secretary for Ireland, Sir Michael Hicks-Beach; Secretary of State for Foreign Affairs, Lord Iddesleigh; Lord Lieutenant of Ireland, the Marquis of Londonderry; Chancellor of the Exchequer, Lord Randolph Churchill; Secretary for War, the Right Hon. William Henry Smith; First Lord of the Admiralty, Lord George Hamilton; Lord High Chancellor, Lord Halsbury; Secretary for India, Sir Richard Assheton Cross; Lord President of the Council, Viscount Cranbrook; President of the Local Government Board, Right Hon. Henry Chaplin; President of the Board of Trade, Col. Frederick A. Stanley; First Commissioner of Works, the Right Hon. David Plunket; Attorney-General, Sir R. E. Webster; Lord Chancellor of Ireland, Lord Ashbourne; Home Secretary, Henry Matthews; Secretary for Scotland, Arthur James Balfour; Attorney-General for Ireland, Hugh Holmes; Solicitor-General for Ireland, John Gregory Gibson; Political Secretary to the Treasury, Aretas Akers-Douglas; Lord Chamberlain, the Earl of Lathom; Judge Advocate-General, the Right Hon. W. T. Marriott; Postmaster-General, the Right Hon. Henry Cecil Raikes; Chancellor of the Duchy of Lancaster, Lord John Manners; Secretary of State Colonial Department, Edward Stanhope; Lord Privy Seal, Earl Cadogan; Lord Advocate, John Hay Athol Macdonald, Q. C.; Solicitor-General for Scotland, J. P. Bannerman Robertson, Q. C.; Master of the Horse, Duke of Portland. Lord Randolph Churchill's appointment is considered a great personal triumph for him. He has not, however, succeeded in squeezing out entirely what is known as the "old gang."

The following gentlemen have been recommended to the Queen by Mr. Gladstone for elevation to the peerage: Sir Thomas Brassey, Sir Michael Bass, Bart., the well-known brewer; John Glencairn Carter Hamilton, who failed of reëlection to Parliament in the late contest, and Sir Henry Thring of the Treasury Department. Mr. Gladstone has also recommended that the following gentlemen be made baronets: Frederick Thorpe Mappin and Charles Mark Palmer, members of Parliament; ex-Commoner Thomas D. L. Jones-Parry and Mr. Kitson, the defeated Gladstonian candidate in Leeds. W. L. Booker, British Consul-General at New York, and John Henry G. Bergner, Superintendent of the Treaty Department of the Foreign Office, have been appointed Knights Commanders of the Order of St. Michael and St. George.

Public interest in the new Tory Cabinet is focussed on two figures. First, of course, comes Lord Randolph Churchill. This appointment has aroused indignation among the Liberals. It is seriously proposed that the Liberal party should refuse to recognize him as the leader of the House until he has apologized fully for the gross insults to Mr. Gladstone in his electoral address. Even among the Conservatives not a little disgust is privately expressed. Churchill has pledged himself in the strongest manner to the policy of immediate protection. Therefore his appointment to the Chancellorship of the Exchequer is doubly disquieting. The second figure is Mr. Henry Matthews, the Queen's counsel who conducted Mr. Crawford's case against Sir Charles Dilke with such relentless ability. He is in many respects the ablest man at the English bar. He is a Roman Catholic, is over sixty, and was the co-respondent in a divorce case twenty years ago. His surprising translation straight into one of the highest offices of the State was done by Lord Salisbury at Churchill's urgent request. Churchill declared that he must have somebody on the front Conservative bench who could be counted on at any moment for a rattling, effective party speech. He personally guaranteed Matthews's ability in this regard.

The new British Ministry received their seals of office from the Queen on Tuesday.

The last election return is now in, and counting the independents as they always vote, the following are the final totals: Conservatives 318, Liberals 194, Parnellites 85, Unionists 73.

An exchange of views among the Parnellites has led to a decision to give the Conservative Government time to prepare an Irish bill, but the Parnellites will demand a measure for the suspension of evictions.

Serious rioting took place in Belfast on Saturday, Sunday, and Monday. The mob of Orangemen was fired upon by the police and soldiers, and many were wounded.

Canon MacColl, one of Mr. Gladstone's most intimate personal friends, has searched John Bright's speeches on the Irish question for many years back, and is about to issue a pamphlet on the subject in the form of an open letter to Mr. Bright, showing that up to the last few years Mr. Bright's opinions were generally in favor of home rule.

Hand-bills demanding home rule are being circulated in Wales. The Welsh members of the House of Commons propose to form a National party in Parliament on the same lines as the Parnellite party.

Tennyson has ready several new poems, the most notable of which is a continuation of "Locksley Hall," the hero reappearing, a broken-down man of eighty, with modified views of life and liberty.

The first prize of the London chess tournament was won by Blackburne.

In the Spanish Chamber of Deputies on Wednesday a resolution that the Government free as soon as possible the remaining 26,000 slaves in Cuba was passed unanimously.

Completed returns from the districts in which elections were held on Sunday for *conseillers généraux* in France have been received. In 847 of the districts Republicans have been elected, and in 411 Conservatives have been successful. In 177 districts a second ballot will be required. The Republicans made 76 gains and the Conservatives 83.

The German army is arranging a celebration in honor of the forthcoming ninetieth birthday of the Emperor, which is intended to be fully worthy of the occasion. It is proposed to form then a union of the officers of the entire army corps, and found a philanthropic military institution in honor of the Emperor.

The celebration of the 500th anniversary of the founding of Heidelberg University was begun on Thursday night. Crown Prince Frederick William made an address.

The Abbé Franz Liszt died in Bayreuth at midnight on Friday. He was born on October 22, 1811, at Raiding, Hungary. His father, Adam Liszt, was an accountant in the house of Count Esterházy, a great patron of music. The boy heard much music and early showed so remarkable a bent in the direction of that art that a number of Hungarian noblemen, Count Esterházy among them, subscribed sufficient money to help the little prodigy to a musical education. At eight years of age he was put under notable instructors in Vienna, and before he was twelve he was considered a marvel in that city, and was declared the first pianist of the day. The period 1832–1842 marks the acme of Liszt's career as a *virtuoso*. His triumphal progress embraced almost every part of civilized Europe, from Madrid to St. Petersburg, from Hamburg to Pesth, and the enthusiasm he excited is unparalleled in the annals of music. In 1849 he settled down as conductor at Weimar and brought out operas by Berlioz and Wagner, making that city the musical centre of Germany for the rising generation. As the admirer and advocate of Wagner's music his work was particularly valuable. Liszt's compositions during the Weimar years were many. In 1861 he went to Rome, where he received religious orders with the title of Abbé, and for several years his life was devoted to meditation and church compositions. In recent years he has lived sometimes in Weimar, sometimes in Rome, with occasional visits to Bayreuth, Paris, and other musical centres. His recent visit to London and Paris was the occasion of immense enthusiasm. As a pianist Liszt was without a rival. Frau Cosima Wagner, the widow of the great composer, is an illegitimate daughter of Liszt by the Countess d'Agoult.

The following circular has been issued by the Canadian Commissioner of Customs to collectors of customs in Prince Edward's Island and Nova Scotia: "In order to avoid any misinterpretation of the concluding paragraph of my circular dated May 7 last, you will substitute the following therefor: 'If any vessel or boat of the United States is found fishing, or to have been fishing, or to be preparing to fish, within three miles of the shore within your district, you will place an officer in charge thereof, and telegraph the facts to Ottawa. To any foreign fisherman who may come within three miles of the shore, but not fishing, preparing to fish, or having fished within such limits, you will furnish a copy of the warning, and if any such vessel shall not depart within twenty-four hours thereafter, even though such vessel is not engaged in fishing, preparing to fish, or having fished within the three-mile limit, you will place an officer in charge and immediately telegraph the fact to headquarters; or if it be ascertained subsequently to serving the warning that any vessel served therewith has been fishing or preparing to fish before or after such service, you are not to allow the twenty-four hours to expire, but put an officer on board at once and act as directed.'"

THE RECORD AS TO THE OFFICES.

THE statement submitted last week to the Senate by the President as to the number of changes in the Washington departments since his inauguration, taken in connection with the recent summary of changes among the postmasters, enables one to get a clear idea as to the civil-service record of the Administration. An analysis of the figures is full of interest.

There are now about 120,000 Federal offices, in the common sense of that term which ranks as an officer of the national Government the sweeper-out of a Federal building equally with the President of the United States. Nearly one-half of all are postmasters, who numbered 53,614 on the 30th of June. In order to compare the changes made in the post-offices under a Democratic Administration with the record under Republican Presidents, we have secured a statement giving the figures for each fiscal year back to the one ending with June, 1869, four months after Grant became President. The classes of appointments which have a political aspect are those made upon resignations and the expiration of commissions, and those made upon the removal or suspension of the previous incumbents. The first of these two classes numbered 9,112 during the fiscal year ending June 30, 1886. The expirations of commissions concern only the offices filled for four years by appointment of the President, which number only 500 or 600 a year, as the fourth-class offices have no fixed term. It has been claimed by Republican organs that the greater part of the resignations have been compulsory rather than voluntary, postmasters taking themselves out of the way simply to avoid inevitable removal. It has also been said that many Republican postmasters resigned because they did not believe that they could hold office under a Democratic administration without sacrificing their convictions or forfeiting their self-respect. The facts do not sustain either theory. When Senator Ingalls of Kansas, a few months ago, declared that the Republican office-holders in his State "trampled on each other in a tumultuous and indecent haste to get out of office" as soon as Cleveland came in, the *Evening Post* promptly convicted him of falsehood by showing from the official records that the facts were as follows:

> "Number of post-offices in Kansas March 4, 1885, to which the President makes appointments, 89; number of appointments to such offices made during the nine months between March 4 and December 17, as published in the *Congressional Record* for December 18 last, 35; of which 7 nominations were at the expiration of the previous incumbents' terms (three of these terms expiring seven months after Mr. Cleveland's inauguration), 8 to succeed suspended officials, and only 20 to succeed postmasters who had resigned, while 54 of the 74 whose terms had not expired or who had not been suspended were still clinging to office, nearly a year after the new Administration was inaugurated."

There appears to be about as little foundation for the claim that Republican postmasters resigned in large numbers to avoid removal. Doubtless there were a considerable number of cases where men did resign because they knew that they merited removal for incompetency or offensive partisanship, but the number of such "martyrs" cannot have been very large. The whole number of appointments upon resignations and the expiration of commissions (chiefly upon resignations) was 9,112 out of a total of 53,614 postmasters, being 17 out of every 100. This but slightly exceeds the proportion repeatedly reached under Republican Presidents. Thus in the fiscal year 1883-84 there were 7,265 such changes among 50,017 postmasters, or 14 in a hundred; in 1882-83, 7,734 out of 47,863, and in 1881-82, 7,346 out of 46,231, or 16 in a hundred; while in 1874-75 there were 6,017 out of 35,547, or 17 in a hundred—precisely the same as last year. So far, therefore, as resignations are concerned, there has been no material change in the relative number, the only difference being that such vacancies have usually been filled by Democrats instead of Republicans.

The other significant class of changes consists of appointments upon removals and suspensions, which aggregated 9,566. This is a great increase over the average of late years, the number having varied between 513 in 1883-84 and 1,045 in 1875-76; but, after all, it amounts to only 18 such changes among every 100 postmasters. It is to be regretted that the causes of removal or suspension are not given. We suspect that a considerable percentage were justified by considerations entirely disconnected with politics—in other words, that a good many hundreds, if not indeed two or three thousand, of these 9,566 deposed postmasters lost their places because they were incompetent or inefficient. But even if every such change be ascribed to partisan motives, we have only 18 changes among every 100 officials due to the fact that a Democrat instead of a Republican is President.

The statement as to the Washington departments shows that the removals or reductions in rank among chiefs of divisions and chief clerks since Cleveland's inauguration aggregate 28 in the Treasury Department out of 97; Interior, 9 out of 43; Post-office and Navy, 2 each out of 21 and 11 respectively; War and State, 1 each out of 18 and 7 respectively; and Attorney-General's office, none. The number of removals among the clerks in the various departments subject to the Civil-Service Law has been 460, while the whole number of such clerks is 5,650. That is to say, only 8 clerks out of every 100 in the departments have been turned out since the 4th of March, 1885, and there is no reason to doubt that most of these removals have been for good cause.

It would be interesting if we had similar statistics for the custom-houses and post-offices throughout the country which are subject to the Civil-Service Law, as well as for the other branches of the public service, but further figures are not needed to warrant deductions. It is plain, not only that there has not been any "clean sweep," or anything remotely approaching a "clean sweep," but that there has been a restraint in making changes for political causes such as has never been known in this country since Jackson introduced the spoils system, nearly sixty years ago. The salient fact is this, and it is impossible to exaggerate its importance: There has been a Democratic President in the White House for nearly a year and a half, and much more than half of the offices remain in the hands of the Republicans who held them when the Republican party went out of power By the death-blow which he has thus dealt at the spoils system, Mr. Cleveland has both justified the confidence of his supporters, and earned for himself an enduring place in history, as a President who did his country one of the greatest services which it has ever fallen to the lot of any American citizen to render.

THE DISINTEGRATION OF PARTIES.

THE first session of Congress under a Democratic President for a quarter of a century is about expiring, and the most striking feature of its record is the evidence which it has furnished of the disintegration of parties. The dividing lines between the two old organizations have been repeatedly and thoroughly broken down, and the end of the session leaves the distinction between Republicans and Democrats so vague that labels are really necessary to distinguish members of the respective parties.

A number of questions have arisen upon which tradition should have arrayed the two parties in sharp opposition, but upon which members of each were found to be badly divided. To begin with, there was the issue of Federal aid to education in the various States. If ever a question was presented regarding which the attitude of the two parties, according to their respective theories of the Constitution, should have been clearly defined, it was this question of voting money from the Federal Treasury for expenditure in the various States under the supervision of Federal authorities. The Republican party might have been expected to support the scheme, especially as its ostensible object was the better education of the negro, but everybody would have expected on general principles to find the Democrats solid against such a proposition. Yet a Kentucky Democrat in the House, Mr. Willis, supported the project as zealously as a New Hampshire Republican, Mr. Blair, in the Senate; and of the twenty-two Democratic votes cast on the passage of the bill in the Senate, sixteen were in the affirmative, and only six in the negative, while such thorough-going Republicans as Frye and Hale of Maine, Hawley and Platt of Connecticut, Ingalls and Plumb of Kansas, opposed it in the Senate, and other equally strong Republicans were responsible for smothering the bill in the House.

The tariff issue furnished another illustration of the lack of cohesion in the two parties. Every Democrat was bound, by every consideration of party tradition and committal, to support at the very least the consideration of some measure aimed at a reform of tariff abuses, and yet 35 out of 171 Democratic votes in the House were cast against the admission of the Morrison bill. On the other hand, the most strenuous application of party discipline could not prevent the Minnesota Republican Congressmen from voting with the majority of the Democrats, and it is known that several Republican Congressmen from other Western States were restrained with difficulty from following this example. These Minnesota Republicans have been endorsed by their constituents, and the St. Paul *Pioneer-Press*, the leading Republican paper of the State, declares that "there is now one State, reliably Republican, which can be

depended upon to work for the interest of the burdened consumer against the manufacturer who has grown great upon profits extorted by the power of Government."

The Oleomargarine Bill was another which constitutional theories and partisan traditions should have made a mere test of party strength in the two branches. Alike because it involves an interference between rival industries such as certainly offends a "strict construction" of the Constitution, and because it levies a new form of taxes when an abrogation of old forms is demanded, Democrats ought to have opposed it *en masse*, while a solid Republican vote in its favor would not have been surprising. Yet one of its most earnest opponents in the House was a Republican Congressman from Chicago, with whom stood a number of his party colleagues, while 70 out of 156 Democratic votes were cast in its favor. In the Senate, 5 of the 28 Democratic votes were cast in its favor, and it finally becomes a law by the signature of a Democratic President.

Upon the question of civil-service reform each party has split to such an extent that neither can claim to be committed, as an organization, in its favor. The Chairman of the Appropriations Committee in the House, a Democrat who has repeatedly been elected Speaker by his party, led in a movement to annul the Civil-Service Law, but he was ably opposed in debate by Democratic Representatives, and beaten by his own party when the matter came to a vote. On the other hand, while the Republicans in the Senate have posed as the especial champions of the reform, the votes of Republican Senators have been ready to confirm the nomination of even such notoriously unfit Democrats as Thomas, Senator Gorman's unsavory protégé, for Indian Inspector.

The financial issue has ceased to divide the two parties. In the House 49 out of 112 Republicans, and in the Senate 13 out of 36, voted for the surplus resolution in its original form, which violated all the traditions of the party as a sound-money organization.

Even the purely political issues of the "rebels" and the "poor negro" no longer divide Congressmen according to party lines. Three Republican Senators voted last spring to repeal that section of the Revised Statutes which debars ex-Confederates from holding commissions in the United States Army; and this proposition, which only a few years ago would have been loudly denounced as "disloyal" by every Republican organ, only failed of passage because a fourth Republican Senator cast his vote in the negative through a misapprehension. Not long after, Fitz John Porter, whom but a few years ago it was a matter of Republican faith to condemn as a "traitor," was vindicated by the help of eight Republican votes in the same body; and on Monday a Republican Senate, by a vote of 33 to 15, confirmed his nomination by a Democratic President to his old place in the army. At the same time the fact came out that the rejection of a competent negro for the office of Recorder of Deeds in the District of Columbia was due to Republican votes, only one Senator of that party joining thirteen Democrats in voting to confirm a colored man for a lucrative position.

It is needless to multiply illustrations. Those which we have cited cover the field, and show that on no question now before the country, whether growing out of ante-bellum traditions, the "issues of the war," or new relations, does the line of division between men correspond with the nomenclature of parties. In fact, it is hardly too much to say that there is nothing left of the old parties except their nomenclature. One man calls himself a Republican, another a Democrat; but nobody can tell from that fact whether he is for or against any particular line of policy in public affairs.

CHARMING UGLY PEOPLE.

SAINT-SIMON'S Memoirs is the most consoling book in the world for ugly people. Half the men and women we meet in his pages are without personal beauty, but by no means without charm; and one is almost deluded into the belief that the body is rather as a costume at a masquerade than a costume on the stage, and neither indicates nor influences the part one plays. Occasionally he carries his liberal courteousness of description to a somewhat comic extreme, as when he says of Mme. de Foix: "She was the prettiest hump-back ever seen; tall, in early years dancing most charmingly, and having so much grace that one could not wish that she were not humpback. She was very little at court, very much in the great world; . . . extremely amusing, without the least malice; and never more than fifteen years old, when she died childless at fifty-five, regretted by every one."

But other deformities than of figure abounded. The ugliness and suffering because the art of dentistry did not yet exist were widespread, and there was one poor woman whose toothlessness marred her fortunes. The King and Mme. de Maintenon, both of them, were always attracted by a pretty face and repelled by an ugly one—"ils se prenaient fort aux figures"—and they could not accept as a *dame d'atour* of Mme. la duchesse de Berri a certain Mme. de Cheverny, a person of much merit, but with "un visage dégoûtant." She was a niece of Colbert, and had decided cleverness and ability, and was agreeable in conversation. Moreover, she had been much liked at Vienna and at Copenhagen, where her husband was ambassador. But in Denmark she, and her husband also, had suffered from scurvy. "They had both left in that country almost all their teeth," says Saint-Simon, adding, "and perhaps they would have done better to have brought none back." This catastrophe, in connection with a bad complexion, was something the King could not accustom himself to, and he finally declared that he could not endure to have this face always about him and often at his table and in his society. "No one but the King would have felt so," says Saint-Simon; but none the less Mme. de Cheverny could not be *dame d'atour*. The King himself was sadly toothless in his last years, and one day, when dining, always surrounded by his courtiers, he complained to the Cardinal d'Estrées of the inconvenience of having no teeth. "Teeth! Sire," exclaimed the kindly, absent-minded, courteous old Cardinal. "Ah! but who has any?" The answer was all the more a jest to the bystanders because the Cardinal himself had very white and beautiful teeth, and his pleasant but very large mouth was so shaped as to show them fully. Even the King could not but laugh.

Most extraordinary must have been the appearance of Mme. de Nemours, the step-daughter of the famous Duchesse de Longueville, who had "a very odd face, and a way of dressing herself, like the servant of a nunnery, which was still odder; great eyes which saw nothing; a tic which kept one of her shoulders always jerking; white hair which was flying everywhere," *and* "the most stately air in the world"! "She was extremely rich and lived in great splendor and with much dignity. . . . She was haughty, too, to the last point, and had infinite cleverness, with an eloquent and animated tongue to which she permitted all things."

Carelessness concerning the toilette distinguished these real aristocrats—the beautiful as well as the plain. "The most beautiful woman in France," Mme. d'Armagnac—who, by the way, was so in spite of "a wretched figure, short and dumpy"—most beautiful to the last day of her life (when she was sixty-eight years old), and one of the greatest of the great—was always "without rouge or ribbands or laces, without gold or silver, with no sort of ornament, always dressed in black or gray, with her skirt caught up as if she were some sort of nurse, with a round mob-cap, her hair dressed low without powder or curls, a collar of black silk, and a short and flat coif—always the same, whether at home or with the King." This was a person who passed her life holding the greatest "state" of all the court, and who never in her life condescended to give her hand or an armchair in her own house to any woman of whatsoever rank.

In complete contrast to such an existence was that of Mme. de Luxembourg, the wife of the famous marshal-duke. She, one could almost believe, must have been the ugliest woman in France, and she and her husband were at first glance a terribly well-assorted pair in appearance, for he had a moderate hump in front, and a very large and very pointed hump behind, with all the other usual accompanying deformities of humpbacks. But he was like Riquet à la Houppe. His appearance, "d'abord fort rébutante," one became accustomed to, Saint-Simon says, to a degree "which can be understood by no one who has not seen him"; and there was about him an air "of fire and nobleness and natural graces which shone in his simplest actions." But his poor wife had nothing of fire and nobleness and natural graces; she was nothing but ugly and rich. "She was frightfully ugly both in figure and face; she had the air and look and demeanor of those great common fish-women who sit [at the market] in a barrel-chair (*tonneau*) with their warming-pans under them; but she was very rich." So M. de Bouteville (as he was then) married her as a stepping-stone to a dukedom. He soon sent her off to his castle of Ligny, where "her sad and darkened life" was passed almost entirely in melancholy solitude. She rarely came to Paris, and lived and died greatly ill-treated, greatly neglected.

The famous Duc de Lauzun was "un petit homme blondasse," and without "agrément dans le visage"; in fact he was insignificant in appearance, so that Marshal Berwick says of him: "Sa figure étoit fort mince, et l'on ne peut comprendre comme il a pu être un homme à bonne fortune." None the less La Bruyère, describing him (under the name of Straton in his chapter "De la Cour"), could say without exaggeration, "His life is a romance: no, it lacks probability (*il lui manque le vraisemblable*). He has not had adventures, he has had brilliant dreams and bad dreams. What am I saying? No one dreams as he has lived." Saint-Simon, his brother-in-law (they married sisters), referring to this characterization, says that to those who knew him most closely even in his old age "ce mot semble avoir encore plus de justesse." La Bruyère, it may be believed, revealed the secret, or at least one corner of the secret, of Lauzun's manifold multiplied, incredible, bewildering successes in

these cutting words: "Il a dit de soi, 'J'ai de l'esprit, j'ai du courage,' et tous ont dit après lui, 'Il a de l'esprit, il a du courage.'" But Berwick shows another corner in saying: "Il étoit noble dans ses manières."

The descendants of the Great Condé—himself small in stature — were scarcely more than dwarfs. His grandson, M. le Duc, was a gnome rather than a man, and in character as well as appearance; but he was a person of great importance and weight in the world. His three sisters were dubbed by the beautiful, cruel Mme. la Duchesse, "les poupées du sang"; yet one of them, the Duchesse du Maine, made herself one of the most conspicuous and remarkable personages of the day, and later won no little admiration from Voltaire, though to style her charming would be something of a misnomer. Another "petite poupée manquée" and very ugly, "was Mme. de Castries, a really learned and very brilliant woman, with the greatest grace and charm of mind and expression."

But we have left the most effective illustration of our thesis to the last. Even the Duchess of Burgundy, the enchanting young Dauphiness, was "unmistakably ugly," but, like the humpback of Mme de Foix, her "soupçon de goître" was not unbecoming! The whole long description of her person is worth quoting, from the extraordinary vividness of the impression it conveys of sweetness, grace, and vivacity, transforming the most deplorable imperfections into almost desirable foils, as it were, of the charms they accompanied; or into shadows only heightening the glow of winning attractiveness:

"Regularly ugly, flabby cheeks; a prominent forehead; a perfectly insignificant nose; thick, pouting lips; hair and eyebrows of chestnut brown and very well set; the most speaking and the most beautiful eyes in the world; few teeth and all decayed, which she did not hesitate to refer to and jest about; the most beautiful color and the most beautiful skin; a small but admirable neck; a long throat, with the least little goitre, which was not amiss (*qui ne lui seyoit point mal*); an elegant, gracious, majestic carriage of the head, and a glance imprinted with the same character; the most expressive smile; a long, round, delicate, flexible, perfectly modelled waist; the motion in walking of a goddess on clouds—she pleased utterly. The graces floated round her steps, and her manners, and her most common talk. She always charmed by her simple and natural air, not infrequently naïf, but flavored with cleverness, and by that ease which she possessed to such a degree as to communicate it to all who approached her. . . . Her youthful, lively, active gayety animated everything, and her nymph-like lightness carried her everywhere like an eddying breeze which fills many places at once, giving to them movement and life. She adorned every spectacle, was the soul of fêtes, pleasures, balls, and was ravishing there from the gracefulness and precision and perfection of her dancing."

This was the external delightfulness of this charming princess, whom Mme. de Caylus, no less than Saint-Simon, represents as in character and disposition no ordinary woman. But what we would particularly dwell on here and now is the comfort (and the lesson!) to be derived from such a picture, by young women who have flabby cheeks, ugly noses, thick lips, bad teeth—and a goitre!

THE ELECTIONS FROM AN IRISH STANDPOINT.

DUBLIN, July 24, 1886.

THE elections are over. Mr. Gladstone has been defeated. In Ireland the interest centred around four contests in Ulster, where the Liberal-Unionists have gained two seats from the Nationalists and the Nationalists have gained one. Mr. Healy lost South Derry to the Conservatives by 108 votes; Mr. O'Brien South Tyrone, by 99 votes. At a previous election they won as land-reformers, in spite of their nationality; they have now lost as Nationalists notwithstanding their services as land-reformers. Mr. Sexton captured West Belfast from the Conservatives by 105 votes. Justin McCarthy has again unsuccessfully contested Derry City; he reduced his adversary's majority from 29 to 3. In this latter contest the Nationalists have petitioned for a scrutiny, and lodged the necessary £1,000. If they succeed, they will again hold the majority in Ulster. There have been no such close contests anywhere else in Ireland. The Unionists and Conservatives felt hopeful of winning South County Dublin, and one division of the city, but were beaten by increased majorities as compared with last election; the relative majorities being 1,768 and 2,443. The Irish Loyal and Patriotic Union, which worked the elections in Ireland against the Nationalists and those in Great Britain against all Gladstone candidates, allowed most of the elections in the South and West to fall to the Nationalists uncontested. The Nationalists loudly protested against the uselessness and absurdity of many of the contests still forced upon them; but themselves fought Dublin University, where they were beaten by 1,870 to 56 votes. There have been several changes in the Nationalist ranks, but upon the whole, when Mr. Healy and Mr. O'Brien have been provided with seats, as, of course, they will be, the party will have been considerably strengthened. A bitter opponent has, however, been established in the person of Mr. T. W. Russell, who took South Tyrone from Mr. O'Brien. Born in Scotland, he has lived nearly all his life in Ireland, where he has devoted his talents as a speaker and organizer to the temperance cause, and where he became a prominent public character. Defeated as a Radical or Liberal at the previous elections in England, he has gone over to the I. L. P. U., and is likely to prove a thorn in the side of the Irish party and of many of his old English coadjutors, such as Sir Wilfrid Lawson.

There was some bad rioting in Belfast. It commenced with a savage attack on Catholic workmen in retaliation for real or supposed threats from a Catholic foreman of what he and his would do when they had home rule. These riots would not occur if neither party minded what the other said or implied by banners and processions—in other words, if human nature were perfect. But probably there is no civilized country where they could be avoided if a small dominant minority paraded from time to time their assertion of superiority and of right to ascendency over the majority of their fellow-countrymen, and their opposition to national sentiments. Why are these Orangemen often armed while their opponents are unarmed even in districts where arms acts are in force? Because hitherto the magistrates who have the licensing power under those acts are often also Orangemen. How is it that the Orange party fight with so much spirit? Because they know that "the forces of civilization" arrayed against disorder are in the main directed by their own side; that if summoned they will be tried before magistrates and judges who in the main sympathize with them, and by juries whereon Orangemen will be the majority. All danger of trouble from this party will disappear when the majority rules in Ireland.

Turning to Great Britain, the first thing that strikes us is the extent to which dissenting Scotland and Wales have supported Mr. Gladstone—in the face of the fear of Catholicism in Ireland which worked so powerfully on the Conservative side, and which it was natural to suppose would have worked more strongly with Dissenters than with Churchmen. It is difficult to understand the dismay with which the result of the elections is received by many of Mr. Gladstone's supporters. A majority on our side could not have been reasonably expected. Could any one have believed a year ago that Mr. Gladstone, Mr. Morley, and a score of other prominent Englishmen would come out as they have done on the question of home rule; or that 191 Englishmen and Scotchmen would be returned at a general election pledged to support the Irish Nationalists? The hopes of immediate settlement prevalent three months ago were as unreasonable as is the discouragement of to-day. Perhaps it is the same in other countries, but occasional sudden collapse of old systems and old wrongs in England is very striking. Up till the last moment the sustainers of rotten boroughs, Slavery, Corn-laws, Contagious Diseases Acts, Coercion, appeared to be skating on firm ice. Suddenly it gave way. They had not allowed for the forces quietly working beneath them. In the present instance the ice has, to a certain extent, given way; but the British public is, upon the whole, as yet too uninstructed to make the catastrophe so immediate or complete as in cases where the agitation had been carried on in and mainly affected Great Britain itself.

Mr. Gladstone and his friends are convinced (and even regarding their convincement some of us would feel more confidence in steady progress if the change had not come quite so suddenly—if there was not so much of the enthusiasm of neophytes about some of the converts)—Mr. Gladstone and his friends are honestly convinced; but the masses of the British people are profoundly ignorant on the whole question. Their inevitable ignorance is the measure of their incapacity to understand Ireland. The writer attended several meetings large and small in London during the late canvass, and was profoundly impressed by the sympathy shown towards Ireland, by the desire of the audiences to do her justice, by the attention with which Irish speakers were heard. It was also evident how easily on many important points those same audiences might have been swayed by speakers in an opposite direction. The English have not the same keen interest in politics as we have. Their minds are differently constituted. English audiences always strike one as guileless compared to our audiences—as if they were more used to being told the truth, as if they had not to discount speech on both sides as we in Ireland discount it. Our "frank open-heartedness" is really a myth. Whether in public or in private, we are deeper and more reserved than our Saxon neighbors. We may appear open enough on the surface, but you must long and well know an Irishman before you know him as you may often know an Englishman on short acquaintance. Hitherto the home-rule agitation has not been carried on upon the principle of instructing Englishmen. It is new for leading Irishmen to address English audiences with arguments based upon an essentially English view of the situation. So far as appears, until this election the National League never spent £50 on the dissemination of campaign literature in Great Britain. Within the past few weeks the League has largely distributed such literature across the Channel, but too much from an Irish point of view; too much in the spirit of ordinary Nationalist newspaper leading articles. The Irish Loyal and Patriotic Union has done better. Its literature has been prepared with greater care, has been better adapted to the English mind, has been more carefully and faithfully disseminated, and has had weighty effect in leading the issue of the elections.

It is noticeable the extent to which eminent literary and scientific men have taken sides against Mr. Gladstone—many of them Radicals in British and European politics, such as Mr. Swinburne. There have been also some strange cleavages. It is remarked by a competent observer that agitators for women's suffrage have

in the main opposed Mr. Gladstone, while the workers with Mrs. Josephine Butler support him. The reduction in the numbers polled, more pronounced in England than in Ireland, is of course due to the removals and other changes since the preparation of the election lists last autumn. M. de Laveleye has done good service in pointing out, in the *Pall Mall Gazette*, the anomalies and absurdities arising from our custom of spreading the elections over some weeks. This system, however, exercises a more distracting influence in England than it does here, where direct appeals to "vote for the winning side" would have little effect. Polite boycotting has been successful in preventing the Protestant home-rulers from having as much influence in the elections as was expected.

The rise in the value of many Irish stocks, which has taken place within the past few days, is triumphantly indicated by the opponents of home rule. The principal cause of this rise is the unexpectedly high dividends announced by some of the railway lines. The shelving of home rule has undoubtedly had something to do with it, but the Government was known to be beaten some days before the rise set in. The general current rate of interest has of late tended steadily to decrease, and this has helped the appreciation.

Although the ultimate attainment of some form of home rule is more than ever assured, the immediate future is more than ever uncertain. We can note the forces for and against, but we cannot estimate their relative strength and persistency. The real difficulty regarding a settlement is the bitter opposition of the wealthy and, in the main, of the "educated" classes in Ireland. The movement for home rule has distinctly entered on a new phase. It is not too much to say that the heart of the Irish people has been deeply touched and drawn towards England by the attitude of Mr. Gladstone and his party, and by the masses of her people. More has been effected for real union in the time than could at all have been expected. It is only to be regretted that the progress of this feeling has been checked by the results of the election. Reversion to a genuinely coercive policy is almost an impossibility. For one thing, the permanent civil service in Ireland, upon which the Government must rely for the administration of the law, has been profoundly influenced by the declarations of Mr. Gladstone, Mr. Morley, Earl Spencer, and by the attitude of the Earl and Countess of Aberdeen. It can never again be counted upon to the same extent as before as a passive instrument against nationality and Nationalist leaders. It is seven years since the present leaders took up their position, which time and altered circumstances have somewhat modified. They cannot revert to the methods by which they gained the hearts of the Irish people and obtained their first success. They have now at their command other and higher forces. All depends upon whether these are wielded as effectually as the former ruder weapons. If so, near victory is certain. If not, we may be entering a slack period; we may have to wait for the fresh impetus which will inevitably be supplied by a younger generation. Perusing, in the *Nation* of the 8th inst., the article entitled "Twenty-one Years," the present writer felt painfully what a long and weary period awaits Ireland before similar words will apply to her, pointing the moral of the healing and uniting effects upon a nation of the removal of a great anomaly, such as slavery was with you, and such as the subjection of the majority is with us.

One bright, one very bright ray we have had with us the past few months, and that a change of Ministry will remove—namely, the viceroyalty of the Earl and Countess of Aberdeen. Their deep and heartfelt sympathy with all classes, their genuine desire for unity upon a common platform of love of humanity and of country, their untiring efforts to cheer the poor and suffering, have never been exceeded and will never be forgotten among us. And a strong new bond has been established between the countries in the many friends of Ireland and her cause so unexpectedly raised up of late among the English, headed by one who, we trust, may yet see the fulfilment of his aspirations for Ireland and the entire United Kingdom. D. B.

THE DUC DE BROGLIE'S RECOLLECTIONS.—IV.

PARIS, July 14, 1886.

FROM 1828 to 1830 the liberal tide was constantly rising in France. The fatal crisis was first avoided by the constitution of the administration of M. de Martignac. He had become Prime Minister almost by accident, but he showed, with much eloquence, great prudence and firmness. The Duc de Broglie, with his usual candor, laments much over the fact that he helped to separate from this Ministry the *doctrinaires*, and thus caused, perhaps, the fall of a Cabinet, "our last anchor," and perhaps the Revolution of July.

France was at this moment sending an expedition to the Morea; volunteers of all ages, of all ranks, were enlisting, and France appeared as a liberator in Greece. But general attention was soon turned exclusively to home affairs. The King was preparing a real *coup d'état*. On the 27th of July, 1829, the day before the end of the session, he had summoned M. de Polignac to Saint-Cloud. Eight days afterwards, on the 8th of August, appeared in the *Moniteur* an *ordonnance* appointing Polignac Minister of Foreign Affairs, with La Bourdonnais, Bourmont, and other ultras, notoriously hostile to the *Charte* and partisans of an exclusive prerogative in the King. The Duc de Broglie learned the news at Cauterets, a watering-place in the Pyrenees. Chateaubriand was there also; Lafayette was in Auvergne, his native country. The latter made, at a great banquet, the first protest against the Polignac Cabinet. He had returned from the United States, where he had made a triumphal march, which he renewed in the French provinces of Dauphiné, Burgundy, Lyonnais. He was everywhere received by the municipal authorities; he went from banquet to banquet, amid illuminations and under triumphal arches.

Royer-Collard would not believe that the new Cabinet would dare to make a *coup d'état*, for the Cabinet had no majority in the Chambers; the opposition all over the country was formidable. The new Ministers were royalist demagogues, who expected that the King could always appeal to the masses of the people; their political ideal was the absence of any organism between the sovereign and the multitude. The struggle began when the Chamber met; the Committee on the Address inserted this phrase in the answer to the royal speech:

"The intervention of the country in the deliberation of the public interests is consecrated by the *Charte*. The *Charte* makes the permanent harmony of the political views of your Government with the wishes of the people the indispensable condition of the regular march of public affairs. Our devotion to you compels us to say that this harmony does not exist."

This was surely strong language. The phrase was the work of Royer-Collard himself, the old and stanch royalist, the great jurist, the proud man who answered in 1814 to the offer of a title, "Noble vous-même." The address was adopted by 221 votes against 181, and read to the King on the 18th of March. The King answered thus:

"I have heard the address which you bring to me in the name of the Chamber of Deputies. I had a right to count on the help of both Chambers to accomplish all the good I meditate; my heart suffers at the declaration of the Deputies of the departments who tell me that this concert does not exist. I have announced my resolutions in the opening speech of the session: they are immovable. The interests of my people forbid me to depart from them. My Ministers will make my intentions known to you."

A few days afterward, the Duke of Orleans gave a great ball to the King and Queen of Naples at the Palais Royal. It was a truly Neapolitan fête, and there were some fireworks at the end. M. de Salvandy approached the Duke of Orleans and said to him: "We are at the foot of Vesuvius and we dance before the eruption." The eruption came soon; on the 16th of May the Chamber was dissolved. The electoral campaign began at once with unusual fierceness. The result was crushing for the Government: out of 428 deputies the Opposition returned 270, and the Government only 145.

The Ministers were not discouraged, and prepared themselves for a *coup d'état*. Baron de Vitrolles tells, in his curious memoirs, how he stopped on the 25th of July at the château of Saint-Cloud, the residence of Charles X. He had thanked the King for his recent promotion to the peerage a few days before, and found him very silent and unwilling to discuss the situation. He found this time M. de Polignac and his colleagues at Saint-Cloud. They all looked preoccupied, as did the King. On his way to the chapel M. de Vitrolles remarked to one of the Ministers: "I don't ask you for your secret, but I will tell you that the fate of the monarchy itself is in question." He told another that the situation had completely changed; that an act of force would find resistance prepared. Charles X. came back from the chapel. His face was more serious than ever; his phrases more short, his complexion redder. He entered the Council room with his Ministers. The famous *ordonnances* were read, textually, to the King, as well as the Report which was their justification. The King hesitated a moment before giving his signature, and, finally, shaking his white head, he said: "The more I think, the more I am convinced that it is impossible to do otherwise." "Gentlemen," said he to his Ministers, after they had signed, "the sacrifice is accomplished; you can count on me as I can count on you. Between us it is now a matter of life and death.

Vitrolles on that same day went in the evening to Saint-Leu, where a dinner was given by the Duke of Bourbon in honor of the Duke and Duchess of Orleans. The Duke of Orleans looked very anxious, and, seeing M. de Vitrolles, asked him: "You were at Saint-Cloud this morning? What do you think?" Vitrolles painted the scene he had witnessed and prophesied great changes. "But what can they do?" said the Duke. "They cannot dispense with the *Charte* or the Chambers." While the old Prince de Condé was entertaining his guests with private theatricals, one of the Ministers carried the *ordonnances* to the editor of the *Moniteur*, the official paper, who read them, and showed great agitation. "I am," said he, "forty-seven years old. I have seen all the great days of the Revolution, and I confess that I am full of terror."

On the 26th of July, in the morning, M. Villemain entered the cabinet of the Duc de Broglie and found him meditating as usual—"nescio quid meditans nugarum, totus in illis." The *Moniteur* was on his table and he had not opened it. "Well!" said Villemain, "have you seen this morning's crimes?" The Duke opened the paper and saw the "crimes." They both went out and visited their friends. The first act of resistance came from the press; the first *ordonnance* was the death-warrant of all the papers. A protest was written by Thiers, who was then a writer for the *National*, and signed by forty-seven names,

which have all since become more or less famous. A double decision was rendered immediately, by the civil tribunal and by the commercial tribunal, ordering the printers of two papers to print the *ordonnances*, notwithstanding the prohibition of the conductors. The Duc de Broglie had gone to the House of Peers, to the office of the *Globe*, of the *Revue Française*. He offered a hiding-place in his house to M. de Rémusat, one of the journalists who had signed the protest.

Paris was already in a state of fermentation. No arms were yet visible; but the next day, "going down the quay," says the Duke, "towards twelve, I heard for the first time, but at a great distance, the fusillade. The noise became more and more distinct. Marmont, Duke of Ragusa, had not many troops, only three or four thousand men; he was expecting reinforcements. Barricades were made everywhere. The people were looking for arms." Then began the standing strategy of Parisian civil wars, which consists in bringing from the Tuileries to the Hôtel de Ville three parallel columns—one on the boulevards, the second in the Rue St. Honoré, the third along the quays. Meanwhile the deputies of the Opposition met at various places. Guizot, Laffitte, the banker, Lafayette, who had arrived from the provinces, proposed that a deputation should ask the Duke of Ragusa for an armistice. Every hour, every minute, the revolt became more energetic, and the number of the rebels increased. Marmont's little columns fought in vain, keeping their ground, but they were like ships on a tempestuous ocean. By the evening of the 28th of July the insurrection was absolute mistress of Paris, with the exception of the Louvre, the Tuileries, the Bank, and the Champs Élyseés. The next day two of the regiments stationed in the Place Vendôme had joined the insurrection; the Louvre was invaded. At twelve the Duke of Ragusa was in full retreat. Paris was lost to Charles X. and belonged to the insurrection. A revolutionary Government took possession of the Hôtel de Ville. The Bourbons were lost, but who would give a new government to France? Fortunately for the country, the movement had responsible leaders. The Hôtel de Ville tried to establish a sort of Commune, but the republicans were not many in 1830; they had no great men to direct their efforts, no organization, no communication with the provinces. They were an unorganized force, and their situation obliged them to lean on the populace, on the multitude which is found in all the great capitals, always ready for agitation and crime.

The situation, however, was very critical: such men as Laffitte, Lafayette, Casimir Périer had to ask themselves questions difficult to answer and to take responsibilities difficult to bear. The Duc de Broglie, in the negotiations which prepared a new government, took a much more active part than we were aware of. He understood at once that in order to have what might be called a minimum of revolution it was necessary to associate as many peers as possible in the work to be done. He multiplied himself, he tried to form a new Cabinet. While he was at work a young man, already known as a journalist, M. Thiers, had boldly gone to the Duke of Orleans, had shown him the necessity of saving monarchical institutions by a change of dynasty. Louis Philippe had not taken any part in the late events. He was too wise not to understand the folly of the *ordonnances* and their danger. He has been often blamed for not having accepted the mere title of regent, and governed in the interest of the child who became the Comte de Chambord. He remembered the dreadful accusations brought against the Regent of Orleans. If the young heir to the Crown had died, there would have been hundreds and thousands of Lagrange-Chancels to write new "Philippiques." He did not hesitate long: the following proclamation was placarded on the door of M. Laffitte, at the Bourse, and in all the public places:

"Charles X. can never more reënter Paris: the blood of the people has been shed.

"The republic would expose us to horrible divisions; it would separate us from Europe.

"The Duke of Orleans is a prince devoted to the cause of the revolution.

"The Duke of Orleans has never fought against France.

"The Duke of Orleans was at Jemmapes.

"The Duke of Orleans has borne the national colors; the Duke of Orleans alone can still bear them.

"The Duke of Orleans has pronounced himself; he accepts the *Charte* as we have always understood it.

"He will receive his crown from the French people."

What followed is well known: how the Duke of Orleans was first appointed Lieutenant-General, how he went between the barricades, at the risk of his life, on horseback, surrounded by a people excited by three days' fighting; and how, by his mere presence, he dissolved the Communist and anarchical organization which was there establishing itself and trying already to terrorize France; how Charles the Tenth, with his guards, retired to Rambouillet, and afterwards left Rambouillet and France; how the new King, the Citizen King, as he was then called, took the oath to the *Charte* before the Peers and the Deputies. All this belongs to history; but the Duc de Broglie has found the means of making an old story appear new. His 'Souvenirs' of the Revolution of 1830 are among the most accurate, the most extraordinary and exciting, historical documents of our time.

Correspondence.

TRAFFIC IN VOTES.

To the Editor of The Nation:

Sir: In one of Macaulay's essays, speaking of a biographer, he says there seems to have been a compact by which the family should furnish papers and the author should furnish praise. You and I might be suspected of a similar arrangement as to fact and theory. I did not and do not know how the facts stand in regard to your editorial with the above heading, but it is what I have long looked for, and believe the evil is only beginning. There are two good and sufficient reasons why it should be so. In the first place, a vote has no meaning and no value, and if it can be sold for anything, it is turning nothing into something—a temptation which the Yankee, not to say the human, mind can never resist. A community is never in greater danger than when its most solemn procedure is a sham and a humbug. A Governor of Massachusetts is to be elected this fall. The candidates of the two parties are men of very little personal and absolutely no political significance. There will be two conventions of 1,000 delegates each, who will come together at considerable expense and trouble, and are supposed to make nominations. In fact, they will merely register the decree of a secret committee, and might just as well have stayed at home. The people are then asked to vote for Mr. 1 or Mr. 2 as the nominee of their respective conventions. They know nothing of either personally, they know that neither represents any policy, or has any share in administration; the best to be hoped from either being that he will be a figure-head, and not share in or endorse stealing. It is just the same with elections to Congress and the State legislatures. You cannot permanently fool the people in that way. The first thing they will do is to stay away from the polls, and the second is to sell their votes, like any other useless rubbish, to the highest bidder.

The second reason flows directly from the first. Inasmuch as no person or party represents anything; inasmuch as no real honor and very little advantage is to be gained from office, the quality of the candidates declines though their number increases, and how to settle their conflicting claims is a matter of no small difficulty. Few people have any idea of the elaborateness of the existing arrangements for assigning nominations or, in other words, offices. Hitherto the basis has been "spoils" or the dividing of offices among the managers. Civil-service reform, so far as it has gone, has spoiled this little game; but whether permanently remains to be seen. If so, it will need to be replaced by something else. Candidates very much prefer, however, spending Government money to spending their own, a proposition curiously illustrated by the flood of private pension bills which have passed Congress this year, and which are simply an expedient for replacing the use of the offices of which the politicians think themselves so unjustly and absurdly deprived. Fortunately they have encountered the Presidential veto, but if all such expedients fail, we shall have the purchase of votes on a gigantic scale by a far worse class of men, with the intention of fully repaying themselves with a profit for their outlay from the public purse, the whole involving the decay of our institutions at a pretty rapid pace.

How is so terrible an evil to be averted? I should say by an exact reverse of "a dearth of political issues and a decadence of party spirit." I would make the people feel that the character of public men and events depends directly upon their votes, and makes the consequences as immediate and visible as possible. The Governor of a State should govern. He should reach every branch of administration through his own chosen agents for whom he is responsible, instead of the work being done by anonymous commissions or separately elected officials, over neither of whom has he any control, and for whom neither he nor anybody else is responsible. The legislatures, instead of meddling with executive work by their secret committees, should act as critics in bringing the plans and conduct of the executive constantly home to the people. The latter would then soon begin to take a pride in their votes, and to regard the sale of them as a shameful thing. And this would be backed up by penalties. The wholesale purchase of votes is not a thing to be done in secret. There is no great difficulty in discovery and conviction. But then a mere law is not sufficient for this, as our people are in many other particulars learning, to their disappointment and loss. It requires strong administration—a thing of which the people of this country, in public affairs at least, are fast losing all conception. In other words, the remedy is in the reform of the conditions of executive power. It is perfectly useless to try at present to make people see this in State affairs, as anybody can convince himself by a little experiment. But in the national Government only one link is wanting, and it is there the beginning must be made.

It is for this reason that I hold with such tenacity to the idea of admitting the Cabinet officers to Congress; not as a mere expedient for doing business, but as a great principle, involving more for the welfare of this country than perhaps any other single one. If it succeeds, its beneficent influence will soon be sought for by the States and cities. G. B.

Boston, Aug. 2, 1886.

COMPARATIVE POLITICS.

To the Editor of The Nation:

Sir: In the extremely interesting letter signed "G. B." (*Nation*, No. 1100), the writer contrasts

the working, in France and England respectively, of a responsible Ministry with seats in the Chamber. He says in France the system is clearly unworkable "because the Ministers are too much responsible to the Chamber and too little to the people."

May I suggest that the reason of this is, the non-existence in France of an element essential to the success of the system? The French have no educated and patriotic *provincial* press. In England, on the other hand, there is a provincial press, politically educated and wisely patriotic. It is a bridge which, arching over the heads of the Parliamentary majority, connects the Cabinet and the people. HERBERT H. MOTT.

WAYLAND, MASS., Aug. 2, 1886.

A SEATTLE PROTECTIONIST.

TO THE EDITOR OF THE NATION:

SIR: The frank speech uttered last night by a Seattle protectionist seems to me worth recording. He was waiting on the wharf for a steamer, and fell to discussing the coal of the region. "It's good coal," he said. "It ain't exactly hard, and it ain't exactly soft, and it ain't just the thing for what you'd use hard coal or soft coal for; but it's good coal. The mines ain't working now. Those foreign fellows can undersell us, and it's a —— shame that the Government don't raise the duties." W.

TACOMA, WASH. TER., July 22, 1886.

STRIKING FOR LONGER HOURS.

TO THE EDITOR OF THE NATION:

SIR: An instance of the tyranny of labor organizations has come to my notice which seems to me worthy of public attention. Tailors and cutters in Philadelphia have been accustomed to work ten hours a day for six days a week—in all, sixty hours a week—until last spring. Then a strike was instituted by the Knights of Labor to obtain a reduction of two hours a day.

For some twelve years the employees of one firm, Snyder, Harris, Bassett & Co., had been required to work but fifty-two hours a week. These hours had been voluntarily fixed by the firm for reasons of their own. The relations of this firm and their men had been so friendly that none of the men had joined labor organizations. They did not complain of their hours, did not wish to join the strikers, and for several days did not. But finally, fearing the persecution of the Knights, they became Knights and joined in the strike. They finally came back to work on the terms agreed upon by committees of manufacturers and employees, but, to their chagrin, found their weekly hours increased by their strike from fifty-two to fifty-four hours.

A. W. HARRIS.

WESLEYAN UNIVERSITY, MIDDLETOWN, CONN., July 29, 1886.

THE ECONOMY OF FEES AND TIPS.

TO THE EDITOR OF THE NATION:

SIR: There was lately afforded to the readers of the *Evening Post* the great gratification of a brief treatise on the true inwardness of giving fees. It was a great gratification because it came from one who is himself in the way of fees, or with an eye to fees—a waiter, in fact, by profession. It was soon made to appear by this philosopher of fees and tips that the general objector to them had no legs to stand on, and was a good-for-nothing creature after all. It was quite right, he showed, that when a waiter had taken especial pains with his table, had even jeopardized his income by purchasing flowers with which to adorn (or perhaps to screen) the immaculate linen, there should be given to him a moderate compensation for his pains. Unfortunately this little apology from the interested party is a most barefaced kind of special pleading and, "not to put too fine a point on it," as Mr. Snagsby remarks, quite absurd. The question is generally—at least in this country—Has a waiter or other servant any just claim on the customer who pays the regular price of the food, service, or whatever it may be? There is an economical question involved in fees and tips that it would be well to consider.

The fee or tip is, like several other things of domestic life, a survival of ancient usage. It is easily shown that the practice dates from a time when all trades and arts were of a servile origin and station, and ministered to the more respectable offices of militant life. The people that took part in them were mostly in the condition of slaves or retainers, and if there was doled out to them a pittance occasionally besides their regular keep in the household or castle, they must be satisfied. One by one the various trades, arts, and professions passed from the servile state of industry to the state of patronage until finally enfranchised, as they are in an industrial era. Status has mostly given way to contract. But whereas the physician and the artist and the tradesman generally have been emancipated from the fee-giving condition, those whose business is domestic or public service are only half emancipated. They receive a half wage and expect to pick up the rest; consequently their income is precarious, and they are constantly engaged in trying to extort, overawe, shame their employers or their employers' customers into satisfying their claims. Of course, extra service, as in an accident or sickness, demands extra compensation; what we are considering is the service that is supposed to be included in the set price or charges. Those who give fees for regular service help keep the servant in his servile condition and continue his precarious income. The requisite income or wages should come from the employer, and would be a constant and assured amount that could be depended on. It would cost the customer no more to pay the additional fee in the bill as regular charges, and then the servant or waiter would have a determinate sum on which to live, and would not need to degrade himself by all manner of shifts and insulting devices to screw out a fee.

There are those who are pleased at this cringing servility, this prostration before a quarter. It gratifies them to be able for a brief season to patronize a fellow-creature, to play the lord and the grandee. They would not care a stiver whether the practice tended to keep the servant in a state of partial servitude or not. They are pleased by the servitude, if themselves are the object of it. But hardly a more degrading spectacle can be seen than such a show of attention, such a meretricious promptness and facility, such fawning, and all for a coin that once pocketed wipes out the whole score. Then there are those who will always give fees and tips because by this means they can get more than they pay for by collusion with the object of the fee. The attendant at the play will find a good seat for a fee that, added to the admission, will not equal the box-office charges, or the waiter will, on a generous fee, furnish dishes that are exceptional. Then, lastly, there are those too timid to resist the insolence of the servants, and yield to them for the sake of peace. All these conspire to keep the servant in a condition of servitude, and postpone the time when domestic and public service will be on the same level of business honor as is the case with the trades generally. Every man has a right to self-respect, and those who would advocate paying a charge that would allow the servant his rightful due, refusing anything more, are those who help that servant to gain that self-respect. J. T.

NEW YORK,

THE INVINCIBLES AND HOME RULE.

TO THE EDITOR OF THE NATION:

SIR: Mr. W. J. Linton, in your number of the 8th inst., refers to the acceptance by the Parnell Parliamentarians of Mr. Gladstone's measure, and continues:

"May it be pertinent to ask whether the American Irish (or Irish-Americans, whichever is the correct term) and the Fenians and the 'Invincibles' would in good faith accept the same? If not, how are they to be dealt with? Will some Irish friend make answer?"

The acceptance or non-acceptance of Mr. Gladstone's or any other scheme of settlement by the "Invincibles," or by any party desiring entire separation between Great Britain and Ireland, is of no account. The question we have to ask ourselves is, whether the present system or a reasonable settlement, acceptable to constitutional politicians, would tend most to a real union between the islands. From this point of view the Invincibles will scarcely be so foolish as to help on any modification of the present "Union."

Yours very truly, ALFRED WEBB.

DUBLIN, July 23, 1886.

NOS MUTAMUR.

TO THE EDITOR OF THE NATION:

SIR: The earth revolves, and human opinions revolve in a precisely similar manner—never returning to exactly the same place, but now nearer, now further from the Light which rules them: the epochs of optimism and pessimism are the alternating summer and winter of the ages. These moral seasons, that endure for more than a generation, induce large diversities in human intelligence; and as virtue is of one quality at the tropics and of quite another at the poles, so does the mind of 1800 judge quite differently of things from that of 1700 or of 1900. The sage asks with more interest what posterity will think than what the world has thought, far less answerable though the question be; and meantime amuses himself with observing how widely wise men may differ. The sage who now addresses you has within the hour been edified in this manner by comparing the views recently expressed by Mr. Max Müller on the subject of Goethe's patriotism, with those to which De Quincey gave utterance, writing on the same topic thirty years ago and more. The generation that has just passed off the stage and that which is upon it are fairly enough represented on this point by these two views. Which of them will seem most reasonable to the advancing generation?

It is in his sketch of Coleridge that De Quincey speaks of Goethe.

"It is a singular anecdote," he says, "it is a singular anecdote [*sic*] to report of Coleridge . . . that in any eminent sense he was not a patriot. His understanding in this, as in many instances, was too active, too restless, for any abiding feelings to lay hold of him. . . . In this instance he had the same defect, derived in part from the same cause, as a contemporary more celebrated than Coleridge, but far his inferior in power and compass of intellect. I speak of Goethe: he also was defective, and defective under far stronger provocation and excitement, in patriotic feeling. He cared little for Weimar, and less for Germany. And he was, thus far, much below Coleridge, that the passion which he could not feel, Coleridge yet obliged himself practically to obey in all things which concerned the world; whereas Goethe disowned this passion equally in his acts, his words, and his writings."

Mr. Max Müller, in inaugurating the English Goethe Society the other day, confined his remarks to one only of the "ideals" of Goethe, "one which he cherished with intense devotion. . . . I mean his *cosmopolitan sympathies*." Behold the stumbling-block of offence become the corner-stone of the temple—the "defect" metamorphosed into "the gigantic stature of Goethe." Mr. Max Müller admits that for these "cosmopolitan sympathies" and "his want of national

sentiment" "his own countrymen have often rather blamed than praised him, . . . most unjustly, I think," he adds—

"for when the time of trial came, he proved himself as good a patriot as many who tried to be more eloquent than Goethe in their patriotic songs and sermons. Goethe . . . was thoroughly true. He was too great to dissemble. He could not pretend to be a patriot in the sense in which Arndt, Jahn, and Schill were patriots. 'I should have been miserable,' he says, 'if I had made up my mind ever to dissemble or lie. But as I was strong enough to show myself exactly as I was and as I felt, I was considered proud.' O that we had more of that pride, and less of the miserable pretence of unreal sentiment. National sentiment is right and good, but we must not forget that national sentiment is a limited and limiting sentiment, particularly to a mind of such universal grasp as Goethe."

Neither Mr. Max Müller nor Mr. De Quincey would be called the wisest of men, but they are very instructive to A Sage.

Notes.

Mr. Charles Francis Adams, jr., has consented to write the life of the late Richard H. Dana, jr., and desires to obtain any letters written by Mr. Dana that are not strictly private and might be of use for the biography. If sent to Mr. R. H. Dana, No. 30 Court Street, Boston, they will be copied and returned.

Edward L. Osgood, No. 60 Congress Street, Boston, is about to deliver to subscribers the 'Memorial History of Hartford County, Conn.,' of which Dr. J. Hammond Trumbull has had the editorial direction. It is a sumptuous work, in two large volumes, freely illustrated.

Harper & Brothers will shortly publish 'The Children of Old Park's Tavern,' a tale of the South Shore of Massachusetts fifty years ago, by Mrs. Frances A. Humphrey; and 'Love and Luck,' by R. B. Roosevelt.

'Thoughts,' by Joseph Roux, a French parish priest, is in the press of T. Y. Crowell & Co.

'Hannibal of New York' is the title of Mr. Thomas Wharton's new novel, which Henry Holt & Co. will shortly bring out.

A. M. Bridgman & Co, Boston, announce 'The Labor Movement: The Problem of To-day,' edited by George E. McNeill, a prominent Knight of Labor, with the aid of other Knights, from Mr. Powderly down. The work will be sold only by subscription.

The Essex Institute, Salem, Mass., is to erect a new building adjoining its present quarters, for its exclusive occupation. The sum appropriated is modest, and it is to be hoped that the friends of this useful institution will respond to its appeal for contributions by which the burden may be made easy. These may be sent to Mr. George D. Phippen, Treasurer Daland House Fund, Salem.

An American *Journal of Morphology*, devoted principally to embryological, anatomical, and histological subjects treated originally and at first hand, is to be published early in 1887 by Ginn & Co., Boston. The editor is Mr. C. O. Whitman, now of Milwaukee, Wis., formerly of the Agassiz Museum at Cambridge. Two numbers will be issued yearly, with plates executed in the best manner of lithography. The subscription price is $6.00.

Palgrave's 'Golden Treasury of Songs and Lyrics' (Macmillan) now takes its proper place among educational text-books by reason of the cheap price at which it can be furnished, neatly bound in cloth. The fifty cents spent upon this book will do more to cultivate the taste of scholars than ten times the amount invested in most of the current grammars, readers, and manuals of English literature. No public school should be without it.

A second, revised, edition of Mr. Louis Heilprin's 'Historical Reference Book' (D. Appleton & Co.) has just appeared, marking the well-earned success of this admirable work—a dictionary of dates, a dictionary of events (with a special gazetteer for the places mentioned), and a concise biographical dictionary, all in one, and all in the highest degree trustworthy. Mr. Heilprin's revision is as thorough as his original work. Any one can test it by running over the list of persons deceased since this manual first appeared. Corrections, too, have been made, as we can testify in one instance at least.

'Quaint and Curious Advertisements,' in Mr. Henry M. Brooks's "Olden Time Series" (Ticknor & Co.), is one of the best of the issues up to this date. Naturally, also, it is the most profusely and amusingly illustrated. A realm which the dictionary-makers only imperfectly invade is here glimpsed in long lists of obsolete names of cloths and stuffs, from kenting handkerchiefs to Aleabad mowsannas. Henry Knox, bookseller at Cornhill, Boston, and about to exchange letters for arms, fitly advertises Dodd's 'Reflections on Death' in 1774. Paul Revere advertises himself a dentist "who learnt the Method of fixing" false teeth from a Mr. John Baker. Dentistry descended through the Flagg family in Boston, and here is one of them ready to pay cash "for live teeth." Here, too, is Whipple, of a line of booksellers, and Hook, of music-sellers and organ-makers. Benjamin Russell, paper-hanger, is on the north side of "Bacon" Hill; while on the western slope the Boston Cent Society is called to hold its annual meeting at the house of the mother of Wendell Phillips. There was a Shaksperian (*sic*) Society in Boston in 1795, with freshly revised articles. That there is nothing new under the sun we are reminded by the cuts of the Draixena, the forerunner of the bicycle, and of a fountain-pen quite like the stylograph.

'The Shaksperian Referee,' by J. H. Siddons (Washington: W. H. Lowdermilk & Co.), is a dictionary of 4,200 words and phrases which may need explanation in Shakspere. The volume is small and handy, and would be of use to school libraries. Unfortunately it did not receive the author's final correction, on which account the publishers ask for consideration; but, so far as we observe, it is adequate to its purpose, though the long notes might be profitably abridged, as they contain much irrelevant matter and occasionally weak commentary quite outside the general object of the work.

The latest number of the *Bibliographical Contributions* of the Library of Harvard University consists of a classified index to the maps in the Royal Geographical Society's publications, prepared by Richard Bliss, of the Redwood Library, Newport, R. I.

We receive from Dietrich Reimer, Berlin, a fourth revised edition of Richard Kiepert's map of the Congo basin, the scale of which is 1:4,000,000. As its value in this country will be rather for the student than for the trader, we will add that it shows in appropriate colors the tracks of explorers, including those of the German expedition of 1884–86. The latter will also be found delineated (1:3,000,000) in the Proceedings of the Berlin Geographical Society (Vol. 13, No. 6). Herr Wolff, a member of the expedition, has discovered a cut-off for the Stanley Falls, viz., the easily navigable River Kassai and a northern tributary, which promise to be the highway to Nyangwe, Lake Tanganyika, and the east coast.

Dr. H. Kiepert has prepared a beautiful map of Asiatic Turkey, in order to show the condition of road-building in that ill-governed country. There are plenty of routes shown, but very few of these are thoroughly constructed, and it has often happened that Turkish attempts to build have ended in leaving the roads worse than before, and, in fact, absolutely impassable. The railroad system is extremely limited, in spite of the great scheme for connecting Constantinople with the Persian Gulf. There is an "Imperial Ottoman Railway" network, of no great magnitude, running out from Smyrna, and there is a line completed from Mersina to Tarsus, and about to be opened to Adana. Kiepert's map (which accompanies No. 123 of the Berlin Geographical Society's *Zeitschrift*) will be useful to scientific travellers in Asia Minor and Syria.

Science for July 30 prints another series of composite portraits, drawn from the students of Smith College. Prof. John T. Stoddard, who made them, accompanies the prints with some helpful remarks on the difficulties of this interesting process, and on the rules to be observed in making the negatives. The type portrait of forty-nine young ladies of the last senior class would be regarded in the flesh as a very attractive person; and very striking as well as attractive is the type of the ten who formed the division in physics. These portraits must be thought to speak well for the class of students who seek their education at Smith College.

Mr. Clarence Cook's art journal, the *Studio*, makes in the July number its first essay in process-engraving, giving several plates after American paintings and a well-conceived "elephant pitcher." Mr. Cook promises to persevere until he can rival the European facility in the use of this invaluable adjunct.

L'Art (Macmillan) closes its fortieth volume with No. 530, and with the first number in July begins vol. xli. An article, in depreciation of Hobbema, by M. Émile Michel, is divided between these issues. M. Eugène Müntz hazards a conjecture as to the original of a portrait study in sanguine by Leonardo da Vinci, and puts it to the test by confronting on opposite pages an engraving after Raphael and a photographic copy of the sketch in question. The result is not convincing, but the comparison doubtless does injustice to M. Müntz's grounds for identifying the two. A study in sanguine after Greuze, and a striking etched character-portrait of the elder Coquelin, are among the best of the full-page illustrations.

Mr. Hamerton's newest chapters on "Imagination in Landscape Painting," in the *Portfolio* for July (Macmillan), have a literary charm out of the common, even for this most agreeable of all writers upon art; and they serve also to advance the argument. The accompanying select illustrations are all weighty. A very pleasing etching represents a boy and girl of the olden time dancing the Pavane. And excellent in its way is Amand Durand's reproduction of Marc Antonio's engraving of Raphael's "Jupiter and Cupid," among the frescoes of the Farnesina.

There is little to remark, for American or English readers, at least, in *Le Livre* for July. M. Charles Glinel makes it very clear that the elder Dumas had an early and a lasting ambition to be admitted to the Academy, contrary to the belief of M. d'Haussonville, as shown in his reception address to Dumas *fils*.

M. Émile Blavet, under the pseudonym of "Parisis," has been writing in the *Figaro* vivacious little sketches, which he has published under their original title, 'La Vie Parisienne' (Paris: Ollendorff; Boston: Schoenhof). These, taken in small doses from day to day, lightly touching on current events, had all the charm of actuality; gathered together in a volume, they are like pressed flowers, which recall a pleasant memory to one who has seen them before when they had the fragrance of novelty.

M. Arsène Houssaye still continues to be prolific—not so much of new productions as of new books, which he makes by gathering together his former uncollected articles into volumes, for

which he always finds attractive titles. The last he has called 'Les Comédiens sans le savoir' (Paris: Librairie Illustrée; Boston: Schoenhof). It is made up of articles, some of them more than ten years old, others dated 1886. Whether M. Houssaye playfully writes of an Hôtel de Rambouillet in 1885, or whether he discusses woman's rights or gives his reminiscences of Félix Pyat, Jules Vallès, Victor Hugo, or Paul de Saint-Victor, he is always the same frivolous but charming writer, with just enough poetic feeling to add a show of grace to disagreeable details, and just enough worldliness to take off the bloom from everything he tries to speak of seriously.

M. Eugène Voizard devotes himself to the study of Montaigne with more fidelity than success. His last book invites attention from its size and apparently learned title, 'Étude sur la langue de Montaigne' (Paris: Léopold Cerf; Boston: Schoenhof). It is incomplete, incorrect, and misleading from beginning to end. The author has not even noted the corrections suggested to him by M. Delboulle in the *Revue Critique* in regard to blunders occurring in his 'Extraits de Montaigne,' blunders which are repeated and aggravated by the more ambitious and pretentious nature and form of the present work. It would evidently be unjust to apply to M. Voizard the epigraph which he complacently places on his title-page, though one is tempted to do so. It is taken from the Essays, Book I, ch. 48: "Me voicy devenu grammairien, moy qui n'apprins jamais langue que par routine, et qui ne sçait encore que c'est d'adjectif, conjonctif et d'ablatif."

Foreign phrases, when used mistakenly, should be nailed at once to the counter and not allowed to pass current for a moment. In a just-published volume, 'On Both Sides' (Philadelphia: J. B. Lippincott Co.), which is not without good sense and humor, we find the following: Mr. Heathcote "had contracted a moral squint which showed itself in some ugly little ways, . . . and this, Jenny, with the *esprit de l'escalier* of the sex, had at once divined and resented." The usually accepted meaning of "esprit de l'escalier" (or, more commonly, *esprit d'escalier*) is the wit, the inspiration, that comes to one *too late* (on the stairway in leaving a salon): it is the thing one *ought* to have said, the "happy thought" one should have had.

The Society for the Promotion of Hellenic Studies, 29 Bedford Street, Covent Garden, London, have arranged with the Autotype Company to reproduce in permanent form copies of twenty-five of Mr. W. J. Stillman's Athenian photographs. These will be sold to members at three shillings each, unmounted, and four and sixpence mounted; to the outside public at five shillings, and six and sixpence, respectively. Mr. Stillman himself can no longer supply them.

—Volume vii of Leslie Stephen's 'Dictionary of National Biography' (Macmillan) includes a number of illustrious names which are treated at length. Sir Thomas Browne, author of 'Religio Medici'; Mrs. Browning; Robert Bruce; James Bruce, the African explorer; Buckle; Bunyan; Burke; Bishop Burnet; and Robert Burns, are some of these. The Browns are very numerous in this volume, the last of the John Browns being the author of 'Rab,' and others of the name being Oliver Madox Brown, Rawdon Lubbock Brown, Robert Brown, the eminent botanist; H. K. Browne ("Phiz"), and one Robert Brown, painter, to whom is ascribed the presence of mind which, in the familiar story, saves his master from walking backwards off a scaffolding by flinging a brush of color at the apostle's head in the cupola of St. Paul's. Frank Buckland and his father (apparently the better scientist of the two) are also in the list, along with Agnes Bulmer (1775–1836), the author of probably the longest work in verse ever achieved by any woman—one mark of distinction at least, considering that she had Mrs. Browning for a contemporary. Mr. Stephen himself writes the sketches of Buckle and of Burns, the latter not deficient in praise or sympathy, and crammed with details. Under Burke is cited his use of the Yankee doggerel,

"Solid men of Boston make no long potations";

and mention is made of Boston editions of his works, 1806–1827 and 1839; but none of the very best and latest, that published by Little, Brown & Co. in 1868, improving on a corresponding English edition. Just as Buckle's masterly chess-playing is brought out in the account of him, so the notice of Burgoyne revives many phases of his talent which are seldom, if ever, thought of in this country, such as his comedy-writing. Other personages in the present volume who have had American connections are Sir Henry Bulwer, of the Bulwer-Clayton treaty; Sir George Brown, wounded at Bladensburg; the elder Brunel, builder of the Thames tunnel; John Baldwin Buckstone, the actor, who wrote a preface to an English edition of Dr. Bellows's 'Claims of the Drama'; and William Bullock, traveller, and author of a 'Sketch of a Journey through the Western States of North America' (1827).

—On the 7th of July a statue of Lamartine was "inaugurated" at Passy—"a tardy homage to the greatest poet of this century," according to M. Jules Lemaître; and three days after there is a discourse in the *Revue Bleue*, by M. Ernest Desjardins, on the two questions, "Why do we honor him to-day?" (*le plus grand poète de ce siècle*) and "Why have we so long forgotten him?" (*le plus grand poète de ce siècle*). M. Desjardins's discussion of this problem is not very profound, but the anecdotes with which he enlivens his pages are very amusing. The transports of enthusiasm which Lamartine excited from 1820 to 1850 or later, subdued his nature to that acceptance of it which is one with a naïf expectation of adoration from all comers. He once asked one of his friends to obtain for him a secretary. The friend sent him one, highly recommended, and a day or two after came to inquire concerning his protégé. "He pleased me," said Lamartine, "only—" "Only what, *cher maître?* Do you think him too young?" "No; his age is very good." "Too ugly?" "Oh, what do I care about his looks?" "Didn't he seem to you active?" "Oh, yes." "Intelligent?" "Yes, certainly, entirely irreproachable; only—" "Only?" "Only he didn't appear moved on seeing me." Lamartine could hardly help believing that he had really brought to the world some sort of good tidings, and that his poetry contained supernatural treasures. His niece used to declare wickedly that he had never been the least envious of Victor Hugo, or of Byron; that even he could not be of Homer. "There is only one person in the world of whom my uncle is a little jealous, and that is Jesus Christ." That was a disenchanted family view; there is something very pretty in the simplicity, on the other hand, of his mother's enchantment, when she said proudly of him as a youth, "Alphonse writes very well; if he would take pains, he could write verses like M. l'abbé Delille."

—It was Balzac, if we remember aright, who added to the divisions of society as they exist in France—*noblesse*, *bourgeois*, *peuple*—a fourth class, *artistes*. He might have added a fifth, *académiciens*, but that, having no expectation of becoming one himself, he preferred to ignore their importance. Another reason may have been that the Academy, outside the small body of professional men of letters, has so little hold upon the imagination. But in Germany the relative importance of classes is reversed. French "artistes," to accept their own opinion, are beings who have developed, from a bourgeois environment, into more or less resplendent butterflies, and are regarded by their neighbors with the hatred of envy or the contempt of ignorance, since, to them, genius means want of common-sense, and intellectual superiority is equivalent merely to eccentricity. Now, it cannot be said that individuals who answer to this description are never found in Germany; but as a class they are not sharply enough defined from the middle class to form a social variety of species. Their peculiarities are less marked. On the other hand, the professors, corresponding to the academicians, have had everything their own way. They are a comparatively numerous body, and share in the halo which adorns all functionaries under a bureaucratic régime; while, at the same time, they formed the only articulate body which could and did, however feebly, protest against official tyranny and bureaucratic meddlesomeness. Hence their importance in a period of confusion like 1848. Directly or by proxy they controlled the Frankfort Parliament, and to the predominance of their ideas its failure is largely to be ascribed. But while in politics their influence was never sufficient seriously to threaten the established order, in literature their sway has been undisputed. Lessing and Goethe, indeed, were not professors; were not even greatly admired by the professors of their time. But, once dead, the professorial world adopted them—took them, in fact, as standard-bearers. But the professors' reign is over; their doom is announced, with lamentations, and after having been blinked as long as possible, in their own organ, the *Deutsche Rundschau*. As "Figaro" precipitated 1789, so 'Die Familie Buchholz' has been the lightning which has revealed the tottering state of the old régime in literature.

—Julius Stinde, the author of this "epoch-making" work, had written several tales, said to be very good, but which had brought him neither fame nor fortune, when he made his ten-strike in the publication of 'Die Familie Buchholz.' The first volume of the book is now in its thirty-seventh edition, while the second is in its twenty-ninth, and there seems no reason to doubt that this (for Germany) fabulous degree of popularity is due to its merits, and not to such adventitious circumstances as Prince Bismarck's advertisement of it. But it appears to have been this, combined with the attention the book received abroad, which forced the professors to take cognizance of its existence. Bismarck seems to have regarded it only as a remarkably amusing novel, but the professors, we may suppose, never read novels as such; it is only when these assume the shape of a social phenomenon or sign of the times, like 'Werther' or the present work, that their attention can be secured. But how, one may ask, can the adventures and opinions of a commonplace middle-class family, however humorously described, be deemed so dangerous to the intellectual foundations of society? It is because in this life, in these characters and their opinions, the soon-to-be dominant class of society recognizes itself, and applauds accordingly. "In this book they find, described with exhaustive accuracy, everything that concerns them in life, God and the world, government and society, marriage, family, birth, and death"; and the sum and substance of all, according to our critic, is that they neither believe nor disbelieve in anything, value everything for its practical advantage solely, and admire nothing except in so far as it contributes to their amusement. "It is not because of the clever things which she says that Wilhelmine Buchholz is popular; it is because she says what others long have thought, *but have not dared to utter*. The passport given to this

fictitious character has become available for an entire class. One need no longer abstain from doing anything that she does, nor does one run any danger in indicating one's adherence to her view of life. The tongue of the *Spiessbürgerthum* has been loosed!" Let not the reader suppose, however, that these views are anarchical or communistic, or are otherwise what are generally deemed hostile to society. The most dangerous opinions here mentioned, as held by people "who know neither Latin nor Greek," are that these languages must be thrown overboard, that *their* education is sufficient, and that the distinction between higher and middle-class culture must be done away with. And the worst is, that "sooner or later they will have their way" in this matter, will degrade the schools "as they already have degraded music and the drama," and be as omnipotent in this field as they are in (liberal) politics. Hitherto, remarks the critic, "literature has represented the class which has ruled in politics and in society. Even those authors who did not belong to this class pretended to do so, and, in writing for a social stratum below this, made plain their condescension." The object of all was "to raise the reader to the height of the writer, to push out of sight the trivial conception of the actual. . . . It never occurred to them to allow the chorus to address the audience; to accept the popular view of anything, because no one was willing to acknowledge that he belonged to the chorus, let alone adopting its views!" But, alas! this happy period is over: already, "even among so-called cultivated people, one hears ten popular phrases to one classical allusion," while "Bräsig and Wilhelmine Buchholz are quoted far oftener than 'Faust,' or 'Tasso,' or 'Wallenstein.'"

—In our obituary notice of Leopold von Ranke we stated that "Giesebrecht, Sybel, Duncker, and Waitz (who died a few days after him) may be mentioned as his foremost followers." Two months have scarcely elapsed, and already another member of this small group of eminent historians, Max Duncker, follows the master into the grave. Sixteen years younger than Ranke, Duncker attained the age of seventy-four years and nine months, having been born in October, 1811. Waitz was born in 1813, Giesebrecht in 1814, Sybel in 1817. The two youngest survive. A politician and state-archivist—the son and brother of famous Berlin publishers—Duncker is known by fewer and probably less lasting productions than either of the other mentioned workers in the field of history; but his 'Geschichte des Alterthums' has made him the favorite of a vast circle of cultivated readers. It embraces only the earliest periods of universal history, being devoted chiefly to Egypt, Assyria and Babylonia, the Hebrews and Phœnicians, India, Media and Persia, and Hellenic origins; but it has the rare merit of combining fulness of detail with clearness and elegance, and a minute acquaintance with the latest results of archæological research with critical independence of judgment. To a whole generation of German scholarly readers, in fact, Duncker has been a trustworthy and indefatigably self-improving guide through the mazes of newly unearthed remains and gradually reconstructed antiquities. Every new issue of his 'History of Antiquity' has been a partial renovation of it, keeping pace with the growth of historical exploration. The first edition was published in four volumes in 1852-7; the fifth edition (of which there is an English translation) was finished with the seventh volume in 1883; the first volume of a "new series" appeared in 1884.

—Alexander Nikolayevitch Ostrovski, after Gogol the most popular dramatist of Russia, died of apoplexy in the middle of June, at the age of about sixty-six. Shortly before his death he had been appointed superintendent of the leading stage in Moscow. It was the sketching of the narrow bourgeois life, with its austerity, rigid prejudices, and domestic tyranny, as it prevailed in that old capital and the provinces of which it is the centre, that gave the chief color to his numerous productions, and rendered them popularly attractive, but by dint of repetition also monotonous, and collectively tedious. One of his dramas of that class had to wait more than ten years for admission to the stage, as the censorship thought the corps of Moscow merchants was too severely handled in it. He wrote with great rapidity, and precipitation marks and mars also the development of his plots. Of his plays "Lucrative Employment," "Poverty is No Vice," and "The Storm," belong to the more successful. The last-named, a pathetic piece, is perhaps his most poetic production. Ostrovski cultivated also the historical drama with varied success, several of his serious plays, such as "Kozma Minin" and "Pseudo-Dimitri and Vasili Shuiski," referring to the "troublous period" of usurpation, invasion, and revolt in which Boris Godunoff, Pseudo-Demetrius, and Basil Shuiski successively acted bloody and tragic royal parts, until deliverance came through the popular heroes, Minin and Pozharski, and the Romanoffs (in 1613) were called to the throne.

SEWALL'S LETTER-BOOK.

Letter-Book of Samuel Sewall. Vol. 1. 1686-1712. [Collections of the Massachusetts Historical Society. Vol. 1.—Sixth Series.] Boston: Published by the Society. 1886. 8vo.

THE impression of Sewall's worth derived from his Diary will not be weakened, but rather strengthened, by the printing of his Letter-Book by the Massachusetts Historical Society, to whom it belongs. We hasten to add that if any one opens this volume with any expectation of finding graphic pictures of the every-day life of our ancestors, bits of news and current scandal, discussion of topics of general interest, criticisms of books, important political revelations, light on obscure genealogical or historical points, or even the mere outpourings of a generously stored mind, he will be greatly disappointed. Sewall, if these letters are a fair specimen of his ability, will never be ranked among the great letter-writers, either for his style or for bright sketches of character and life. He writes a clear, straightforward letter, about whose meaning there can be no doubt, oftentimes expressing himself in very excellent terse English, with now and then a quaint expression and an occasional faint glimmer of humor. As mere letters, however, they are not worthy of publication. But if one wishes to know something about the life of a busy man two hundred years ago, his interests, his hopes, his gains and losses, his methods of transacting business, his habits of thought, he will find much to interest him in this volume. And if he be a merchant, or familiar with the details of a mercantile life, after reading some of these letters he will have, we fancy, a greater respect for the enterprise of the men who, from the very humblest beginnings, laid the foundations of our commerce.

The first entries in this Letter-Book were made in 1686, though sundry documents of an earlier date were copied into it. It served, in fact, in a slight degree, as a commonplace book, as Sewall inserted a few letters by other persons, with papers, facts, and quotations of special interest to himself. About half of the letters appear to be given in full; the remainder are simply short memoranda of letters written. Occasionally there are repetitions of letters which have been lost at sea or captured by the French. The period covered is that between the years 1686 and 1712, the most important and active part of Sewall's life. A second volume is promised by the editors, giving the letters of his later years, as well as others, possibly, collected from various sources. To a limited degree they supplement the Diary, and at times throw light upon some of its obscurities.

The earlier letters relate very largely to business matters. Sewall originally intended to be a minister and studied divinity with that end in view; but his marriage with the rich John Hull's daughter, Hannah, led him to give up this intention, and, until he was forty years old, when he became judge, his chief employment seemed to be the care of his property, which was very considerable for those days. This implied in his case more than the mere cultivation of land and the collection of rents. He was a merchant also, although we are not aware that he actually had a store or a counting-room. Like most of the leading men of the colony, he was a ship-owner, and sent to the West Indies, England, and Spain cargoes of oil, fish (chiefly mackerel and cod), tar molasses, etc., receiving in return a great variety of articles, but mainly cloths and books. Most of these things were imported for his own use, but many were bought apparently on commission for his correspondents. When the consignments were sufficient, the goods were paid for in this way. But when this was not the case, payment had to be otherwise provided for. Bills of exchange were used but infrequently, as they were very expensive. The following extract from a letter to London dated Aug. 1, 1691, is worthy of record as giving values at that time. Received "Fifty pounds in pss. 8-8, at six shillings a piece, weighing 17 P.wt., and I have drawn on you to pay them the Money at 30. £ ℔ cent, which sum is now given here for good Bills." Remittances of coin or silver and gold was the most common form. Sewall took with him to England in 1688 "eight hundred and one Ounces of silver, and seven ounces of Dust-Gold in two Baggs." At another time he sent to a London merchant, for some books, "a little Liñen Purse marked with Ink J. L. The contents inclosed, and are Gold Four arabian pieces, One double pistoll, Two Single ditto, One Lewi dore, Five Guineas; One broad piece of Charles the first." At another time he sends "sixty-five ¾ pieces of eight and one Skillet of fine silver, being Mexico pieces melted down, weighing in all one hundred ounces. Supose you had best put off the pss. to some Merchant who for sake of the Coin may give 1d or 2d in an ounce the more for them. The skillet will be proper for a Goldsmith." Lovers of old plate will grieve over this method of settling accounts, to which Sewall more than once refers. Among his English consignments is a live raccoon, and there is this ghastly memorandum: "Sent 4 Ind. Scalps in Barrals mark'd with Ink S. S. one to Mr. Charles Morton, another to Mr. Mather, if acceptable." Occasionally goods are consigned to him from England to sell on commission. Various trusts, involving considerable estates, were also placed in his hands, and many of his letters relate to these, while a large number are to his tenants or agents in different parts of New England.

Sewall's references to political and current events are comparatively few and unimportant. There are but two very brief allusions to the witchcraft trials, a subject upon which he was very reticent, also, if we are not mistaken, in his Diary. These memoranda in letters to England in July and October, 1692, are all: "Are perplexed ℔ witchcrafts; six persons have already been condemned and executed at Salem. Tis a very dry Time"; and I "desire your Prayers for us relating to the Witchcraft." To Nathaniel Higginson in London he writes an elaborate de-

fence of his action in refusing in 1706 to grant a writ of habeas corpus for the release of Vetch and others, who had been put into prison by the General Court on the charge of illegal trading with the French and Indians. This was to be used in case he was impeached as was threatened. We are surprised that the editors have not made this trial—which involved Governor Dudley, also, and excited great interest both in the Province and in England, and was the occasion of several noted pamphlets—the subject of a note, as it is neither very fully nor clearly treated in the Diary or in Palfrey's History. Sewall also speaks once or twice of the wisdom of the reduction of Port Royal in Nova Scotia, and Canada, and copies a scheme of Vetch's for the conquest and settlement of Nova Scotia, which was partly carried out in 1710, though no successful efforts were made to colonize the country until 1749. But to the revolution in which the Andros Government was overthrown, there is not, we believe, even a single allusion, although there is little doubt that Sewall was in sympathy with the movement, and would have shared in the responsibility for it, had he not been absent in England at the time. The references to current events are chiefly confined to the notice of the deaths of members of his family and prominent persons.

His greatest pleasure in writing, however, is to discuss some religious question with a minister. The longest and most elaborate letter in the collection, which he sent to various persons, is one upon the interpretation of the Book of Revelation. On this he had evidently spent a great deal of time in thought and in the study of all who had written on this subject, with as barren results as they. Naturally America is to play a great part in the coming redemption, but it is a little surprising to find him hinting that the City of Mexico may be "the New Jerusalem." The most insignificant events are seized upon with confidence as the fulfilment of prophecies. He hears of the wretched Darien expedition, and "so soon as I was informd of it . . . I said within myself, Surely the Company of Scotland is the Sixth Angel" of Rev. ix. Sometimes there is a strange mixture of religious discussions with business. Writing to a correspondent in "Antego" in regard to the state of religion in that island, and his hopes that the Tree of Life will make the place "healthy," he says: "Pardon me, Sir, if after this I subjoine a Passage of a far Inferior nature and pray you to send so much Lignum Vitæ as may make two or three very fair Mortars and pestills if they are made of the same," and then frankly adds, "The mention of the tree above brought itt to my mind which I thought not off before." Among the questions on which Sewall's advice was asked, as appears from this book, was as to the lawfulness of certain marriages. He argues in almost the same terms against the Scriptural propriety of a man's marrying the "Widow of your Cousin German" as the opponents of the "Deceased Wife's Sister's Bill" use to-day in England. It is directly contrary to the Levitical law and is consequently in part a casting off of the "Yoke of CHRIST." After this we are prepared to find him condemning in strong terms the marriage of the Rev. John Williams of Deerfield with his own cousin, and writing to a lady who wishes to know whether she may marry her dead husband's brother: "I apprehend it to be against the Law of England, against the Law of Nations [? Nature], and against the Law of GOD."

His interest in the Indians is great, and he advises that some of them should be educated to be ministers and teachers, and also recommends the modern system of reservations to show that we did not "grudge them a Living upon their own Earth." He has but little to say about Harvard College, although the earliest letter is one written in 1672 to a classmate (hardly to Daniel Gookin, as the editors conjecture, who was of the Class of 1669, since he writes "Remember me kindly to all our Class"), which is interesting simply as showing the affected style, the pedantry and clumsy attempts at wit of a youth just out of college. Sewall evidently took some pride in it, from the fact that he copied it so many years later. In 1710 he writes a vigorous and sensible letter to President Leverett, condemning the practice of inserting "the Names of those in the Thesis, who are beyond Sea, and no expectation of their being present." This he styles "Faggoting," a word still used in a somewhat similar sense in Scotland. It is noteworthy that, while showing considerable interest in finding out the College and the year in which Blackstone, the founder of Boston, took his degree at Oxford, offering to pay the charge for the research, he shows none in relation to that which interests so many of our own day—the somewhat similar question in regard to John Harvard. He writes a letter of advice in regard to the establishment of a college in Connecticut, in which one of the principal items is, "Let the president be enjoind to read and Expound the Scripture in the Hall morning and Evening, *de die in diem*." Later he sends 'Pole's Synopsis Criticorum,' in five volumes, "for the use of your Collegiat School." As a specimen of his letters, we venture to give the following, addressed to the two schoolmasters of Boston:

"April 1, 1708. *Feria quinta.*

"Gentn,—If stated anniversary days for solemn Religious exercises are unwarrantable: Without controversy, anniversary days for sinfull vanities, are Damnable. If men are accountable for every idle word, what a Reckoning will they have, that keep up stated Times, to promote Lying and Folly! What an abuse is it of precious Time; what a Profanation! What an Affront to the Divine Bestower of it! I have heard a child of Six years old say within these 2 or 3 days; That one must tell a man his Shoes were unbuckled (when they were indeed buckled) and then he would stoop down to buckle them; and then he was an April Fool. Pray Gentlemen, if you think it convenient, as I hope you will, Insinuat into your Scholars, the defiling and provoking nature of such a Foolish practice; and take them off from it. I am Gent'n your Serv't, S. S."

Good Master Cheever, no doubt, acted willingly on this suggestion of the honored Judge, who had probably been a sufferer by this "Foolish practice;" but, we fear, without success.

We have noted one or two quaint expressions, as for instance, in excusing himself to Higginson for intrusting his defence to him, Sewall says, "There is none in England I have eat so much Py in partnership with, as yourself; therefore I Trust you." A certain sick friend "is still confin'd to the prison of his Stamack." Referring to the fact that he would not follow the prevailing fashion in wearing a wig, he says, "The Truth is, a Great Person has furnished me with Perukes Gratis, these Two and Fifty years, and I cânt yet find in my heart to goe to another." Twice he uses the expression "as long as the three stars continue to make the obtuse Angle in the Heavens, I am your assured friend."

The little vanities and weaknesses which are so apparent in his Diary, and which have been brought into such undue prominence by those who have written upon it, are not to be discovered here. In these letters Sewall shows himself to have been a shrewd, clear-headed man of business, venturesome and at the same time prudent. He was a just but not hard creditor, an indulgent landlord, a generous friend. To ministers in the country he was continually doing kind actions, writing to them, and sending the new books, pamphlets, and papers; about as much a boon to them in those days as a newspaper now to a traveller in Central Africa. Writing in a day when personal enmities and jealousies were very strong, from which Sewall himself suffered frequently, as his Diary shows, there is not a hard or a bitter word to be found from the beginning to the end of his letters. And, perhaps stranger still, there is not a letter in which he solicits place or preferment of any kind for himself, though he was by no means without ambition. It is difficult for any one to understand what a remarkable fact this is if he is not familiar with the letters of such men as Dudley, Belcher, and others of that time, whose letters are full of personalities, and, if to men of influence, of fawning flatteries and solicitations for office. Sewall's character seems to have been of a higher type than the greater part of his contemporaries.

It is a mistaken notion that men in those early days led necessarily a narrow and confined life. This was true, no doubt, of the majority, but not of men of Sewall's stamp, whose business enterprises were considerable, bringing them into constant communication with different parts of the world. The continual wars gave them a keen interest in European politics, so that every ship that came, brought them abundant material to think and talk about. Then there were their brethren who were captives in Canada, Algiers, or "Salley," to be cared for and ransomed, the frontier towns to be provided for in time of danger; and finally the policy and designs of the French and the home government were an ever-fruitful subject of discussion. Sewall in addition had estates in many parts of New England, over all of which he exercised a watchful care. It is not too much to say that he had more varied interests, and a mind more keenly intent on gaining knowledge, than most men of the present day.

It only remains to speak briefly of the editors' part in this work. They have very scrupulously followed the original manuscript, even to the printing of manifest errors and repetitions. In regard to the notes with which they have here and there elucidated the text, opinions will of course vary. Some will regard the information given often as trivial and unnecessary, and will wish that light had been thrown on other portions which have been passed over without annotation. While most of the notes are short, there are a few subjects, such as the Bellingham will case, the addresses of the colonies on King James's "Declaration for Liberty of Conscience," and the course of Andros in respect to land titles, which are treated very elaborately, and contain some new historical material. The editors say that they reserve their opinion as to the value of this publication as a contribution to American history for the second volume, and we must follow their example. There are a few minor criticisms which we are prompted to make, since the publications of this Society have a right to be regarded as a standard for works of a similar character. It would have been better, we think, and clearer, if Sewall's own notes, which are numerous, had been indented in the text instead of being put at the foot of the page. With the preliminary matter to the volume a list of the more important publications of the Society could easily have been given, and would have proved very helpful to the many students who consult these valuable Collections. An index of the letters, giving the names of the persons to whom they were addressed, ought to have been prepared for the purpose of ease of reference. It is a mistake, also, we think, not to put the subject of a book in some way upon the title-page. There is nothing in the book, except in the editors' "Prefatory Note," which tells the reader that this is volume i of Sewall's Letter-Book. It is well to have this information on the back of the book, but it should also be in some prominent position on the title-page.

GOGOL.

Les Âmes Mortes. Roman par Nicolas Gogol. Traduit du russe par Ernest Charrière. Paris: Hachette et Cie. 1885. 2 vols., pp. 336 and 357.

Taras Bulba. By Nikolaï Vasilievitch Gogol. Translated from the Russian by Isabel F. Hapgood. T. Y. Crowell & Co. 1886. Pp. 295.

THE door of Russian literature that has been opened to us, as that of Germany was to our fathers, was but unlocked a little while ago, and at first it was only ajar, and allowed but one or another writer of the day to step out and make himself known in these our distant lands. But now it has been, or will soon be, thrown wide open; and if, because of the barrier of language, we are unable still quite to enter into the national life it would admit us to, yet not only the authors our contemporaries, but their predecessors, are rapidly making their way to us through the help of their French conveyances.

It behooves us, in welcoming them, to recognize intelligently their various personalities, their degrees of nobility, the merits and demerits of each; and, in so doing, to acquire the material for judging and criticising the conditions of this literature which has so surprised us by its qualities of power, passion, satire, delicacy, depth, sadness, and especially by its *originality*—its extraordinary force of nationality, its never-before-witnessed blending of the streams of thought derived from old social and political sources with those springing from new ones.

When Turgeneff has introduced us to Tolstoi, and Tolstoi to Dostoyevsky, and Dostoyevsky perhaps to Gontcharoff, we find ourselves glancing towards an older man behind this group, and we are told, "Ah! that is Gogol [Gogle, they call him], whom you must not fail to know." And then they tell us this—that he was born in 1810, and had the immense good fortune to be the grandchild of an old Cossack who excelled in story-telling; and that, as soon as the boy had sown his wild oats as an author, he recalled the impressions of his childhood, and before he was twenty-five he had given the permanence of a very remarkable literary form to the thrilling legends and admirable traditions of heroic exploits which his dead grandfather's remembered voice still narrated to him, or which he heard recounted at familiar firesides. His first important book was entitled 'Evenings at the Farm,' the second 'Taras Bulba'; the one it is said Turgeneff ranked as "masterly," the other as "a work of genius." Soon after the publication of the latter, the failing health of its author induced him to leave Russia and take up his abode in Italy. He there completed the work before us, 'Les Ames Mortes,' and it was published—in two parts, with a year or two's interval—between 1841 and '43. Subsequently Gogol's illness took the form of a sort of insanity, and he died in 1852.

'Les Âmes Mortes' can scarcely be called, like 'Taras Bulba,' a work of genius, but it is the work of a thoughtful mind, keen, vigorous, and fertile. It has not a touch of the large ancestral picturesqueness, the poetic reminiscential quality, which distinguishes Gogol's more romantic writings; it is no romance, no novel, no story even—it is *scènes de la vie russe*, like so many of its successors in Russian literature. It is the progenitor, on one side, of Turgeneff's 'Memoirs of a Sportsman,' and, in a sense, of Tolstoi's 'War and Peace.' The same intensity of patriotism in pain breathes through it; the same disgust, the same delight in Russia as she is; the same confidence, the same disheartenment in contemplating Russians as they are; the same seriousness and absence of light humor. It is not a romance, but a history—passages of a philosophical history of Russia at the moment preceding the abolition of serfdom; a contemporary history, with an insignificant thread of fictitious personal narrative running through it; a poem, its author somewhat enigmatically calls it, but it is really history set forth in pictures, not in annals—history in the mould in which philosophy is cast in 'Wilhelm Meister'; and what Carlyle (in his preface to the first edition) said of that is not less true of this: "Of romance interest there is next to none. The characters are samples to judge of rather than persons to love and hate; the incidents are contrived for other objects than moving us."

"The hero is a milksop," Carlyle continues, "whom, with all his gifts, it takes an effort to avoid despising." Gogol's hero—Tchitchikoff—is no milksop, but "un coquin ambitieux," "un méchant drôle," whom, with all his gifts, and they are many, we are intended to despise. But he represented one of the types of the generation of his day, a type which was disappearing as Gogol wrote; and as a study of his generation and of the conditions which produced Tchitchikoffs in abundance, this book deserves serious attention. Its interest is not diminished by the monotonous bitterness and almost passionate irony of its dominant note—the bitterness and irony of a patriot; but it must be admitted that many pages are, from other causes, open to the charge of being irredeemably dull. When the satire, as too often, assumes a farcical tone, its gayety is not contagious, it has no heartiness. None the less, since the present cannot be understood—especially the present state of Russia—without a knowledge of the past, such veracious testimony as this about the past from an observer curiously minute is of high value, if it is so also from a literary point of view, in considering the greater works of Gogol's successors.

The very title of the book, 'Dead Souls,' is derived from social conditions no longer in existence, and needs explanation. The adult male-serfs of Russia were called "souls"; and those who died were "dead souls." The fortune of a landed proprietor was not estimated by his acres, but by his serfs, and he was taxed accordingly; but as the census was rarely made, it often befell him to pay for a long time for "dead souls." One is slow to understand that these "dead souls," weighing heavily to the disadvantage of their original masters, could bring such advantages to other owners as to induce the conception of the fraudulence of buying and selling them. But remembering that the title deeds of his serfs was a man's fortune, we can follow that fact to the result that these dead peasants could (in a fiction) be pledged as so much wealth. The national bank made this transaction seem easy; and the object in life of our hero at the time we are introduced to him is to acquire a sufficient number of "dead souls" to people fictitiously an imaginary tract in a distant province, and then to pledge this domain to the State for a large sum.

It is on his travels in search of "dead souls" that we accompany him, and thus are brought into contact with all manner and conditions of men and things. In the author's own words, we "see men, contemplate closely the motive power, the springs, the interlocking wheels, and the hidden working of that machine which is called the world, read in the book of life, and put ourselves in a position to control theories by facts, and to assure ourselves that we know something." The formlessness of this *cadre* is in harmony with the mutability of the principal personage. Tchitchikoff plays different parts in succession and alternation. Like the various *Sganarelles* of Molière, he is many men of one name. The lack of artistic desire for completeness of outline, of artistic love of harmony of color, which Gogol thus evinces, throws light on the curious irregularities and excrescences in Tolstoi's work, and makes it appear that this marked tendency to produce effects by force of accumulation rather than of selection is, we may believe, to some degree a national, and not especially a personal, characteristic.

In an admirable study of Gogol, Mérimée, who was among the first to make our author known outside Russia, compares him to Rabelais, the immortal master of "narrateurs décousus," and adds: "The mind becomes wearied in reading these brilliant pages, where perhaps there is not a superfluous word, but of which it is not less true that perhaps large parts of the work might be suppressed without sensibly diminishing its merit. The art of selection among the innumerable facts that nature presents to us is, after all, much more difficult than that of observing them carefully and rendering them exactly."

It is only Turgeneff who, as yet, among the Russians, as far as we know, has possessed this special quality of a great artist; and even his art is not of the kind which presents us

> "With pure form nakedly displayed
> And all things absolutely made."

With all of them the *form*, like Truth, is ever

> "Flexible, changeable, vague, and multiform, and doubtful."

The slow encumberedness of movement this produces makes the book an almost impossible one to *quote* from: any "passage" is pages and pages in length. But we can perhaps extricate this description of the "telega," which leads up to a comparison of Russia herself to the national equipage, and even these few words of our author will surely inspire interest in him:

"Thou hast not a very fine appearance, O telega; . . . thou art not in thy configuration an object of art on which the glance lingers: dry wood, an axe, an adze, an active arm, and thou art built. There is not a peasant of Yaroslav who is not capable of this construction. The three horses are put to, and the man?—What man?—The man to drive.—Ah, but if you please, it's this same peasant.—Very well! let him draw on his high boots, then.—Are you jesting? He is not a German postillion, he has no high boots, and he even does without any foot-gear at all. He has all that is necessary—mittens on his hands, and a beard on his chin! Look at him: God knows on what he is balanced; he strikes up his song, he sets off, and it is a whirlwind. The spokes of the wheels are blended together, and seem a plain surface from the centre to the circumference; the road trembles at the approach of the impetuous nags; the foot-traveller stands aside, uttering a malediction which is only a cry of alarm; then he stares open-mouthed, but the cyclone has passed. It rushes, rushes, rushes on; and off there, far off, a cloud of dust ascends spirally, then melts into the air, is dissolved, and becomes a vast drapery, which sinks slantingly down the descending sides of the road. All has disappeared.

"Dost thou not resemble this, O Russia, O my beloved country? Dost thou not feel thyself swept toward the unknown, like the impetuous troika which nothing can keep pace with? Along thy course the road smokes, the bridges groan and thunder; everything is overpassed, distanced, overrun. The observer pauses, impressed with profoundest wonder. . . . What means this movement, the cause of universal terror? . . . O Russia, Russia! Whither speedest thou? Let thy voice be heard—answer! She answers not. . . ."

'Taras Bulba' has just been translated by Miss Hapgood from the Russian *immediately* (not through the French). Those who may read it, and it deserves a very large number of readers, are to be congratulated on the translation being made by so competent a hand. It has the high and unusual excellence of conveying to the reader, from the closeness of its rendering, a certain foreign element in the style as well as in the thought. The tale is of Cossack life 400 years ago; of the fierce, half-nomadic life of the Zaporozhian Setch—a life as remote from our knowledge as is this out-

landish name itself, but not remote from our sympathies when pictured with all the force of Gogol's vigorous imagination.

Carlyle and the Open Secret of his Life. By Henry Larkin. Scribner & Welford. 1886.

Mr. Larkin, who was in the latter part of Carlyle's life his private secretary, has previously given the public some account of the unhappiness he witnessed. The present volume is less biographical than critical. It is an attempt to sustain a theory of Carlyle's hopes and purposes by an examination of his works, letters, and acts; and in connection with this some valuable comments are made upon the man and his books.

The "open secret" is that Carlyle was desirous of entering public life in some active capacity—to be, in fact, the Man of Might of his own time. His first stroke was to write 'Sartor Resartus,' not truly an original book, but a popularization of German literature, especially as it was developed in Richter and Goethe. To show that this was the conception and plan of the work, Mr. Larkin enters on a detailed and highly ingenious analysis of 'Sartor,' chapter by chapter, and we recommend his explanation of that enigmatic volume to those who are curious about literary origins. At the conclusion of that work he finds and lays stress on these words: "Our own private conjecture, now amounting almost to certainty, is that, safe-moored in some stillest obscurity, *not to lie always still*, Teufelsdröckh is actually in London." To London, it would seem, Carlyle had come in the faith that a new era was to begin, and with some hope of making a party of literary men to lead in it; but 'Sartor' fell dead, and instead of congenial spirits he only found a set of destructive thinkers, whom he had to teach what a revolution meant by writing the 'History of the French Revolution,' which he believed was the final act of a world-movement. Not to pull down, but to construct was the duty of the hour; and this lesson was the ulterior aim of that great prose epic. In 'Heroes and Hero-Worship,' in its turn, Mr. Larkin also discerns the appeal to men of letters to combine for a public purpose; but, after that time, Carlyle having set out by himself as a social reformer in 'Chartism' and 'Past and Present,' and having got a new light upon the nature and ineradicable opposition of good and evil from his study of Cromwell, he gave up the men of letters and began making his appeal to captains of industry and statesmen.

It is here that the striking portion of the theory comes in. Sir Robert Peel, it is said, became Carlyle's hope. Their acquaintance is minutely traced. Froude's report that Carlyle said he thought of public life just before Peel died, is brought forward to indicate a disposition on Carlyle's part to be a Queen's member; and the publication of 'Latter-Day Pamphlets' at that very time, and their cessation when Peel suddenly died, owing to his fall from a horse, are skilfully used to add weight to the supposition that Carlyle was practically considering the matter. Finally it is added that the reason of Carlyle's attachment to Lady Ashburton was that she had guessed his ambition, brought him into acquaintance with Peel, and by her hospitality offered the only avenue open to him to meet the public men of the ruling class. This was the secret which he did not tell Mrs. Carlyle, and was his defence for keeping up a connection which gave her so much pain. The death of Sir Robert Peel put an end to Carlyle's hopes, though Mr. Larkin thinks there was some glimmer of the old purpose in his seeking Prince Albert, also on introductions from Lady Ashburton; but this soon flickered out.

Such is the "open secret," briefly stated; and it must be granted that the advocate has made a plausible case, both by his marshalling of facts, by his extracts from the writings of Carlyle, and especially by the manner in which he brings out Carlyle's tone at critical points. Furthermore, the theory does explain the facts of the Ashburton alliance, and put them in reasonable relation to one another. It may be allowed, too, that Carlyle, like many men of thought, desired to be a man of action, to have a hand in affairs. He seems to have held, like most men of the closet, that what is ethically desirable in a nation would be politically feasible, if the right hand were at the helm and the right brain on the bridge. Mr. Larkin, however, goes much further than to suppose that political ambition was incidentally felt by Carlyle, or that he was at one time making ready to seek public office through Peel; he asserts that a thwarted ambition was Carlyle's trial through life—a gnawing, secret, passionate desire. Hence the death of Peel is repeatedly spoken of as a terrible and tragic blow to long-cherished hopes on the eve of their possible realization. In other words, Carlyle was thereafter a kind of Napoleon in exile, fretting a great spirit to slow death.

Mr. Larkin pleads with such vigor and persistency to this effect that it really requires some effort to remember that the whole theory is a matter of pure inference, inasmuch as neither Carlyle in his voluminous confessions, nor any reporter of his conversation, nor any near friend, has ever disclosed this "secret." He thinks, indeed, that Carlyle guarded it so jealously as to be made uncomfortable by the suspicion that he himself—the private secretary—had penetrated it. Lady Ashburton would seem to be the only person who could have told us this by authority. Under these circumstances, the reader will scrutinize the evidence more closely. Mr. Larkin lays great stress, for example, upon Carlyle's remark that he wrote "with quite other than literary aims"; but is this anything more than a veiled sneer at "polite literature," and an assertion that he meant to affect society, in a practical fashion, it is true, but yet only by the instrument of printed thought? There is certainly no necessary implication in that sentence that he was using literature as a means to enter public life so as to affect society by direct action as a man of affairs. Similarly, with a considerable portion of Mr. Larkin's argument, much depends on the alternative chosen, the stress allowed, and the tone assumed; it is not a conclusive, but a cumulative proof. And yet, after a most guarded reading, one cannot resist the impression that Mr. Larkin has divined a truth in regard to Carlyle, though formulating it too closely and rigidly, and overstating its relation to the other elements of his life.

Whether one accepts this characterization as "the real Carlyle" or not, he will find much else in the volume of interest. The analysis of 'Sartor Resartus' has already been referred to; not less valuable is the criticism of 'Cromwell,' especially in regard to the incident of the refusal of the royal title, in which Mr. Larkin holds that Carlyle showed incapacity to understand the simplicity of the Protector's character. The division of Carlyle's literary life into the two periods of Goethe's influence and of the ascendency of those later ideas which were developed in the study of Cromwell, is well marked off; and at the conclusion there is an admirably frank examination of Carlyle's dealing with his wife's inheritance, which sets his obtuseness and household economy in a very strong light, not at all to his honor. One observes, too, throughout the volume, the singular combination, so frequently to be seen in the minds of Englishmen who are neither Tories nor Liberals, of the idea of the English Federation with a mingled distrust and hatred of the democratic spirit through which alone such Federation is possible. The book, we need hardly add, is essential to the student of Carlyle.

The Centennial History of the Protestant Episcopal Church in the Diocese of New York. 1785-1885. Edited by James Grant Wilson. D. Appleton & Co. 1886.

This handsome volume of 454 pp. octavo is published by the Diocese of New York and edited by one of a committee appointed in Convention for its publication. Gen. Wilson's work has been done with affectionate assiduity and carefulness. The volume is enriched with portraits of the several bishops, all steel engravings with one exception—a superb wood engraving of Bishop Potter, engraved by Johnson after a painting by Huntington. There are a few other engravings: an interesting one of old Trinity Church and a very ineffectual one of the present building, with a highly conventionalized vehicle going down Broadway, and three persons on the sidewalk equally conventional—an *entourage* as unlike the actual as could well be.

The reading-matter of the volume consists of an account of the dual celebration of the centennial anniversary of the first Diocesan Convention of New York, followed by lives of the successive bishops of the diocese and by historical accounts of the several parishes of the diocese as at present constituted. The celebration was held simultaneously in Trinity Church and in St. Thomas's. At Trinity Church the centennial sermon was by Dr. William J. Seabury—appropriately so, he being the great-grandson of the first American bishop, Seabury of Connecticut, and the fifth in direct line of descent ministering to the Episcopal Church in America in one way or another since 1743. His sermon is an expression of gratitude for the practical wisdom that has marked the development of the Episcopal Church in this country. For the structure of the Church, its interplay of episcopal with clerical and lay powers, he makes no claim of New Testament or traditional authority. It came, he says, from the peculiar training and position of those who were called upon to organize the Church in the American States as a body distinct from the Church of England. What we miss in this sermon, as in the remainder of the volume, is any large enthusiasm for morality or for religion. The pride of church extension is the dominant chord. And equally we miss, in a succession of sermons, speeches, biographies, and parish histories, throughout which the sense is steadily apparent that the Episcopal Church is *the* Church of America, any suggestion that it has been in harmony with the development of our political institutions in their most critical periods. The Church, as such, was distinctly out of sympathy with the War for Independence. Provoost was driven from his charge of Trinity by a Loyalist flock. In the anti-slavery conflict it was equally out of sympathy with the abolitionist and anti-slavery parties. The material good-fortune of its later years is mainly owing to its accessions of pro-slavery Christians during the civil war.

The historical address at St. Thomas's Church, by Dr. B. F. De Costa, is an exceedingly elaborate and minute piece of work, filling forty closely printed pages. We presume it was shorter in the delivery. Much briefer are Bishop Coxe's and Bishop Doane's personal reminiscences. The effusive eloquence of the former is well spiced with dogmatism. He dwells for several pages on the reform of Bishop Hobart in the relations of the pulpit and the altar in the architecture and service of the Church. Before his time, when the priestly functions were going on, the congregation "heard a voice but saw no man." The speeches generally move in this circle of ideas;

and much of them, for one not used to the ecclesiastical jargon which the speakers use unconsciously, "subdued to what they work in like the dyer's hand," conveys a dubious impression.

The sketches of the bishops are the most interesting portion of the book. The devotion of Provoost to the Revolutionary party is all the more attractive because of its exceptional character. Driven from his parish, he took to botanizing while the war went on, but sometimes lent a hand to the defence of the imperilled neighborhood. It is evident that the early years of the present century were years of weakness and contempt for the Episcopal Church in the United States. Provoost did not expect it to outlast the colonial generation, and his successor's ineffectual labors are but thinly disguised by the phrases of his eulogistic co-religionists. With Bishop Hobart there was a much better order of affairs. His successor, Onderdonk, was suspended from his office, the last seventeen years of his life, for lascivious conduct. He is treated very tenderly by his biographer, but the traditional leniency of ecclesiastics in dealing with offences in their order makes an appeal from the stern judgment of his fellow-bishops difficult to sustain. The bishopric was without a head for several years after Bishop Onderdonk's suspension; from 1852 to 1854 Dr. Wainright was provisional Bishop, and Bishop Potter, succeeding him as provisional Bishop, entered into the fulness of his office when Bishop Onderdonk died in 1861. The fact that Bishop Potter is still living tempers the praise of his biographer, but it is evident that the bishopric has never had another man of temper and ability so well adapted to the place. Liberal in his constructions, of conciliatory spirit, with a blind eye for things he doesn't care to see, steadily resolved to make the Church an instrument of social elevation, he deserves the love and admiration which is accorded him wherever he is heard or known, and he is fortunate in the assistant who has for several years relieved him of his more arduous duties.

The parish histories vary in length from several pages to a few lines, and are confined to the most salient facts. The number does not represent the growth of the original bishopric from which the bishopric of Western New York was detached in 1835, that of Central New York in 1868, and still later the bishoprics of Albany and Long Island. Following the parish histories there is a long chapter on Institutions of Charity and Learning, which is a remarkable exhibit. A concluding chapter on the literature of the century is equally remarkable, but in another way—for the paucity of the results. It is evident that the strength of the diocese has gone into church extension and consolidation, and into works of charity, rather than into critical or speculative theology.

The Cruise of Her Majesty's Ship "Bacchante," 1879–1882. Compiled from the private journals, letters, and note-books of Prince Albert Victor and Prince George of Wales, with additions, by John N. Dalton. Vol. i.—The West and the South. Vol. ii.—The East. Macmillan & Co. 8vo, pp. 675, 803.

THE only break in this three years' narrative is made by the division into volumes. The diary flows on with the continuity of a river, and, but for an occasional chart, even the voyages would be indistinguishable. These are, indeed, analyzed in the table of contents, but with no diversity in the captions. "At Sea" covers the run from Trinidad to Grenada, from Port Jackson to Moreton Bay, from Corfu to Palermo, etc. The worthy chaplain's sins against the art of bookmaking culminate in his failure to provide an index. This is a great pity, because while only the most determined "loyalty" could regard his lucubrations as readable, in the sense, for example, that Mrs. Brassey's accounts of her cruises are readable, these two hulking volumes have a certain value as a work of reference. The "additions" which Mr. Dalton has made, and which double the normal size of the diary, embrace practical advice to emigrants to Uruguay, a history of the Transvaal War, an exposition of Confucianism and of the religion of ancient Egypt, the whole round of Egyptian and Syrian antiquities, the Eastern Question, and a thousand other things. Particularly the condition of the British colonies is studied and set forth with useful statistics, and with ready counsel to British statesmen as to what to do to revive Jamaica, etc., etc. To digest all this information, our royal middies would need another voyage round the world in the company of these volumes.

It cannot be said that the Rev. Mr. Dalton is a Jingo, though he has a pleasing faith in the British genius for governing, elevating, and blessing inferior peoples all over the globe, and clearly intimates a manifest destiny in the case of Egypt. He seems to be aware that his countrymen's dealings with the Chinese and the Zulus have not been quite moral, but in the case of the West Indies his view is antipathetic to the blacks, and he is far from having stated the facts about Gov. Eyre and the "insurrection" which he suppressed. At Martinique he remarks on the superiority in the condition of the French negroes over that of the same class in the English islands, attributing the difference to the fact that the French planters remained on their estates. He describes the contented and prosperous state of the Indian coolies in Trinidad, who have done wonders in opening up that beautiful island. Why the banana, which he calls "a devil's agent," has not wrought the same mischief with them as with the blacks, he does not attempt to explain. "The much-abused cocoanut," he says, "cannot come near it" in this vicarious capacity:

> "The cocoa-palm is confined to the tropics and sea levels, and asks some labor, though not much. The banana grows as a weed, and hangs down its branches of ripe, tempting fruit into your lap as you lie in its cool shade. The cocoanut has a hundred uses, and urges man to work to make spirit from its juice; ropes, clothes, mattings, bags from its fibre; oil from the pulp. It creates an export trade which appeals to almost all men in offering large and quick returns for little work. But the banana will make nothing: you can eat it raw or fried; you can eat it every day of your life without becoming tired of its taste, without suffering in your health; you can live on it exclusively. The plentiful possession of this tree has been fatal to industry and exertion for multitudes in the West Indies" (i, 176).

There is not much that is quotable in these pages—not so much as is really interesting. The princes have a British fondness for active exertion, sport, and athletics (every "bathe" is recorded), and very little sentiment. They are tatooed in Japan, and on the voyage thither join, at least as spectators, in shark-catching, when one of these fish "was blown to pieces with a disc of gun-cotton placed in a tin with a strip of pork wrapped round it for a bait; when he took it, it was fired with a boat's battery, which blew his head off and he sank." This was good discipline for a Sepoy rebellion. On the Nile, Philæ seems to have touched the sensibilities of the lads, or of their tutor; but had all three been totally devoid of the æsthetic sense they could not have been more silent as to the impression made on them by the statues of Memnon. They left their princely mark on the Great Pyramid under their father's A. E., as Cook's tourists might have done. They heard of Garfield's assassination while at Melbourne, July 3, 1881; and of Longfellow's death at Jericho, "the scene of his blind Bartimeus," on April 8, 1882. In 1880 their curiosity as to home politics caused this adventure, one of the few humors of the cruise:

> "*April 29th.*—. . . . In the afternoon exchanged numbers with two English barques. . . . To each of these we make a signal, 'Who is the Premier?' being anxious for news as to change of Ministry in consequence of the late elections in England; but neither of them make any response.
>
> "*April 30th.*—. . . . At 6.05 P. M. exchanged colors with an English barque, running to the westward, but cannot make out her number by signal; we alter course and close her, holding up a blackboard on the poop with, 'Who is the Premier?' chalked upon it. We are now within hailing distance of the barque, and her skipper, thinking we are inquiring her name, shouts out, '*Fanchon*,' which our captain and those around him on the poop hear as 'Gladstone.' So they next hail to the old gentleman, 'What is his majority?' and the old man replied, 'Non entiendo' (meaning, I don't understand), which those on our poop understand as being 'One hundred.'"

Typographically, these volumes leave nothing to be desired, and the numerous illustrations are very good and serviceable.

The Journal of William Dowsing. A new edition, with an Introduction, Notes, etc., by the Rev. C. H. Evelyn White. Ipswich: Pawsey & Hayes, the Ancient House. MDCCCLXXXV.

WELL-NIGH unique in its infamy stands the memory of the fatuous fanatic who, in the days of the Commonwealth, swept like a pestilence through East Anglia, laying his foul hands on relics of idolatry, as he regarded the venerated objects of his spoliation and destruction. Of what the man held to be alone compatible, as to externals, with genuine religion, it would be curious if we could recover his ultra-puritanic definition. One sacred edifice was, in his designation, "the church, so called"; and another and another, "the church, as it is called." A cross on a font or on a steeple was to him an abomination beyond endurance; the letters I. H. S. he stigmatizes as "the Jesuit's badge"; in chancel-steps and rails he could see nothing but appurtenances of false worship. Organs, stained glass—unless merely exhibiting armorial bearings—and carved ends of seats were not to be tolerated by his peculiar Christianity. In one church he ordered a painting of the sun and moon to be taken down; in another, he removed "Moses with a rod, and Aaron with a mitre"; and, from still another, "Adam and Eve" suffered summary ejectment. One can hardly object to his having done away with a pictorial representation, in the church at Haverhill, of "seven Fryars hugging a Nunn," provided he actually found such a thing there. Especially conspicuous was his vandalism at Bures, where, he reports, "we brake down about 600 superstitious pictures"; at Bramford, where he destroyed 841 embellishments similarly characterized; and, above all, at Clare, where the number of them reached a round thousand, if we are to take his words literally.

Of the personal history of Dowsing little that is uncontroverted, his ravages apart, has been ascertained. It seems to be pretty well settled, however, that he was born at Laxfield, in Suffolk, in 1596, and that he was buried in the same parish in 1679, having accordingly arrived at an age of more than four-score years. In 1643 he was appointed Parliamentary Visitor of the Suffolk churches, by a commission emanating from the second Earl of Manchester, who bore in loyal circles the nickname of "a Manchester Shift"; a very different description of person from his father, the author of a devout little treatise, once of great repute and extensive currency, entitled 'Manchester al Mondo.'

Dowsing was occupied in all fewer than fifty days, between January 6, 1643, and October 1, 1644, in his work of devastation. In that inter-

val he wrought more or less damage to a large number of churches, though only just upwards of a third of the Suffolk parishes are specified, in his Journal, as having attracted his pernicious attention. In all likelihood a good deal was left by him to his deputies, among whom Francis Jessup, of Beccles, went even beyond his principal in sacrilegious folly, as appears from an account of his doings at Gorleston, near Yarmouth. His recording that he "brake the popish inscription, *My flesh is meat indeed, and my blood is drink indeed*," affords a measure of the miscreant's intelligence. At the same place "we did deface the font," he informs us; and he deemed worthy of abolition, as being "superstitious inscriptions," the words, *Jesu fili Dei miserere mei.*

Dowsing's Journal has been repeatedly printed; but, as copies of it had become difficult to procure, Mr. White was moved to bring out a new edition of it, to which he has prefixed and appended sundry additions. The matter by which he has supplemented it is of very inconsiderable value. It is to be regretted, indeed, that some one more competent did not forestall him in his undertaking. His literary skill is that of a school-boy. Of style he has the crudest of conceptions; and he is not only slovenly, as his very first page sufficiently evidences, but silly. A Mr. Dove being mentioned, he thinks good to comment on his name, as being hardly indicative of his character. If he had taken warning by what befell Southey for his feeble facetiousness about Francis Bugg, the Quaker, he would not have done amiss.

The Imperial Island: England's Chronicle in Stone. By James F. Hunnewell. Boston: Ticknor & Co. 1886.

In 'The Imperial Island' Mr. Hunnewell has done for England, with some differences of detail, what he did for France in his 'Historical Monuments of France.' He has made a manual for the most important of the old buildings of England which is half-way between a handbook and a guide-book. He describes her architecture, from the Druidical and Roman remains to the Houses of Parliament and the Albert Memorial. This ample field he allots into four divisions—architecture, or building, before the Normans; mediæval church architecture; civil and military architecture in the Middle Ages; and the architecture of modern England, from Elizabeth's days to ours. These divisions he subdivides geographically, prefacing and accompanying them with historical and geographical commentaries, the whole illustrated by pretty full and very useful bibliographical notes. Thus Mr. Hunnewell carries his reader four times over England, pointing out at each tour a different set of buildings, with a connecting thread of historical reminiscence. This plan tends to clearness and easy following—we do not know that another would have been better—but it does not lend itself readily to the study of architectural development. The point of view, indeed, is that of the intelligent amateur and reader of history rather than of the architect or antiquary, and this, with a certain negligence of broad relations, gives the book a desultory character, which, indeed, it is hard to avoid in books of its kind.

Mr. Hunnewell has but little of the art of the showman. He is not particularly graphic, and does not care to expend himself on objects of popular curiosity. But he has a sense of the value and dignity of history, and has compiled with exemplary diligence a great mass of material freshened (as far as may be) by personal observation and recollection. It is notable that no adequate general survey of English architecture has yet been made from a technical point of view, and, pending this, the amount of material here collected, though lacking in technical directness and precision, will have its permanent value; and it contains most, perhaps all, of what the intelligent reader or traveller will wish to know of its subject.

For the illustrations of the book there is not much to be said. They are photolithographs from prints of various dates, mostly ill-executed, with an effort to give them a factitious smartness by printing in brown ink. Many are from excellent originals, but as here presented do little credit either to their engravers or the publishers. The map of England, with the tinted boundaries of the counties intensified by photographing into obtrusive black ribbons, is simply atrocious.

Carlsbad and its Environs. By John Merrylees. With a Medical Treatise on the Use of the Waters, by B. London, M. D. Charles Scribner's Sons. 1886.

This is the latest of several monographs which have for their subject the waters of Carlsbad, the most famous, efficacious, and frequented of the Austrian spas. The work is divided into two parts. The first describes the situation, climate, history, springs, and environment of Carlsbad, giving full practical hints as to hotels, lodgings, cafés, and amusements, not overlooking the topic of the promenades and longer excursions that may be taken in the neighborhood of this charming place. In the second part the accomplished Dr. London, one of the best known of the resident physicians of Carlsbad, gives a careful résumé of the properties, indications, and uses of these potent waters. This part of the work has special value, for it brings out clearly the all-important distinction between the intrinsic goodness of a mineral water, and its special adaptation to the particular invalid. The distinction is one which is constantly disregarded by the public, and which indeed can only be rightly drawn by the physician who has given special attention to the therapeutics of mineral springs. The failure to make it is, of course, serious. One of our most prominent public men went to Carlsbad last summer on general principles—that is to say, because the waters of Carlsbad were of high repute; but as they were not those required by his case, but were, on the contrary, precisely those which he should have avoided, he was made worse and not better by his visit. Dr. London points out with detail the cases that should be treated at this famous spring; for the contra-indications, the cases that are unfitted for Carlsbad, the excellent treatise of Dr. Kraus may be read ('Carlsbad and its Natural Healing Agents.' London. 1880). Both of these manuals belong to a serviceable class of monographs.

Beaumarchais. Eine Biographie von Anton Bettelheim. Frankfurt-am-Main: Rütten & Loening; New York: Christern.

It may be doubted whether Beaumarchais would have been satisfied with his latest biographers. He, who took such pains to color various questionable acts of his career in a way that has made it difficult if not impossible for us to say with precision just where he ceases to be veracious, would certainly not thank Herr Anton Bettelheim for the pains he has taken to sift out the truth in his large octavo volume. Louis de Loménie's 'Beaumarchais, Sa vie et son temps,' was, until the publication of the present work, the most available source for many points connected with the life of Beaumarchais. It still retains its high value as an authority on the literary and social history of the last quarter of the eighteenth century; but as what might be called the picaresque side of Beaumarchais's career was deliberately and avowedly omitted or attenuated by De Loménie, his biography, in spite of its permanent merits, is necessarily incomplete.

Herr Bettelheim pays an eloquent tribute of homage to his predecessor, whose work he says "can be replaced by no other." His aim, however, is quite different. He has tried to do more, making use of more abundant material, and the reader is tempted to apply to his own book many of the pretty things he says of De Loménie's, which he calls a "rundes Kunstwerk," and a "Zierde der neuern französischen Gelehrten-Literatur." The new documents to which he has had access have enabled him to follow with greater precision the literary adventurer in Spain and Germany, and he has been further aided by the searching book of Alfred von Arneth on Beaumarchais's adventure in Vienna. The result of all this is a life, of which the creator of *Figaro* might have said unjustly, as he did of Goethe's "Clavigo," "the German has spoiled the anecdote of my memoirs by overcharging it." But Figaro's life, though it might be attractive if related by himself, could not be made exemplary if honestly told by another. Those who desire the romance and the wit of Beaumarchais's existence will still find it in the 'Mémoires'; those who desire a calm, well-written, and critical biography of one of the brightest as well as most unprincipled of literary money-makers and money-lovers, will find that in Herr Bettelheim's book.

Racing and Steeple Chasing: Racing, by the Earl of Suffolk and Berkshire and Mr. W. G. Craven, with a contribution by the Hon. F. Lawley; Steeple Chasing, by Arthur Coventry and Alfred E. T. Watson. [Badminton Library.] 8vo, pp. 419. London: Longmans, Green & Co.; Boston: Little, Brown & Co.

The subject of this book deserves a better discussion than it has received at the hands of the distinguished sportsmen whose names appear on its title-page. Were it only for the reason that horse-racing has long been one of the most highly developed of the arts of play which have been cultivated by Anglo-Saxons, it would be worthy of careful study; but it has a greater interest from the fact that the race-horse is, of all our domesticated animals, the one which has been most carefully bred and the most determinedly urged to the exercise of its peculiar power. The authors have seen fit to limit their treatment of the subject to the plane of ordinary sporting interests. Measured by this low standard, the work is only fairly well done.

The first chapter is devoted to the history of horse-racing; it really concerns the racing of horses in Great Britain alone, and cannot properly be called a history of the sport, which has had a large place in other countries. We next have a brief account of the Jockey Club, and then of racing officials, with a synopsis of the duties of the men who control the management of the sport. After this the book becomes a collection of fragments covering the different racing meets, the habits of jockeys, the breeding of horses, betting, and other incidental matters connected with the turf. We look in vain for any intelligent discussion of the principles of breeding. Only eight trifling pages are given to the subject, which could well have been made the longest and most attractive chapter in the volume; more than twice the space is allotted to personal anecdotes of jockeys. The text of these chapters is plentifully interlarded with Latin and French quotations, and the chapter on betting has a motto from 'Prometheus Unbound' in the original Greek. As usual, this display of classic lore is accompanied by much turgid English. We doubt whether the sporting reader will be most puzzled by the foreign quotations or the

involutions of his own speech. He will certainly miss the delightfully simple and forcible language to which he is accustomed in his daily walk of life.

The last hundred pages of the book treat of steeple chasing. The authors of these chapters, Messrs. Coventry and Watson, have given a simple and tolerably direct narrative account of this interesting form of racing. It is to be regretted that the whole book is not their work.

The Bridle Bits: A Treatise on Practical Horsemanship by Col. J. C. Battersby, late of the First New York (Lincoln) Cavalry, etc. O. Judd & Co. 1886.

DESPITE a bad literary style and a fancy for "splurge" in writing which is indicated even in the title-page, the author of this treatise has given us a really useful and readable book. He is evidently a skilled horseman, for, unlike many of the recent writers on the art, he has discerned the fact that the bit is the most important part of the horse's gear, and that its proper construction and management are the most difficult points which the rider has to study. The bit is not the only, nor should it be the chief means of conveying to the horse the knowledge of the master's will: that task should in the main be done by the voice, or, in the ridden animal, by the movement of the rider's body; yet it is by the bit that we secure the control of the creature in moments of excitement, and convey to him our meaning in the speediest way.

To do its work effectively the bit needs to be a rather cruel instrument; it is applied to an extremely sensitive part of the horse's body, and acts in a way that makes it easy, on a well-constituted horse, to inflict great pain. There can be no doubt that as commonly used it is more an instrument of torture than either whip or spur. The author of this little book sees these points clearly, and gives the reader information which will help him to be merciful as well as skilful in the selection and use of bits. If novices in horsemanship would heed his recommendation of the double or "Bridoon-Bit," they would escape a certain class of accidents arising from the breaking of the single-bitted bridle.

It seems to be the peculiar privilege of writers on matters concerning the horse to make wide digressions from their direct way. Col. Battersby's wanderings are numerous, but generally amusing enough to compensate the reader for the lengthened journey.

Simon de Montfort, Comte de Leicester: Sa vie (120?-1265), son rôle politique en France et en Angleterre. Par Charles Bémont. Paris: Alphonse Picard. 8vo, pp. 387.

THE excellent lives of Simon de Montfort by Pauli and Prothero have, after all, only prepared the way for a complete study of the career of this the most eminent of the English statesmen of the Middle Ages. The work has now been taken up by a French scholar, who, building upon the foundation laid by his German and English predecessors, has made an exhaustive study of the authorities, and presented a view which is not perhaps final, but which must be accepted as the ripe conclusions of conscientious labors, in the light of all attainable information.

M. Bémont has not merely given his readers the fruits of his laborious researches, but has placed in their hands the means of forming their own opinions by numerous references and citations on nearly every page, and by an appendix of 118 pages, containing *pièces justificatives*. And in order to make his account of De Montfort's statesmanship more intelligible, he has entered at great length into a description of the social and political institutions of England in the thirteenth century, which will be found one of the most valuable parts of the work. These pages are no doubt designed especially for his French readers, as there is no period at which the institutions of France present any near analogy to those of England at this time, and French readers need, therefore, to have a great deal explained to them which we of English blood can take for granted. Nevertheless, even we can derive much instruction from these chapters. There are few, even careful students of the history of the English Constitution, who can form a clear and independent notion of its condition at any one epoch; and the sketch here given is the clearest and most graphic picture of society and government in the thirteenth century that we have ever seen. Not that it contains, perhaps, anything that one may not find in Stubbs's 'Constitutional History'; but there is a power of grouping and of presentation, and a genuine French lucidity, which places this treatment even above that of Bishop Stubbs in these respects. In this respect chapter iv, which treats of the political constitution, is better than chapter iii, which describes the social condition of England. Probably the defect is in the state of our knowledge on the subject; but in the description of feudal society in chapter iii we find it hard to obtain a clear notion of the relation of the parts to one another and to the whole, such as chapter iv gives us in admirable perfection for the political institutions.

M. Bémont is even less disposed than Mr. Prothero to exaggerate the share of Simon de Montfort in the development of the English Constitution. His language upon this subject (p. 230) deserves to be carefully studied. The representation of the burgher class in the famous Parliament of 1265 was not, he says,

"borrowed from abroad by Simon de Montfort. He did not transfer to England the customs of Aragon [Pauli's hypothesis], nor of Sicily [Milman's], nor even those of Gascony [Webster's]. Neither was it an invention of his genius. As we have already seen, in 1213 the representatives of the middle classes (*roturiers*) of the cities, in 1254 and 1264 those of the nobles of the counties, had been especially summoned before the King, in the same forms in which they were regularly summoned to the courts of the hundreds, the monthly courts of the sheriff, or the assizes held by the itinerant justices. They came to exercise, in the presence of the sovereign, functions analogous to those which they exercised in the county in the presence of the sheriff. It was, as it were, a national grand jury of inquest which was thus organized under the most solemn circumstances."

So far, if we understand rightly, his view is precisely that of Bishop Stubbs, but expressed with superior breadth and clearness. He continues:

"The complete Parliament of 1265 is not, therefore, a creation. Neither is it a regular institution which Simon de Montfort planned to establish. The treaty between the King and the barons, which the Parliament has just ratified with unaccustomed ceremony, puts in operation the oligarchical constitution of 1264, which has as a basis the aristocratic constitution of 1258. It has no other bearing. After the 14th February the representatives of the commons return home, and there they will stay. They will not complain at being dismissed to that local life in which all their interests are centred, and where, from time immemorial, they are accustomed to administer their own affairs, because these assemblages brought them more burdens than advantages. Simon has so little thought of making the commons a regular element of Parliament, the assembly of 1265 is so completely, in his eyes, an extraordinary meeting, that in the month of June following, when he convokes the Parliament to an ordinary session, we hear nothing more said of the representatives of the commons: the greater barons and the prelates alone take part in it. In order that the commons may take a regular place in Parliament, it is necessary that royalty should find its advantage in it, that it should feel the necessity of associating the nation in a regular manner with the efforts of its foreign and domestic policy. This is what took place under Edward I., at the very moment when the French monarchy, under Philip the Fair, underwent also this fruitful transformation."

We have given this passage at length, because it seems on the whole to exhibit most correctly the meaning and historical importance of this event. But we are inclined to think that, if most writers exaggerate this importance, M. Bémont somewhat underrates it. It is true that the representation of the commons did not now become a regular institution, and was perhaps not intended as such by De Montfort himself. This consideration helps us to understand what has been so puzzling in the ordinary view—the gap of thirty years after De Montfort's Parliament before the complete representation of the cities and boroughs reappears. But none the less it appears to us a "creation," or at least a creative idea, which entitles Simon de Montfort to a place among the founders of constitutions. The imperfect and probably forgotten precedent of 1213 may or may not have given him a hint; but to take a lesson from such a precedent, and summon a representation of the entire people of England, of every class, in what was really the establishment of an organic law, was an act of true statesmanlike genius. For the fact, which is pointed out, that the Parliament of 1265 was not an ordinary Parliament, but an extraordinary assembly, convoked for a special purpose, in reality enhances the importance of the act. We in America can compare it with one of our most original institutions, the Constitutional Convention. The Constitution of England, as remodelled by the discussions and negotiations of 1264, was to be accepted and confirmed; and in this acceptance and confirmation the whole nation was called together to give its consent.

The analogy pointed out with the French States-General, interesting and correct up to a certain point, is nevertheless misleading. Simon de Montfort's Parliament and that of Edward I. were—as is very well shown in this extract—built upon vigorous institutions of local self-government: in this respect, as in so many others, the national institutions of England were, to use Bishop Stubbs' felicitous expression, the "concentration" of local institutions. It was this that gave the English Parliament its life and its substantial power. But the States-General of France had no root, and they withered away. Both assemblies began at the same epoch, with essentially the same powers—hardly more in either country than that of granting supplies. Out of this the English Parliament developed its present imperial authority, while the French legislature, after some abortive efforts in the same direction, failed at last to maintain even its hold upon the purse-strings.

There is a good index and a tolerably good table of contents; but the book would be much improved by running titles and marginal index. On page 41 we find Alexander IV. of Scotland for Alexander III.

BOOKS OF THE WEEK.

A Race for Life and Other Stories. Cassell & Co. 15 cents.
Cars, Duc des. Memoires of the Duchess de Tourzel. 2 vols. Scribner & Welford
Dumas, A. Les Demoiselles de St. Cyr: A Comedy. Edited by Victor Oger. Macmillan & Co. 40 cents.
Edwards, H. S. The Case of Reuben Malachi. Rand, McNally & Co. 25 cents.
Garlanda, F. The Philosophy of Words. A. Lovell & Co. $1.50.
Ginn, E. Plutarch's Lives. Classics for Children Series. Boston: Ginn & Co.
Heilprin, L. The Historical Reference Book. 2d ed. D. Appleton & Co. $3.
Lee, Katherine. Katherine Blythe: A Novel. Harper & Bros. 25 cents.
Letters from Donegal in 1886. By a Lady. "Felon." Edited by Col. Maurice. Macmillan & Co. 40 cents.
Mason, L. W. New Second Music Reader. Boston: Ginn & Co 48 cents.
McClelland, Miss M. G. Oblivion: A Novel. Leisure Season Series, No. 1. Henry Holt & Co. 50 cents.
My Night Adventure and Other Stories. Cassell & Co. 15 cents.
Palgrave, F. T. The Golden Treasury of the Best Songs and Lyrical Poems in the English Language. Macmillan & Co. 50 cents.
Peyrebrune, Mme G. de. Une décadente. Paris: Frinzine; Boston: Schoenhof.

The Nation.

NEW YORK, THURSDAY, AUGUST 12, 1886.

The Week.

THE surplus resolution passed by Congress has failed to become a law. The President has neither approved nor disapproved it. The Constitution allows him ten days for the consideration of any measure passed by the two houses, and provides that all such measures not disapproved within that time shall become laws unless Congress, by its adjournment, shall prevent the returning of the same, in which case they shall not be laws. The very brief time which elapsed after the passage of the surplus resolution and before the adjournment, gave the President no opportunity to state his objections to the resolution if he had intended to veto it, or to give it any mature consideration. No inference can therefore be drawn, one way or the other, from his failure to act upon it. It is not fair to say that he killed it by a "pocket veto." It was the most hotly disputed measure of the whole session. It led to wide divergence of opinion among members as to its legal construction and intendment, and even wider divergence as to its financial effects and consequences. Nobody on either side of the dispute could fairly expect that the President would weigh the pros and cons in the few hours left to him, and in the midst of the shower of appropriation bills raining upon him.

Senator Allison contended that one of the effects of the resolution would be to set apart $100,000,000 explicitly as a greenback redemption fund, and that another would be to define the $29,000,000 of subsidiary coin in the Treasury as being no part of the reserve. When Mr. Allison stated these conclusions in the Senate there was general surprise among the supporters of the original House measure, and Senator Plumb maintained to the last that no such inference could be drawn respecting the $100,000,000 reserve. The Senator from Iowa held that the clause of the bill which referred to the Treasury statement of June 30, 1886, for a definition of "the surplus or balance herein referred to," enacted that statement as a part of the law as effectually as though it had been quoted at length; and that since the statement of June 30 described this sum as the reserve held for the redemption of United States notes under the acts of 1875 and 1882, the joint resolution did expressly ratify and confirm the construction put upon those two acts by the Treasury Department. It should be remarked that it has always been a mooted question whether the acts of 1875 and 1882 did specifically name any sum as a minimum greenback redemption fund. Obviously if a court were required to construe the joint resolution upon this point, it would seek to find out what is the surplus or balance to be held in reserve at all times. Finding a reference in the text to the Treasury statement of June 30, 1886, it would incorporate that statement into the record for the resolving of all doubts. Mr. Allison's contention appears to us to be unassailable. He found in this clause of the joint resolution a reason for giving it his support.

The President's reluctant approval of the River and Harbor Bill calls fresh attention to the pressing need of a Constitutional amendment giving him the power to veto items in appropriation bills while approving the bills themselves. There is no opposition to such an amendment except among the Congressmen who are interested in "jobs," and that is an opposition which popular sentiment is sooner or later sure to overcome. Such bills as that of this year ought to help on the reform, for it is plain that the amount of jobbery in it is unusually large. We are convinced that if the President had had time to examine it more carefully, he would have seen that the Chief Engineer's statement about the proportion of unworthy items in it fell far below the facts. If he had vetoed the bill and thus arrested the meritorious work now in progress, the responsibility would not have been upon him, but upon Congress. At the same time a veto would have had an excellent effect upon similar legislation in future in keeping down the number of jobs. Under the present system the members of both houses put into the bill the largest amount of jobbery which they think the President can be persuaded to let pass. If the President had taken the bold ground that even one flagrant job, like that of the Sabine Pass, was an adequate reason for a veto, we have not the slightest doubt that public opinion would have sustained him in his position.

The failure of the bill to stop the enormous frauds upon the public lands committed under the preëmption and timber-culture acts is justly chargeable to the House of Representatives. The requirement of the Senate that in cases where fraud is charged in past transactions the question of fraud shall be tried by the courts was perfectly proper. When the House rejected this fair amendment it elected to allow the frauds to go on to any extent, and assumed the responsibility for whatever may be done hereafter under the old system. In like manner the House stultified itself by refusing to accept the Senate amendment to the Northern Pacific forfeiture act. This measure proposed to restore to the public domain all the lands in Oregon and Washington Territory not earned up to the present time. That would have been so much gain to the settler. But no. In a grand burst of demagogy, the House insisted that unless all the lands not earned prior to 1879 were forfeited none should be forfeited—the company should take all or nothing. It is to be hoped that Mr. Cobb of Indiana and Mr. Payson of Illinois will explain to the hardy sons of toil the gains that they have made in behalf of homesteaders by refusing to take back any part of the public domain originally granted to the Northern Pacific Company.

Congressman Reed of Maine severely condemns the Democratic House for doing nothing, and taking so long to do it. The criticism is richly deserved. But when Republicans ask the country to elect a Republican House because of Democratic inefficiency, they must reflect that the record of the last Republican House was quite as bad. The session of 1881-82, under Speaker Keifer, was even longer than that of 1885-'86 under Speaker Carlisle, and, the day before it ended, a Republican Senator, Mr. Plumb of Kansas, concluded a long indictment of its failures by declaring that "the House had trifled deliberately with every interest of the country." The Democrats have made a wretched record; but when the country is asked to turn the control of the House over to the Republicans, the question will be, Where is the evidence that they will do any better than they did the last chance they had?

There are the best of reasons for believing that the resignation of Collector Hedden was at the request of the President. It is within our knowledge that his removal was not only decided upon more than a month ago, but that his successor was also virtually selected. There has been no doubt about Mr. Hedden's unfitness for the position since his conduct in the Sterling case, and no doubt whatever about the President's determination to supersede him. The effort to make his resignation now appear as due primarily to the death of Hubert O. Thompson is characteristic of the President's enemies, and no kind-hearted person can begrudge them this final opportunity for using Mr. Thompson's name as a club with which to assail Cleveland. His death was a great blow to them.

The death of Mr. Tilden removes almost the last of the old Democratic leaders; Allen G. Thurman being now the sole survivor of the representative men of the party who belonged to the Tilden generation. The Republicans have more of their old leaders still alive, but they have ceased to lead. During the session of Congress just closing no one of the many Senators and Representatives who have long been prominent in Republican councils has taken a single forward step, or shown any comprehension of the necessity for a positive and pronounced policy of progress if the party is to recover power. The only difference between the two parties is that the old Democratic leaders are dead, while the old Republican leaders are moribund. The only men who stir the popular impulses are the representatives of a new political generation, both at the North and at the South, and they are coming to the front under a President whose public life did not begin until long after the war era.

The liberality of Mr. Tilden's bequests for public purposes will probably surprise most people, but rather because of the rarity of such generosity among the wealthy men who have died of late years than because it is out of keeping with his character. About $4,000,000

of the $5,000,000 which is estimated to represent his fortune is left in the hands of three trustees for the establishment, support, and direction of public institutions. Large discretion is allowed the trustees, Messrs. John Bigelow, Andrew H. Green, and G. W. Smith, in the disposition of this money, but Mr. Tilden knew his men well, and was justified in intrusting much to their capacity and good sense. There seems no reason to doubt that it was Mr. Tilden's wish that, after deducting the expense of establishing free public libraries in New Lebanon and Yonkers, the bulk of his fortune should be devoted to a free public library in this city, and there is no better use which could be made of it. Political enemies will join his devoted followers in commending the spirit which prompted Mr. Tilden to leave so noble and enduring a memorial of his career.

Two more Democratic conventions came to the support of the President's policy on Thursday. The Kansas Democrats were unusually warm in their approval, declaring that they "heartily endorse the present Democratic Administration, and fully sustain the President in his intelligent, manly, courageous efforts to carry into practical effect the principles and doctrines laid down in the national Democratic platform," adding: "He has been faithful so far to his high trust, and his administration of national affairs has given assurance to the country that he meant what he said when he announced his fearless determination to do right whether offensive to friend or foe, and we join him in his sentiment that the perpetuation of the republic and of the liberties of the people is far paramount to the existence of any political organization." That is pure Mugwumpism, and must make the Old-Fashioned Democrats rub their eyes with consternation. The South Carolina Democrats appear to have been less unanimous, yet they adopted by a small majority a platform approving unequivocally the President's civil-service reform policy. All the official Democratic declarations thus far indicate that the President's hold upon his party is slowly but surely gaining in strength.

The Jacksonville *Times-Union*, the leading Democratic newspaper of Florida, has been a hearty supporter of the President's reform policy, and has insisted that in this attitude it only reflected the feeling of the masses of the party. That the *Times-Union* was right appears clearly enough from the action of the Democratic conventions which were held in the two districts of the State last week. Whatever discontent there might be among disappointed politicians would be pretty sure to manifest itself in such gatherings, yet not only was there no expression of dissatisfaction with Mr. Cleveland, but platforms were adopted which endorse his course, not merely in general terms, but particularly in the matter of the civil service. This resolution shows how Florida Democrats feel toward the President:

"Resolved, That in this, the first assemblage in Florida of representative Democrats since the inauguration of a Democratic President, we embrace the opportunity to congratulate President Cleveland upon the success of his efforts to bring the Government back to those principles of purity, integrity, and simplicity that have always formed the cardinal doctrines of the Democratic faith; and we note with satisfaction his steadfast fidelity to the promises of economical government and administrative reform that were made by himself and his party prior to the election which placed him in the chair of the chief magistrate."

Last week the Democrats of the Raleigh (N. C.) Congressional District met in convention to nominate their candidate for the Fiftieth Congress. The district has been represented with great credit by Mr. William R. Cox, who is now serving his third term, and who has gained a national reputation by his manly defence of civil-service reform against the assaults of Mr. Randall and other Democratic spoilsmen in the House a few weeks ago. Mr. Cox in that debate planted himself firmly upon the platform of reform, declaring that it was "the very genius and essence of democracy" to appoint men on account of merit instead of political influence, and heartily commended Mr. Cleveland as "an Executive who is endeavoring to faithfully execute a law which we placed upon the statute-book." Upon this record of belief in the reform principle and defence of the Civil-Service Law Mr. Cox submitted the question of his renomination, and the politicians of his party secured his rejection by the Convention, with the aid of a local "unwritten law" against a fourth term for Congressmen.

Such temporary victories on the part of the spoilsmen only render more certain their permanent defeat by arresting public attention and exposing the essential weakness of their cause. The surest way of promoting the acceptance of the reform principle is to get people to thinking about the question. When Mr. Littler of Illinois calls the Civil-Service Law an "infernal, unrepublican, and un-American measure," and the politicians shout, "That's right," the people will begin inquiring into the matter, and it will not take long for them to find out that, instead of there being anything "aristocratic" about the system, it is, as Mr. Cox called it, "the very genius and essence of democracy," because "it brings the offices within the reach of the people." When the voters have mastered this idea, they will make short work of the spoilsmen. The Illinois member of the Republican National Committee may denounce reform, and the Democratic office-seekers in North Carolina may reject a Congressman who has championed the law, but, as Mr. Cox declared in his speech in the House, "the reform will go on, despite the opposition of grasping politicians."

The Vermont Democrats cannot often elect any of their own party to office, but they manage to have a good deal of fun trying to foment dissensions in the other party. Their convention in Lamoille County last week adopted resolutions endorsing President Cleveland's administration, "and endorsing and warmly commending Hon. George F. Edmunds for his action in not supporting James G. Blaine in the late election." The motive in bestowing Democratic praise upon a Republican Senator is, of course, to injure his standing with his own party, but the scheme will fail. Republican county conventions have already been held in all but two or three of the counties, which have in all cases nominated candidates for the State Senate who endorse Mr. Edmunds, and there is no doubt that nearly all the Republican nominees for the lower branch will be men of the same mind. Mr. Edmunds will be reëlected, and he will be reëlected not only upon his anti-Blaine record in the campaign of 1884, but also upon his recent reaffirmation of his former attitude.

We notice an indisposition on the part of the Blaine press to mention Mr. Edmunds's interesting observation, that "if the Republicans go to the West and select some good, clean, upright man, with an honest record upon financial questions, a man who is above reproach," the party will have seven out of ten chances of success in 1888. Yet it seems to be an exceedingly sound observation. What other course can be mentioned which appears wiser? What the Republican party needs is unity, and a candidate who will poll its full vote. Mr. Edmunds describes the only kind of man who can do this; and when he says he must be found in the West, he undoubtedly means to exclude himself as well as Mr. Blaine. Is not that good advice also? With the prohibition revolt gaining strength every day, with the old bugaboo of danger from Democratic power destroyed, with the assessments upon office-holders and other resources for a large campaign fund taken away, can the party afford to nominate a candidate who is known to be objectionable to a large section of his party?

The generosity of the Government in the matter of pensions is illustrated by a case reported in a Montpelier letter to the Boston *Journal*. Mrs. Almira H. Farrar of Waterbury, Vt., has just received the large sum of $4,125 in cash as arrears, and the assurance of $15 a month as long as she lives, as the pension due a dependent mother. It appears that a son of Mrs. Farrar enlisted in the army in April, 1861, and was killed at Gettysburg in July, 1863, and the pension is allowed upon the ground that he was her only support. But it also appears that, when the soldier son died, Mrs. Farrar's husband and three other sons were alive, that the family lived on a good farm, well stocked with horses and cattle, and that these other sons are still alive and able to support the mother. It is not surprising to find that "there is considerable excitement among the neighbors" of Mrs. Farrar in the little town of 750 people where she lives, at her receiving in a lump sum what in that region is a fortune, upon the ground that one of her sons was killed in the army nearly a quarter of a century ago, and that she was dependent for support upon this particular one of her four sons. Such a case as this has a bearing upon the President's vetoes. When the Pension Bureau interprets the law so liberally as to grant pensions in cases like Mrs. Farrar's, it is obvious that there is small excuse for carrying to Congress cases which the Bureau is unable to allow, and that Mr. Cleveland was abundantly justified in vetoing many of the private pension bills.

The fall of silver to 40 pence per ounce has startled the great mining camp at Butte City, and word comes that unless something is done there will be a speedy curtailment of the production of that metal. Perhaps that is just the thing that is wanted to arrest its decline. The farmers have seen the price of wheat go down from $1.10 per bushel to about 80 cents, and the coal miners and the manufacturers all over the country have submitted to a corresponding "shrinkage in values." None of them have had the benefit of a law of Congress calling for the purchase of $2,000,000 worth of their products monthly out of the public taxes. This has been the exclusive "pull" of the silver miners, but it seems to have done them little good. The conclusion drawn by the gold-bugs and money-sharks all over the world will be that the decline of silver is a sign of "over-production," and that it is idle for any government or all governments together to resist the decline so long as the over-production continues. The truth is, that scientific advance in the processes for extracting silver from the earth has kept pace with other scientific growth, like the advance in the making of steel and the spinning of cotton. There has perhaps been a contemporaneous decline in the use of silver by mankind, but that is not certain. It is certain that while legislation may cause more of it to be coined, it cannot cause more of it to be used.

The labor unions of this city have decided to go into politics, and it is now proposed by them to hold a convention to nominate a candidate for Mayor and other officers on August 19. There can be no objection to this plan, and there is much to be said in its favor. For one thing, the vote polled will show the true proportions of the professional "labor vote," and that is certain to be a useful demonstration. In all previous instances where a labor candidate has been run, the result has been to show that where the labor agitators claimed thousands of followers they really had only hundreds. The showing has always been beneficial, for it has had the effect of keeping the labor issue out of politics for several years afterward. So long as the labor agitators confine themselves to claims as to their strength, they are able to have great influence upon the leaders of political parties. A striking illustration of this has been afforded by Gov. Hill, who has given the representatives of labor more offices than they could ever hope to get by popular vote. Of course, rewards of this kind will cease when the labor party runs its own candidates and polls, as it always has done, only a few votes.

The struggle between the Knights of Labor and the cigarmakers' unions culminated in a free fight at the regular Sunday meeting of the Central Labor Union. It was only a week ago that the Central Labor Union decided to go into politics, and on Sunday it received its first lesson in politics from some of its own members. Under the leadership of James E. Quinn, the Knights of Labor "packed" the meeting as thoroughly as Barney Biglin ever packed a primary. Quinn had 183 men in the hall, seated in a compact mass, when the other delegates began to arrive. The first formal ballot showed that he had twenty more votes than the other side. As soon as this appeared, the Knights began to decide every question in their own favor. Finally, they moved to "repeal" the action of the previous Sunday, by which the Central Labor Union had pledged itself to sustain the cigarmakers' unions in their contest with the Knights of Labor. Then trouble began. It was declared that a motion to reconsider required a two-thirds vote, but the Knights got around this by saying they had not moved to reconsider, but to repeal, and then their 183 men voted to repeal. As soon as the vote was declared the two factions fell upon each other, and a free fight followed, in which some blood was drawn. In the midst of the uproar the police appeared, and the meeting was adjourned by a rush of the fighting delegates for the street.

There can be no question after this about the presence of "politics" in the Central Labor Union. Sunday's meeting was strikingly like a political caucus, which either a Tammany or a County Democracy or a Republican ward faction might have held. There have been hundreds like it held in this city in recent years, and we suspect that Quinn acquired his experience in some of them. The significant aspect of the affair is the appearance of such methods in a controversy between two bodies of laboring men. They are not fighting with capital in any form, but are flying at one another's throats to keep one union from being absorbed by another. In fact, this is the first violent attempt which has been made to keep the Knights of Labor from carrying out the chief aim of their order, which is the consolidation of the entire laboring classes in one great body. As we have steadily pointed out, the fatal obstacle to this aim is the fact that if it could be accomplished it would only result in a combination of all laborers to get the advantage of each other. The laborers themselves are finding this out now, and the discovery is hastening the dissolution of the Knights of Labor more than even Mr. Powderly's speeches.

The testimony of City Chamberlain Ivins in the Squire case furnishes a picture of the city government of New York without a counterpart in the civilized world to-day, and without a precedent unless the doings of the Tweed Ring may supply a parallel. According to theory the government of the city is vested in the Mayor and other elected and appointed officers. In point of fact, it is, or was until a few days since, vested in Hubert O. Thompson, Maurice B. Flynn, and Richard S. Newcombe, three private citizens, who had the joint custody of the Commissioner of Public Works by means of an incriminating letter which they, or some of them, had compelled him to sign. This Commissioner of Public Works was a member of the new Aqueduct Board, and had the casting vote there. The three private citizens had virtually obtained the taxing power over real and personal property in New York city. Their Commissioner of Public Works, being a giddy creature who did not know how to behave, gave them some uneasiness, or possibly was not able to satisfy all of his masters at the same time. So one of them gave up the incriminating letter. The real situation of the government of New York was thus revealed. While the picture is not exactly surprising, it is one which ought to and undoubtedly will make the taxpayers very angry, without distinction of party or previous condition of servitude, just as a man who has been long aware that his chickens are disappearing, becomes suddenly indignant when at last he catches the thief.

The trial of Cutting will perhaps clear the heads of the swashbucklers, Gubernatorial and other, by the evidence showing that the prisoner defied the Mexican court on Mexican territory in a very aggravated manner. It is at least a debatable question whether Cutting did not make himself amenable to the *lex loci* when, after repeating the original offence, he placed himself voluntarily in the jurisdiction of the offended tribunal. This position is maintained with much force by a writer in the *Times*, and it is certainly conformable to reason. Any sympathy that might be extended to Cutting personally as a victim of foreign persecution is neutralized by the wholly gratuitous character of the insult which he flung at the court. The trial which took place on Friday differed in no wise from similar proceedings in our own courts, nor is any reason perceivable why the judge should not have sentenced the prisoner to the full penalty of the Mexican law. It would be most unfortunate if our Government should seek to impair the administration of justice in a neighboring republic without some reason which will stand the scrutiny of the civilized world. A fitting rebuke has been administered to Gov. Ireland by the sober-minded inhabitants of El Paso in the form of a protest, "signed by nearly all the lawyers, bankers, merchants, and business men" of that town, declaring that they have entire confidence in the intention and ability of the present Administration to protect American citizens abroad, and that they look for a settlement of the existing difficulty in an amicable manner and without dishonor to either nation.

That the spirit of patriotism is still alive may be wisely inferred from the reported enlistment of a company of volunteers in Pennsylvania for service against Mexico in case war is declared against that republic. It was a mistake, however, on the part of the gallant captain who recruited them to tender their services to the President, or to anybody in Washington city. They should have been offered to Governor Ireland of Texas. Congress having adjourned without declaring war, the President is really powerless to accept the services of volunteers, but no such limitations restrain the Governor. Mr. Ireland is committed to the opening of hostilities at an early day. Having received the endorsement of a public meeting at Vicksburg, and being sure of support from Shamokin, Pa., we look to see him on a war footing almost any time.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 4, to TUESDAY, August 10, 1886, inclusive.]

DOMESTIC.

CONGRESS rapidly closed up its work on Wednesday. The House agreed to the amended surplus resolution, 120 yeas to 63 nays, and the Senate accepted it without a division. It then went to the President. By noon on Thursday the appropriation bills were all signed, including the River and Harbor Bill. To a reporter the President explained that an examination of the River and Harbor Bill in the light of the facts presented to him by Gen. Newton, Chief of Engineers of the Army, and Gen. Parke of the Engineer Corps, with whom the President conferred on the subject, had convinced him that on the whole the interests of the Government demanded its approval. Gen. Newton assured the President that of the items in the bill all but eighteen in number, comprising less than one per cent. of the amount appropriated, were meritorious beyond question, and while he in no manner condemned those, he was unable to give a positive opinion because of lack of complete information concerning them. The President said he had gone over the bill as fully as the data at hand and the time permitted him for that purpose allowed, and while some of its provisions not included in the items above mentioned were probably objectionable, he was satisfied that the most of the improvements provided for were of great importance. The present bill is smaller than that for any like period in several years. The appropriation for the period ending in 1883 was $18,988,875; that for the period ending in 1885 $14,948,300; and this for the period ending 1887 is $14,473,900.

The Morrison surplus resolution failed because not signed by the President before adjournment. The conference committees could not agree on a Fortifications Bill, and it also failed. At four P. M. on Thursday Congress finally adjourned until December.

Mr. Allison, at the close of the session of the Senate on Wednesday, made a very interesting financial statement. There will be, he said, $10,000,000 more surplus the present fiscal year than there was the last. The total appropriations for the fiscal year 1886–'87 are $264,783,579; those for the same purposes for the year 1885–'86 were $219,595,283. The increase is in round numbers $33,000,000, made up largely of the increase of pension appropriations ($16.000,000) and of the River and Harbor Bill ($14,000 000.) Deducting the river and harbor appropriation — which was not made last year — and deducting the increase of pensions, the appropriations for the current operations of the Government are $2,547,823 in excess of like appropriations for last year. The deficiencies for last year were $4,000,000, while for this year they are $13,000,000. If the appropriations as here stated shall be expended during the present fiscal year, and the revenues shall be what they were last year, there will still be a surplus of about $47,000,000 above the expenditures. In this statement the sinking fund is not included. The permanent appropriations of the Government, including the sinking fund, make an aggregate of $118,910,000; deducting the sinking fund, a total of $72,000,000 remains. The total of the appropriations is $264,783,579, including the entire appropriations for the Post-office Department. This makes the total expenditures, exclusive of the sinking fund, and including the Post-office appropriation, $336,934,534.

The President on Wednesday withdrew the nomination of H. F. Beecher to be Collector of the Puget Sound District, owing to the Senate's unwillingness to confirm him.

The President has renominated Mr. Matthews (colored) to be Recorder of Deeds for the District of Columbia.

Daniel Magone of Ogdensburg, N. Y., was on Tuesday appointed Collector of the Port of New York, to succeed Mr. Hedden (resigned). Mr. Magone is the President's personal choice. He was determined upon fully three weeks ago. He is expected to carry out the letter and spirit of the President's civil-service-reform policy, and to take no part in the factional contests in New York city. Mr. Magone is the most widely known lawyer in northern New York. He was for some time a member of the Democratic State Committee. In 1876 he was Chairman of it, and to his energy, push, and bold methods Mr. Tilden was under special obligation for the way in which he carried this State for the Presidency. In all party matters since 1875 he has been closely allied with the Tilden wing of the party, and has been the trusted political friend of Daniel Manning.

The National Civil-Service Reform League held its annual meeting at Newport, R. I., on Wednesday. George William Curtis, the President, delivered the opening address. Among the resolutions adopted were the following: "We declare our adherence to the following principles: (1.) Appointment for merit only. (2.) Merit to be ascertained wherever practicable by open competitive examinations, and tested by probation. (3.) No removal for partisan reasons or merely to make places for others. We regard with satisfaction the recent circular of the President warning employees of the Government against undue political activity, because it is a public pledge of the sincere and courageous Chief Executive that, so far as depends upon him, this gross abuse and public wrong shall cease We ask the President to extend the application of the civil-service rules to the District of Columbia, to the postal mail service, to the mint service, to the clerical force of the Indian service, and to the other offices where a smaller number of clerks than fifty are employed, and as much further as may be practicable, for the reason that open competitive examinations provide a better way to ascertain the qualifications of applicants for office than the secret recommendations from irresponsible persons. We ask the Senate of the United States hereafter to consider the nominations to office in open session, so that the people may know the reasons for the appointment or rejection of their servants. Public officers intrusted with the power of appointment and removal should be required by law or executive order to put upon record, in every case of removal, the reasons thereof. Appointing officers, when in the exercise of their discretion they do not select those rated highest on the eligible lists presented to them, should in each case be required to file reasons for such action. Acts which limit the terms of subordinate officers to four years should be repealed."

The American editor, Cutting, was tried at Paso del Norte on Thursday. The Prosecuting Attorney said that the case hinged upon the written agreement between Medina and Cutting called "an act of reconciliation," which was broken and made void by the publication of Cutting's article in the El Paso *Sunday Herald;* that Cutting's breach of contract gave Medina a perfect right to continue his case against the prisoner, and in support of this view he quoted article 656 and section 5 of article 657 of the Mexican Code. The counsel for Cutting then argued that the former action had ended the claim of Medina, that Cutting did not voluntarily break any Mexican laws, and that is why he went so far away to republish his card; also, that if the offence was punishable, there were many reasons why the punishment should be as light as possible. Mr. Cutting was then offered a chance to speak, but simply stated that he could not recognize the court, and that he was in the hands of his Government. The Judge then pronounced him guilty and the court adjourned. On Saturday Cutting was sentenced to one year's imprisonment at hard labor and a fine of $600. On Monday he was taken into court, and told that his attorney had appealed his case to the Supreme Court of the State, and that the appeal had been granted.

Secretary Bayard, speaking to a correspondent of the Cutting case, said he saw no reason why a satisfactory adjustment of the difficulty should not be reached. He had been assured that such was the desire of the Mexican Government. Señor Romero, the Mexican Minister at Washington, said some days ago that his Government would promptly settle the matter.

President Diaz of Mexico, in a talk on Wednesday on the same matter, said: "I have no apprehension of difficulties growing out of such an insignificant affair, which is really only a quarrel between two disreputable journalists. I think that the United States Government was a trifle hasty in the matter, owing probably to early and inaccurate and one-sided reports."

The text has been published of an extradition treaty with Japan, which was signed on April 29, 1886, and sent to the Senate by the President on June 9. It was referred to the Committee on Foreign Affairs. There are a number of provisions to which, it is understood, Messrs. Edmunds and Evarts objected. Chief among these is that contained in article vi. of the treaty, which provides for the detention for two months of a criminal whose extradition has been demanded by telegraph. This time limit, it is thought, is not, in the case of so distant a country as Japan, sufficiently liberal. These details the Japanese Minister is authorized to perfect, subject of course to the approval of the Imperial Government of Japan. The treaty is to be taken up early in the beginning of next session.

The South Carolina Democrats on Wednesday nominated State Treasurer Richardson for Governor, defeating B. R. Tillman, the farmers' candidate. One of the resolutions says: "We heartily endorse the wise, patriotic, and statesmanlike administration of President Cleveland and his Cabinet." On Thursday the Convention, by a majority of four, passed a resolution in favor of civil-service reform.

The Kansas Democrats on Wednesday nominated Thomas Moonlight for Governor. The platform "heartily endorses the present Democratic Administration, and fully sustains the President in his intelligent, manly, courageous efforts to carry into practical effect the principles and doctrines laid down in the national Democratic platform upon which he was nominated as the choice of the national Democracy for the Presidency of the United States."

At the Tennessee election on Thursday the entire Democratic judicial ticket was elected.

The Grand Jury of this city on Tuesday found indictments against Rollin M. Squire and Maurice B. Flynn, charging them with misdemeanor in entering into a compact whereby Squire was to conduct the business of the Department of Public Works in the interest of Flynn. Both men were put under arrest and admitted to $10,000 bail each.

Samuel J. Tilden died peacefully at Greystone on Wednesday morning at 8:45 o'clock. Although he had long been in failing health, his end was unexpected. Messages of sympathy were sent to his relatives by President Cleveland, Gov. Hill, and other distinguished gentlemen. The House of Representatives immediately passed a resolution of condolence.

Mr. Tilden was born at New Lebanon, N. Y., on February 9, 1814, studied at Yale College and the University of New York, and prepared for the law. Early in life he took an active interest in political questions, and when eighteen years old he wrote an analysis of the political situation in this State—when the coalition of National Republicans and anti-Masons threatened the supremacy of the Democratic party here—which was printed in the Albany *Argus*, and was so clever and finished a piece of work that it was generally attributed to Van Buren. As a lawyer he

rapidly gained a notable reputation, and continued his practice until he was nominated for Governor in 1874. His analytical powers were naturally great, and his arguments in court and his examination of witnesses showed the perfection of method. He was employed in many very important corporation cases. Among the minor offices which he held were member of Assembly in 1846, member of the State Constitutional Conventions in 1846 and 1866, and Chairman of the Democratic State Committee. The Tweed Ring manifested their dislike and fear of Tilden some years before their exposure came, and in 1869 they tried to get rid of him as Chairman of the State Committee, but did not succeed. When in 1870 the Ring charter was prepared and Tweed inveigled a good many honest citizens into its support, Mr. Tilden went to Albany and argued strongly against it. But the charter was passed and became a law. When the exposure of the plundering done under that charter came, Mr. Tilden at once took a leading part in bringing the guilty men to justice. In the State Convention of 1871 he declared open opposition to the Tweed candidates for the Legislature, and in 1872 he consented to become a member of the Assembly, that he might give the lawmakers the assistance of his counsel in straightening out the affairs of this city. His work in finally overthrowing the Ring was very effective. As a part of the warfare against the Tweed Ring came the warfare on the corrupt judges in this city. Mr. Tilden had taken an active share in the formation of the New York Bar Association in 1869-70, and he was very prominent in the work of putting Barnard, McCunn, and Cardozo off the bench. In 1874 the Democratic party in this State nominated Mr. Tilden for Governor. The vote stood Tilden 416,391, Dix 306,074. He took office on January 1, 1875. For many years previous to that time a ring had had control of the canals of the State, and its conduct was scarcely less scandalous than that of the Tweed Ring here. One of the most notable acts of his Governorship was the sending of a message to the Legislature denouncing this ring. The dishonest system was broken up, and the Constitutional Amendment ratified a few years later established the canals on a new and better system of government. In 1876 Gov. Tilden was nominated for President by the Democrats. The election resulted in the famous electoral dispute and the seating of Mr. Hayes by the decision of the Commission. Mr. Tilden was proposed as a candidate again in 1880, but a letter was read from him refusing to allow the use of his name. Since that date he has lived quietly, most of the time at his country house on the Hudson, with occasional visits to his house on Gramercy Square.

The funeral services of Mr. Tilden took place at Greystone on Saturday. A very distinguished company was present, including President Cleveland and Secretaries Endicott and Manning. Simple religious services were conducted by Dr. Wm. J. Tucker of Andover, Mass. The body was then taken to New Lebanon, where it was interred.

The will of Samuel J. Tilden was read at Greystone on Monday afternoon. It is a very long document, bequeathing an estate which is estimated at about $5,000,000. The disposition for public uses of the bulk of the property is left to the discretion of three trustees, who are John Bigelow, Andrew H. Green, and George W. Smith, Mr. Tilden's confidential secretary. Mr. Tilden gives to his sister, Mrs. Mary B. Pelton, the house in which she lives and the income from $100,000. For each of the other relatives he sets aside a certain sum to be held in trust by the executors, the income to be paid them during their lives, they, however, to have power to dispose of the principal at death. All the rest of his property is left in trust to the trustees, who are also executors, to be applied to several public uses. The will provides for a free public library and reading-room in New Lebanon, and another free library and reading-room in Yonkers. It suggests to the trustees the establishment of a great free library in this city.

Mr. Tilden sent this letter to President Cleveland dated February 28, 1885: "Your silver letter is absolutely perfect. It is the only silver thing I know of that transmutes itself into gold."

Dr. John Maclean, President of Princeton College from 1853 to 1868, died in Princeton on Tuesday at the age of eighty-six.

FOREIGN.

At a meeting of the Parnellites in Dublin on Wednesday, it was resolved that no measure offering less legislative and executive control over Irish affairs than does Mr. Gladstone's bill should be accepted as a settlement.

If the British Government declines to deal with evictions, Mr. Parnell will ask permission to introduce a bill dealing with the subject.

A meeting of Liberal-Unionists was held in Devonshire House, the residence of Lord Hartington, on Thursday. Lord Hartington presided, and among those present were Messrs. Joseph Chamberlain, Rylands, Heneage, Caine, and Jesse Collings. Lord Hartington, in a long speech upon the coming Parliamentary work, proposed that all attitude of hostility towards the adherents of the late Government be abandoned. The Liberal sections should coöperate in an endeavor to secure the enactment of useful legislation, and oppose unitedly all proposals looking to the separation of the empire. He said the consolidation of the party was only a matter of time. Towards that end the Unionists should at once identify themselves with the rest of the Liberals by taking seats in the House of Commons among them. He reiterated his opinion that the split in the party would soon heal. Mr. Chamberlain followed Lord Hartington. He said he would willingly accept the leadership of Lord Hartington, with whom he was in entire and cordial sympathy. He declared that such action as Lord Hartington proposed would speedily restore the unity of the party. The Unionists, he said, were the real victors at the late elections. Mr. Chamberlain's remarks were received with enthusiastic cheers. A resolution was unanimously adopted that the Radical and Whig Unionists should work together, and that the leaders who are privy councillors should claim seats in the House of Commons on an equality with the Gladstonite leaders. The meeting unanimously endorsed the sentiment of the speakers.

Parliament met at two P. M. on Thursday, and proceeded with the usual formalities to reëlect the Speaker. The chief feature of interest was the presence of Lord Hartington and Mr. Chamberlain by the side of Mr. Gladstone in the front Opposition bench. When Mr. Gladstone saw Mr. Chamberlain, he arose and went over to the Radical leader, shook hands with him cordially, and held a conversation with him and with Lord Hartington. Mr. Gladstone looked extremely well.

After a consideration of Lord Hartington's speech, the conversation of members returned to town goes to show that there is little clearing up in the chaos of parties. Mr. Chamberlain has declared that he will not vote upon any subject which might have the effect of returning Mr. Gladstone to power so long as the latter remains unchanged on the Irish question. If some distinct question of Radicalism versus Toryism arises, Mr. Chamberlain cannot vote against it except at the risk of stultifying himself, nor vote for it without helping Mr. Gladstone's return. Lord Hartington announces that the Unionists will not help the Liberals force a premature expression on the Irish policy from the Conservatives. On the other hand, Mr. Chamberlain's new caucus, the so-called Radical Union, has decided to support Alderman Cook, the home-ruler, against Mr. Henry Matthews, on the latter's seeking a re-election for East Birmingham on his appointment to the Home Office. In the face of such contradictions no one knows what to expect.

The London *Times* says: "While it must freely be conceded that the Unionists, if they succeed in their bold effort to reconvert the Liberals to old principles, will be doing the country the greatest service, it is vain to ignore the dangers to which their attempt will expose them. The separatists being numerically larger, the tendency will be to absorb the smaller body. Although Lord Hartington and Mr. Chamberlain will coöperate on the Irish question, ulterior debatable questions that are certain to be raised will divide them."

The House of Commons adjourned on Tuesday to August 19.

Rioting was renewed in Belfast on Saturday evening and continued unabated during Sunday and Monday. Time after time the police fired on the mob, and on Monday the military were called out in force, 1,200 reinforcements arriving from other cities. More than eleven people were killed and 130 wounded. The city, owing to the wreck and ruin of houses, presents a deplorable aspect. Its appearance is similar to that of Paris after the Commune. Comparative quiet was restored on Tuesday, though there were apprehensions of renewed trouble.

The difference which has prevented the British and Russian members of the Afghan Boundary Commission from arriving at an agreement has been settled, and the work of the Commission is drawing to a conclusion.

The state of affairs in Burmah is, and has been ever since the British occupation, one of political discord and social confusion. In consequence of this the British Government in India has decided to intrust the supreme command in Burmah to Maj.-Gen. Sir Herbert Macpherson, Commander-in-Chief in Madras. Five thousand troops will be sent into the country as soon as the cold season commences, to scour it and drive out or subdue the insurgents, and 1,000 additional police will be sent from India to maintain order.

The Emperors William and Francis Joseph met at Gastein on Sunday and Monday, and had a long interview.

A meeting of all the Bonaparte family except Prince Victor will be held on the 15th inst. Prince Jerome Bonaparte will preside. The object of the meeting is to unite the Royalist party. Prince Victor declines to attend, on the ground that he alone represents the Empire.

One hundred and fifty thousand new subscribers have applied for the new bonds issued by the Panama Canal Company. The number has exceeded the most sanguine hopes of the company.

Honorary degrees have been conferred by the University of Heidelberg upon Prof. Alexander Graham Bell of Washington, Prof. Edward D. Cope of Philadelphia, Prof. Othniel Charles Marsh of New Haven, Prof. Simon Newcomb, Superintendent of the *Nautical Almanac* at Washington, and Prof. John W. Powell, director of the Geological Survey.

Prof. William Scherer, the German historian and author, is dead, in his forty-sixth year. In 1864 he obtained his diploma at Vienna, where four years later he succeeded Pfeiffer in the chair of German literature. In 1872 he took the same chair at Strassburg, and in 1877 at Berlin. His published works deal specially with German literature and history. Among them are: 'Monuments of German Poetry and Prose' (1864), 'Religious Poets of the German Empire' (1874), 'The Origin of German Prose Romance' (1877), 'History of Alsace' (1871), and a 'History of German Literature' (2d ed., 1884).

The Presidents and ex-Presidents of the Central American republics of Salvador, Nicaragua, Honduras, Costa Rica, and Guatemala have been in Mexico arranging a plan for the union of those states in one confederation.

THE EXTRADITION TREATY.

THE Senate has adjourned without ratifying the new extradition treaty with Great Britain, but it would be a mistake on the part of intending embezzlers and defaulters to suppose that their interests were considered in the premises. The effect of non-action is to continue the existing immunity for every species of crime that anybody may choose to commit except "murder, piracy, arson, robbery, and forgery," the five offences named in the Treaty of 1842; since anybody committing a crime can put himself on British territory within a few hours, and generally before the crime is discovered. In a paper contributed by Mr. George H. Adams of New York to the *American Law Review* (July-August) it is shown how the mere fact of the enumeration of these five crimes has tended to make extradition more difficult than it commonly is between countries which have no such treaty. Murder, for instance, means the taking of human life by premeditation. It excludes all homicides, however heinous and unjustifiable, of less degree than murder, and excludes, of course, unsuccessful attempts to commit murder. Forgery under the treaty is held to be the act or acts known and described as forgery when the treaty was made—that is, forgery at common law. In the Eno case it was held that, although the statutes of both countries had declared the acts committed by Eno to be forgery, yet since they were not so in the year 1842, he could not be extradited. In a case quite as remarkable it was held in this country that, although a fugitive from English justice had, in the opinion of the court, been guilty of forgery at common law, yet, since the English courts had held that it was not forgery at common law, the party could not be extradited. Indeed, remarkable ingenuity has been put forth on both sides to reduce the existing treaty to its lowest terms. Diplomacy has sometimes aided in the escape of rascals of high degree, as in the well-known case of the forger Winslow, who was apprehended in England. An act of Parliament passed subsequently to the Treaty of 1842 prescribed that stipulations should be made with governments to whom fugitives were surrendered that they should not try the surrendered person for any other offence than that for which he was extradited until he should have had an opportunity to return to British territory—this by way of protecting political refugees. Secretary Fish refused to give any such stipulation as to Winslow, not because it was desired or intended to try him for any other crime than forgery, but because the Treaty of 1842 was absolute in its terms and called for no stipulations. So Winslow went scot free, and all extradition between the two countries was suspended for a time. It should be added that the authorities, both American and foreign, were opposed to Mr. Fish's contention in this case.

The laws of the two countries respecting the punishment of crime and their administration are so nearly alike that if no such thing as an extradition treaty had ever existed, it would be easy for either country to provide for the rendition of criminals by passing a law naming all the crimes in the calendar, and providing that persons should be delivered up, on proper demand, to any country which should enter into reciprocal relations as to those crimes. This is what Great Britain has done by the acts of Parliament of 1870 and 1873, and her offer has been accepted by nearly all civilized nations. By reason of contiguity of territory and identity of language, unusual facilities are offered to our criminal classes for escape to British jurisdiction. So much has the highway to Canada been thronged with fugitive bank officers and embezzling clerks, that a large portion of the public have come to regard British courts and society as having strong prejudices against the rendition of criminals, if not a secret liking for those who run away with other people's money. The facts are precisely the contrary. We have had the option of accepting the terms of enlarged extradition, which includes all crimes, from murder down to fraudulent bankruptcy, any time in the past thirteen years, and we have that option now. We are not even confined to the Phelps-Rosebery Treaty. It rests with us to put an effectual bar across the thieves' highway to Canada. If there is a flourishing colony in Montreal composed of people who are "wanted" in New York and other American cities, the fault is altogether our own. Any safe-blower or counterfeiter who can get across the border with his plunder is secure (provided his act was not accompanied by violence to any person so as to bring it under the definition of robbery), simply because we have chosen that it should be so. Why we have so chosen is because we had a "miff" with Great Britain about the Winslow case, ten or twelve years ago, and because our State Department has adhered to the untenable position taken by Mr. Fish.

The non-action of the Senate in the Phelps-Rosebery treaty must be ascribed to the doubts entertained by our politicians regarding the political effect of the dynamite clause in the treaty. This species of crime was not embraced in the English extradition acts of 1870 and 1873 because it was not then known. It is a more recent invention. Supposing, therefore, that the "miff" arising out of the Winslow case has been gotten over by lapse of time, or by change of administration, so that the two countries can take up the subject of extradition in a suitable spirit, the question would naturally present itself to the negotiators, Shall we follow strictly the lines of the general law of Great Britain, or shall we take the opportunity to add any new crime that may have been spawned by the powers of darkness since that law was passed? The use of dynamite as a persuader to social change is not confined to either country. The Chicago Court-house is as much exposed to blowing up as the Tower of London or the Parliament-house at Ottawa. Shall we improve this occasion to provide for the recapture of this class of offenders? It would have been easier for Minister Phelps to have accepted the English statutory schedule of crimes. Lord Rosebery could not have refused to negotiate on that basis since it was a completed part of English legislation and diplomacy. Nor could Great Britain consistently refuse to ratify the remainder of the treaty now if the Senate should strike out the dynamite clause. Probably the treaty will be ratified after some further delay, but the debate and the vote upon it ought to be public. There are few questions upon which a keener interest is felt.

THE "POOR NEGRO."

ONE of the most important developments of the late session of Congress has been the exposure of what may be called the "poor negro" humbug. Ever since the black man was emancipated and enfranchised it has been the rôle of Republican politicians to profess a lively concern about his future, and to assert that one of their chief aims was to secure him in the possession of all the white man's rights and privileges. On the day after the election of 1876, when Mr. Hayes supposed that Mr. Tilden was to become President, he lamented the result chiefly on behalf of the negroes, who would lose the protecting care of a Republican President. In every national campaign the Republican managers have appealed to hesitating voters to support their candidate, on the ground that the safety of the colored race depended upon the maintenance in power of the Republican party.

It has long been obvious enough to careful observers that there was a vast deal of hypocrisy about these professions, but so long as the Republicans remained in power, it was impossible to expose the humbug. A single session of Congress under a Democratic President has sufficed to show the truth. Mr. Cleveland applied a test to the Republican Senate which has demonstrated conclusively the real temper of Republican politicians toward the negro. For the office of Register of Deeds for the District of Columbia, the President nominated Mr. James C. Matthews, a colored man of marked ability resident in Albany, whose fitness for the place is not questioned. The office is a lucrative one, and, naturally enough, the selection of a negro to fill it was exceedingly distasteful to the many white applicants. But, of course, a Republican Senate would care nothing for such objections, and it was to have been expected that the nomination would be promptly confirmed. Instead of this, the committee to which it was referred delayed action upon the case for many weeks, and, when it was finally brought to a vote, almost all the Republican Senators refused to vote in favor of Mr. Matthews.

The adherence of the Senate to the secrecy of executive sessions unfortunately prevents the publicity which is always desirable in the case of contested nominations, and especially in such an instance as this. But the main facts about the rejection of Mr. Matthews are notorious. A pretence was made that he was rejected because he was a non-resident of the District of Columbia, but that this was a mere pretence is perfectly obvious when one reflects that a large number of white Democrats have been confirmed without opposition by the same Senate for Federal offices in Territories where they did not reside. The real reason why Mr. Matthews was rejected was because he was a Democratic negro,

and Republican Senators did not believe in encouraging negroes to vote the Democratic ticket. Mr. Ingalls of Kansas, who often displays a cynical frankness, is quoted as having admitted without any reserve that the reason why he and his party colleagues were against the nominee was, because they thought that the occupancy of so important an office by a negro upon the appointment of a Democratic President would tend to weaken the hold of the Republican party upon the negro vote.

There could not have been a more forcible demonstration of the hypocrisy of Republican professions about the negro than this action of a Republican Senate. To every right-minded person the fact that a Democratic President is ready to appoint a negro to so high a station in the capital of the nation is a cause for rejoicing, as remarkable evidence of the decay of prejudice. But the Republican politician, so far from congratulating the negro that both parties are ready to recognize his ability, is filled with dismay because he fears that his own party is going to lose its hold upon the black man if the black man finds that he fares tolerably well with the other party. It is plain that the best thing which could befall the colored race would be the breaking down of the old Democratic prejudice against it; the Republican politician sees that the breaking down of this prejudice would inevitably split the negro vote in halves, and he does his best to maintain the ancient wall.

It is only when such an incident as this happens that we realize the odious tyranny over the negro which the Republican politicians have established. The black man has never been treated by the Republican managers, he is not treated by them now, twenty years after his emancipation, as a free man in his political relations. He is regarded simply as the property of the Republican party. It has actually been the custom of Republican politicians to consult the census in order to find out how many men with black skins there were in a Congressional district, and then to question the fairness of the election if the count did not show as many Republican votes as there were colored men. If a man had negro blood in his veins, and voted the Democratic ticket in 1884, as Mr. Matthews did in company with so many old-time white abolitionists, he was denounced — as Mr. Matthews is denounced to-day by that Republican organ, the Albany *Evening Journal* — as "a renegade," "an ingrate," "a hypocrite," a "creature," and "opposed to the interests of the colored race" — as though the interests of the colored race in the United States were different from those of the white race, and as though a man with a black skin, simply because of the color of his skin, were bound to be the political slave of a party as completely as he was the physical slave of a master before emancipation.

The rejection of Mr. Matthews by the vote of Republican Senators is one of the most fortunate things for the colored race that could have happened. It cannot fail to open the eyes of negroes to the hypocrisy of the talk with which Republican politicians have so long deluded them. They will see that the interest of these politicians in the negro is as a Republican voter; that when he casts his ballot with the other party, they have no further use for him. It is a good thing to have this fact made plain. It will hasten the day when negroes shall divide between the two parties precisely as white men do, and when the odious color line shall be finally wiped out.

A NOTABLE VICTORY FOR REFORM.

THE Democratic State Convention in South Carolina last week possesses a national interest from the fact that there was a sharp fight over the civil-service question and a notable victory for reform. This is the first time that an issue has been made over this question in any Democratic convention since Mr. Cleveland was inaugurated, the usual practice having been to adopt some deliverance couched in general terms, with which neither the spoilsmen nor the reformers were disposed to quarrel. But in South Carolina there was an open contest as to whether the Convention should endorse the merit or the spoils system, and the result of such a contest in a representative State of the "solid South" is of the first importance.

The Committee on Resolutions reported a platform which contained half-a-dozen planks regarding State and national affairs, but made no reference whatever to the civil-service question. A motion was made to adopt the platform, and it was about to be put and carried in the usual way when Capt. F. W. Dawson, editor of the Charleston *News and Courier*, called attention to the fact that, although nearly identical with the platform adopted in 1884, there was one omission which seemed to be of great importance in view of the record of the party on the subject, to wit, the following plank:

"Civil-service reform, appointments to minor offices under tests that will indicate the qualifications of the applicant, promotion by merit, a fixed tenure of office, and no removals except for cause."

Capt. Dawson moved that this plank be inserted in the platform as reported by the Committee, and supported his motion in an emphatic speech. He pointed out that the Legislature had taken a clear and unmistakable stand on this question, resolutions covering the same ground having been adopted by that body at two separate sessions and almost without dissent. He reminded the Convention that one of the State's Senators, Gen. Butler, is "a stanch advocate of civil-service reform," and that the other Senator, Gen. Hampton, has gone so far as to propose that it be made an offence for a member of Congress or a Senator to urge, unsolicited, the appointment of any person to public office. He declared that to omit now the old and familiar declaration in favor of the reform, when the Democracy of the State has been in the past "planted squarely upon the bed-rock," would place the party in a false position, and would be regarded as a change of policy, and even as a repudiation of the broad and wise principle which before had been accepted as its guiding principle. He recalled the fact that Grover Cleveland was elected upon a reform plank in the platform of the last Democratic National Convention, and declared that it is his record on this issue "which goes so far to give him his present enormous strength among the people of the United States." Capt. Dawson concluded as follows:

"I cannot believe that the South Carolina Convention, with the previous history and record of the party before it, will repudiate the principle of civil-service reform as expressed in the amendment, and rebuke President Cleveland himself by telling him at this day, and after the grand victory that has been obtained, that the South Carolina Democracy are not in sympathy with him and are ready to turn their backs upon him and the policy and the principle he represents. I am confident, Mr. President, that the Convention will stand by its old landmarks, and in adopting the amendment which is proposed will keep itself in the position that it has held for years—the position which it asserted before the triumph was ours, and which we assert unswervingly now that the Democratic party holds power."

Capt. Dawson was loudly cheered during his speech and at its close, but the spoilsmen did not propose to yield without a struggle. Capt. T. H. Clarke, a delegate from Kershaw, declared against the proposed amendment, and said that "he felt that the old principle of Jackson was right, that to the victor belonged the spoils." Mr. Murray of Anderson opposed the amendment, and said that "he was of the opinion that the present Civil-Service Law was not in accordance with the genius of Democratic institutions. The rascals should be turned out, and honest, faithful, and true Democrats substituted." Col. Haskell of Richland spoke strongly against the proposed amendment. "He believed the present Civil-Service Law tended towards keeping Republicans in office. He regretted as deeply as any one that this matter of civil-service reform had been brought into this Convention, but since it had been brought in he would vote against the addition of any plank to the platform."

Other speakers supported the amendment, Mr. Murphy of Colleton, for example, saying that "if it was a right and proper plank to put in the platform of 1884, when we wanted to elect a Democratic President, it was a proper plank to be put in the platform of 1886, now that Grover Cleveland had been elected." Finally a vote was taken upon a motion to lay the reform amendment on the table. As the roll-call proceeded it was seen that the contest would prove a very close one, but when the end came it was found that the spoilsmen had been beaten, the motion to table having been lost by 149 yeas to 153 nays. The announcement of the vote was greeted with a storm of applause, and the plank was then adopted without a division.

It would be difficult to exaggerate the significance of such a contest, ending in such a result. It shows, as nothing before has so plainly shown, the strength of reform with the people. The resolution upon which the fight was made contains in a few words the whole gospel of Civil-Service Reform —entrance into the service only upon proved qualifications, promotion by merit, and no removals except for cause. This is the very antipodes of the Jacksonian doctrine of a "clean sweep" of incumbents, and a bestowal of the offices in return for political services. To adopt such a declaration was to place obstacles in the way of every professional office-seeker, not only by requiring him to prove his capacity before he can have a chance to fill a vacancy, but by endorsing the policy of not making vacancies "except for cause." It was not a mere declaration in favor of reform in the abstract by a party which was out of power

and bidding for votes, but a declaration in favor of reform in the concrete, when such reform affects the chances of every office seeker, by a party which is in power and is called upon to show exactly where it stands.

It would not have been surprising or discouraging if a convention made up, as the average State convention always is, so largely of professional politicians, had rejected the proposition to come out explicitly in favor of reform; but the defeat of the spoilsmen is cause for rejoicing. It shows that the Democratic politicians in the section where the Democratic party is strongest have already begun to appreciate the fact that the success of the party depends upon its fidelity to its pledges, and upon the heartiness with which it supports the President.

AN AUSTRO-HUNGARIAN IMBROGLIO.

HUNGARY, like this country, has a patriotic Decoration Day in May. On each anniversary of the capture of Buda in 1849, the walls of which were scaled by Görgey's *honvéds*, after a terrible struggle at dawn on May 21, the common burial ground of the fallen heroes—in the Military Cemetery—is decked with wreaths by their surviving comrades. While the preparations for this act of national piety were being made this year, Brig.-Gen. Jansky, of the Austro-Hungarian garrison of Buda-Pesth, happened to observe how neglected were the neighboring graves of the Imperial officers who fell gallantly fighting in defence of the stronghold against the revolutionists. Among these graves is that of Gen. Hentzi, the commander of the defence, who was mortally wounded in the last hour of the deadly conflict. Jansky, a Slav by birth and an Austrian soldier by training, regarded this neglect as a dereliction of duty on the part of the Imperial-Royal army, and persuaded a number of his surbordinate officers to join him in honoring the memory of the martyrs of fidelity to the flag and crown. The Austrian graves were accordingly decorated with wreaths, and so was the public monument of Gen. Hentzi, erected in the Castle of Buda after the surrender of Görgey's army to the Russians and the final triumph of reaction, and left standing by the chivalrous Magyars on the revindication of their national autonomy in 1867.

This new and unusual tribute to the memory of an officer who had not only deranged the victorious spring campaign of the patriots in 1849 by his obstinate defence of a stronghold in the centre of the country, but in so doing had laid in ruins by bombardment the fairest portion of Pesth, on the opposite bank of the Danube, incensed the more susceptible portion of the population of the Hungarian capital, and especially the young followers of the Independence party. Their creed is that Hungary, while abiding by the personal dynastic union with Cisleithania, must have a separate national army of her own. They saw in the action of Jansky and his military friends an insult to the patriotic sentiment of the nation, prompted by the highest military circle in Vienna, of whose centralizing and absolutistic spirit the Inspector-General of the common army, Archduke Albert, "the hero of Custozza," is deemed the embodiment. This aged relative of Francis Joseph had just toasted the common army, at the capital of Bosnia, in words in which the Radicals of Buda-Pesth saw only devotion to the Emperor, with a tacit negation of his duties as King of Hungary. Violent demonstrations against these "outrages" were at once resolved upon, and executed in a riotous way in the streets of the capital in the early part of June, so that the police had repeatedly to interfere with sword and bayonet, and even troops of the garrison had to be called out. Jansky's windows were smashed, a number of persons were wounded, hundreds were arrested, and one man was killed by a bayonet.

Both wings of the Opposition in the Hungarian Parliament, the Moderates and the Radicals, tried to profit by these occurrences to weaken the position of the Tisza Cabinet, the oldest in Europe. The adroit Premier ably and rationally answered interpellation after interpellation, blaming Jansky's action as "unwise and incorrect," but vindicating the defenders of order. The odium which his condemnation of Jansky excited in the military spheres of Vienna was intensified by a fierce attack on Archduke Albert, in the *Pesther Lloyd*, from the pen of Dr. Falk, an editor frequently inspired by the Minister President. The latter himself had made, in debate, depreciatory allusions to the unpopular Archduke. He had also referred to the highest military authority in the land as sharing his own view of the officers' demonstration in honor of Hentzi. This was rightly understood to be an allusion to the opinion of Baron Edelsheim-Gyulai, Commandant-General in Hungary, a distinguished soldier of German birth and Hungarian adoption and leanings. To place himself in the right at Vienna, Tisza repeatedly visited that capital, while Falk completely changed tactics in the *Lloyd*, extolling the private and civic virtues of Archduke Albert in a way which provoked a riotous outbreak against the glaringly inconsistent editor. Jansky had in the meanwhile received leave of absence from his post in the Hungarian capital, order was restored there, and a favorable reaction in the popular mind ensued. Backed by a vast majority in the Parliament, and high in the favor of Francis Joseph, Tisza seemed to have completely triumphed over his civil as well as military opponents.

The exasperation of the higher army circles, however, caused by the provocations in the streets, the press, and the Parliament of Pesth, needed salving. About the middle of July, therefore, when the popular animosities in Hungary seemed to have subsided, a measure was adopted in Vienna which promised to give satisfaction to both sides in the controversy, if reason could prevail over passion. Baron Edelsheim was placed, "at his own request," on the retired list with a pension, to which a decoration with a grand cross of a high military order was added, and Brig.-Gen. Jansky was removed from Hungary to Bohemia, with the rank of division-commander. Gen. Pejachevich was appointed Edelsheim's successor. Thus rewards and removals were blended together, and satisfaction apparently given both to military honor and to popular susceptibility. But in Hungary the retiring of Edelsheim and the promotion of Jansky alone were considered by the excited populace, and the leaders of the Extreme Left or Independent party found the opportunity favorable for renewing their attacks on the Cabinet, and opening a crusade for the separation of the Hungarian army from that of Cisleithania. Monster meetings were announced in various parts of the country, and flaming appeals made to the patriotism of the masses. The excitement grew apace, and Tisza, about the beginning of this month, found it advisable once more personally to explain the state of affairs to Francis Joseph, and plead for some concession calculated to allay the patriotic heat of the Magyars. According to the latest advices by cable, the Emperor will gratify the Premier.

ARCHÆOLOGICAL CHRONOLOGY.

THE remarks of Mr. W. J. Stillman in No. 1099 of the *Nation* on "chronological attribution in archæological research" (as he very well puts it), apply with equal correctness to archæological finds on this hemisphere. The truth of his statement that "in implements, in methods of structure, in pottery, etc., survivals are so common and so strange in their persistency that there is almost no reliance to be placed on them alone," is well exemplified on this continent wherever the occurrence of ruined aboriginal sites coincides with actual occupation by aboriginal tribes. Thus, in New Mexico, for instance, not only is the water-jar made and used to-day by the Pueblo Indians (the so-called *tinaja*)—the bowl or *cajete* (whether for household use or for purposes of worship)—identical in shape with those found among ruins of every description, but the style of decoration is the same; and as that decoration rests mostly on types originally, at least, symbolical, we easily recognize a perfect agreement between the fundamental ideas underlying designs at Casas Grandes (Chihuahua), throughout Arizona and New Mexico, into Colorado, and those painted to-day by the Indians of Zuni, Moqui, and along the Rio Grande. Symbolism has "stood over," as E. B. Tylor expresses it in his definition of the word *superstitio*, in spite of advances, in spite of modern example and patterns. It is utterly useless to point to such and such kinds of pottery as "older forms"; they recur at various times and at the most remotely distant places. Thus corrugated and indented pottery was used and made as early as the sixteenth century. In Sonora a corrugated surface was produced, by scratching, on jars used less than a century ago. A "lost art" is only that of producing a thick vitreous gloss, very clumsy, on lines of paint alone. This type of pottery was common in the pueblos up to 1680; at present, even recollection of how it was made has vanished among the Indians.

Mr. Stillman refers to "the occurrence of flint implements with much later forms," and says: "The use of flint knives for circumcision is of very late record, probably for sanitary reasons as well as surgical, and maybe for hieratical also." Flint and obsidian are not altogether out of use to-day among the American aborigines. Operations on horses and cattle are still sometimes performed with obsidian splinters in preference to steel even; and as to surgical practice on the human body, the crescent-shaped tools of obsidian as well as of flint are to-day used by medicine-men in secret. Sanitary reasons are conceded to be at the root of this old custom, but in addition there is a belief in the celestial origin of the instruments themselves. Thus the crescent of flint which the Tehua Indians still have (and conceal from foreigners) is kept imbedded in the powder used as a preventive of lightning-

strokes—the *flor del rayo*, whose aboriginal name I omit, owing to its great length.

Fetishes of to-day have the same type as those from utterly forgotten ruins. The medicine idols of lava, painted red, which are used and made to-day, are like the oldest ones exhumed. At Casas Grandes I found a panther-fetish, recognizable as such at first glance, and closely resembling the "long-tail" (as *Felis concolor* is called at Zuni) so plentifully carved by the Pueblos and used by them at the present time.

The same conservatism is exhibited in purely ornamental objects. Shells and shell-beads have identical shapes and sizes, whether exhumed in Sonora or Chihuahua, found in cliff-houses, or worn to-day and manufactured at Santo-Domingo, Taos, or Isleta. The same applies to turquoise pendants.

What was formerly termed the "stone age" continues to flourish among the village Indians of the Southwest (and also among roaming natives), notwithstanding the use of steel and of gunpowder. The hand-mill is of lava, and such slabs as have been used in long-abandoned settlements are carefully exhumed and set up in the houses of to-day. Newly "built" earthenware (the turning-wheel is yet unknown), newly plastered walls and floors, are still smoothed and polished with the pebble or drift of olden times. The grinding-pin is often "picked" with a piece of pointed flint. Sluggers or slungshots made of a stone ball covered with rawhide were but lately discarded. Stone hatchets and hammers are out of use, but it is quite interesting to observe how the Pueblo Indians still turn to a stone for purposes of beating, pounding, or hammering, in preference to the American hatchet or axe, and how much more they can accomplish with the former than with the latter "tool of the age." Flint-tipped arrows have almost disappeared now, but at the present date the Apaches use, against small game, simple *wood-pointed* shafts—weapons still more primitive than the arrow-head of flint or obsidian. The wooden club is still extensively wielded, and, were the Pueblo Indians to go to war, we should not fail to see "le bouclier de mon père," of gaudily painted buffalo-hide, strapped to his body.

The study of aborigines and aboriginal remains in the Southwest affords the great advantage that it presents to us, side by side, the culture of a long-gone past in its minute details, and a culture of to-day which has preserved enough of the old to make those details, not only intelligible, but mostly *tangible*. In the Old World, the intellectual and moral life of peoples who existed before the time of inscriptions can only be surmised. Here it becomes the object of direct observation: we can, to a great extent, learn to feel and to think as they felt and thought untold ages ago. Archæology and ethnology in the Southwest may, therefore, yet become of some service to classical archæology even—in a modest degree. They may serve to illustrate the growth of institutions, of features in art and industry, during periods so remote that, on eastern continents, every reliable tradition thereof is lost.

I shall not refer to the great field of primitive sociology, in which American studies have been so fruitful, but cannot refrain from alluding here to two minor instances in symbolical decoration. The cross is not uncommon on painted pottery; it occurs on rocks—either in colors or carved and scratched. Its signification is definitely ascertained by study of the symbols among various tribes. It is needless to state that such symbols are very ancient. The cross stands for the *star* in general; if painted red it is the star of evening, if white the morning star. The Greek fret and the scroll, clumsy and coarse sometimes, are equally common. Their symbolical import is also ascertained. In both cases it signifies the *whirlwind*. A study of pottery from more than 300 localities between the thirty-seventh and twenty-ninth degrees of latitude has further satisfied us that, in the case of these two designs, there is a sensible rise in development from north to south.

It is very gratifying to know that there is at least some faint connecting link between classical archæology and that Cinderella among scientific researches, American archæology *at home*.

AD. T. BANDELIER.

THE PRINCES AND THE ARMY.

PARIS, July 30.

THE French army has been so far extremely averse to mixing in the political struggles: there is no example of any French *pronunciamiento*. The *Coup d'Etat* of December, 1850, was made with the help of the army, but Prince Napoleon was in power when he made it; the Minister of War obeyed his orders, and the army obeyed the orders of the Minister of War. The army, in this respect, somewhat represents the people—a people without any political initiative, extremely docile, unable to resist the tyranny of Paris. All the initiative is in the capital, and if the provinces triumphed over the capital in 1871, during the days of the Commune, it was because half the country was still occupied by foreign troops, and because the Government was in Versailles. The political inertia of the army is notorious; I have often heard generals, holding the most decided views in politics in their personal capacity, speak with horror of the possibility of a conflict between two French regiments. In fact, such a thing is considered a sheer impossibility. The army is the army of the nation, and knows nobody but its recognized chief of the day.

In order that this strong sense of discipline should be preserved, it is highly important that the army should feel secure against all political agitations, that its rights should be respected by the powers of the day. The Republican opinions of such men as Cavaignac or Charras did not prevent their advancement under the reign of Louis Philippe. Under the Second Empire, MacMahon, though he was notoriously a royalist, became a Marshal of France. The Governments could ignore the private feelings and opinions of the soldier, since the soldier never obeyed the commands of the politicians.

A new spirit seems to be introducing itself in the army, and it has found an exponent in a young and ambitious Minister of War. I will not speak here of the law of the 25th of June last, which banishes the heads of the families that once reigned over France, and which forbids all the members of these families to *enter* the French army and navy. As soon as this law was promulgated, the Minister of War informed all the officers belonging to the house of Orleans and to the Bonaparte family that they were struck off the army list. The eldest son of the Duc de Chartres was passing at the time his examination for the school of St. Cyr. His compositions were sent back to him unopened. This was strictly legal, as he was competing for entering the army. Was it legal to strike off the army list those who had entered it long ago? Article 4 of the law of banishment says merely that "the members of the families which have reigned in France shall not enter (*ne pourrons entrer*) the army or the navy, nor exercise any public function, nor any elective mandate." It may be argued that the possession of a military grade is a public function; but this is a very poor argument, as the grade, the rank of officer, is very distinct from the function, from the employ. It is always permitted to the Minister of War to place an officer in what is called "retrait d'emploi," and, in fact, in February, 1883, the Duc d'Aumale, the Duc de Chartres, the Duc d'Alençon, were placed in this category, and deprived of their functions, the one as general-inspector, the others as colonel and as captain. There are many officers who, for one reason or other, have no employ, but they cannot be deprived of their grade.

The Minister of War, fearing that his measure would disquiet the whole army, said himself in answer to an interpellation on the 13th of July: "I am the first to say very loudly that the officer is proprietor of his grade, and nobody, absolutely nobody, can take it away from him; provided, however, that he has obtained this grade in conformity with the law." Then he tried to establish that the Duc d'Aumale and Prince Murat had not obtained their grades regularly and in conformity with the law. The Chamber of Deputies was so enchanted with this argumentation that it voted at once that the speech of the Minister of War should be placarded on the walls of all the *mairies* of France. There it is on the walls of my *mairie*, and what do the bystanders learn in reading it? They learn that the advancement of the princes has been rapid; they are told the dates of their promotions; the legal question remains totally ignored.

Nothing has been more legal than the advancement of the Duc de Chartres. He was a volunteer in the war of 1870, he was promoted and decorated by Gambetta. After the war the Constituant Assembly, which was a sovereign assembly, appointed a Committee of Grades, which revised all the grades received during the war. (The present Minister of War, who objects to the advancement of others, served in Paris during the siege, and he received three grades in succession during this siege.) The decisions of this Committee had a sovereign character, as has been recognized by the Council of State (decree of November 15, 1872, and of January 3, 1873). The Duc de Chartres was confirmed in his grade of major, and he afterwards became colonel in the most regular way. The position of Prince Murat is this: he certainly advanced rapidly, but he obtained all his grades in conformity with the law of April 14, 1832, on advancement in the army, which is a constitutive law of the army. As for his son and Prince Roland Bonaparte, they entered St. Cyr, and became officers in the most regular way.

The Minister of War had not the slightest right to strike these officers from the army list, though he could deprive them of their employ. The law of May 19, 1834, distinctly gives to the grade the character of a real property. The Council of State has always considered it as such. It would be easy to cite the text of various decrees which give this interpretation to the law. The Minister of War, moreover, committed a very strange mistake when he struck off the Murats from the army list, as belonging to the families which had once reigned in France. If he had taken cognizance of the acts which have established the status of the family of the Napoleons, he would have seen that there was a distinction between the imperial family proper and what was called the civil family: that the members of this civil family had no right of succession; that the descendants of Napoleon I., of Joseph, of Louis, of Jerome Bonaparte, were the only members of the imperial family, while the Murats and the descendants of Lucien Bonaparte had no hereditary rights. It was unnecessary cruelty to treat them as pretenders; it is quite clear that the late law of banishment was only directed against the princes who could eventually become pretenders.

The position of the Duc d'Aumale must be examined by itself. His advancement was not disputed by the Republicans when he came back from exile after the war, when he was made President of the Council of War which judged

Bazaine. It was not disputed as long as the army had to be reorganized, when he took command of the Seventh Corps d'Armée, at Besançon, and took all the measures to preserve a great part of our eastern frontier against a new invasion. It was not disputed when he was made Inspector of Armies, and inspected the south of France. The last man to dispute it at the time was the present Minister of War, who served as Colonel in the Seventh Corps d'Armée. Now this Minister of War says quietly to the Chamber that the Duc d'Aumale did not enter the French army "either by going to a military school or by serving in the ranks of the soldiers." He says that the Duke was made sub-lieutenant in 1837, at the age of fifteen, and that he became very rapidly colonel and general. He tells all the dates of the promotions; he forgets the dates of the victories, the long and arduous struggle in Algiers, the combats with Abd-el-Kader, the taking of the Smala, the pacification of the French colony.

Let us look only at the legal aspect of the case. When the Duc d'Aumale became an officer, France was a monarchy. The Minister of War cannot suppress history. It is of the essence of monarchy to attribute special rights to the members of the royal family. All the kings and emperors of Europe use such rights. An *ordonnance* of August 2, 1818, decided in one of its articles that when the princes of the blood who were not yet generals entered active service, the brevet of *maréchal-de-camp* (or of brigadier) should be sent to them after the first campaign. King Louis Philippe, when the law of 1832 was passed, consented to a diminution of his prerogative; he inserted in the ordinance of March 16, 1838, which was issued in execution of the law of April 14, 1832, an article thus worded:

"The princes of our family may be named colonels after the age of eighteen years. Their advancement to the grades superior to the grade of colonel is submitted to the conditions enunciated in article 10 of the law of April 14, 1832. However, after a war campaign, they may, without the accomplishment of these conditions, be promoted to the grade immediately superior to the one which they are in possession of. Their various promotions are to be inscribed on the roll-list of the army."

This ordinance of 1838 is perfectly legal, and the regularity of the nominations made in favor of the princes of the royal blood was recognized, after the fall of Louis Philippe, by the law of August 4, 1849, on the organization of the general staff of the army. Shall we add that all the restrictive dispositions of the ordinance have been obeyed? To be sure, the Duc d'Aumale was colonel at the age of nineteen; but he only became brigadier in 1841, after two campaigns in Africa. He became divisional general after two new campaigns, followed by the defeat of the great Arab leader, Abd-el-Kader. It is therefore evident that if the Duc d'Aumale received a rapid advancement, this advancement was always the recompense of great military services, and was in conformity with the rules of the time. After the fall of the Empire, he naturally took his place at the head of the generals of division, in virtue of the date of his nomination; and it was owing to this circumstance that he was chosen by M. Thiers as President of the Council of War which condemned Marshal Bazaine.

The question is now before the Council of State, but it will probably be long before the judgment of the Council is delivered. To many people the legal and technical question will appear very secondary in comparison with the political question. There are many who believe that the law of the strongest is, after all, the best law, and that it ought to supersede all others. It is idle to debate with these strong-minded adherents of the theory of the struggle for life, applied to mankind, to forms of governments, to races, nations, and even families. We should have much to say if we undertook to discuss these barbarous theories. It is with a feeling of great sadness that we are obliged to confess that they are at present triumphant. The Conservative, *Athenian*, *Periclean*, *amiable*, open republic of M. Thiers, of Jules Simon, and others is no more; the contract made at the time of the creation of our existing constitutional laws has been broken; the *modus vivendi* which had allowed France to live peacefully for a few years, has come to an end. Time will show what is to be the result of the *thorough* policy—of intolerance in religion, of tyranny in civil life.

"PARSIFAL" AND "TRISTAN."

BAYREUTH, July 26.

THREE death-blows—literally—have lately been struck against the cause of Wagner, compared with which all hostile attacks must be regarded as mere fly-bites. In rapid succession, within three years, Wagner himself, his royal patron, Ludwig II., and his best singer, Scaria, have passed away. The news of Scaria's sudden death was received just a few hours before the first performance, on the 23d, of "Parsifal," of which he had been the most perfect interpreter and *régisseur* since 1882. Had this triple fatality occurred ten years ago, it might have retarded the popular appreciation of Wagner's art twenty years or more. The death of the King, however, came near frustrating at least this year's festival; and had Wagner lived he would have been perhaps the first to suggest a postponement, for he admitted that without King Ludwig's kindly encouragement "Parsifal" would not have been performed in his lifetime, or perhaps even would not have been written.

The Bayreuth *Tageblatt* comments on the unusually large number of English, French, and American listeners at the first performance; and the proportion of foreigners is indeed quite striking. After getting on the branch road which connects Bayreuth with the main railways, north and south, it seemed to me as if I was on a local Hudson River or New Jersey train, so plentiful were the New Yorkers, most of them well known in the musical world. They all looked tired and warm, and complained of the slowness of the railroads. To give an instance: It took me three days to come from Visp on the Rhône (near Zermatt, Switzerland) to Bayreuth (between 400 and 500 miles), and I always took the fastest train. On the Rhône road the average rate of the *fastest* train is twelve miles an hour. It was not on this road, however, but on the way from Augsburg to Nuremberg, that the conductor, while talking to a passenger inside a coupé, had his coat pulled by an assistant, who exclaimed, "Herr Conducteur! It is time to go!" Whereupon that official replied in a bass voice of imperturbable placidity, "Ja, ja! Gleich" (presently).

After his arrival at Mecca, the weary pilgrim was taken in tow by the Wohnungs-Comité, which had provided rooms—generally the best room or parlor of some family in moderate circumstances—at the average rate of a dollar a day; which, though about three times the ordinary rates, appears reasonable enough to foreigners. At three o'clock the Bayreuthers formed two lines in front of the Wagner Theatre, to watch the carriages drive up the hill, and to point out the famous among the guests. There are no Emperors or Kings, as in 1876, but there are several Princes, and the literary and journalistic world is well represented. Liszt, who, with Wagner's children, was in the King's box, was the centre of attraction, until the lights were turned down, reducing the auditorium to pitch darkness, making the reading of text-books impossible, and revealing the stage pictures with marvellous distinctness. Whenever I have the good fortune to sit before one of these stage pictures at Bayreuth I cannot help recalling a remark of Helmholtz, that one may look at a photograph of a strange place many times without getting a vivid impression of it, but that after seeing it through a stereoscope and then visiting it, the spectator will have the impression of having actually been there before. This is precisely the difference between a stage picture at Bayreuth and one on any other stage. Those who have seen "Parsifal" at Bayreuth have actually lived among the Knights of the Graïl, among the flower maidens in *Klingsor's* magic garden, and in the gay meadow on Good Friday morning. And this stereoscopic illusion is produced by the means so often described—the darkening of the auditorium, the having an empty space between stage and auditorium, and the invisibleness of the orchestra. This delightful arrangement, though it had been suggested by other famous musicians before Wagner, and though its magic charm has been demonstrated here for ten years, has been nowhere copied, though there have been a few *partial* imitations, the success of which has, of course, been only partial.

The illusion is not only optical but acoustic too; for the invisibleness of the orchestra makes it appear as if the music proceeded from the stage. It almost seems, indeed, as if the singers produced the instrumental as well as the vocal music; and it need not be said that this results in a delightful unity of impressions. The "Parsifal" orchestra is this year, as usual, under the command of Kapellmeister Levi of Munich. He has not, however, his own orchestra, but one made up of musicians from several orchestras. Though they are all excellent musicians, they have never before played together, and this was occasionally noticeable on Friday. For though as a whole the orchestral work was wonderfully clever and impressive, in a few places (notably the erratic introduction to the third act) one missed the subtle accents by means of which the Munich orchestra—which played at the festivals in 1882, 1883, and 1884, and therefore must have been over the score about fifty times—so wonderfully balanced and contrasted the variously combined motives. Perhaps the flaws were noticeable to those only who had heard "Parsifal" before; but they show that the best orchestra cannot do full justice to a Wagner score until it practically knows it by heart. From a less exacting standard of judgment than that which prevails here everything was perfect, except the bells, which were even less satisfactory than in 1882. The problem of constructing a not too expensive set of chimes, the tones of which, while distinctly marked as to pitch, shall have the deep droning sound of cathedral bells, has not yet been solved. Will not some inventive Yankee apply his imagination to this task?

Vocally, the performance did not differ greatly from those of 1882, as the cast included three singers who were in the original cast—Malten of Dresden, Winkelmann and Reichmann of Vienna. All three were admirable, especially Fräulein Malten, whose superb voice thrilled the whole audience in the second act, while in dramatic action she has greatly improved since 1882. Great efforts have been made to secure Malten for our Metropolitan Opera-house, and there is hope that she may be able to visit us next year. The rôle of *Gurnemanz* is perhaps the finest vocal part ever written by Wagner, and Herr Scaria's interpretation of it was probably the best specimen of dramatic singing on record. His successor, Herr Siehr, though very good, cannot but suffer by comparison. Some, even among

the Wagnerites, complained that the epic narrative in the first act is "too long"—an objection never heard while Scaria sang it; another proof that Wagner's dramas are interesting *throughout* only when they are interpreted by first-class artists. At to-day's performance of "Parsifal" the cast will be a different one, there being three sets of singers for both "Parsifal" and "Tristan." This alternation is one of the things that make the Bayreuth festivals so interesting; not only because one can thus hear in one week the leading vocalists of the leading German operahouses, but because the feeling of emulation is thereby mightily stirred in the artistic heart. When Malten, for instance, sings the part of *Kundry*, the presence of the most distinguished audience can hardly inspire her to such a supreme effort as the knowledge that all the seats in the front row of the "parquet" are occupied by the festival artists (including the rival *Kundry*, Materna), looking for faults through the microscopic medium of jealousy.

The audience was one that would have gladdened Wagner's heart. After the lights had been turned down there was not a stir or sound to be heard, except the occasional tinkling of the little silver bells on the bracelets of some ill-bred fashionable "ladies." Even at the close of the first and second acts the audience respected Wagner's wishes by abstaining from any attempt to call the artists before the footlights. At the end of the last act, however, the whole storage battery of enthusiasm was discharged at once; though even here the artists would only allow the curtain to be raised while they retained their position in the final tableau, refusing to mar the illusion by coming before the footlights and making an undramatic modern bow of thanks. The Bayreuth method of displaying enthusiasm is based on the thermometer of silence: the more a scene is appreciated, the more profound stillness reigns in the house; and there were places in "Parsifal" where it seemed as if breathing itself would be an offence against one's neighbors.

During the performance of "Tristan und Isolde," which followed two days after "Parsifal," this Wagnerian etiquette was not quite so strictly observed—not only because "Tristan," being a secular drama, does not call for such reverential silence as the quasi-ecclesiastic "Parsifal," but also because the majority of the audience consisted of a party of Viennese, who had been brought here on a special excursion train. The Viennese, being the most musical people in the world, are irrepressible in their enthusiasm, especially when listening to Wagner or Strauss, whom their liberal taste allows them to admire equally—each in his sphere. Consequently every act of "Tristan" was applauded frantically, though even here the artists respected Wagner's wishes, and refused to be seen after the fall of the curtain, before the end. The enthusiasm of the audience was fully justified, for a grander performance of Wagner's love-drama has perhaps never been given. I have always regarded "Tristan" as Wagner's most inspired work, and two of New York's leading Wagnerites, who previously considered "Die Meistersinger" his supreme effort, admitted, after yesterday's performance of "Tristan," that I was right. In front of me sat two Frenchmen, who kept muttering to one another, "C'est merveilleux, c'est merveilleux!" and there can be little doubt that if "Tristan" were to be produced in New York next winter, as has been intimated, it would attract as many crowded audiences as "Die Meistersinger" did last year.

The first act of "Tristan"—the conveying on shipboard of an unwilling bride to an aged king by a young hero, culminating in the love potion unwittingly drunk by them, which makes them the victim of an irresistible passion—is wonderfully dramatic. On the love scene in the garden, in the second act, the composer has lavished a wealth of ravishing orchestral effects such as are to be found in no other work of his; and in the death scene of the last act the poetry of the text is only equalled in impressiveness by the tragic pathos of the music. Morally, too, no candid person can object to the legend as treated by Wagner. For, by the introduction of the magic love potion, he removes the action of the lovers from the region of mere amorous adventure (as treated by the mediæval poets) to the sphere of inevitable tragic necessity. And as, moreover, in his version, *Isolde* has never really become the wife of the king, who, indeed, when he hears of the love potion, follows the lovers to give his consent to their union only to see them breathe their last, the objections which have been advanced against Wagner's drama are seen to rest on ignorance and malice in perhaps equal parts.

As this was the first performance of "Tristan" ever given in Bayreuth, great things were expected of the scenic features and the performance, all of which hopes were realized. Vogel of Munich as *Tristan* and Frau Sucher as *Isolde* were very impressive in their difficult parts, and Frau Staudigl was such a good *Brangäne* as to make one wonder why she should have been two years in New York with her husband, without appearing in German opera. The orchestra was perfect, bringing out the delicate mezzotints abounding in this score with the same skill as the more brilliant colors; while the sailors sang their brief but very realistic chorus with admirable vivacity. Wagner's idea of heightening the effect of the music by means of minute correspondences with the dramatic by-play was illustrated in a hundred ways. To give one striking instance: While the sailors gradually pull in a rope, the orchestra plays a charming little melody with a peculiar rhythmic accent and swing, that suits their action so remarkably that it seems as if the two necessarily belonged together; and perhaps some of the Americans in the audience will, when they see the sailors on the *Etruria* or *Werra* pulling their ropes, involuntarily exclaim: "Hang it! Why don't the fellows sing the Rope Motive?"

At the first performance of "Tristan," as of "Parsifal," the house was crowded, and the indications are that the fifth festival will be the most successful financially of all those given so far. What a bitter pill this must be to those who, like Hanslick, confidently prophesied that the festival of 1876 would never be repeated! It was announced yesterday that the sixth festival will be held next summer. Five festivals in ten years is at the rate of one every two years, which is even in excess of the anticipations of Wagner, who, when he first built the theatre in Bayreuth, merely hoped to have a festival once in three years. In one thing, it is true, Wagner was disappointed—in his desire to make Bayreuth a dramatic high school for young singers. This plan, he says, failed from lack of a sufficient number of candidates of talent. But in another sense Bayreuth always was, and still is, a dramatic high school, where the singers who never enjoyed Wagner's tuition learn from those who have, and the latter from one another. Even Madame Marchesi of Paris, who has trained so many *lyric* singers for the operatic stage, is now recommending her pupils to visit Bayreuth, and she admits that the possession of a dramatic voice is now the great desideratum in a singer, while light, lyric voices are at a discount. Even Patti, Nilsson, and other leading warblers are without a "job" this season, and have sought refuge in the concert hall, while for dramatic singers the managers are fighting and establishing boycotts against American competitors. And for this change in popular taste Richard Wagner and his Bayreuth festivals are chiefly responsible. H. T. F.

Correspondence.

INTELLECTUAL MEN AND WOMEN.

To the Editor of The Nation:

Sir: Your correspondent "E. R. S.," two weeks ago, in his interesting letter, "Why Not Make Her an Intellectual Woman?" describes very truly that state of affairs in society which results from want of mental activity in its members, namely, general lack of interest in all subjects of thought except mere gossip; hence the deplorably low state of society talk and society entertainments in general. As a remedy your correspondent suggests that the women should be made more intellectual by receiving a higher education. And in the last number of the *Nation* Mr. Robert Waters joins the first correspondent, and quotes what a lady of Vassar College says about the matter.

Now, I appreciate fully these remarks, but think it can be easily shown that the mere higher instruction, such as colleges usually afford, is far from likely to produce the desired effect. The fact is, that we find people everywhere, both men and women, who have had the advantage of a college education, but who, in a few years of life in business or in society, have lost almost the last trace of interest in matters of science, literature, art, etc. What is the cause of this? In my estimation it is our wrong modes of instruction. We do not instruct in order to *inspire*, but in order to have good recitations. The standing of the pupil does not depend upon his insight into the subject of study, not upon having perceived the bearing of the lesson upon other parts, not upon seeing what other questions of interest are raised thereby, but depends, in the main, upon the glibness with which he recites from the book. The pupil is far more interested in the "percentage" of his recitations than in the subject-matter of those recitations. After finishing a course of study in any science, the ordinary pupil has in his mind a recollection of things learned and recited, but not digested. He has not a source of reflection and interesting inquiry inviting him in all his spare moments. Such he would have, had he really mastered the elements.

I believe that all candid observers will say that these statements are true as regards by far the greater part of our colleges and schools of all kinds. Now, let a young man or woman thus trained enter the world: that source of joyful mental activity which *he* possesses who has learned to take a scientific, unselfish interest in things, is totally wanting; and as those subjects once learned (chiefly by force of memory) pass away, the mind becomes more and more vacant, and we have the result which we observe everywhere in society.

The aim and purpose of all education is primarily the greater happiness of the individual. The value, then, of a higher education consists not so much in storing the mind with useful knowledge as in giving that inspiration which throughout life is a source of joyful activity, a source of interest in all that interests the best of our race. We shall look in vain, I fear, for improvement in the tone of conversation in society, for improvement of the interest that people take in earnest matters of thought and inquiry, so long as the conditions I have pointed out continue to prevail.—Respectfully yours,

Werner A. Stille.

St. Louis, August 1, 1886.

WOMAN IN MUSIC.

To the Editor of The Nation:

Sir: I am glad to observe that my little book, 'Woman in Music,' is bringing out some discussion of the subject implied in its title in the columns of the *Nation*. In the opening chapter of the work an examination of the problem why woman has thus far failed to create any large musical composition destined to become classical is invited, and the author's inability to solve it is freely acknowledged.

I can hardly allow the communication of Mr. Philip Hale, which appears in your paper over the date of Paris, July 9, to pass without a reply to its manifest injustice. At the very outset Mr. Hale says:

"I have not read Mr. George P. Upton's 'Woman in Music,' but from your notice of it in the *Nation* of June 17th I infer that he is better acquainted with German music than French music, and that Élise Polko is more of a personality to him than Louise Bertin, C. de Grandval, or Augusta Holmès. To be sure, Élise Polko is known in America by a translation of stories about musicians in which traditional and original lies are ingeniously mixed with descriptions of that peculiarly sentimental, ultra-amorous nature so dear to that class of German women called by Heinrich Dorn 'die Horde überspannter hysterischer Weiber.' But to see her taken seriously and even named in the same sentence with Clara Schumann, does not of itself awaken a desire to buy Mr. Upton's book."

Mr. Hale's unfair statement is in itself sufficient testimony that he has not read the book. Had he done so, he would have found that on page 17 the reader is warned against accepting the musical literature of Élise Polko, as being untrustworthy, and that the only other connection in which her name is used is on page 145, where her personal description of Mendelssohn's wife is cited, because it is the observation of an eye-witness. As to Mme. Schumann, twelve pages are devoted to her musical genius and to the relations between herself and her husband, while frequent and enthusiastic reference is made to her in other parts of the book. I do not think this point needs further amplification.

The cases of French female composers cited by Mr. Hale attest to the truth of the general sentiment which forms the keynote of 'Woman in Music,' namely, that "while a few women, during the last two centuries, have created a few works, now mostly unknown, no woman during that time has written either an opera, oratorio, symphony, or instrumental work of large dimensions that is in the modern repertory" (p. 20). Mr. Hale cites Louise Bertin, Mme. de Grandval, Mlle. Holmès, and Mlle. Pelletan. Louise Bertin wrote an opera, "Esmeralda," which was an eventual failure, for the reason that it was not well written. Mme. de Grandval and Mlle. Holmès have a local reputation. They are unknown out of France. Neither of their names can be found in the standard encyclopædias, and not one of their works is in the modern repertory, or, so far as I know, has had a hearing outside of Paris. As to Mlle. Pelletan, her reputation rests upon the Gluck edition, which has nothing whatever to do with the subject of my book.

The remainder of Mr. Hale's communication is too flippant to need answer.—Yours truly,

George P. Upton.

Chicago, August 1, 1886.

QUEER DOINGS AT THE UNIVERSITY OF MISSISSIPPI.

To the Editor of The Nation:

Sir: On the 23d of June the Board of Trustees of the University of Mississippi declared vacant the chairs of mathematics, Latin, Greek, English, natural history. Shortly afterwards the Secretary, Hon. H. M. Sullivan, himself a member of the Board, scattered broadcast over the land circulars requesting intending applicants to forward their testimonials, or be present here in person, on the 27th of July, when the Board would meet to fill the vacant chairs.

Straightway there rose up from the Baptists of the State a cry of alarm and indignation. Sixty thousand of them (white and black) "would know the reason why" their "representatives" in the Faculty, one of them a minister, had been ousted. The Methodists, too, had a "representative," also a minister, among the five that had been dropped; and the Presbyterians; and the Episcopalians.

By the morning of the 27th five hundred teachers, hailing from nearly every State in the Union, and many from foreign parts, had entered the lists, most of them by letter. Thirty-five had hastened hither to be on the spot, remembering that *les absents ont toujours tort*. The Board met on Tuesday and did not adjourn *sine die* till Thursday afternoon. What was the outcome of it all? Truly

"Parturiunt montes: nascetur ridiculus mus."

Nay, hardly so much as a *mus*. It took two days and a half for the fifteen members of the Board to "swap votes" in such a way as to reinstate the several "representatives" of the Baptists, Methodists, Presbyterians, and Episcopalians, shove the Methodist into the gap made by the Chancellor's resignation, and stop up that gap with a Presbyterian, the "sole and only" man taken from the five hundred. And the five hundred who stood for mathematics, Latin, Greek, English, natural history—what of them? Why, they seem to have gone on "a fool's errand." But, doubtless, they have learned this lesson—that when the University of Mississippi next announces a batch of vacant chairs they must go to their ministers for certificates of orthodoxy, not to the masters in literature and science for testimonials to their fitness.

The trustees have been guilty of a gross indignity to both the five and to the five hundred. The five were removed for cause or without cause. If for cause, they should not have been reinstated. But they have been reinstated; ergo. If the election had been solely on men's merits, one of the five hundred would surely have beaten one of the five. But not one of them did it; ergo.—I am very truly yours,

One of the Five Hundred.

Oxford, Miss., July 30, 1886.

"TRAFFIC IN VOTES."

To the Editor of The Nation:

Sir: Your correspondent, "G. B.," in his article in No. 1101 of the *Nation*, under the above heading, comes justly to the conclusion that the way to prevent this evil is to inspire the people with a greater interest in elections, and make them feel a responsibility in the selection of candidates. I should like to suggest the advisability of carrying this principle still further, and of keeping up the same interest and responsibility of the people throughout the term for which their representatives are chosen. The people should not be allowed to feel that their duties are ended on the election to Congress of Mr. 1 or Mr. 2, and that the responsibility is thenceforward shifted to the shoulders of their representative elect; but they should feel the necessity of watching his votes in order to be able to criticise them, and, if need be, to express publicly their disapproval of them in a way which the representative would feel. In the majority of cases how many people know or care which way their representative has voted upon any particular question?

It seems that this feeling of responsibility would excite the interest of the people, and render them constantly on the alert to catch their representative in a wrong vote, and that the representative in his turn, if he knew that the seal of popular disapproval were liable to be put upon his actions, would be more careful in casting his vote, and in scrutinizing more closely the provisions of each measure with particular reference to the opinion of his constituency.

It may be inquired how this result is to be produced. We have in answer only to point to the example of one of the smallest members of the family of republics. In the present Constitution of Switzerland there is a provision that certain laws of a general scope, and not urgent in character, may, upon the demand of a certain number of voters, be referred to the popular vote; and it is only after the final vote of the people in favor of a measure so referred that it becomes a law. This *Referendum*, so called, has been in operation for nearly twelve years, and seems to have worked well. During this period of twelve years fourteen laws have been referred to the people on their demand. Of these fourteen, but three have finally received the approval of the people. The total number of laws upon which the *Referendum* has been demanded by the people shows their unflagging interest in national affairs, while the large proportion of rejections shows that the people are not inclined in Switzerland to stand aside in politics, and allow their representatives to have their own way in the national legislature as we do.

A. F.

Boston, August 6, 1886.

THE DISINTEGRATION OF PARTIES.

To the Editor of The Nation:

Sir: Your remarks on party disintegration could be supplemented indefinitely. In all sections of the country the dissolution is marked and rapid. I have before me just now a leading Democratic paper which censures a Congressman of this State for even favoring the consideration of the Morrison tariff bill, and, in the very next sentence, belabors him for opposing the Administration.

But it is useless to multiply instances. The truth is apparent that we are clinging to the mere forms of organizations which have no logical excuse for continuance whatever. This ought not to continue, *cannot* continue; but what is going to come out of it all? Are any wise steps being taken to organize order out of the political crash that is long since overdue? Scattered about, here and there, are all the elements necessary to the formation of a party to which a patriotic American could give his support and maintain his self-respect—a party that would in course of time repair the damage done by the present Supreme Court in its unaccountable legal-tender decision; a party that would have the honesty and courage to reform a tariff system which is so manifestly absurd that even the party which brought it into existence cannot defend it; a party which would interpret the Constitution as it is, and not in accordance with the dictates of political expediency; a party that would use its power to reform the civil service instead of hampering the President in his efforts to do so; that would resolutely and unanimously oppose demagogical pension schemes, river and harbor steals, and all that class legislation whose chief end is to secure another term for its authors.

Where are the newspapers and public leaders whose duty it is, and whose sacred privilege it should be considered, to gather these elements together? The time has come, and we are looking for a leader. A resolute, independent move forward might not be so quickly crowned with success as it was in the foundation of the Republican party, but its success would be no less certain. Will not the many papers and influential public

men who recognize and deplore the folly, the stupidity of clinging to organizations which have not even the shadow of a basis in reason or expediency, come forward and lead us out of this quagmire of political corruption and imbecility? The country at large is getting sick and tired of the present condition of affairs, and the right kind of a revolution now is about the only thing that can prevent one of the wrong kind in the near future. W. H. J.

PARKERSBURG, W. VA., August 7.

CAPITAL AND ENTERPRISE.

TO THE EDITOR OF THE NATION:

SIR: The labor agitations which culminated in the Chicago bomb-throwing have called people's attention forcibly to subjects which have always deserved, though they have not always received, respectful treatment. Nothing is more worthy of serious and fair-minded consideration than the present industrial situation. No one is more worthy of courteous and fair-minded treatment than a man who attempts to take a sympathetic, intelligent interest in the statements of certain classes of society who think they are suffering unfair treatment at the hands of other classes.

Without doubt, the interest in this country in economic and labor questions has increased many times over within the last year. In view of the increased attention which many are giving such matters, will you allow me to emphasize two important economic definitions? I think that the distinction between profits and interest, between the *entrepreneur* and the capitalist, has been too much neglected. Trained economists, as well as socialistic and labor agitators, seem to have the impression that profit must necessarily accrue to the owner of capital. Prof. Francis A. Walker, who has given the subject of profit more discerning treatment than perhaps any economist, outside of Germany, says ('Political Economy,' chap. iv, sec. 276): "Unfortunately, as it seems to me, the *entrepreneur* function has not been adequately treated, if, indeed, it has been in the smallest degree recognized. English and American economists in general have chosen to regard the capitalist as the employer of labor—that is, as employing labor merely because of the possession of capital, and to the extent only to which he possesses capital." The German economists have long recognized the importance of the *entrepreneur* (*Unternehmer*) in modern industrial distribution. Briefly, the *entrepreneur* (the employer, the boss) is an individual who organizes an industry either on his own or on borrowed capital. He comes to do this because he is endowed with the personal qualifications which make a modern industrial enterprise a success. These are, mainly, powers of organization and administration and business insight. He gains profit because he has these qualifications. His profit is what remains when the cost of raw material, wages, interest, rent, and all expenses have been deducted from the gross produce. Profit is the reward of exceptional ability. One man gets more profit than another, other things being equal, because he has the above-named personal qualities to a greater extent than the other. A man gets profit because he has natural abilities which other people are willing to pay for. As industrial society is organized at present, it cannot get along without the *entrepreneur*. It is doubtful if it ever can; we need him more and more every day. The only ways in which profit can go to any one but the *entrepreneur* are two: he might be a kind-hearted man and give his profit away to some one; he might make a voluntary surrender of it. There are not enough kind-hearted people engaged in industry at present to establish an industrial system on this basis. Some or all of his profit might be taken from him by force. This would mean that society had concluded not to allow enterprise and natural ability to be rewarded without stint or hindrance. A coöperative organization of society might be brought about in which the *entrepreneur* would not appear except as a boss or foreman. No scheme of society is practicable which leaves out of consideration individuals with the capacities of the *entrepreneur*. A coöperative commonwealth or a socialistic state would need him much more than society does now. He would be needed so badly that unless the commonwealth or state, when it came to reward him, suspended the law of supply and demand, he could probably get what he asked for. That is what he receives now, and he would not be likely to ask for less. It is evident that interest and profit are very different things. Capital is paid interest, not profit. Interest is what is paid for the use of capital. Profit is the reward and *product* of exceptional ability.

A man may combine both functions. He may go into manufacturing on his own capital. In that case his surplus over cost of production must be at least sufficient to pay the current rate of interest on his capital, and to give him such profit as will make it worth his while to continue in the business. We are never surprised to find a man engaged in business with at least borrowed circulating capital. We are surprised at the reverse. The capitalist and the *entrepreneur* are more apt than not to be different persons.

This distinction may not seem to be of much value. There can never be any harm in insisting on clearness of definition, and, I am sure, great damage and misunderstanding are resulting from neglect to do so in this case. Inasmuch as the orthodox economists have confused this important distinction, it is not surprising that labor agitators and socialists have also gone amiss. In socialistic and labor literature we hardly ever find the distinction made. The capitalist is almost universally confounded with the *entrepreneur*. Capital and the capitalist are made to bear the whole responsibility for what goes wrong in the present social system. According to Laurence Gronlund ('Coöperative Commonwealth,' page 24), in 1880 at least four times as much of the annual product of labor in this country went towards the support of labor as went towards compensation for the use of capital. Profits absorb more than interest and rent together. If the annual amount which goes to profit, in the strict sense of the term, were handed over to the wage-earners, the wages of each workingman would be raised by something less than one-half. With whom, then, have the laboring classes most excuse for a quarrel? No colossal fortune can be raised by the employment of capital at three and four per cent. The man who borrows capital at such rates and has the natural ability to make twenty per cent. with it should attract the invective of the agitators for a spell.

It would be a cause for thankfulness, on the part of both laboring man and capitalist, if we could get along without the *entrepreneur*. Prof. Walker says there is no economic excuse for him except that he performs services which neither laborers nor capitalists can do for themselves. How to manage without brains an individual or private enterprise, is the question which agitates the socialistic and labor world.—Very truly,

T. K. WORTHINGTON.

JOHNS HOPKINS UNIVERSITY, August 5, 1886.

CONTROL OF THE ELECTIVE SYSTEM.

TO THE EDITOR OF THE NATION:

SIR: The following translation of an extract, in the *Berliner National-Zeitung*, from a recent article by the editor of Schmoller's *Jahrbuch für Gesetzgebung, Verwaltung und Volkswissenschaft*, may interest a number of your readers. Schmoller is Professor of Political Economy in the University of Berlin, very reactionary in his views, but deservedly popular for his qualities as a man and as a teacher. Where the bias of his political opinions does not interfere, he may be considered a model teacher; and his views of the present University system should compel attention all the more as they set him at variance with his political friends. In his review of a pamphlet by Dr. Georges Blondel, of Lyons, on the "Study of Law at German Universities," occurs the following passage:

"We desire a reform of the so-called academic freedom of the student. Blondel lays well-founded stress upon the fact that, in spite of its great advantages, in the case of law students its worst features become most apparent. This freedom, while stimulating the greatest application and encouraging the best individual development of a chosen few, engenders an average attendance at lectures of little over half the number of those who elected the course, and utterly engulfs, for at least a year or two, about a third of all the law students in laziness, beer drinking, and sloth. Blondel sums up his impressions in this way: 'Ce qu'on trouve de moins bon, ce sont les étudiants. Sans doute, il y en a d'excellents, et je crois avoir fait large la part des éloges. Mais, si la paresse n'est le privilège d'aucun pays, l'élément paresseux l'est en Allemagne remarquablement. Les cours sont désertes et les brasseries sont pleines.' Whoever, in spite of all that can be brought forward in objection, sees, with the present writer, the best aristocracy in that of the officials, teachers, and clergymen of Germany; whoever bases with him all political and economic hopes on the continuance and healthy development of this brain aristocracy, cannot but view with profound sorrow and with grave alarm for the future many features of academic life."

After a digression against duelling and drinking, and against the prejudice that favors them, he continues:

"Students in other branches are not so indolent as the law students. The latter are the wealthiest; consequently, says Blondel, 'ils sont les plus enclins à la paresse et au plaisir.' But ought wealth to give this privilege? Must not every class of necessity degenerate which arrogates the luxury of dedicating its sons *à la paresse et au plaisir*? Allow youth all possible liberty, every trial of strength, all manner of enjoyment; but distribute these liberties and pleasures over a decade or more, and permit their indulgence only at intervals. To maintain rigid discipline in the Gymnasium, and later on at the office desk, while relaxing all restraint during the long intervening years, pleasure's romping-ground, is to ruin the gifts of mind and body, to laugh to utter scorn every principle of pedagogy.

"How to find a remedy? I should be the last man to advocate sudden change in our academic studies or their administration. Improvement must be slow and cautious. Passing by changes in the frequency and nature of the examinations, projects which Blondel discusses, I wish to mention, in conclusion, an idea that I have long cherished, and which could hardly meet with serious objection. At the Seminar in Political Economy which Prof. Knapp and I conducted at Strassburg, the former commenced a record, in 1875, of the attendance of each pupil, and I have continued this custom in Berlin. . . . My suggestion is to keep strict records of attendance, to communicate the data to parents and guardians at the end of each semester, and to inscribe on the diploma given the student at his departure the percentage of his attendance in each course. No change need be made in the university statutes, and yet this method would have a miraculous effect on the diligence of the student. Academic liberties would not be infringed, but a certain publicity given to laziness would act as a curb. Even laziness would have its rights respected; solely the privilege of concealing laziness, of grossly deceiving parents and examiners by long lists of electives, . . . would be abolished. Could that be harmful?"

These utterances will possibly raise a storm of objections in Germany, but they will come from those who deny the harmfulness of the *Kneipe* and the *Bummel*. To Americans, unendowed with a sense for the poetry of these institutions, a consideration of Prof. Schmoller's remarks may be of two-fold value. In the first place, oppo-

nents of the system which Harvard is striving to introduce ought to perceive that in Germany, where that system has had a thorough trial, the only fault found is with the want of control of the attention given by the student to studies once elected. Should we not expect a leader in Prussian state socialism, which seeks its ideal in the absolute control of bureaucratic authority over the doings of the individual, to seize the opportunity of advocating the exercise of a similar control by the academic senate over the choice of study of its wards? On the contrary, the champion of paternal government has no objections to offer to that elective system which is so distasteful to governors of our paternal colleges.

On the other hand, admirers of the German system can learn that here, too, a difference must be made between free electives and voluntary attendance. If voluntary attendance is to mean no steady control of diligence, idleness up to examination-time and hasty "grinding" will be the rule. Thus, if we substitute Academic Department for Juristische Fakultät, Prof. Schmoller's lament is remarkably like the speeches in Memorial Hall at Harvard's Commencement. How, then, about applying Schmoller's remedy in its fullest extent? Would not the whole "soft-course" danger be dissipated if the marking system were completely abandoned; if such examinations as were held to control the several courses were rigorous pass examinations only; if "honors" depended on special examinations and original theses, as they already do, in part, at Harvard; and, finally, if such estimates of individual industry as were required in the allotment of scholarships and for college discipline should be based upon a just survey of the statistics of attendance, although (and indeed on condition that) such attendance should be made as strictly voluntary as study itself must be? Then, perhaps, steadiness of purpose and faithfulness in endeavor would become the true criterion; we should have more fixed stars and fewer comets in the undergraduate firmament.

Well aware that I am intruding upon your valuable time and space at a moment when there is a natural truce to the scholastic warfare, I plead in extenuation my remoteness from the scene of conflict, as well as the tempting opportunity, and remain,

Very respectfully, MORRIS LOEB.

BERLIN, July 19, 1886.

Notes.

J. B. LIPPINCOTT Co. have in press a 'Manual of North American Birds, for the Naturalist and Sportsman,' generically illustrated, by Robert Ridgway; 'Three Thousand Miles through Brazil,' by James W. Wells, in two volumes, profusely illustrated; 'A Soldier's Reminiscences in Peace and War,' by Gen. R. W. Johnson, U.S.A.; 'Lyrical Poems,' by Emily Thornton Charles; 'A Signal Success,' being the work and travels of Mrs. Martha J. Coston, an autobiography; and 'The Curability of Insanity,' by Pliny Earle, M.D.

'Uncle Titus,' from the German of Mme. Spyri, by Lucy Wheelock; and 'The Modern Jew: His Present and his Future,' by Anna L. Dawes, are in the press of D. Lothrop & Co., Boston.

Wm. S. Gottsberger will publish this week 'Aphrodite, a Romance of Ancient Hellas,' by Ernst Eckstein, translated by Mary J. Safford.

W. J. Johnston, Potter Building, New York city, will shortly issue 'The Electric Motor and its Applications,' by T. C. Martin and J. Wetzler.

Ginn & Co. announce 'The Elements of Plane and Solid Analytic Geometry,' by Prof. J. D. Runkle, of the Massachusetts Institute of Technology.

The Interstate Publishing Company, Chicago, have issued a new edition of the 'Supplemental Dictionary,' by the Rt. Rev. Samuel Fallows, D.D. It is uniform in size and style with Webster's Unabridged, and will hereafter be sold to the trade at a reduced price.

Mr. Bret Harte has written a children's Christmas book, with the alluring title of 'The Queen of the Pirate Isle,' which will be illustrated by twenty-five drawings by Miss Kate Greenaway, printed in colors in the text. The result of this combination of one of the most English of artists with one of the most American of authors will be awaited with unusual interest. The book will be published early in the fall by Houghton, Mifflin & Co., Boston, and by Chatto & Windus in London.

With the August number, Houghton, Mifflin & Co. resume publication of the Official Postal Guide.

Dr. C. W. Larison's 'Geografy: A Text-buk in Fonic Orthografy' (Ringoes, N. J.) is a respectable attempt to bring into more general use the phonetic system and typography devised by the reformatory author. Dr. Larison hopes to fix the correct pronunciation of geographical names by first impression. His work is not a mere gazetteer, but describes the physical and other features of the countries of the eastern hemisphere in an interesting manner. Objection will be taken in some quarters to the statement that the Russian Government is "mild and well suted tu the pepul it guvernz." Nor can we always agree with Dr. Larison's standard pronunciation. He gives us Green-wich (for *grinidj*), Cabul' only (*kaw'bl* being also well supported), and accents on the last syllable Cronstadt, "Konigzberg," and Magdeburg. "Tu'rim" must be an accidental error. And mongrel are "Frankfort on the Mīn," "Gwadalquivir'," and "Severs'" (Sèvres). If all the figures of population were as much out of the way as 95,000 for Bremen and 180,000 for Breslau, they would be utterly untrustworthy. It is odd not to find any mention of Berlin under Germany.

Prof. F. W. Putnam, Permanent Secretary of the American Association for the Advancement of Science, has published the Proceedings of the thirty-fourth meeting, held last August at Ann Arbor, Mich.

As a means of perfecting its series of municipal documents of American cities, the Cornell Library begins in its current Bulletin, No. 15, a list of what it has on its shelves. Gifts in this department (and it can only grow by gifts) will be very welcome. The Library now numbers nearly 62,000 volumes and about a quarter as many pamphlets. Since January its reading-room has been opened in the evening and lighted with incandescent electric lamps—on the whole, satisfactorily.

Some interesting particulars concerning the maternal ancestors (Haskins, Upham, etc.) of Ralph Waldo Emerson are given by a kinsman in the *Literary World* for August 7. More are to follow.

The most significant article in the August *Magazine of American History* is by Mr. Charles C. Jones, jr., of Atlanta, who briefly sketches the relations of the slaves to the Confederate Government during the civil war. When the Congress had screwed itself up to the point of employing them as soldiers, the bottom was already out of the rebellion.

Shakespeariana for August (Philadelphia: Leonard Scott Publishing Co.) shows more life than previous issues have done, and promises to open in October a "School of Shakspere" department, intended to further coöperative study of the dramatist.

The third (July) number of the *English Historical Review* contains four articles, all of decided interest. The first is a short paper, by Evelyn Abbott, upon "the earliest inhabitants of Greece," placing special emphasis upon the non-Hellenic elements in this population, and arguing that the art of writing in all probability came considerably earlier than has usually been assumed. The second article, by Mr. Charles I. Elton, upon "early forms of land-holding," is principally a discussion of M. Fustel de Coulanges's recently published studies. Mr. Elton gives all praise to the learning, industry, and ingenuity of these studies, and the valuable results secured by them; but still asserts his belief in the collective holding of land among the early Germans. Mr. Osmund Airy follows with an article upon Lauderdale, and Mr. A. W. Ward with one upon "The Electress Sophia and the Hanoverian Succession," chiefly founded upon the correspondence of the Electress with Leibnitz. Mr. Ward pays a high tribute to her character and intelligence. Among the Notes and Documents we find replies by both S. R. Gardiner and Walter Rye to the arguments of Mr. Aldis Wright in the last number in favor of the authenticity of the Squire papers. Mr. Rye promises a more complete argument in the next number.

Sphinx closed its first volume with No. 6 in June, and began its second with the July issue, on the cover of which latter we read the names of Colby & Rich, Boston, as agents for America of this Leipzig magazine. In the June number M. Hermann, the first prestidigitator in Germany, makes a by no means scoffing contribution to the solution of the problem whether spiritualists have to deal with mediumship or hocus-pocus. He and his brother "wizard," C. Hermann of Vienna, will, as sceptics, yet in good faith, experiment next autumn with a well-known English medium, William Eglinton. The discussion is continued by Carl du Prel. "Psychic research" in the form of mind-reading also comes within the scope of this journal, which is devoted to the investigation of supersensual forces; and some examples are given of copies of drawings conveyed by mental impression. Chiromancy and chirognomy are likewise treated; and there are readable paragraphs on astrology, black and white magic, magnetism and hypnotism, levitation, doubles, even upon vegetarianism.

A French Wagnerite, M. Adolphe Jullien, has the freedom of the pages of *L'Art*, in the issue for July 15 (Macmillan), to make light of the composer Gounod, apropos of his "Mors et Vita," a sequel to the "Redemption." This does not prevent the illustrations to the article from being such as Gounod's admirers would like to possess, with the exception, perhaps, of a little caricature by Carjat. He is further represented before an easel in the studio of the painter J. Pils, and in a medallion by Ringel; and specimens of both his literary and his musical MS. are given in facsimile.

The French Academy has never been noted for its republican tendencies. Under the Empire it manifested a discreet but decided spirit of opposition to Cæsarism. Its general tone has invariably been one of conservatism, and, it may be added, of enlightened and calm toleration. But now, if we are to believe the radical press of Paris, its days are numbered. It has expressed sentiments of sympathy for the Duc d'Aumale. This "outrage to democracy," this "raising the flag of conspiracy," is sufficient cause, according to the journal of M. Henri Rochefort, for stripping the Academy of all its "advantages and privileges." Not only must the Academicians' fees, odious to the nation, be suppressed, but the whole corps must be suppressed and treated as an assembly of *factieux*.

Possibly the members of the Académie des Beaux-Arts had not pondered well the threats

of the Radical press, for at their last session they unanimously approved the words of their president, M. Charles Garnier, who expressed his regrets at the forced absence, not of one of its members only, as was the case with the Académie Française, but of two; for Prince Napoleon, as well as the Duc d'Aumale, is a *membre libre* of the Academy of Fine Arts.

Besides the outcries of the *Lanterne*, the opinion of M. Francesque Sarcey ought to be mentioned. Speaking of a recent academical reception at which the present Government was not lauded, he said: "Let them speak against the Republic, provided they do so in good French."

The biography of Gambetta, by M. Neucastel, and that of Admiral Courbet, by M. Ganneron, have recently been added by Leopold Cerf to the collection of contemporary biographies in which the life of Gen. Chanzy, by M. Chuquet, and that of Henri Martin, by M. Hanotaux, had already been published.

Under the title, 'Variétés morales et politiques' (Paris: Fischbacher), M. de Pressensé has collected a series of articles, generally biographical. Gambetta, Jules Favre, Lanfrey, Dufaure, D'Haussonville, De Falloux are among those of whom M. de Pressensé writes with independence and friendly sincerity.

A number of hitherto unpublished letters of Lamennais have appeared of late years in the *Correspondant*. They were addressed to J. B. L. Marion, a distinguished jurist who took an active part in the Catholic movement in the first part of the century. Nowhere did Lamennais express more forcibly the bitterness with which his soul was filled. The letters, 152 in number, have now been published, with an introduction and notes, by M. Arthur Du Bois de la Ville-Rabel (Paris: Perrin et Cie).

M. Albert Duruy has republished the interesting paper which appeared not long ago in the *Revue des Deux Mondes*, "Le Brigadier Muscar" (Paris: Librairie Illustrée). In an appendix he gives some curious letters of Gen. Hugo, the father of the poet.

M. Gaston Boissier has collected the articles upon Horace and Virgil contributed by him to the same periodical, and has issued them in a volume under the title 'Nouvelles promenades archéologiques' (Paris: Hachette).

The new edition of M. Victor Duruy's 'Histoire des Grecs,' which Hachette began publishing in weekly parts on May 21, might almost be called a new work. The author says in his preface that it has been carefully revised in all those portions relating to the facts of history, and almost entirely rewritten and greatly expanded in those directions in which the discoveries of the thirty-five years since it appeared (the first edition was published in 1851) have been so rich. The work when completed will form three large octavo volumes, similar to the new edition of the same author's 'Histoire des Romains.' It will be profusely and beautifully illustrated under the direction of M. Babelon, of the Musée des Médailles, and M. Haussoullier, professor at the École des Hautes-Études and *ancien élève* of the École d'Athènes, which appears to guarantee the assurance of the publishers that on this side the work shall owe nothing to the imagination, but shall be faithfully and seriously illustrated, and not merely ornamented, by its 1,500 engravings.

M. A. de Rougemont has certainly had an excellent idea in preparing his little volume, 'La France' (New York: The Writers' Publishing Co.). The work purports to be the notes of an American in France, "collected and arranged" by the editor. It was an American who could look through French eyes, though it must be said the faults of the country and its inhabitants are touched upon sufficiently for impartiality. The book contains much information very pleasantly given on French institutions, manners and customs. Judgment is shown in the choice of the topics, which really embrace enough to make a large volume, and M. de Rougemont's work is a little book of less than 200 pages. This is sufficient to account for the rather summary character of several of the chapters, which would certainly have been more interesting if the author had allowed himself more space. As it is, he has made an attractive and useful manual, accompanied by a 'Questionnaire' which a skilful instructor can vary at will.

G. P. Putnam's Sons have lately added to their series of "German Classics for American Students" a fifth volume, consisting of a selection of Schiller's letters, edited by Pauline Buchheim. The book is in every way a creditable member of the excellent series to which it belongs. The bulk of the text is taken up with letters to Körner and to Goethe, those to the former numbering twenty-two, and those to the latter forty, out of a total of seventy-nine. The notes, which are concise and well written, give the student necessary information concerning persons, places, and events, but do not deal much with linguistic matters. In deciding upon material for publication, the editor has been guided (according to her own statement in the preface) by a "desire to bring together those letters which present the most characteristic view of Schiller's genius and of the various stages of his literary career." The selection as thus dictated has resulted well, and has given to the student world a volume which ought to be something more than a mere text-book for learning German. It ought to enhance the reader's admiration for the character of Schiller, and to imbue him with something of Schiller's inspiring idealism.

In June, Karl Kehrbach began issuing a very considerable and protracted publication, "Monumenta Germaniæ Pædagogica," to consist of school regulations, text-books, etc., so ordered as to show the history of education in all German-speaking countries. The first volumes deal with the Brunswick *Schulordnungen* from the earliest times to the year 1828 (New York: F. W. Christern).

The history of Protestantism is in a fair way of being thoroughly written. It is only a short time since the "Bulletin de la Société de l'histoire du protestantisme français" was announced, and now comes a publication covering much the same ground for the Netherlands. In 1571 Marnix de Ste.-Aldegonde, the famous Flemish reformer, was commissioned by the Synod of the Walloon churches to undertake the compilation of a general history of that church. Other occupations prevented his carrying the wishes of the Synod into effect, and, no one being found to take up the task, nothing has since been done towards the preparation of the work. At the "Réunion des églises wallonnes" in 1877, an historical commission was appointed to collect materials for a general history. The fruits of their researches are presented in the "Bulletin de la commission pour l'histoire des églises wallonnes" (The Hague, 1883–85). The publication will be biennial, and will comprise biographical and historical monographs and unpublished documents. As it is intended to treat the history not only of the Walloons in Europe, but of emigrations to this country as well, this periodical will not be without interest to American historical students. It will be remembered that the first company from Holland to make a permanent settlement in New Netherlands was composed largely of Walloon families.

—The midsummer *Century* is, as usual, distinguished above the ordinary by its richness of illustration and variety of topic, but it fails to impress one as being a remarkable success. The picturesque subject of Algiers displays a wonderful lack of distinctness and vividness in the text, and the article on Heidelberg, which the five-hundredth anniversary of the founding of the University makes timely, is chiefly noticeable for the very scanty reference to that institution, being in fact rather an historical and architectural study of the Castle. The birds'-nesting expedition to the Farne Islands is interesting, though like the page or two of Mr. Leland's on the Gypsy, Charlotte Cooper, it is largely what used to be called a plate article. The fiction is nothing if not popular, the poetry dips below the level, and criticism is represented by a kind of drawing-room bow, a page or more deep, by Miss Edith Thomas to Mr. John Burroughs, whose fine American face the reader may see in an admirable sketch. The notice of "The Western Art Movement" is rapid, thorough, and instructive, and the principles it illustrates and maintains are practical, simple, and attractive. Perhaps the limitation in the supply of "old masters" has something to do with the readiness of the West to turn so cheerfully to the industrial minor arts, but the result in arousing an art sentiment among the people is none the less desirable on that account. Mr. Washington Gladden's long article in exposition of the industrial warfare really waging between capital and labor is in his strongest, clearest, and most emphatic vein; and that part of it which suggests that disregard for law is usual and necessary in a state of war, and that non-combatants can't always escape the inconveniences of being on the field, probably comes nearer to stating the laborers' view of boycotting and like measures than their own words could do.

—The *Century* war papers are devoted to the battle of Fredericksburg. Major Lacy, of the Confederate staff, gives some personal reminiscences of Gen. Lee. Gen. Longstreet gives a clear, strong sketch of the battle from the standpoint of the Confederate headquarters. Gen. Couch writes of the national attack upon Marye's Heights, and Gen. Smith of the battle in front of the left wing. Both of these last-named articles have personal reminiscences of Gen. Burnside's conduct and conversations which are valuable for the light they throw upon his purposes, his plan of battle, and upon the traits of his character which have been supposed to account for the failure of his campaign. A sad episode in the history of the civil war is made more intelligible, though it is fair to say that Burnside's own view of it has not yet been fully presented; for whatever may have been his deficiencies as a commander, he had a noble patriotism which made him accept the responsibility for misfortune without complaint and without any controversial effort to argue his own case. The photographs reproduced in the woodcuts give admirable aids to the comprehension of the text, and the portrait of Burnside is a most excellent one.

—Mr. David A. Wells brings to a close in the August number of the *Popular Science Monthly* the notable series of articles whose publishing, under the title "An Economic Study of Mexico," was begun in May. The last article treats of the political and commercial relations of the United States to Mexico—what they are and what, in his opinion, they ought to be. Few would dispute his general conclusion that our duty in respect of Mexico is that of the strong to the weak, "not an offensive protectorate or meddlesome interference, but a kindly feeling and policy." Nor could serious objection be taken to the first suggestion of Mr. Wells as to the practical discharge of this duty, "that the Government and people of the United States should do all that can be reasonably asked of them to dispel the idea, or suspicion, that now prevails throughout Mexico

and all Central America, that the North Americans desire and intend, at no distant day, to take possession of all these countries and destroy their present nationality." But to the second proposition of Mr. Wells, that the United States should help towards the establishment of a stable government in Mexico by undertaking to guarantee the interest on her public debt, there would no doubt be fully as much opposition as Mr. Wells himself anticipates, and perhaps more. For it would seem to be forgotten that "such a proposition is likely to be scouted" not only "by the American public," to use Mr. Wells's words, but also by the Mexican public. The intense national pride and feeling of self-sufficiency existing in Mexico are but little appreciated on this side of the border. They of themselves would be enough to prevent the execution of Mr. Wells's suggestion, which seems to have been advanced more as a matter of ideal than of practical consideration. Mr. Wells holds, and no doubt justly, that the expectations of a speedy development of commerce with Mexico are doomed to disappointment. Yet he favors the proposed treaty of reciprocity, as giving to Americans a chance to get a part of what little trade there is. His approval of the treaty ought to carry more weight with our lawmakers than we fear it will.

—The July number of *Les Lettres et les Arts* (Paris: Boussod, Valadon & Cie.; New York: Charles Scribner's Sons) is less rich in illustrations than some of the previous issues. Among the artists represented, M. François Flameng is the most prominent, partly from the strikingly decorative character of his subjects, and partly also from their number, for he illustrates with five large full-page pictures the story of M. Théophile Gautier *fils*, "L'Aventure du commandant Pervenche." Strikingly decorative also are the two illustrations to "Le Grand-Prix de Paris" which M. de Nittis has known how to make expressive and artistic, as well as decorative, to a degree which the nature of the subjects, so rebellious to all picturesqueness of treatment, renders surprising. There is, as usual, an exquisite page by Giacomelli, accompanying the little poem of Pierre de Nolhac, "Chanson d'été." The literary part of the number does not offer as many widely known names as some previous ones have done. M. E. M. de Vogüé tells with many fanciful touches a Russian story, "Le Manteau de Joseph Olénine," with an ending more French than Russian. M. Édouard Grenier's poem, "À la Vénus de Milo," may perhaps reconcile the English-speaking reader to the idea that there is poetry in the French of to-day in spite of an occasional touch of declamation. It is but just to say that the poetry given in *Les Lettres et les Arts*, a very little in each number, has always been chosen with the greatest tact and taste. If the poets represented in its pages have been but little known here, and sometimes not universally recognized even in France, it is by no means because they do not deserve to be known. The most interesting article is the long and careful study by M. Henry Cochin, "Pétrarque ennemi des femmes," which will certainly charm the reader if it does not convince him. The number closes with a paper, "À propos des romans du comte Tolstoï," in which M. Charles Salomon expresses, without any of the customary vagueness of writers upon the great Russian, some personal impressions produced upon him by his romances, which will be as new to many of those who think they understand and appreciate all the depths of Tolstoi's characters, as they are delicately sympathetic. The paper is accompanied by a large full-page head of the great writer, signed E. de Liphart.

—Under the somewhat enigmatical title, 'La Triade française' (Boston: Schoenhof), Mlle. Louise Both-Hendriksen, of Smith College, has published a very pretty selection from the poetry of Alfred de Musset, Lamartine, and Victor Hugo. In the case of Alfred de Musset especially, the poems chosen are very acceptable, since, owing to the rigidity of the French publishers, only a few, almost always the same, have been allowed to appear separately. The editor has shown excellent taste in the choice made from the three authors. But it would only have been justice to the young women for whom the volume was prepared to print the last stanza of Lamartine's "Le Lac" as it was published by the author, not as it was changed by him in his 'Lectures pour tous' to satisfy the requirements of an unhealthy *pension* morality. The original version, appropriate to the character of the poem, is:

"Que le vent qui gémit, le roseau qui soupire,
Que les parfums légers de ton air embaumé,
Que tout ce qu'on entend, l'on voit ou l'on respire,
Tout dise: Ils ont aimé!"

In the school-book literature "Ils ont aimé" has become "Ils ont *passé*," which necessitated in the second line the weak ending, "dont l'air est caressé." As a justification of Mlle. Both-Hendriksen's title, M. Clovis-Hugues's last poem might be quoted. This was read at the inauguration of the statue of Lamartine on July 7. The poet-deputy closed his tribute, which might be called emphatic in both the English and French sense of the word, by calling Hugo and Musset and Lamartine "La trinité des demi-dieux."

—Prof. James M. Whiton's little book, 'Six Weeks' Preparation for Reading Cæsar' (Ginn & Co.), now in its third revised edition, is based on the lines of his elaborate letter to the *Nation*, published in our issue of Aug. 13, 1885. It shows care, thought, and experience in its make-up, and, with a good teacher behind, may be of as much service as Mr. Whiton claims for it. One of the most obvious criticisms pertains to the notation of quantity. Instead of marking the vowels throughout, the only true plan, Mr. Whiton has laid down rules to which he does not stick, and the boy is left to find out, as best he may, that *o* is long in *Romanus*, and to ask himself why *u* is marked long in *nūllus*, whereas *e* is not marked long in *mensa*. Caprice is nowhere less in place than in an elementary manual. The spelling is not always orthodox, but too much must not be made of that. There is always danger of being too orthodox—and it sometimes happens that purists are too correct for the dictionary, with sad results. Still, *quum* has long since given way to *cum* even in books for beginners, and ought not to show its face here. Sufficient references are made to the three leading Latin grammars, and if Cæsar must be the child's earliest Latin diet, Mr. Whiton has made the hard food easier of digestion. In any case he deserves the thanks of all concerned for his protest against beginning with the first book of the Gallic War.

—Quite as satisfactory as any similar compend can be is 'An Icelandic Primer with Grammar, Notes, and Glossary by Henry Sweet, M. A.,' prepared for the Clarendon Press Series (New York: Macmillan). Its grammatical part is based on Noreen's 'Altisländische Grammatik,' the best existing manual of Old-Northern phonology and inflection; and the selection of texts is principally made from the admirable material furnished by the 'Lœsebog' of Wimmer. The notes are clear and sufficient, and the glossary, in which the proper names are conveniently printed apart, is complete and accurate. Moreover, the terminology is English, as "mutation" for *Umlaut* and "fracture" for *Brechung*—a pleasing evidence that linguistic science in England is at length beginning to go on its own vernacular legs. The deviation from the method, almost universal in printed texts, of indicating vowel length—substituting, for example, "á" for "á"—seems to be a scarcely necessary innovation, even if we give all proper weight to the desirability of employing the usual sign of vocal length to represent, in a certain class of editions, "the actual accents of the MSS." It is to be regretted, too, that the 'Primer' does not concisely note, somewhat as is done in Wimmer's 'Formlære,' the chief variations in orthography and inflection of the New-Icelandic, especially as thereby the size of the volume need not have been increased (see pp. 42, 59, 69, 76, and 82). With such an omission, and with but a single allusion to Modern Icelandic, the title of the work should rather be 'An *Old* Icelandic Primer.' But criticisms like these can hardly depreciate the value of such an excellent elementary manual to those who desire to enter upon a study of the classical tongue of the ancient North, and for whom the bulkier publications of the learned Dr. Gudbrand Vigfusson might be too advanced, and, in some instances, too costly.

—The purification of the language from words of foreign origin, which in England has few adherents outside of Prof. Freeman's disciples (who see in it, as in the scientific spelling of proper names, a means to an important end), has in Germany received much support from officers of the Government as well as from literary enthusiasts. We have received No. 4 of the new series of *Deutsche Zeit- und Streit-Fragen*, which consists of a paper on the subject by Dr. C. Blasendorff, while Otto Gildemeister discusses the "struggle" in the July *Rundschau*. Dr. Blasendorff is much encouraged by the progress made, though the campaign has only begun; and he gives various documentary proofs in the shape of bills of fare, dance programmes, advertisements for building contracts, quotations from military literature, etc. Now it is true that German affords exceptional facility for making compounds, and it would no doubt be possible for Germans to carry on business, and even write newspapers and official orders, without using foreign words. It would also be possible for them to exist, without being deprived of any essential comfort (except on account of its increased cost), if they should be prevented, through long-continued war with the rest of the world, from importing all material objects. But at how great inconvenience! Only through long observation does one become aware of the degree in which not only the choice of words, but our phraseology as well, depends upon an unreasoning—one might say an instinctive—consciousness of euphony and brevity. Of the power of the first may be instanced the fact (not mentioned by Dr. Blasendorff) that not even the rechristening, by Emperor Wilhelm, of the Pagan *Telephon* into the Christian *Fernsprecher*, was able to effect the substitution; and even the learned doctor admits a preference for *Fortepiano* over *Starkschwachkastenrührbrett*.

SHAKSPERE IN HIS OWN THEATRE.

A Chronicle History of the Life and Work of William Shakespeare, Player, Poet, and Playmaker. By Frederick Gard Fleay. With two etched illustrations. Scribner & Welford. 1886.

A NEW life of Shakspere, even when it is put forth by so painstaking and minute a dramatic student as Mr. Fleay, and in so luxurious a form as the present beautiful volume, must justify itself. The subject of investigation is preëminently one in which the pleasure lies in the pursuit, and the game brought home has been so insignificant that it has become a laughing-stock in literature. All this hallooing, this dust of antiquity, this din of controversy, and at the end only a general "fault"! Mr. Fleay himself has no high opinion of the attempt to write Shakspere's life by the records of "his malt account.' Of the biographers who undertake to discover

the dramatist's actions, he says: "They have shown beyond doubt that Shakespeare was born at Stratford-on-Avon, was married, had three children, left his home, made money as an actor and playmaker in London, returned to his native town, invested his savings there, and died. I do not think that, when stript of verbiage and what the slang of the day calls padding, much more than this can be claimed as the result of the voluminous writings on this side of his career." What has been thus ascertained he includes in his own book, on the basis of Mr. Halliwell-Phillipps's documents in the latter's 'Outlines.' He regrets, with marked emphasis, that these "are not published by themselves apart from hypotheses founded on idle rumors or fallacious misreasoning," and remarks that he does "not know of any work so full of fanciful theories."

A second class of Shakspere biographers is made up of the æsthetic writers who would compel the dramatist's personality to emerge from his books, like a soul from the body, and to give us the history of his spirit—the development of his mind and art—in a sort of dumb-show. To these Mr. Fleay scarcely deigns to allude. He has found a new and better way. He writes "the public life" of Shakspere; the facts about his theatrical career still verifiable from the fragmentary and confused records of the stage itself. He makes no attempt at a formal narrative. He significantly styles his book a 'Chronicle History,' and confesses its many repetitions, its overlapping sections, the tedium of its year-by-year annals, and its lack of any grace. It is in effect the commentary of a Shaksperian scholiast, meant for students, and hard and dry in the reading. Yet by dint of patient attention one may master the relations of its parts; and then, if we may judge by our own experience, he will find an exceptional consistency and unity in the conception of Shakspere's life which the author tries to establish by evidence; he will be struck by an unexpected sobriety and closeness to fact in the argument; in a word, he will have the pleasure of meeting with a Shaksperian who is not mad.

The centre about which by far the larger part of the volume revolves, is the history of the different companies of Players. Mr. Fleay differs from Collier and Halliwell-Phillipps in his statement of the number and importance of these, of which he says there were never more than five at once and usually only two of consequence. He endeavors first to fix upon the company which Shakspere joined, when, after his birth, marriage, and fathering of three children, he left Stratford. In 1587 he was in that town, and in the same year Leicester's Players acted there. He is next known as attached to Lord Strange's Men; and as some of the actors and of the plays in the latter company had belonged to Leicester's Players, and as it is unlikely that Shakspere would have found employment at either of the other two companies in London on his arrival, and as the hypothesis of his doing so would not agree very well with the words of Greene and Nash, Mr. Fleay conjectures that he originally joined Leicester's Players at Stratford in 1587 or soon afterward, and on Leicester's death in 1588 passed into the new company of Lord Strange's Men formed out of the old band. Under the new name they settled in London; Alleyn, the tragic actor, being their head.

It is interesting to follow their career for a moment, in order to the better understanding of Shakspere's apprenticeship and of Greene's attack in 1592, the next mention of him after 1587. It must be remembered that each theatre had its staff of writers, and owned its plays; a dramatist was attached to his company, as a journalist is to his newspaper, and for it he supplied new works or furbished old ones. In London the leading company in 1589 was the Queen's Men, first in court favor, and for it Greene was the chief writer—a position which Mr. Fleay aptly terms that of the court stage-poet. He had managed well, and had crippled his only rivals, the Admiral's Men, by gaining over their leading writers, Lodge and Peele; but at this time his hopes were dashed by the secession from him of Kyd, Marlowe, and R. Wilson to Pembroke's Men, a strolling company, like Shakspere's, which was settling in the city. In consequence of his irritation, Greene then poured virulence on Kyd and Marlowe in his "Menaphon," 1589, and, though he remained with the Queen's Men until 1591, the company for some reason declined at that date and went out of existence. Meanwhile, Shakspere's company had satirized Greene in "Fair Em," and, when the latter and others were ridiculing the Martinists, in 1589, had replied with a play on the other side, and had acted it contrary to command. They prospered, and at Christmas, 1591–92, took the place of the Queen's Men as the company most in favor at court; they obtained a theatre to act in (instead of the inn-yard of the Cross-Keys), "The Rose on the Bankside," and at the same time incorporated some of the players of the old Queen's with themselves, and acquired many old Queen's plays, among which was "1 Henry VI."; and this, being brought out March 3, 1592, had a prodigious success, owing to the addition by Shakspere of the famous Talbot scenes. It was under these circumstances that Greene, being then attached to a minor company, Sussex's Men, wrote in the summer the "Groatsworth of Wit," in which he vented his spite by speaking of the "upstart crow," the "Johannes Factotum," the "Shake-Scene," and referred to the company's acting and revising of the old Queen's plays as a being "beautified with our [*i. e.*, Marlowe, Peele, and Lodge] feathers." The explanation of the phrase has been given by R. Simpson, but the fact that the old Queen's was amalgamated with Shakspere's company, which Mr. Fleay shows by a very subtle and ingenious course of reasoning, is a capital point in the history.

The plays which Shakspere wrote or assisted in, up to 1592, were, according to this author, "The Comedy of Errors," "Romeo and Juliet," "The Merry Wives," the "Gentlemen of Verona," "Love's Labor Lost," and "Love's Labor Won"; and he sustains the ascription of date, not later than 1592, by pointing out that all these except the last are in the list of English plays acted in Germany before 1626, and (with a single exception) none others in the list date later than 1592. Mr. Fleay believes that in these and in a conjectural "Midsummer Night's Dream," *circa* June, 1592, Shakspere worked with a coadjutor, and that in the later revisions, in which alone we now possess them, he replaced the work of other hands by his own. Subsequently to 1592 he wrote altogether by himself.

It is needless to follow his successive dramas or the fortune of his company in detail. Suffice it to say that he remained with one and the same company through all its changes of patronage, of location, and of internal constitution. It continued to hold the first place in regard both at court and in the city, and he was its leading writer. It produced usually no more than four new plays a year, depending on no more than one poet besides himself; in this, offering a marked contrast to its rival, the Admiral's, which employed twelve poets, and gave a new play fortnightly. "Hence," says Mr. Fleay, "the explanation of the small pay and needy condition of the latter, and their jealousy of the rapid advancement in wealth and position of Shakspere, who had virtually a monopoly of play-providing for his company." This freedom of Shakspere from collaborators does not imply, however, complete integrity in his work. He had fame, which his love-poems of 1593-94 had given him more than his plays; but as a dramatist it was still his business to rewrite the stock plays of the company whether by himself or others (especially for representation at court, where only new or practically new plays were performed in Elizabeth's time); or, much more rarely, he composed on a new subject. He did not lack "invention"; he merely fell in with the common practice, and renovated stories which had obtained popular favor in the dramatized form in which his theatre owned them. He subjected the old work of himself or others to repeated revision; hence we possess it in many versions, just as we have lost it in many.

In consequence of this perpetual remaking of old plays, there may be in any one of them work by Shakspere of different years, or work by different hands. He frequently, although not in direct collaboration with any one, took from the "stock" the play of another writer and bettered it for immediate production. He thus, as Mr. Fleay thinks, inserted scenes in Marlowe's "Edward III.," acquired from Pembroke's Men, or in Lodge's (?) "Taming of the Shrew," from the same source, or in Wilkins's "Pericles," written for the company in 1606; or he rewrote with minute correction Marlowe's "Richard III.," made for the company in 1593. "Hamlet," as its history is here plausibly conceived, affords a capital instance of gradual transformation of an old play into his own work. By a novel interpretation of a remark of Nash's, Mr. Fleay identifies the original "Hamlet" as Kyd's, one of the plays which passed from Pembroke's Men to Shakspere's company in 1594. It was revised for the Scottish tour in 1601, which version is represented by the first quarto, and again for the Court in 1603–04, the second quarto; the Folio text represents the shortened acting-copy, and also shows signs of a later revision in 1610. The fact is, that Shakspere worked from year to year to keep the good plays fresh and to better the antiquated ones already in stock, and occasionally wrote a new play out of North or some other like source. From time to time they got into print, legitimately or surreptitiously, in the quartos, which generally represent rejected versions; at last, in the Folio, acting-copies were also given A play never had a final form: our "Tempest" and "Julius Cæsar," for example, are shortened versions, cut for the actors; our "Macbeth" is a version made by revision after Shakspere's death. The text was always in flux; and out of this fact springs the problem of editing it, dating it, and determining its authorship. The bearing of all this upon Shakspere's own opinion of the permanence of his work is possibly not so grave as might at first seem; but that this is the view borne out by the annals of the stage is indisputable.

A less technical subject is opened in the relations of Shakspere to his literary contemporaries. With such as wrote for his company he must have been in close connection, yet there were few. It may plausibly be said that he utilized the example of Lyly in comedy and of Kyd in tragedy; that he wrote heroic rhyme like Peele, and doggerel and stanza like Wilson; and that Marlowe exercised over him a predominating influence in history. But of these only the last is known to have been attached to his company, and of mutual relations nothing is to be made out. Lodge, Drayton, and Jonson were fellow-writers in his theatre. The first retired in 1597, and no more can be said; the second in 1599, and he afterwards cancelled his praise of "Lucrece" and showed animosity in other ways. Jonson was introduced to the company by Shakspere in 1598; he soon left, and, after satire on both sides, reconciliation and renewed offence,

left again in 1605. After this he satirized Shakspere's work repeatedly, and no certain intercourse between them is traceable. This ends the short list of Shakspere's prominent literary associates. It is remarked that commendatory verses to him during his life are noticeably absent; and we observe that Chettle's apology, at the time of Greene's attack, which is commonly thought to describe Shakspere in its gentle and courteous characterization, is here referred to Marlowe. Shakspere thus appears an unusually solitary figure, withdrawn from the literary craft, disengaging himself from those who were temporarily associated with him, and afterwards the object of their enmity. Perhaps in earlier years he had been made to feel he was "not a University man," and had received a bent away from that class; perhaps the jealousy of the irritable and quarrelling race made it more agreeable to him to keep aloof; perhaps he disliked them and preferred his "private friends," to whom he confided the "sugared sonnets"; perhaps—but why seek a reason for such a trait in a man whom this book teaches us once more is unknowable? Of Shakspere's relations with other persons, not literary, Mr. Fleay adopts the view that the marriage was brought about by the older party to it, was uncongenial, and resulted in a practical separation which did not cease until after Hamnet's death and Shakspere's worldly rise; in respect to the lover and the lady of the "Sonnets," the interpretation based on 'Willoughby his Avisa' is followed, and Southampton "is the man."

The tables, in the appendix, of Shakspere Quartos, the other Company Quartos, the performances at court 1584–1616, the entries of plays 1584–1640, the transfers of copyright in plays 1584–1640, and Moseley's entries 1653, 1660, and Warburton's list, are of the highest value to specialists, and afford a kind of diagram of the whole subject. Mr. Fleay cuts down the estimate of lost plays very considerably. The number of extant plays, 1576–1642, is less than 500; the total number produced he places at 2,000, and thinks that nearly all worth preserving are in our hands. Halliwell-Phillipps's and Collier's statements on this matter he declares "gross exaggerations." We regret to say that in the lack of a proper index Mr. Fleay is only less reprehensible than Halliwell-Phillipps himself.

A Victorious Defeat. By Wolcott Balestier. Harper & Bros.

The Mayor of Casterbridge. By Thomas Hardy. [Leisure Hour Series.] Henry Holt & Co.

Beaton's Bargain. By Mrs. Alexander. [Leisure Hour Series.] Henry Holt & Co.

No Saint. By Adeline Sergeant. [Leisure Hour Series.] Henry Holt & Co.

The Secret of Her Life. By Edward Jenkins. D. Appleton & Co.

Dagonet the Jester. Macmillan & Co.

THE "Judæa" of 'A Victorious Defeat' is obviously the Moravian Bethlehem in Pennsylvania. The story attempts a picture of the colony as it appeared to the eyes of a young Englishman coming thither shortly after the Revolution. He falls in love with the doctor's beautiful daughter, thus bringing himself into rivalry with the pastor of the congregation. There are practically but two incidents in the whole story—the public reproof of the heroine, Constance Van Cleef, before the congregation, for her suspected partiality for the English stranger, as one outside the Moravian communion; and the appeal to "the lot" to decide the question of the marriage of Constance and the minister. So far as motives and convictions are involved, it all belongs as completely to a vanished world as the scenes of the 'Scarlet Letter,' and only such a hand as Hawthorne's could make it live again. There is ascribed both to the system and to the rulers of the church a sternness and an asperity such as the author was bound to prove beyond doubt, either from competent witness or from the innate logic of the story. Supposing this to be beyond his power, as to outward things he might have been painstaking. As to custom or ritual, enough of them survive to make it easily possible to have reproduced the outward life with great accuracy. In this most important respect the author has taken so little trouble to be informed or to use information, as to give no idea of the simple beauty always surrounding the Moravian faith. Not only is no fit use made of scenes so striking as the choral service upon a great feast day, or the evening celebration of the Lord's Supper, but there are most careless mistakes about perfectly obvious things. "Men were born to the glad note of trumpets, . . . the horns blew over the open sepulchre," is a strange misconception of the Moravians' unique use of trombones in a wonderfully adjusted double quartet. Who could forget them that had ever heard the deep, sweet notes floating downwards from the church belfry on the morning of a feast day, or their wailing harmony as at sunset they precede the coffin lifted high above the shoulders of the bearers, at the head of the funeral procession?

> "Though the sounds that ye make are all foreign,
> How native, how household they are:
> The tones of old homes mixed with heaven,
> The dead and the angels, speak there."

Not to mention the fact that at the supposed time of the story the hymns must have been all in German (the Bethlehem congregation use almost nothing else even now), the author ignores the existence of the whole body of Moravian hymns and psalms, some of which have long had an honored place in our own hymn-books, and selects for the evening songs of the family hymns so closely, so inseparably associated with New England feeling and worship as "While Thee I seek, protecting Power," and "All hail the power of Jesus' name." The illustrations might at least have been faithful. For the cemetery it was only necessary to copy photographs, for the long rows of low stones in the upper half of it bear dates long prior to the Englishman's visit. No illustrating artist ever lost a rarer opportunity, for not Salisbury Cloister is more noble, more august—no rural cemetery in the land more peaceful, more serene—than that quiet graveyard on the hill. The whole establishment at Bethlehem is now a little island in the midst of the busy modern town, but in suggestion and association nothing could be more remote from to-day. It may well tempt a novelist who is seeking at once the real and yet not the everyday. The present book need be no hindrance. The field is as open as if it did not exist.

Mrs. Alexander, Mr. Hardy, and Mr. Jenkins all have the unfortunate good-fortune of a reputation to work up to. None of the three has this time at all succeeded, according to the standard of previous performances. Mr. Hardy, of course, shows his own strong hand in the vigorous character of the Mayor, as he sketches his rise from the level which believes the sale of a wife both possible and lawful, over the height of prosperity, down again to be an outcast. Scene by scene, epoch by epoch, one might say, the tale is deeply impressive; but, for a final abiding effect, it has too many sudden catastrophes in it, whether deaths or deliverances.

Mrs. Alexander's plot and assembly of personages are the more distinct for being simpler than her wont, but the villany—and it is pretty rank villany—begins before the reader's sympathy has been sufficiently wakened, and he never believes it likely enough to be successful to be at all excited about it. A rascally guardian advertises "with a view to a matrimonial alliance," etc., for his rich and lovely ward. Of course a *prétendant* is not wanting, but "Beaton's bargain" is brought to naught by the sudden return from parts unknown of an heir with a prior claim, which is speedily allowed, to the happy escape of the heroine from all the Beatons. Our reader, however, is not to suppose the cousin to be the true hero. He is quite a different man, and one of the most attractive of the very many whom Mrs. Alexander has drawn in that position.

It is an odd peculiarity in fiction that once in so often the same subject turns up from the most different directions. 'No Saint' is one of those books, and the subject now reappearing is the effort of a man not only to redeem himself from sin, but to reinstate himself in character before the world after having suffered disgraceful legal penalties for actual crime. 'No Saint' is vividly conceived and well worked out, but its merit consists in its limitations. No sensational element appears, and no exaggerated sympathy interferes with the probable elements of such a man's opportunity. A very simple sense of duty bids him relinquish all the brilliant chances of missions or reforms. "You would say that his life had nothing noticeable, nothing interesting, in it. Just the narrow, common, egotistical life led by a Methodistical Scripture-reader; that is all. But, to the seeing eye, a life with a distinction of its own; a moral harmony, an exquisite inward beauty." The story must rank high in the Leisure Hour Series, after the great ones like 'Fathers and Sons' are counted off.

It is no new thing to find that the author of a clever *jeu d'esprit*, or of an able political pamphlet, has not the sustained power for a work of long breath. The necessity of combination, of interdependence, where many characters or many incidents have to be dealt with, requires just the opposite power to that which deals the single straight blow of the *brochure*. 'The Secret of Her Life' has many pleasant scenes of English life in it, and rather more trying ones; but the plot is so divided between three sets of people, the heroine (the antecedent of "her" in the title) makes so tardy an appearance—only when we are half through the book—and the concluding interests of the story are so remote from the opening ones, that the book is dropped with the feeling that one has been reading snatches of three or four, and not a single story. Such work can produce no lasting impression.

The Macmillans have given a handsome dress of open type and wide margin to 'Dagonet the Jester,' which it well deserves, though it is only a sketch—an episode it might be called—in the crowded story of the English Commonwealth. The writer's purpose to show how the great seething forces which were working on battle-field and in Parliament had their effect, too, upon lowly rustic spirits, has been carried out on very simple lines. All the more for that, it may be, the little story leaves an impression supplementary to the knowledge which even a pretty close student of that time might have. It may well be set upon the shelf with 'Woodstock.'

SOME GERMAN BOOKS OF TRAVEL.

Ein Herbstausflug nach Siebenbürgen. Von Dr. Wilhelm Lauser. Vienna. 1886. 8vo, 28 illustrations, 68 pp.

Zur Volkskunde der Siebenbürger Sachsen. Kleinere Schriften von Joseph Haltrich. In neuer Bearbeitung herausgegeben von J. Wolff. Vienna: C. Graeser. 1886. 8vo, xvi, 535 pp.

Herr Stanley und das Kongo-Unternehmen. Eine Entgegnung von Dr. Pechuël-Loesche. Leipzig. 1885. 8vo, 74 pp.

Herrn Stanley's Partisane und meine offiziellen Berichte vom Kongolande. Von Dr. P.-L. Leipzig. 1886. 8vo, 32 pp.

Nach Ecuador. Reisebilder von Joseph Kolberg. 3 Aufl. Freiburg im Breisgau: Herder. 1885. 8vo, xvii, 550 pp, 122 woodcuts.

WORKS of foreign travel have in 1886 been not less abundant than in former years, and the ethnological reflections and sketches found in them prove that the traveller is becoming more and more an observer of his own species in the scientific sense of the term.

From the press of Charles Graeser in Vienna, who has published a long array of books on Transylvania and the adjoining countries, we have Dr. Wilhelm Lauser's illustrated 'Autumn Trip to Transylvania.' This attractive little volume gives a lively, frisky sketch of the multifarious and curious nations making up the population of that distant country, of their strange customs, picturesque dress, and interesting history; and by the numerous photographic reproductions of landscapes we are led not alone through Transylvania, but also to all the cities and memorable places on the Lower Danube.

Another more voluminous work, which deals exclusively with the folk-lore of the German or Saxon element of Transylvania, is Joseph Haltrich's 'Zur Volkskunde der Siebenbürger Sachsen,' published by C. Graeser in a remodelled shape. The popular imagination of these Saxons seems specially prolific in producing tales about animals, and among these the fox and the wolf, either separate or in partnership, are the most favored characters. Shorter tales about other, especially domestic, animals succeed; next, gypsy stories, some worded almost in the Eulenspiegel style; then chaff about the various classes of human society, children's lore, tales and songs of orphan children; then a highly interesting collection of superstitions and popular beliefs. Proverbs follow, with weather prognostications, oaths, and riddles in various Saxon dialects with parallels in other languages, and the volume winds up with a rich collection of inscriptions discovered upon house-walls, churches and church-plate, on fountains, inns, city halls, as well as upon gravestones, implements of domestic use, and on regimental flags. The German element of this region has kept itself remarkably intact from Magyar and other alien influence, though its immigration took place as long ago as the end of the fourteenth century, when the main bulk of the Saxons arrived. Haltrich's book is not less fascinating to the conscientious, careful student of all the popular manifestations embodied under the generic term of folk-lore than to the casual reader seeking entertainment only; and the wide range and shrewdness of the author's observation are as wonderful as the ready wit and inventive combination of the rustics whose mouthpiece he is.

Two German publications, by Dr. Pechuël-Loesche, on the possibility of colonizing the Congo country, are of a polemic tendency. By invitation of the Congo Colonization Committee, presided over by the King of Belgium, the author sojourned long enough in Africa to become aware of all the difficulties of the new State. From various quarters the expression of his opinions had elicited misrepresentation and aspersion, and in self-defence against Stanley the author declares himself to have been shamefully treated during his African mission, and gives all the particulars to sustain his charge. A settlement on those unhealthy tracts, he says—speaking only of the country around Stanley Pool—will never have a shadow of success: the colonists die off like sheep; there is no commerce worth speaking of, for there are no merchantable goods in sufficient quantities, and hence the railroad projected from the coast north of the mouth of the Congo will never pay. Ample experience corroborates these facts, and Pechuël-Loesche endorses throughout the report of the American Commissioner to the Congo, Mr. Tisdell, who openly discouraged any settlement in that unpromising corner of the globe.

The extraordinary volcanic phenomena visible in Ecuador are combined in the grandest manner with earthquake manifestations. It was the occurrence of both in that lofty South American plateau which prompted Joseph Kolberg to undertake long journeys to study the phenomena on the spot. His observations in Ecuador and on the way there are laid down in a richly illustrated volume, which has just been published in a third edition, and affords useful and agreeable reading for general readers, especially the more youthful. As to the scenery described and the occurrences witnessed, Kolberg is graphic and truthful, while free from sensationalism and bombast. But the excessive details in explanation of earthquakes and volcanic disturbances make the work almost a school-book; for there is no end of geogenic theories propounded and problems discussed in it. In view of its being addressed to scientific readers, it has altogether too much philanthropic twaddle to make up for the dearth of positive facts, and, after all, very little that is really new can be found in it. Any one seeking information about the Indians will find scanty extracts from earlier writers. The Indian element is now almost entirely confined to the eastern portion of Ecuador, which belongs to the drainage basin of the Amazon River, and is very uncomfortable to travel over; Kolberg visited only the western part of the country.

Comparative Literature. By Hutcheson Macaulay Posnett, M.A., LL.D., F. L. S., etc. D. Appleton & Co. (International Scientific Series.) 1886.

THE application of the historical method to literature on a grand scale must finally be made; but the work involved in learning the contents of the whole body of literature in relation to its determining causes and modifiers under complex varieties of nature, society, politics, metaphysics, and tendency, and in then comparing this knowledge part with part, is tremendous. To look for a satisfactory volume in the present stage of scholarship is as foolish as to expect one on Comparative Religion. The book before us is, perhaps, a primer, in intention; but primers are condensations rather than first trials in a subject, and here is only a first trial. The author is quite aware of many deficiencies in his study, and very often stops his discourse to regret omissions of whole topics, and to apologize for inadequate treatment and illustration, on the score of the popular character of his book and its limited bulk. He surveys all literature, and passes and repasses from China to Spain, from the Hebrews to the Muscovites, from the North American Indian to Walt Whitman; but India, China, Japan, the Jews, Greeks, Romans, and Christians, England, France, and Germany, receive most attention. From the extent of the field (if a technical figure may be allowed) let the reader judge of the intensity of the agriculture.

It is not necessary to say to such as are familiar with bookmaking, that the author has but one idea; there is not room for more. As a preliminary matter, he had to show that literature, like everything of human production, is conditioned by the nature of the man who expresses himself, and by the environment which supplies him with modes of utterance; *i. e.*, first, by ideas and emotions in the author, and, secondly, by language-forms, physical surroundings, social customs and tastes, etc. Out of this arises the relativity of literature, in consequence of which it is proper matter for the application of the historical method. In literature there is nothing universal and permanent, because both the nature of the author and the character of his *milieu* are shifting and transitory, just as in religion and morality, according to a similar view, there is only a perpetual flux of Heraclitean change. All this, however, is merely hoisting the flag of science over the territory and proclaiming it the king's land. This ceremony over, the author proceeds to unfold his one idea. He does not derive this from the study of literature, but he adopts it from the students of early institutions. Social evolution consists in the gradual development of the conception and sense of personality, and the substitution of sympathy between individuals for the tie of blood as the bond of society; literature is essentially an illustration of this principle. That is the whole story. "Comparative literature" is the study of the proof of this theory. First came the clans, out of whose choral dances sprang literature with a communal sentiment, which in its evolution expressed clan-morality—blood-revenge, inherited guilt, fidelity to the group, etc.; in this the individual was impersonal, with a future life devoid of any moral relation to his deeds in the flesh, and was in all things merged in his kinsmen. Next came the decay of the clan in different phases, such as the rise of Greek chieftainship with its attendant epic; or the growth of the Roman state, without the transition stage of chieftainship and consequently without the epic; or the development of a clan-priesthood, as among the Hebrews, with hymnals, the laws, and the histories, in its charge. Among all such changes, the form of the city-commonwealth stands out with prime importance. World-literature, under the sway of the Empire or the Church in the West, and of Indian caste or Chinese ethics in the East, was the third stage; and last of all came the national literatures of modern Europe.

The author, in his progress through these four successive kingdoms of literature, is careful to observe that their boundaries overlap, but in this respect he finds that the classification is eminently scientific, and only goes to prove how similar literature is to geology, for instance. What he insists on is, that at every advance there is a deeper sense of personality and an expansion of social sympathy, while at the same time survivals of the anterior stage may be noticed. Thus, in the Athenian drama of the great age, clan-morality—the doctrine of inherited guilt and blood-revenge—was still vital, and Sophocles represented its conflict with the new morality of individual responsibility which in Plato was to find its peculiar and novel sanction in the theory of reward and punishment in a future life; or, in the parallel case of the Hebrews, Ezekiel first renounced the clan-morality in favor of individual responsibility, and the Hellenizing Jews, before Christ, supported this with the Platonic idea of future judgment. Or, to illustrate again, the gradual realization of personality involved a clearer perception of the insignificance of the individual in contrast with the permanence of nature and society. Hence, among the Hebrews, the Preacher's reflections during the transition period, before the soul had received the added value of immortality in the philosophic (Greek) conception of its fate; hence, too, the Sicilian elegiac poetry, which contrasts the death of man with the continuance of nature; and so on. In Christ, according to this writer, occurred the union of the old clan-socialistic spirit with the idea of a perfectly realized personality conceived as existing for eternal life. The leaven of Christianity consisted in this synthesis, and resulted in the World-Literature. The socialistic element, however, has been interfered with by the course of

human events, and is only now reasserting its power in connection with democratic individuality; of this modern synthesis the supreme expression is found in Walt Whitman. With his name—the sole reference to American literature—this survey of the spiritual history of all mankind in their progress from the Dakotah war-dance to the 'Leaves of Grass' closes.

The volume, it will be seen, is a social rather than a literary study; it is an essay in the general subject of Evolution. It would be wrong not to say that several literary topics are dealt with which are of interest; but the discussion is necessarily closely confined to the surface and limited in its heads, and the generalization is too baldly made. It is merely specious to speak of Æschylean morality as if its contents were identical with the doctrine of inherited guilt and blood-revenge, and were nothing other or more. But the apologies of the author for his omissions and condensations preclude criticism in that direction. This is not the case, however, with total absence of any perception of the æsthetic value of literature either in the author's criticism or in his selection of quotations. The importance attached to non-European literatures is disproportionate; the treatment of them is relatively as diffuse as that of the better known literatures is meagre. One might find much fault in detail; but the book was written not for its details, but its generalities, and if one reads it, he will have a fuller and more defined impression of how literature has taken color from the political progress of the race, and shared in the evolution of both mind and morals.

It is not meant to imply by this remark that all the historical links in the author's unfolding of his subject are true metal and well forged; nor that his analysis of cause and effect in the relation of special literatures to their times, is final. By no manner of means, either, is it meant that the doctrine of the relativity of literature as he states it, to the exclusion of any universal and permanent element in the nature of the soul since it became self-conscious, is something to be admitted without further argument. In fact, the "impersonality" of the individual in the clan, which is the starting-point of the book, is a conception which must be better defined in the mind and clarified by historical fact, before the human beginnings implied in it can be considered more than hypotheses; and though, within the course of known history, literature has had a temporal and local dependence on the social forms and mental and moral contents of the civilizations it records, and has shared the relativity that appertains to all human knowledge, this is not the same thing with allowing that it has not a basis as changeless as is the persistence of force, and conditions as universal and simple as are time and space. The limitation of the author's view on the metaphysical and æsthetic sides, together with his engrossment with prehistoric times and outlying literatures, are very serious defects in his equipment as the pioneer of a "new science."

Childhood, Boyhood, Youth. By Count Lyof N. Tolstoi. Translated from the Russian by Isabel F. Hapgood. Boston: Thomas Y. Crowell & Co.

SYMPATHY and candor seem to be the chief characteristics of Count Tolstoi, both as an author and as a man. These characteristics are nowhere more strikingly exhibited than in the semi-autobiographical volume whose title we give above. The task which the author set himself was a difficult one—no less, in fact, than a psychological study of that most baffling of all periods, so far as literature is concerned, the years between ten and eighteen. It is no mere chronicle of childish pranks and superficial sentiment, such as the majority of books treating of children turn out, whatever may have been the writer's intention at the start. Childish pranks there are in abundance, and in the proper place, and trivial incidents. But there is much more than this. Nominally, it is the record of Nikolai Irteneff's development from a child into a man. In reality, it is the record of Count Tolstoi's own youth, with some changes, which are, however, less important than they at first appear.

But the reader, whether man or woman, speedily discovers that it is his own personal moral autobiography, in a great measure, which he is perusing. It is the breadth and universality of the author's sentiment which gives him his power over his audience. What most people disregard or dislike to acknowledge, he reveals, not in a lengthy analysis, but in a few words which open up to the appreciative reader great depths of youthful feeling to which he looks wistfully back. This is done in the simplest and most natural way possible. The author never seems to search for extraordinary emotions or events. The latter are just of the ordinary sort which convey an idea of a boy's life in Russia, both in town and country. But nothing is more difficult than to express the lofty aspirations, the vigor and elevation of sentiment in early youth, without either under or overstating the case, even when they are coupled with, and to some extent justified by, extraordinary material surroundings. What Tolstoi has done is to account for these sentiments in a quiet, uneventful life. So easy and natural is his manner that the amount of skill required for the series of mental and moral pictures is hardly realized at first. It is the same with his sketches of nature. The power of vivid delineation in a few words seems to have characterized him from the first. The description of the harvest field through which Nikolinka's father passes on his way to the picnic, is fully as vivid and glowing as the picture of Levin among the mowers in his latest work. The morning under the apple-tree among the raspberry bushes, the moonlight night on the terrace, or the second journey to Moscow, in this volume, equals anything of the kind in his more recent writings.

The author's two great novels somewhat overshadow this quiet story, which, nevertheless, it must be remembered, placed him on a level in public estimation with Turgeneff and the foremost writers of Russia. The exquisite gradations by which Nikolinka grows from a superstitious little boy, who says his prayers on the sly in the carriage lest misfortune should overtake him, into the supercilious young man who despises all the world but the Irteneff family and people, who are *comme il faut*, while he makes frantic, though not entirely successful, efforts to be *comme il faut* himself, are delightful. His meditations while shut up in the garret for his misdeeds are so natural as to be ludicrous in spite of their intensity. His temporary religious fervor, his disappointment at the indifference of his family to his newly acquired but imperceptible goodness, his love affairs, his attempt to speak the exact truth to his friend Dmitri, and the unpropitious results, are all things which are treasured up from personal experience in out-of-the-way nooks of many a reader's memory. The chapter entitled "Reveries" in "Youth" contains the germs of the principles by which the author now rules his life. The interest of the whole book is quiet but intense, and, in common with Tolstoi's other writings, it makes the reader feel a warmth at his heart, elevation of purpose, and fresh strength to meet what life may bring to him.

It is a pity that we are compelled to bid adieu to young Nikolinka just when he has come to the conclusion that other people in the world besides the Irteneff family have brains and virtues. Having arrived at this point at the early age of eighteen, his further career would have been of great interest. As it is, the book will make a profound impression on all thoughtful people. The translation has been carefully made, with a view to preserving the style and spirit of the original; and nothing has been omitted.

The History of Pedagogy. By Gabriel Compayré. Translated, with an Introduction, Notes, and an Index, by W. H. Payne, A.M. Boston: D. C. Heath & Co. 1886.

M. COMPAYRÉ'S work is a condensed statement, in sections and paragraphs, of the aims of educators and systems of instruction that have a place in history. The methods and purposes of the Chinese, Hindu, and Israelitish schools are naturally set forth with brevity, and Greece, Rome, and the Middle Ages are soon despatched. The body of the volume is made up of a detailed examination of education in France, with views of the more notable foreigners, such as Locke, Comenius, Pestalozzi, Froebel, and Spencer, while a few quotations from Channing and Mann do duty for the subject in America.

A complete history of education would be a reflex of progress, or of the change in the ideal of what a man should be which has taken place in the evolution of society; and, in the rapid survey which M. Compayré makes, the dependence of education on a variable social expediency is perhaps the most instructive lesson. Not less striking is the perennial character of educational discussion which arises from the permanence of the mental qualities and the acquisitive instincts of the race. The case of utility *vs.* culture, of object *vs.* idea, of modern *vs.* ancient, of manual labor *vs.* books, etc., is pleaded in every age and by all the theorists on one side or the other. The only advance seems to be made by successfully disputing the right of any theory to exclusive possession of the field. In respect to all such problems that still vex our institutes, this compendium will prove a storehouse of quotations and authorities; and in general the decisions of the writer himself are in harmony with the ideal of the age, which is developing the secular, practical citizen school, with compulsory attendance, mild discipline, and much physical exercise. At the conclusion the "science" of education as something intimately and unchangeably related to psychology makes its appearance, and the dictum of Spencer, that education should reproduce in the individual the historical evolution of the race, is brought prominently forward. The object of the author, however, is not to theorize, but to present the speculation and practice of the past; and, except for the great preponderance of France in the history, the work is useful for reference, and likely to benefit teachers both by a fund of knowledge respecting the practice of the profession in other countries and by many valuable suggestions.

Teacher's Handbook of Psychology. On the Basis of 'Outlines of Psychology.' By James Sully, A.M. D. Appleton & Co. 1886. Pp. 414.

MR. SULLY'S 'Outlines of Psychology' contained so many references to educational matters as to suggest the inference that he expected it to be read mainly by teachers. He has now abbreviated and simplified that work, retaining all the pedagogic matter, and remodelling other parts into harmony with the general plan of throwing light on the education of the young. Perhaps the process of simplification has been carried too far by omitting mention of controversies and leading controversialists in various disputed questions. The quiet, dispassionate tone in which he discusses some questions in æsthetics and mo-

rality over which bloody battles have been fought, may add to the dignity of the work, but deprives it of dramatic interest. In another sense, a little more simplification would have been desirable. Mr. Sully's style, though clear enough, is too diffuse. What is true of his 'Outlines' is also true of his 'Handbook'—everything in it might have been said, and more impressively said, in less than half the space. There are too many self-evident assertions which might have been left to the reader's inference. The style lacks concreteness, and is hardly ever suggestive. A teacher's mind does not differ so greatly from a pupil's as to make special illustrations dispensable, and these are very rare in the present volume. Thus, Mr. Sully refers to the extraordinary memory of Scaliger, Pascal, and Macaulay, but cites none of their feats to illustrate the extent to which memory can be cultivated, which is the most important phase of the question, and which would impress the matter on the reader's imagination. Nor is there any reason why the tone of the book should be so monotonously dignified. A teacher's life is so dry that he would especially relish a few anecdotes, a little humor; and he would, *e. g.*, be more apt to remember the psychologic peculiarity that young children cannot estimate distance, on being told the story of the absent-minded man who was annoyed by his child's screams, and, when the nurse informed him that the child wanted the moon, replied impatiently, "Well, then, for heaven's sake, let him have it."

But, these, after all, are minor faults, which do not prevent Mr. Sully's book from being of very great use to the teacher in calling his attention to matters which might otherwise escape his attention, and in explaining psychologically why certain methods of teaching are preferable to others. Mr. Sully is perhaps better versed in the latest discoveries of Continental psychologists and physiologists than any other English writer in his field; and, by a short bibliographical appendix to each chapter, he enables teachers to pursue the same subject in the works of other authorities. By constantly referring to the nervous concomitants of mental action, he makes clear the reason for many rules of pedagogy—the necessity for frequent relaxation, change of subject, to exercise a different region or sense-centre of the brain, etc. The observations of Preyer, Perez, and Darwin, on the earliest manifestations of the different mental faculties in children are also fully utilized and enlarged upon. The difference between former faulty educational methods and modern improvements is everywhere emphasized, especially as regards the need of making learning agreeable, visualizing the lessons, and not cultivating the word-memory at the expense of imagination and spontaneity—which, it is well known, is the defect in German educational practice.

The treatment of Feeling is generally the weak point in psychologic treatises, but here Mr. Sully rises much above the average, though, in common with most writers, he insists too much on the antagonism between feeling and thought. It may be true that violent feeling of some kinds "disturbs the normal flow of the thoughts." But, on the other hand, it must not be forgotten that thoughts are most vivid and original when they are raised to a white heat by fervent emotion.

The absence of an index is hardly atoned for by the very full table of contents at the beginning of the book.

Class Book of Geology. By Archibald Geikie, LL.D., F.R.S. 12mo, pp. 516; 209 figures in the text. Macmillan & Co. 1886.

TEACHERS are already indebted to Dr. Geikie for an admirable manual or dictionary of geology, of which it is high praise to say that it deserves to rank with the great compendium by Dana. In this "class-book" Dr. Geikie has essayed a far more difficult, though less laborious, task than the preparation of a manual of reference involves. He has undertaken to select from the stores of fact which have been accumulated by geologists such points as will command the attention of students. In this task he appears to have succeeded as well as the limitation of the method admits.

The first chapters give an account of the action of the atmospheric agents, especially of water, in the destruction and formation of rocks. This part of the subject is the key to geological actions; its importance is fully appreciated by the author, who has given us an excellent brief presentation of the matter. The only criticism that can well be made against it is the incompleteness of its description of glacial action, and the failure at the outset to call the student's attention to the fact that during the last ice period the ice occupied other countries besides those of central and northern Europe. From the text of this chapter the reader will not be able to form a conception of the importance of ice action in the earth's history; he must turn to the latter part of the book for this information, where it is fairly well given.

The part of the book which treats of volcanoes is much less satisfactory than that which concerns the other modes in which water operates on and in the earth. The author omits clearly to show the student that steam is the most important agent in volcanic explosions, though he evidently understood it himself. The reader thus fails to get the key to this class of geological actions. In other regards this portion of the subject is well presented. After considering the action of the atmosphere, water, and volcanoes, the author takes up the components of the earth's crust, following with an account of the formation, destruction, and metamorphism of rocks—a field in which he has an admirable mastery—so that in the space of fifty pages we get by far the best summary of the points the beginner needs to know that is to be found in any book of this nature.

The last half-hundred pages of the book are devoted to the geological record of the earth's history, and to an appendix, which gives a descriptive list of organic forms. This outline may serve as a model for those who essay to exhibit such details in a text-book. The work has never been so well done, yet we cannot think that the young student will find any profit in it. He cannot, without years of patient study, have any conception of the powers which are indicated to him by mere names now and then helped out by diagrams. Are we not stuffing the youth with wind when we tell him that in the carboniferous strata "some of the more common lamellibranchiate molluscs belong to the genera *Aviculopecten*, *Leda*, *Nucula*, *Edmondia*, *Modiola*, *Arthracomya*. Among the gasteropods *Euomphalus*, *Pleurotomaria*, *Loxonema*, and *Bellerophon* are not infrequent"? There are at the present time not more than a few score persons, mostly gray-haired, to whom these terms bring any definite connotation. The late Prof. Sophocles used to say of naturalists that "they take a pickled snake, a pinned butterfly, and a stuffed alligator, and call that learning." When we teach names in place of nature, and give the student an utterly false sense of acquisition in a store of mere words, we are clearly open to the bitter criticism of the learned Greek. "Gerund-grinding" may be bad, but even gerunds have at times a touch of human nature to give their meaning. This criticism is less applicable to Dr. Geikie's book than to any other of its class; but it lies against the method which characterizes them all. Only so far as the natural sciences can clear themselves of this evil will they serve in the work of education.

Dr. Geikie's book is written in a simple and clear style. The print is excellent; the diagrams are, with few exceptions, good, only one, on p. 47, being thoroughly bad; there is a good index. Those who are so unhappy as to be compelled to begin the study of geology with a text-book cannot do better than to take this.

Outlines of Mediæval and Modern History. A text-book for high-schools, seminaries, and colleges. By P. V. N. Myers, A.M., President of Belmont College, Ohio, etc. Boston: Ginn & Co. 1886.

A FEW years ago (see *Nation* for Oct. 12, 1882) we reviewed Myers' 'Outlines of Ancient History,' the most prominent merit of which we found to be the freedom from unnecessary detail which makes up the bulk of most historical text-books. The same author has now published a text-book of mediæval and modern history, characterized by the same excellence. The two volumes, taken together, furnish the best brief universal history for general readers with which we are acquainted. The same sound historical sense which leads to the omission of so much of the usual detail, is to be noted in the plan of the work. The author does not attempt to make a complete history, and especially he does not, as most writers of school history do, think that he must make his *general* history a bundle of *particular* histories. Take, for example, his Second Period—"The Age of Revival" (from about 1000 to 1500). The chapters in this are Feudalism and Chivalry, The Normans, The Crusades, Supremacy of the Papacy, Conquests of the Turanian or Tartar Tribes, Growth of the Towns, The Revival of Learning, and Growth of the Nations—in which last we find most of the details of dynastic history. Such a treatment as this assumes, it is true, a certain amount of previous knowledge, at least for its best results. But the book will serve admirably for collateral reading in connection with any school course, as well as directly as a text-book, in the hands of a good teacher.

A series of maps (nine, we believe, but there is no list of them) is inserted at the proper pages. Of these it is enough to say that they are reproduced, by permission, from those in the Atlas to Freeman's 'Historical Geography of Europe.' There is also an index.

BOOKS OF THE WEEK.

Arnold, T. Clarendon History of the Rebellion. Vol. 6. Macmillan & Co.
Brown, T. E. Studies in Modern Socialism, and Labor Problems. D. Appleton & Co. $1.25.
Campbell, Helen. Miss Melinda's Opportunity: A Story. Boston: Roberts Bros. $1.
Cambridge Greek Testament: The First Epistle to the Corinthians. Edited by Rev. J. J. Lias. Macmillan & Co. 75 cents.
Dana, W. F. The Optimism of Ralph Waldo Emerson. Boston: Cupples, Upham & Co. 50 cents.
Fenn, G. M. Double Cunning: A Novel. D. Appleton & Co. 50 cents.
Hamerton, Eugénie. Golden Mediocrity: A Novel. Boston: Roberts Bros. $1.
Hamlin, Myra S. A Politician's Daughter. D. Appleton & Co. 75 cents.
Hodgkin, T. The Letters of Cassiodorus: Being a Condensed Translation of the Variæ Epistolæ of Magnus Aurelius Cassiodorus, Senator. Macmillan & Co.
Humphrey, Frances A. The Children of Old Park's Tavern. Harper & Bros.
Keith, L. The Chilcotes; or, Two Widows. Harper & Bros. 20 cents.
Lillie, Lucy C. Jo's Opportunity. Harper & Bros. $1.
Molinari, G. de. Conversations sur le Commerce des Grains et la Protection de l'Agriculture. New ed. Paris: Guillaumin et Cie.
Morley, J. Critical Miscellanies. Vol. 3. Macmillan & Co. $1.50.
Neubauer, Ad. Catalogue of the Hebrew Manuscripts in the Bodleian Library and in the College Libraries of Oxford. Macmillan & Co.
Neubauer, Ad. Facsimiles of Hebrew Manuscripts in the Bodleian Library. Macmillan & Co.
Norris, W. E. My Friend Jim. Macmillan & Co. 50 cents.
Oger, V. Les Demoiselles de St. Cyr: A Comedy. By Alexandre Dumas. With notes. Macmillan & Co. 40 cents.
Roberts, E. Santa Barbara, and Around There. Boston: Roberts Bros. 75 cents.
Robins, G. M. Keep My Secret. Harper & Bros. 20 cents.

HENRY HOLT & CO.'S

IMPORTANT NEW TEXT-BOOKS.

JOHNSTON'S HISTORY OF THE UNITED STATES.

History of the United States for Schools. With an Introductory History of the Discovery and English Colonization of North America. By Alexander Johnston, Professor in Princeton College. 12mo, 473 pp., $1 25.

A history of the United States, and not principally a history of the colonies from which the United States sprang. It is not a story-book, or a picture book. The author has written in the conviction that what the mass of pupils need is to learn from the history of the past how best to perform the simple and homely duties of good citizenship. Mr. John Fiske says of it: "incomparably the best short history of the United States with which I am acquainted." The *Nation* calls it "The best school history which has yet been presented to the public."

REMSEN'S CHEMISTRY—BRIEFER COURSE.

An Introduction to the Study of Chemistry. By Ira Remsen, Professor in the Johns Hopkins University. 12mo (American Science Series), 389 pp., $1.40.

The one comprehensive truth which the author aims to make clear to the student is the essential nature of chemical action. With this in view he devotes the first 280 pages of a carefully selected and arranged series of simple experiments, employing only the four common elements—Oxygen, Hydrogen, Nitrogen, and Carbon. In these experiments are gradually developed the main principles of the subject. His method is purely inductive; and, wherever experience has shown it to be practicable, the truths are drawn out by pointed questions, rather than fully stated. Next, when the student is in a position to appreciate it, and not at the start, as is usual in elementary treatises, comes a simple account of the theory of the science. The last 150 pages of the book are given to a survey, fully illustrated by experiments, of the leading families of compounds.

PACKARD'S ZOOLOGY—ELEMENTARY COURSE.

First Lessons in Zoölogy. By A. S. Packard, Professor in Brown University. 12mo (American Science Series), 290 pp., $1.00.

In method this book differs considerably from the large books in the series. Since it is meant for young beginners it describes but few types, mostly those of the higher orders, and discusses their relations to one another and to their surroundings. The aim, however, is the same with that of the others—namely, to make clear the general principles of the science, rather than to fill the pupil's mind with a mass of what may appear to him unrelated facts.

WHITNEY'S FRENCH GRAMMAR.

A Practical French Grammar. By William D. Whitney, Professor in Yale College.

A practical class-book for academies, high schools, and colleges. Part first opens with a full account of the pronunciation of the language. In the next forty-two lessons the author unfolds those important facts of the grammar which the student must master as a foundation. The regular verbs are gradually introduced and fully explained, then the more common of the irregular verbs are taken up, and their conjugation exhibited by a new method of arrangement. The exercises carefully avoid the error of bringing in too many new words at a time, but give repeated practice in a carefully selected vocabulary of common terms. Part second is a more systematic presentation of the facts of French usage, in the order usual in scientific treatises on grammar. Its matter is meant to supplement and extend that of part first. The sentences for translating in this part are all quotations from French authors.

GOODELL'S THE GREEK IN ENGLISH.

First Lessons in Greek, with special reference to the etymology of English words of Greek origin. By Thomas D. Goodell, Instructor in the Hartford (Ct.) High School. (*Shortly.*)

The Greek element of English in conversation, and especially in literature, carries many of the key-words to the thought, and he to whom these key-words are not alive with meaning is at a great disadvantage; and yet mere dictionaries or etymological hand-books alone cannot give what is wanted. *The words in their Greek form, and with some fragment of their Greek associations*, must become somewhat familiar before one can be sensible of that grasp of their English derivatives which will enable one to use those derivatives correctly and fearlessly. The Greek vocabulary surviving in English *can* be presented in a sort of Greek primer, with its relations to English pointed out; and this is just what this book aims to do. It is not intended to lessen the number of those who shall enter on a full course of study in the Greek language, but it is rather hoped that it may increase that number.

CLARK'S PRACTICAL RHETORIC.

A Practical Rhetoric, English Composition and Revision. By J. Scott Clark, Instructor in Syracuse University. 12mo, $1.50.

Its main source of inspiration was an attempt to work Herbert Spencer's 'Philosophy of Style' in the classroom, the result of which was the accumulation of a body of rules which adapt the principles of that incomparable treatise to actual work with untrained students. The author attempts no impossibilities. He believes that rhetorical training must be largely negative; that it cannot teach "invention," but can develop the ability to arrange and revise. The exercises, which are a leading feature, are treated somewhat after the manner of Abbott's 'How to Write Clearly.' They deal not with errors that have been committed by authors of reputation, but rather with those that are peculiarly apt to be committed by students in school and college.

HENRY HOLT & CO.'S new educational catalogue, which contains full descriptions of these and other new and forthcoming books, will be sent free on application.

29 W. 23d St., New York; 151 Wabash Avenue, Chicago.

DR. JAEGER'S Sanitary Woolen System Co.,

827 and 829 Broadway, New York.

L. C. HOPKINS, Manager.

DR. JAEGER'S WOOLEN CLOTHING is called sanatory, not because the garments are "medicated," but because they are made of a material *provided by Nature for the clothing of an animal*; a material, therefore, endowed with properties (*non-conductivity to heat and permeability to moisture*) which make it auxiliary to the functions of that great HEALTH-REGULATING ORGAN, the *Human Skin*.

The material is also *woven, cut*, and *made* with special reference to its relations to the body anatomically and physiologically.

Every garment, therefore, made under the Jaeger System is sanatory—that is, *conducive to health*, preserving, improving, and restoring it.

The garments are all made of absolutely pure wool, and of every description for men, women, and children.

The Underwear manufactured from "Stockinet," a beautifully woven texture of natural, gray, undyed wool, is fine, soft, "smooth as silk," does not "irritate the skin," can be worn with the greatest comfort in summer and winter.

Writing of this underwear, DR. HART, President of the National Health Society of Great Britain, says: "*I consider it a contribution to Hygiene of the highest importance.*"

THE SANATORY BOOTS AND SHOES, worn with the SANATORY SOCKS, keep the feet clean, fresh, dry, and warm, "free from corns and other feet troubles."

W. LEONARD of Bristol, Eng., says:

"Till I used your boots, I never knew what it was to have warm feet in the winter"; and of the

SANATORY HATS, which keep the forehead dry and cool, the same writer states: "It is the *most comfortable hat I have ever had.*"

THE SANATORY BEDDING, of pure, undyed Wool or Camel-Hair, is protective against cold and chills, and highly conducive to sound, restful sleep, especially for persons suffering from insomnia and neuralgic affections.

All these materials are *free from noxious dyes*, and especially designed with reference to grace, beauty, comfort, and convenience, in all which respects the guaranteed Jaeger garments are pronounced by the highest medical authorities to be greatly superior to those made of any other fabrics. Catalogues of prices sent by mail. Prompt attention paid to mail orders. References by permission: Messrs. H. B. CLAFLIN & Co., New York; BANK OF THE METROPOLIS, New York; Messrs. S. V. WHITE & Co., Bankers, No. 7 Wall Street; Messrs. KESSLER & Co., Bankers, No. 68 Wall Street. July, 1886.

Messrs. Roberts Bros.'

NEW BOOKS:

Miss Melinda's Opportunity

A Story. By HELEN CAMPBELL, author of 'Mrs. Herndon's Income,' 'The What-to-do Club,' etc. 16mo. Cloth. Price, $1.00; paper covers, 50 cents.

Golden Mediocrity.

A Novel. By Mrs. EUGENIE HAMERTON. 16mo. Cloth. Price, $1.00; paper covers, 50 cents.

Mrs. Hamerton is the "Eugénie" to whom her husband, Philip Gilbert Hamerton, dedicated his book, 'The Intellectual Life.'

For Summer Afternoons.

A Collection of Stories. By SUSAN COOLIDGE, author of 'What Katy Did,' &c. A new edition, enlarged. 16mo. Cloth, $1.25. Paper covers, 50 cents.

Santa Barbara, AND AROUND THERE.

By EDWARDS ROBERTS. With Illustrations by H. C. FORD. 16mo. Cloth. Price, 75 cents.

"Santa Barbara is the Nice of America, and its popularity increases yearly. This is a truthful account of its climate, surroundings, and natural attractions. A chapter on 'The Home of Ramona' will be read with great interest by the lovers of that book."

Sold everywhere. Mailed, postpaid, by the Publishers,

ROBERTS BROTHERS, BOSTON.

Robert Browning's Poems,

in 4 volumes, and over 2,500 other volumes of the

TAUCHNITZ COLLECTION

of British authors, bound in half morocco, at $1.25 a volume. Send for catalogue to

DUPRAT & CO., Booksellers, 5 East 17th St., New York.

The Nation.

NEW YORK, THURSDAY, AUGUST 19, 1886.

The Week.

THE most marked feature of the past week in business circles has been the rather sudden turn in the money market from great ease to apparent stringency. The rate of interest has been phenomenally low ever since the flurry of 1884. The failure of Grant & Ward and the Marine Bank in the early part of that year produced a genuine panic, which required the utmost efforts of the banks to control. When the squall had passed, the money market settled down into a condition of stagnancy betokening a very bad state of general business. Upwards of $60,000,000 of idle money accumulated in the banks of New York at one time, and the unused surplus during the whole year 1885 did not fall below $24,000,000. During the present year the surplus has been gradually diminishing. On Saturday it had fallen to $7,000,000, and the rate of interest on call loans was 5 per cent., against an average rate of 2 per cent. prevailing throughout all of the preceding and the greater part of the present year. The rate of interest on call loans is the best index to the state of general business. Setting aside the abnormal conditions of panic terror, when men clutch at money for protection against fancied danger and for every other purpose than investment, the rate obtainable for call loans is an accurate measure of the usefulness of capital for the time being. It tells us whether profits are good or bad in the common walks of trade and industry. Now, profits have undoubtedly been bad for more than two years past, not only here, but throughout the civilized world. The stagnancy of money has been the index of stagnancy in trade. The rate of interest, whether high or low, is everywhere and always the consequence of causes at work in the world of commerce and production, save in the exceptional and transitory periods of panic. The renewed "activity" of money is therefore the best possible evidence of a revival of business. Although it is found temporarily inconvenient for certain classes of borrowers, and especially those who are "carrying" stocks, it is the best sign that anybody can have that profits are improving, and that business is again becoming brisk.

One of the invariable accompaniments of a revival of business is an increase of the Treasury receipts. Mr. Fairchild has announced that it will be the policy of the Department to apply as much of the revenue as is practicable to the payment of the public debt, and to be governed by the circumstances existing from month to month. It is possible that the receipts may enable him to issue bond calls more rapidly than the Morrison surplus resolution would have required. Whatever the "size of the pile" in the Treasury will enable him to pay out, will be paid without regard to the opinions of Congressmen or the condition of the outside money market. A certain "working balance" ought to be kept in the Treasury, the amount of which should be left to the discretion of the head of the Department, just as the reserve of a bank is left to the judgment of its chief officer. Beyond this it is no concern of the Treasury whether the money market is tight or easy. If it is too tight, we shall draw money from other countries. If it is too easy, the surplus will pile itself up in the banks as it has done during the past two years.

The popularity of our silver coinage in the South, and the steady opposition which the most of the Southern members of Congress have always manifested to any modification of the present silver laws, have been a feature of our recent financial history. Many of the leading newspapers in the Southern States ably expose the fallacy of the arguments in behalf of a continuation of the silver coinage, but the Southern Representatives say that they only follow the will of their constituents in voting as they do. Several Northern papers are commenting on the recent passage of resolutions at a meeting of workingmen in Savannah in favor of increased silver coinage, as indicating the spread of a delusion in the South "which," as one of them puts it, "is popularly supposed to be exclusively Western." The fact is, however, that the existence of the silver mania in the South is much more easily accounted for than it is in the West. The reasons should be sought for in the experience which the Southern people have had with all forms of paper money within the memory of most persons now in active life. The close of the war not only found the Confederate money, which had already sadly depreciated, of no value at all, but the State bank bills, many of which were hoarded like coin as of undoubted soundness, depreciated almost as much. Of gold the people of the Confederacy saw very little, and the money that they did see endure the test of all their trials was silver. The writer of an interesting article in the August *Atlantic* on the domestic discomforts of the Confederacy says—his remarks bearing directly on the point under discussion—"Such an object of cupidity did the all-powerful silver become to the people, that years of vexatious experience with the unwieldy medium have hardly destroyed their veneration and affection for it."

A new interest was given to the annual meeting of the bankers this year by the presence of a Democratic Comptroller of the Currency, representing more particularly the Southern States. Mr. Trenholm, moreover, is well fitted to make an agreeable impression in the society of cultivated gentlemen. Very close attention was accordingly paid to his remarks, which had a conservative and reassuring tone, but presented no new or positive ideas in regard to banking. The gist of what he had to say was put in the interrogative form at the close of his address in these words:

"(1.) How can the banks be released from the obligation to invest a portion of their capital in United States bonds, yet retain the power to issue a thoroughly secured circulation?

"(2.) How can the national-bank circulation be made, what it ought to be, the elastic element in our national currency?"

To comprehend the full purport of these interrogatories we must know what ideas are stirring in the section of country which Mr. Trenholm more particularly represents, and where his sympathies, if he has any, are likely to find expression. Fresh evidence has been disclosed lately that the South is in favor of the old State-bank system, and desires to have it revived through the repeal of the 10 per cent. tax on State-bank circulation. This policy is warmly advocated by the press of South Carolina and Georgia upon grounds of local necessity and convenience, and not in any spirit of hostility to the national-banking system On the contrary, the Atlanta *Constitution*, which is the most pronounced supporter of State-bank ideas, expressly disavows any opposition or prejudice against the national banks, and rests its argument mainly upon the drying up of the fountain of national bonds, which constitute the basis of national-bank circulation. Mr. Trenholm, we presume, shares in the feeling common to his section, but, as we judge from the tone of his interrogatories, would prefer that the national system be broadened so as to meet the wants of the Southern people, rather than that it should be superseded by the ante-bellum systems of thirty different States.

Mr. Trenholm himself is in a very fortunate position to take the lead in measures to protect the national system against unjust aspersion and assault, and also to preserve it from natural decay—for decay it will unless active measures are taken to preserve it. He gives excellent reasons why there should be no opposition to it. He shows, what every man of sense has always known, that the classes most deeply interested in the system are the depositors, the borrowers, and the note-holders—that is, all the people of the United States. To speak exactly, the stockholders in national banks are interested in it to the extent of $760,000,000, the depositors to the extent of $1,146,000,000, the borrowers to the extent of $1,393,000,000, and the note-holders to the extent of about $300,000,000. That is, other classes are interested in it about four dollars' worth for every dollar's interest of the owners themselves. But this does not really represent the whole interest of the public in the national-banking system. All business has adjusted itself to the system. Its ramifications run through the whole warp and woof of trade and industry. Ideas and expectations are based upon it to an incalculable extent. It is now a part of our commercial education and a considerable part of our legal education. Still more, it is an unseen but potent element in the Union of the States. It cannot be torn up or suffered to go to decay without enormous consequences—for the most part evil, in our judgment.

The President has given another evidence of the painstaking care which he bestows upon the smaller as well as the weightier matters of his office, by filing with the State Department memoranda of his reasons for not approving nearly a dozen acts and resolutions which reached him during the last days of the session, and had not

been acted upon at adjournment. The strongest impression made upon one by the perusal of these memoranda is that of the recklessness with which Congress passes bills. For example, one bill provided for the payment of $633.50 to William H. Wheeler for quartermaster's stores furnished the army in 1862, but data furnished the President by the Quartermaster-General seem to leave no doubt that the claim has already once been paid. Not a shadow of doubt is left in regard to the similar bill for the relief of J. A. Henry and others, which appropriates various sums to these persons for rent of quarters occupied during the war by the Quartermaster Department of the army, including $51 to L. F. Green. This account has been paid once, a special act directing such payment having been approved February 12, 1885; and the President remarks that "the fact of this payment, and important information bearing upon the validity of some of the other claims mentioned in the bill, could have been easily obtained by application to the Third Auditor." In another case an act had been passed, doubtless without attracting any attention, which granted a pension to Margaret D. Merchand, although the President had already vetoed a similar bill upon the ground that she was not entitled to it, as the death of her husband did not appear to be in any way related to any incident of his military service.

The easy-going spirit in which Congressmen vote away other people's money is also illustrated in the President's comments. One of the bills proposed to give $200 to Francis W. Holdeman, an Ohio man, "as compensation for services performed and money expended for the benefit of the United States Army," upon the ground that in the fall of 1863, when he was a lad twelve years of age, he purchased a uniform, armed himself, attached himself to various Ohio regiments, and performed various duties connected with army service until the end of the year 1864. The boy never enlisted and never was regularly attached to any regiment, and, as Mr. Cleveland says, it is quite evident that his military services could not have amounted to much more than the indulgence of a boyish freak, and his being made a pet of the soldiers with whom he was associated. The President's comment upon the matter is that which would be made by any unprejudiced person: "There is a pleasant sentiment connected with this display of patriotism and childish military ardor, and it is not a matter of surprise that he should, as stated by the Committee, have 'received honorable mention by name in the history of his regiment'; but when it is proposed, twenty-two years after his one year's experience with troops, to pay him a sum nearly, if not quite, equal to the pay of a soldier who fought and suffered all the dangers and privations of a soldier's life, I am constrained to dissent." Another act allowed two men who were employed by the doorkeeper of the Forty-eighth Congress as laborers, at $720 a year, the difference between that rate of pay and the $1,200 allowed messengers, on the ground that they performed the duties of both laborers and messengers. Mr. Cleveland points out that the men accepted the position of laborers, that they owed their time and services to the Government, that while they were performing the duties of messengers they escaped the harder tasks which might have been required of them as laborers, and that if they actually performed the duties of both places, their ability to do so is evidence that the labor of either place was light. He concludes that "claims for extra compensation such as these should be firmly discountenanced." A more important measure which met the same fate was the bill providing for the erection of a public building at Annapolis, Md. The two Federal offices there are now accommodated at a total rental of but $575 a year, and the only plausible plea for constructing a Government building was the fact that most if not all of the other capitals of States have such buildings. The average taxpayer will agree with the President that this is altogether too flimsy an argument to justify the waste of $100,000 or more.

The position of Chief Examiner of the Civil-Service Commission is of very great importance, the success of the competitive system depending in large measure upon his ability and fidelity. The President has just filled the vacancy in this office, caused by Mr. Lyman's promotion to the position of Civil-Service Commissioner a few months ago, by the appointment of Major William H. Webster, who has been chief of an important division in the Pension Office for several years. The Hartford *Courant*, which speaks with knowledge of the man, pronounces the selection an excellent one, saying of him: "Major Webster did good service during the war, going from this city with the Fifth Connecticut Volunteers. He has risen from a subordinate position in the Pension Bureau to the responsible office he has ably filled for a number of years." The choice of such a man in preference to one of the pertinacious office-seekers of the spoils school is another proof of the President's sincerity in the matter of civil-service reform.

A short time ago the First Comptroller of the Treasury, in reply to a query addressed to him by the First Auditor, gave an opinion that heads of "offices" could be furnished with "confidential clerks," who need not be examined or certified by the Civil-Service Commission. Thereupon the First Auditor, the Fourth Auditor, and perhaps other heads of offices, were supplied with "confidential clerks," though they had never employed such clerks before. Without questioning the correctness of this decision or the propriety of employing confidential clerks for every head of an office, it is worth the while to inquire how it has come about that the Comptroller construes the meaning of laws. It is his duty to revise certain accounts which have been audited, and to certify the balances thereon arising to the Register. He may, under this power, refuse to make an allowance. As those who are charged with the disbursements of public moneys like to find out beforehand whether there will be any doubt about their receiving credit for the same in particular instances, the practice has arisen, and it is constantly growing, to get an opinion from the Comptroller concerning the legality of an expenditure before it is really made. If the First Auditor had chosen some friend who had never appeared before the Civil-Service Commission for his "confidential clerk," the First Comptroller, who revises the accounts of the officer who pays the salaries of the employees of the Treasury Department, could have refused to give him credit for that particular disbursement, and he could have refused to countersign any warrant which the Secretary might have drawn for the payment to the officer of the necessary funds to meet these salaries, on the ground that it was not warranted by law. But it does not follow from this that the Comptroller can go any further than to declare what he will or will not allow in the accounts of the disbursing clerk of the Department. It is not his province to construe the Civil-Service Act or the rules adopted under it, and the President or the Commission should determine what classes of clerks are exempt from examinations.

President Cleveland has authorized the statement that, having gone to seek a few weeks of rest in the Adirondack woods, if anything happens to him or his family that possesses any public interest, he will find means to communicate it to the press. He hopes that the newspapers will accord him the freedom and the privacy to which an overworked public official is entitled; but if he finds that he cannot enjoy a brief period of repose like a private citizen, he will take such means to protect himself as will effectually frustrate the intentions of the newspaper fiend, or words to that effect. We deem it our duty to advise the President that the way to shelter himself, and the only way, is not to read the newspapers. Surrounding himself with pickets, putting himself behind walls, landing in a desert isle, plunging into jungles, or going up in a balloon will avail nothing as against the enterprising reporter. "Our Special Commissioner" will interview him twice a week in spite of himself. During President Arthur's last term he made sure of getting away from the reporters by taking a boat on the Great South Bay, and spending a day fishing with no companion but the Secretary of War. The next morning a column of his sayings was published in a New York paper, together with sundry interjections on the part of the Secretary, and was extensively copied by the less fortunate newspapers that had no Special Commissioners on the spot. The annoyance to the President and Secretary consisted altogether in reading this stuff. If they had never seen it, they would never have been in the least disturbed by it. Mr. Cleveland should learn by this example not to admit any newspapers into his camp. It is the newsboy and not the reporter that he should be on his guard against.

The Democrats of Tennessee had special reason for commending the President, since the advantage of his course to the party had been conclusively demonstrated by its great gains in the judicial election which occurred only a few days before the Convention. The presiding officer frankly confessed their indebtedness to Mr. Cleveland when he said in

his opening speech: "Under an administration new to your country, he stands to-day like a granite wall, fulfilling every pledge he has made, and, in the brief history of his Administration, has infused new blood and life into the party; and as evidence of it, in the last few days, in your own State, in the judicial vote, you have been able to increase your majority from eight thousand to nearly forty thousand." The Tennessee election afforded a fair test of the question whether the President's course was helping or hurting the Democrats, and the result leaves no room for doubt that Mr. Cleveland "has infused new blood and life into the party." The Democratic Bourbons have been insisting that the reform policy would lose the party thousands of votes and not win any to take their places, but there is no way for them to meet such testimony as an increase of the majority from 8,000 to 40,000. The Republican managers show plainly enough that they perceive how much Mr. Cleveland has strengthened the Democracy, by the unprecedented scale upon which they are preparing to conduct the canvass in Mr. Blaine's own State, the whole force of stump-speakers from all over the country being called upon to "save Maine."

The development of a healthy public sentiment in the South regarding the "bill to promote mendicancy" is demonstrated by the action of two Democratic Conventions in States where the scheme of Federal aid to education had once gained a strong foothold. In South Carolina two years ago the Democratic Convention endorsed the Blair bill, but this year the platform omitted any reference to the subject, and no attempt was made to supply the lack. In Tennessee a certain element in the party has been captivated by the idea of getting a pile of money for the schools out of the Federal treasury, instead of raising the needed funds by the heavier taxation which the State can easily stand; and this faction desired that the platform should at least make no reference to the question, if a declaration in its favor could not be secured. But the spirit of self-respect triumphed, and the convention last week adopted a resolution which takes strong ground against Federal aid. The largest share of the credit for this result belongs to the Nashville *American*, the leading Democratic newspaper at the capital, which has made an admirable fight against the subsidy scheme, on the two-fold ground that it was unconstitutional, and that it was repugnant to that spirit of self-help which is the hope of the State.

The action taken by the New York Republican State Committee last week is most significant. There was a large attendance, both of members of the Committee and of leading representatives of the party from all sections of the State. The proposition to hold a State convention was fully discussed and voted down by a large majority. "One of the strongest arguments used by those opposed to a convention," says the *Tribune's* report, "was that if a convention were held with only one candidate to be nominated, there would be an ocean of talk, and a good share of the delegates might go home before the actual business of the convention was reached. An extreme temperance plank might be adopted which would not commend itself to the good sense of the main body of voters of the Republican party, and would alienate the German element in the cities and towns. The effect of this probably would be to lose several Assemblymen, and with them the chance of electing a United States Senator." This is a surprisingly frank and truthful statement of the real reason why a convention was not decided upon—namely, that the party is afraid to make any declaration of principles this year because it does not dare to take a position on the temperance question.

Michael Davitt did a valuable service to the Irish cause when he rebuked Congressman Finerty for his incendiary speech in Chicago, on Saturday. Mr. Finerty has for a long time been one of the most loud-mouthed defenders of the dynamite faction in this country, never losing an opportunity to express his sympathy with all the most infamous outrages which that faction has perpetrated in London and elsewhere. He presided at the great Irish mass meeting in Chicago on Saturday evening, and, in introducing Mr. Davitt, made one of his usual speeches declaring "war" on England. Before beginning his address Mr. Davitt hastened to assure Finerty and his school that the genuine leaders in the home-rule movement had no sympathy with that kind of talk. "The fight for Irish national self-government," he said, "looks, perhaps, different in Ireland to what it does in Chicago. It is very easy to establish an Irish republic 3,000 miles away from Ireland by patriotic speeches. I assure you it is no easy task, though, to do so in dear old Ireland." He undoubtedly meant also that it was not only very easy, but very much safer, to declare war 3,000 miles away than to do so in Ireland itself. Nobody knows that better than Finerty and his kind.

The public will not fail to observe that the war faction in the Irish National League Convention at Chicago are for the most part the "Blaine contingent" in the last Presidential campaign. They are opposed to the peaceful methods of Gladstone and Parnell because these give no promise of a Donnybrook fair in American politics wherein the Finertys and Sullivans and Pat Fords may be great men, constantly in the way of getting office or distinction by playing on the passions of the unruly and stirring up dissensions between the United States and Great Britain. Mr. Blaine is the natural leader of all the harum-scarum classes in the community, Irish and other. But the Irish question in Ireland has passed beyond the harum-scarum stage. A feeling of kinship has sprung up between the Liberals of England and the Nationalists in Ireland that is detestable to the Finerty and Sullivan faction because it leaves no room for the exercise of their talents as mischief-makers between this country and England. It is hardly possible that the outcome of the Chicago Convention should be a condemnation of Mr. Parnell and the only party in Ireland that has the least chance of success or even of existence.

The struggle between the cigarmakers' unions and the Knights of Labor has ended in the complete triumph of the former. The cigar manufacturers, who sided with the Knights in their effort to starve the union cigarmakers into subjection, changed their ground and went over to the side of the unions. The chief results of the contest thus far have been that 4,000 men have been idle for over a fortnight, and the business of their employers has been at a standstill. A very interesting phase of the controversy is yet to be decided. While the factories all resumed work with union men on Monday, the Knights say that they will refuse to allow their label to be used upon the cigars manufactured. This, the Knights claim, will virtually stop their sale in all the liquor stores and small tobacco shops in the country, and will be a serious blow to the manufacturers. Whether it will or not, remains to be seen. The outcome will be awaited with interest, for it will show whether the Knights are as strong as they claim. We are inclined to think that they will be disappointed.

Mayor Grace confirms the report that he is not a candidate for reëlection as Mayor, nor for any other office. We sincerely regret that he has reached such a determination, and cannot regard it otherwise than as a public misfortune. He has been not only the most upright and faithful Mayor which this city has had for many years, but one of the best the city has ever had. No stronger evidence of his ability and public usefulness could be afforded than has been constantly shown by the abuse which has been poured upon him by the enemies of honest municipal government from the day he took office to the present moment. This abuse has not only been directed at him, but at all his associates in his work. The most notable instance of it has been the recent attempt to prove that, in trying to rid the city of the Squire Flynn-O'Brien plunderers, the Mayor and Mr. Ivins were merely trying to secure plunder for themselves, or, if not plunder, reëlection to office and complete political control of the city. The Mayor's announcement of his determination not to be a candidate for any office puts a stop to this way of defending Squire and Flynn, and leaves their apologists in a worse condition than ever.

The official report of the judgment of the Mexican court discloses two grounds for the sentence against Cutting, which are not answered by the contention of our Government that an American citizen cannot be tried in Mexico for an offence committed on American soil. One is, that the republication of the libel, being an infraction of an agreement entered into in the presence of the court, was a continuance of the original offence; Cutting having again voluntarily placed himself in the jurisdiction of the court. The other is, that Cutting brought the second libel personally into Mexico, and circulated it by handing it to one or more persons. If the latter contention is true, it would seem to leave nothing for dispute except the abstract question, what would have been Cutting's status if he had not taken a copy of his newspaper over the line.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 11, to TUESDAY, August 17, 1886, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND started on Monday for the Adirondacks to enjoy his vacation. He has requested that the newspapers shall not send special correspondents to his resting-place to annoy him and his wife with the publication of unnecessary details of their every-day life in the woods.

The President has appointed William H. Webster to be Chief Examiner for the Civil-Service Commission, to succeed Mr. Lyman, recently promoted to be a member of the Civil-Service Commission. Mr. Webster is a Republican, and has been Chairman of the Departmental Board of Examiners since that board was organized. He is also Chairman of the Medical Board of Examiners of the Pension Office, where he is employed as a chief of one of the divisions. He is a college and law-school graduate and a veteran soldier.

The Civil-Service Commissioners have decided to issue an order requiring the Secretary of each Board of Examiners in the postal and customs service to submit his eligible register and certification book to the Board at each regular monthly meeting. The Board is to see if the Secretary has complied with the law governing the making of appointments. Each monthly report of a local board to the Civil-Service Commission must include copies of all certifications made during the month, a statement of the standing of each person certified for appointment, and a full statement of the circumstances in each case.

The Secretary of State says there is no truth in the report from the City of Mexico that the United States has withdrawn its peremptory demand for Cutting's release. Mr. Bayard maintains still that the Mexican Government is proceeding against Cutting under the provision of the Mexican Code, which gives the Government of that country the right to punish an American citizen for an offence committed in the United States, and that no claim is made that Cutting circulated the libel in Mexico. The claim of Mexico in this particular the United States will never acknowledge. It is believed, however, that the United States Government is not certain that the facts of the case have at all points been correctly reported to it; and Secretary Bayard has sent Mr. Arthur G. Sedgwick of this city to Mexico as a special envoy to investigate the whole matter, to listen to the Mexican arguments, and to report to the State Department within twenty days. Mr. Sedgwick is a well-known lawyer and writer, who has had special experience in international law, and was for several years the Corresponding Secretary of the Bar Association of this city.

The *Diario Oficial* of the City of Mexico, the Government organ, on Friday contained important documents regarding the Cutting case, including the full text of the decision of Judge Zubia, at Paso del Norte, which show that the Court held Mr. Cutting for a crime begun on Mexican soil and continued simultaneously in Texas and Mexico. A. P. Cushing, an American lawyer, sums up Judge Zubia's decision thus: "Mr. Cutting was convicted of a repetition of a libel first published in Mexico and reprinted more virulently in a Texas paper, which he then brought over and distributed in Mexico; and it was the distribution in Mexico of the second libel, and not the printing of the same in Texas, for which he was convicted, the libel having been read by three or more persons, as required by the statute of the State of Chihuahua. Mr. Cutting pleaded, in bar to the jurisdiction of the Mexican court, that the paper had been printed in Texas. He did not, however, deny that the paper had been circulated on the Mexican side, which was the fact, numerous copies having been seized there by order of the court."

Counsel for Attorney-General Garland have filed his answer to the bill recently filed by J. Harris Rogers against the Attorney-General, Senator Harris, and others for a settlement of the affairs of the Pan-Electric Telephone Company. Mr. Garland in his answer denies in detail every material statement in the bill, and says that he was impressed by the apparent usefulness of the inventions and had great confidence in the legal validity of the patents, and believed that their validity would be judicially sustained in any litigation instituted for the purpose, and that in that event they would become very valuable if honestly ma naged on business principles. Mr. Garland asks that "after the settlement of all liabilities of said company by the application thereto of the scrip issued by said company if necessary, any portion that may remain of the scrip of this defendant so brought into court, or any interest of this defendant therein, may be cancelled or returned and surrendered to the Pan-Electric Telephone Company, or otherwise disposed of as the court shall direct, to the end that this defendant may be absolutely rid of the complainant's said stock and all interest therein."

The new silver certificates authorized at the last session of Congress will not be ready for issue much before the first of November. The $1 certificate contains a vignette of Mrs. Martha Washington, the $2 certificate a vignette of Maj.-Gen. Hancock in full uniform, and the $10 certificate a vignette of Vice-President Hendricks.

The Postmaster-General has issued an order extending the "special delivery service" on October 1 to all offices and to all classes of matter.

A. M. Keiley of Richmond, whose appointment as United States Minister to Italy and later to Austria gave so much dissatisfaction, has been appointed one of the judges of the International Court at Cairo, Egypt, vice Judge Batcheller of New York, resigned.

The annual Convention of American Bankers met in Boston on Wednesday, and was opened with an address by President Lyman J. Gage. A letter was read from Hugh McCulloch, ex-Secretary of the Treasury, in which he recommended the Association to advocate the following principles: A suspension of silver coinage for an indefinite period; the discontinuance of the issue of notes under five dollars; the recoinage of a part of the dollars now in the Treasury into fractional pieces, the maintenance of the public faith, not in letter only, but in spirit. On Thursday a resolution was unanimously adopted earnestly appealing to all boards of trade, chambers of commerce, and civil and political associations of every kind to make persistent efforts to secure the repeal of the silver law or a suspension of the coinage of silver dollars. Logan C. Murray of New York was elected President, and the Convention adjourned.

The Indiana Democratic State Convention adopted a platform on Wednesday in which they "cordially approved of the Administration of President Cleveland for its ability, integrity, and economy in the management of national affairs, and recognized in the President and members of his Cabinet faithful and patriotic servants." They also resolved "that taxation of the people for other purposes than raising revenue for the expenses of the Government economically administered is robbing under the forms of law. We are, therefore, in favor of a reduction of the present unjust tariff to a revenue basis, and we hereby reaffirm the principles laid down in the Chicago platform on that subject, and heartily endorse the action of the Democratic Representatives in Congress from this State for their fidelity to the cause of tariff reform."

In the Texas Democratic State Convention on Wednesday all the speakers emphatically urged that more vigorous and prompt measures be taken for obtaining redress for the indignities suffered by American citizens at the hands of Mexicans. Col. Swain, one of the most popular candidates before the Convention, declared that if he was elected, and if war was declared, in twenty-four hours he would lead a force into Mexico, and every man would have a hacienda. The platform as adopted, however, considerably toned down the war resolutions. Gen. L. C. Ross was nominated for Governor. President Cleveland's Administration was heartily endorsed.

The Tennessee Democrats on Friday nominated Robert L. Taylor, United States Pension Agent at Knoxville and ex-Congressman from the First District, on the fifteenth ballot for Governor. He is a brother of the Republican candidate, and there is some talk of the Prohibitionists nominating their father. The nomination does not meet with general satisfaction among the Democrats. Before the Convention Mr. Robert L. Taylor wrote to the Commissioner of Pensions asking if it would be improper for him to go to the Convention. He received the following reply: "In reply to your letter, I have the honor to inform you that, in pursuance of the instructions of the Hon. the Secretary of the Interior, I have to inform you that it is better for you not to attend the nominating convention. While no doubt exists as to your good faith in your proposed action, your presence at the Convention will place you and the Administration, if not in a false position, in one subject to misconstruction."

The New York Republican State Committee, by a vote of 18 to 9, decided on Wednesday that no State convention should be held this fall, as there was only one candidate to nominate, a Judge of the Court of Appeals, and that the Committee should again meet to make a nomination for that office. The present Judge, Theodore Miller, will probably be renominated.

In 1875 there was inserted in the Nebraska State Constitution a provision that, at the general election immediately preceding the expiration of the term of a United States Senator, the electors should by ballot express their preferences for some person for the office of Senator. No action has ever been taken under this provision. Now Senator Van Wyck, who is a candidate for reëlection, has determined to appeal to the people for their expression of preferences, and he has issued a manifesto accordingly.

The hearing in the case of Rollin M. Squire, Commissioner of Public Works, before Mayor Grace, was closed on Friday. The Mayor will recommend to the Governor that Squire be removed.

Wm. Gray, jr., Treasurer of the Indian Orchard and the Atlantic Cotton Mills, in Massachusetts, was on Monday announced to be a defaulter, and it is said the amount of his deficit may be $1,000,000. He acknowledged his crime on Friday and promised to make restitution, but on Monday he fled to Canada. Mr. Gray has been the agent of the Indian Orchard Mills of Connecticut, of the Atlantic Cotton Mills of Lowell, and of the Ocean Mills of Newburyport for several years, and has had from them a large salary. He is a prominent member of the Eastern Yacht Club, is the owner of the *Huron*, and was one of the syndicate which bought the *Puritan* last year. He also owns two smaller yachts, the *Flora* and the *Scamp*, which have been kept for the use of his boys. It is thought that his wife's fortune is dissipated as well as his own.

The firm of Gaddess Brothers, in Baltimore, failed on Monday for $106,000, the entire amount of which is due them by I. Parker Veazey, who until a few months ago was Postmaster of Baltimore, and who tried to run his department in disregard of the civil-service rules.

Many counties in Wisconsin have been devastated by forest fires in the last ten days,

causing a heavy loss of standing timber, and depriving some 700 families of their homes. The losses of buildings and personal property will foot up about $1,000,000.

The total footings of the school census give Chicago a population of 703,817, an increase during the last year of almost 75,000.

Cardinal Gibbon of Baltimore does not agree with Cardinal Taschereau of Canada in his condemnation of the Knights of Labor.

The Rev. Moses A. Hopkins, United States Minister to Liberia, is dead. He was born the slave of Joseph Cloyd in Montgomery County, Va., December 25, 1846. He was graduated from Lincoln University in Chester County, Penn., in 1874. In 1877 he was graduated from Auburn Theological Seminary. Mr. Hopkins was ordained as an evangelist by the Presbytery of Baltimore in June, 1877. He preached in Franklinton, N. C., until appointed Minister to Liberia in October, 1885.

Frank Hastings Hamilton, M.D., LL.D., the distinguished surgeon, died in this city on Wednesday at the age of seventy-three. He was one of the founders of the Bellevue Hospital Medical College, and a Professor of Surgery in it from 1861 to 1875. His greatest works are a 'Treatise on Fractures and Dislocations,' and a 'Treatise on the Principles and Practice of Surgery.' As a practical surgeon he was a bold yet conservative operator, and was the inventor of many valuable instruments. He was one of the physicians to President Garfield during his fatal illness. In the discussion about medical ethics he was a vigorous upholder of the old school.

Representative Lewis Beach of the Fifteenth New York Congressional District died at Cornwall on August 10, at the age of fifty-one. He was elected by the Democrats to the Forty-seventh, Forty-eighth, and Forty-ninth Congresses, and was the author of a 'History of Cornwall.'

FOREIGN.

The Marquis of Salisbury on Wednesday received a deputation of Imperial Federationists. He expressed hearty sympathy with the general idea of federation. In the evening he made a notable speech at a Mansion House dinner. It was dignified in tone, and alluded to Mr. Gladstone as the greatest statesman England had produced. He also complimented Lord Rosebery's conduct of the Foreign Office. He proposed no Irish policy except a restoration of order.

The British Cabinet on Friday decided to appoint a Royal Commission to inquire into the Belfast riots. They also finally approved the Queen's speech. This, it is generally believed, will be exceedingly brief, and merely repeat the assurances of the determination of the Government to restore law and order in Ireland, similar to those made in Salisbury's speech last Wednesday. The session of Parliament will be opened by a debate on the state of Ireland, in which Mr. Sexton will represent the Nationalists and Mr. Saunderson the Loyalists. Sir Michael Hicks-Beach will remain in London while the debate lasts. No business will be proposed in Parliament except the estimates. Members of the Government hope to be able to prorogue Parliament at the end of September.

It is said that Mr. Gladstone, far from lending himself to lead any movement of technical Parliamentary obstruction, will not countenance any organized attempt of this kind. He still holds the strongest opinions against the constitutionality and advisability of proroguing Parliament without a disclosure of the Government policy for Ireland. As the leader of the Opposition he will protest vehemently against this course, and will declare that his party will hold the Government responsible for whatever consequences may follow in Ireland.

The Dublin *Irish Times* (Conservative) asserts that Lord Randolph Churchill is engaged in drafting a bill intended to solve the Irish problem. The skeleton of the measure is already done, and it provides for universal local self-government throughout Great Britain and Ireland, giving Ireland, England, Scotland, and Wales control each of its own immediate affairs, leaving the supreme power of the Imperial Parliament undiminished. The bill is described as a measure which opens the door to imperial federation. The full text of the bill will not be completed before next February. The London *Times* says: "It is quite certain that nothing like a statutory parliament will enter into Lord Randolph's scheme, and that the development of county government on an elective system will be applied on the same principles to all parts of the kingdom."

Mr. Matthews, Home Secretary, was re-elected to the House of Commons for East Birmingham without opposition. The Liberals at the last moment withdrew their candidate, Alderman Cook, fearing that the Irish vote would be cast against them, Mr. Matthews being a Catholic. All the members of the new Cabinet have been reëlected to Parliament without opposition.

Rioting began again in Belfast on Saturday midnight and continued all day Sunday. Expert marksmen conducted a rifle fight from roof-tops, chimney stacks, and street corners. Finally, after the Riot Act had been twice read, the troops charged upon the crowds and cleared the streets temporarily. The mob repeatedly fired upon the police. The order instructing the police to use buckshot instead of bullets has been cancelled. William O'Brien, one of the Irish delegates to the National League Convention, who arrived here on Monday, said in an interview: "The Belfast riots are the result of Churchill's incendiary speeches. Chamberlain has constantly asked the Orangemen to show that they were earnest in their hatred of home rule. They are showing their earnestness by killing some Catholics."

During a procession of Orangemen through Londonderry, Ireland, on Thursday, two bottles filled with gunpowder packed around lighted fuses were cast into the ranks at different points along the line. Both bottles were smashed before the lights could reach the powder. When the nature of the affair became generally known among the Orangemen, they became greatly excited. The Orangemen were also attacked while they were parading on the famous promenade made by the old town wall. An Orange procession, while passing through the streets of Widnes, Lancashire, England, on Saturday evening, was jeered at by the spectators. The Orangemen thereupon broke ranks and attacked the crowd. One of the spectators was stabbed and mortally wounded, and two policemen and a number of other persons were injured.

The *Irish Times* of Dublin (Loyalist) reiterates the statement that Mr. Parnell will soon become a Roman Catholic.

Archbishop Walsh, in an interview at Dublin, has said he believed that the land-purchase question would never be settled except on Michael Davitt's nationalization principles of just compensation to the actual holder, rather than on the principles of Henry George. He declared that the statement that the Pope disapproved of the attitude of the Irish clergy towards the Nationalists was founded upon malice.

A terrible explosion occurred in a colliery at Leigh, Lancashire, on Friday. Forty miners are known to have perished.

Gen. Booth of the Salvation Army will visit America in October.

The yacht *Genesta* has lost to the *Irex* the Cape May Cup, which she won in this country last year.

England has proclaimed a protectorate over the Ellice Islands in the South Pacific Ocean.

The *Politische Nachrichten* of Berlin says: "The three treaty Powers agreed not to alter the status quo in Samoa unless all concerned concurred. There can, therefore, be no question of the establishment of a German protectorate over Samoa without the assent of England and America. The change in the consular staff of the three Powers at Apia, advocated by Germany and already set afoot by America, meets with obstacles, owing to the refusal of England to make a change. With a view to paving the way for a definitive settlement the three Powers, in conformity with Germany's proposal, have despatched special commissioners to Samoa. The fact that they were not concerned in the late disputes affords a guarantee of an impartial report."

The Pope has been confidentially informed from Vienna that the Emperors William and Francis Joseph, in their conference at Gastein, took into account the position of the Vatican. The Pope has thanked both Emperors for this manifestation of interest in his behalf.

Prussia and the Vatican have signed a convention terminating the religious controversy between them so far as it related to all secondary matters, and regulating the presentation of benefices and appointments to ecclesiastical seminaries within the kingdom of Prussia.

The Pope has published a decree, dated July 13, reinstating the Jesuit order in all the privileges conferred upon it by his predecessors ever since its foundation, notwithstanding the decree of Pope Clement XIV, pronounced against it in 1773.

Emperor Francis Joseph of Austria has written a letter to Herr von Tisza, the Hungarian Prime Minister, in which he expresses regret that the recent changes in the army—the resignation of Gen. von Edelsheim-Gyulai and the promotion of Gen. Jansky—have been used by unscrupulous agitators to arouse discontent in Hungary. The letter is intended as a conciliatory manifesto to the Hungarian people.

Anti Jewish riots have occurred in the province of Kieff, Russia. The houses of many Jews were wrecked.

The Czar has warned M. Paul Deroulède, the advocate of a French war of revenge against Germany, that any attempt on his part to agitate against Germany will be followed by his instant expulsion from Russia.

A rumor is current in St. Petersburg that China is hastening military preparations and has ordered 200,000 rifles from English firms.

A fresh Russian sensation was caused in London on Tuesday by the announcement in the *Standard* that it had been determined to recall the English commission engaged in the delimitation of the Afghan frontier at the earliest possible date, whether the English and Russian Goverments had agreed on the points at issue or not. On Wednesday the *Standard* reported that the commission comes home by an entirely peaceable arrangement between England and Russia.

The Kurds are invading Persia; there has been severe fighting with them, and the Persian Government has appealed to Turkey to stop their incursions.

Petroleum has been discovered in Auvergne, France. This is the first petroleum discovery in that country.

Three sailors who went on a fishing voyage to Greenland in 1869 have just returned to Dunkirk, France. They report that their vessel was wrecked, and that they have since been held in captivity by the natives. Their wives, supposing them to be dead, have since remarried.

Twenty thousand provincial workmen and Socialists took part in a Socialist procession in Brussels on Sunday, demanding universal suffrage and amnesty to Bormage and other rioters. The demonstration was orderly.

A great sensation has been caused in Havana, Cuba, by the discovery of a deficit of about $1,500,000 in the funds in charge of the Public Debt Board.

THE YOUNG DEMOCRACY.

THE Indiana Democratic State Convention of Wednesday week was, all things considered, the most significant event in the political development which has occurred since President Cleveland's inauguration. In its composition and in its action there was clearly perceptible the remarkable transformation in character which the Democratic party is undergoing as the reform leaven does its work, and which is alike the most interesting and the most important change in partisan relations that has happened since the war.

Indiana has long been notorious as a State given over to political Bourbonism. Both parties have been infected by the curse, but the Democratic has suffered most severely from it. Old leaders have controlled the organization and have clung to antiquated issues. New ideas have been frowned upon, progressive men have been snubbed, reformers have been ridiculed. The conventions have been for the most part assemblies of old fogies, with an admixture of the rowdy element, and there has seldom been anything in their often disorderly proceedings calculated to attract young men into the party. A more complete contrast to all this could not be imagined than that which was presented by Wednesday's Convention, the most prejudiced Republican critics being witnesses. The Indianapolis *Journal*, as bitterly partisan a Republican organ as is published in the country, says:

"The Convention had 1,231 people in it, with credentials to vote for the Democracy of the State in selecting a ticket, and there was not a delegation that did not impress one with the wisdom of the constituency that sent it. There was an absence of the 'rounder' element—that of the average heeler and the troublesome bummer. If liquor was used in promoting friendliness, it did not carry away common sense. The delegates were of a class who, if they drink at all, do it in moderation. In the entire three days of excitement and interest about the hotels, and especially at the hall yesterday, not a drunken man was to be seen."

All observers agree upon this point. The Indianapolis *News*, an Independent newspaper, says: "The personnel of the Convention compelled favorable comment. The Convention was better looking, better dressed, and more intelligent than any State Convention of the Democracy in modern times." Mr. J. W. Tindall, a Mugwump long familiar with Indiana politics, testifies to the same effect:

"In twenty years' observations of State conventions I have never seen so dangerous a body of men gathered together as that which has just dissolved. In appearance, manner, and subdued heat of enthusiasm it reminded me of the Republican conventions in the good old days when nearly all the well-dressed men went to Republican conventions, and when it was a cardinal belief that 'the earth is the Lord's, and the fulness thereof hath He given to the Republicans for an inheritance.' On the whole, to-day's convention was the best-looking, best-mannered, best-united that I remember to have seen since the aforesaid days of Republican ascendency."

It was the large infusion of young men which chiefly contributed to this change in the personnel. "It was noticeable," says the *Journal*, "that the young man has a chance in this new era of State conventions." Says the *News:* "There was a marked absence of the old-time bosses. Young men were most prominent, and new voices and faces were in every district. The mossback element, for once, apparently, had lost control of the Indiana Democracy. Here and there the 'gray-beards' of lean chaps and hungry appearance were to be seen. But they felt, no doubt, as they looked, both lonesome and willing to play a minor part." A leading Democrat remarked to a reporter: "I never saw a gathering of our party where young men acted with such force and judgment as they do to-day. If you were to take the ages of the delegates, you would find that half of their number is under fifty years."

The young men among the delegates secured the nomination of a ticket composed almost entirely of young men, one candidate being 35 years old, another 34, a third 33, and only one of the eight past 50. The nominee for Superintendent of Public Instruction, in accepting his nomination, spoke of the great benefits of the free educational system, and reminded the delegates that it had enabled one who was driving a cart in the streets of Indianapolis only eighteen years ago, to be now a candidate for this responsible office, and apparently an excellent candidate, for he taught a high school some years and has been School Superintendent of his county for eight years.

The new element left no doubt as to its feeling toward the President. "Senator Voorhees failed to touch the house," says a writer in the *News*, "till he named Cleveland, and then it stormed." The Senator's tribute to the President was in itself a concession to the young and progressive Democrats, for everybody knows that he has always been personally in sympathy with the Bourbons and the spoilsmen. Even a man of Voorhees's great personal popularity could not have withstood the reform current, and he floated along with it. The strength of this current is shown by some remarks of delegates which Mr. Tindall quotes: "Win this year, and let the advanced Democracy leaven opinions for 1888," said a strong man from the Twelfth District. "People will understand Cleveland better two years hence than they do now," said another; "he is our trump card for the next convention."

The change which is thus manifested in Indiana is not an isolated phenomenon, nor is it confined to the Northern wing of the party. Last week the Democrats of Tennessee met to nominate a candidate for Governor. The chief rivals were George G. Dibrell and Robert L. Taylor. Dibrell is a man of sixty-four years, who was a "Confederate brigadier," and whose supporters were described as being "compact and organized just as the old Dibrell brigade was organized nearly a quarter of a century ago, by which they made for themselves and their gallant commander a name which is enrolled high up on the ladder of fame." Taylor is a man of only thirty-six, who was a mere boy during the rebellion and had no war record of any sort. Dibrell was commonly alluded to as the "old man," and his supporters were chiefly men of his own generation, including the larger share of the veteran wire-pullers and pipe-layers. Taylor's backers, says a report of the Convention, were "composed in the main of young men who have never had much political experience, but are full of enthusiasm and energy." The Nashville *American*, the leading Democratic newspaper at the capital, says: "The young Democracy of the State were especially enlisted in his behalf, and young men were present in unusual force in this Convention, active, vigilant, tireless, and aggressive in their devotion to their favorite candidate." The young Democracy won, and a man whose brief record in public life is that of an open opponent of the old fogies and Bourbons, was nominated amid the greatest enthusiasm.

Such incidents as these are typical of an organic revolution which could only come about by the operation of time, and which surely betokens a new and a better era in our political being.

THE LATEST COPYRIGHT DECISION.

IN order properly to understand the importance of the decision rendered July 3 in the Circuit Court for the Southern District of Ohio, in the copyright case of the Henry Bill Publishing Company vs. Smythe, it is necessary to have a clear understanding as to the facts in the case. The book in controversy was Mr. Blaine's 'Twenty Years of Congress,' the copyright of which belongs to the plaintiff. The plaintiff sold the book only by subscription to individual buyers, employing agents to solicit such subscriptions and to deliver copies to subscribers, each agent having assigned to him a certain territory, and being obliged to give his bond not to sell or deliver in any other mode than that directed by the plaintiff. It had been publicly advertised that the book would be sold only in this way, and it seems to have been generally known to the trade that it was sold by this method of individual subscriptions taken, and the books delivered, by persons acting solely in the capacity of *agents* for the plaintiff.

Such an agent of the plaintiff, in New York, had copies sent to him to deliver to certain subscribers procured by him, but instead of delivering them to such subscribers he sold them to a bookseller in Troy, who in turn sold six copies to the defendant at Columbus, O. He in turn parted with five of them at a profit, one copy remaining unsold when the suit was instituted. The plaintiff's authorized agent at Columbus notified the defendant that he was such agent for that section of territory, and that the book was to be sold only by actual subscription, and warned the defendant not to sell the copies he was offering to the public; not knowing, however, how the latter had obtained them. Suit was then brought to enjoin the defendant from selling the copies, from selling the book at all in the future, and for an account of such as might have been sold.

Judge Hammond apologizes for his delay in rendering a decision in this case, explaining that his unfamiliarity with the law of copyright made him unwilling to give an opinion without an investigation. The result of his researches is set forth in an opinion of unusual length, and it is summed up in a ruling, which we give in his own words, as follows:

"If the owner of a subsisting copyright seeks to enjoy his exclusive right of selling the published work by making sales directly and only to individual subscribers, the statute protects his plan of sale from interference by other dealers offering surreptitiously obtained copies of the genuine work without his consent, unless there be something in the circumstances of the particular case to estop him from relying on the privileges of his monopoly."

He claims to have derived support for this ruling from a mass of cases and authorities bearing on the nature and incidents appertaining to property in copyright, but acknowledges that he has failed to find a single case directly in point, though he refers to that of Hudson and Goodwin vs. Patten (1 Root, Connecticut, 133-134), as very nearly a direct precedent for the judgment rendered in the one under consideration. Judge Hammond admits that when listening to the arguments in the case, he thought it a startling proposition—as stated in his own words—that the dealer in copyrighted books "must deraign his title to each copy from the copyright holder with all the particularity of real estate, if not more inexorably, and that no right to use or sell a copy could be acquired without his consent"; but professes to be now unable to see how the monopoly of sale granted by the statute can be secured without a principle almost as broadly stated as that, and expresses it as his opinion that from the essential nature of copyright itself would spring this principle of exclusive sale, because in printed books there is, aside from the material property in them, a peculiar, intangible, and incorporeal right pertaining to the authorship—a property created by the statute—requiring a further protection. This protection can be adequate only when it is understood, in the Judge's words, "that no one can read this book, buy it or sell it, or otherwise use it, or any copy of it—either that which is piratically or that which has been lawfully printed—without the consent of the author or copyright holder; and the basis of it is," continues the opinion, "that a moneyed or other valuable consideration must be paid to the author, and he has a right to receive value for any use of the product of his labor. Protection in the monopoly of sale for the lawfully-printed copies is just as essential to the value of the right of property created by the statute as protection against piratical printing, publication, and sale of the book."

It is to be understood, however, that the *authorized* sale of a copy of a copyrighted book transfers to the purchaser the right to read, otherwise use, or sell that particular copy. The distinction between the rights acquired by such purchaser and the copyrights of the author, and the relation of these rights to each other, are well set forth in the following paragraph:

"The owner of the copyright may not be able to transfer the entire property in one of his copies, and retain for himself an incidental power to authorize a sale of that copy, or, rather, the power of prohibition on the owner that he shall not sell it, holding that much as a *modicum* of his former estate, to be protected by the copyright statute; and yet he may be entirely able, so long as he retains the ownership of a particular copy for himself, to find abundant protection under the copyright statute for his then incidental power of controlling its sale. This *copyright* incident of control over the sale, if I may call it so, as contradistinguished from the power of sale incident to ownership in all property—copyrighted articles like any other—is a thing that belongs alone to the owner of a copyright itself, and as to him only so long as and to the extent that he owns the particular copies involved. Whenever he parts with that ownership, the ordinary incident of alienation attaches to the particular copy parted with, in favor of the transferee, and he cannot be deprived of it. This latter incident supersedes the other—swallows it up, so to speak—and the two cannot coexist in any owner of the copy except he be the owner at the same time of the copyright; and, in the nature of the thing, they cannot be separated so that one may remain in the owner of the copyright as a limitation upon or denial of the other in the owner of the copy. A genuine copy, owned by the owner of the copyright, carries with it the ordinary incidents of alienation belonging alike to all property, and, if he parts with the copyright, he retains with the ownership of the particular copy this power of sale; or if he sells a copy to another, having, as owner of the copyright, authorized a transfer, the purchaser takes the copy with the ordinary incident of alienation belonging to all property; and *that* copy is no longer under the copyright law."

Applying this reasoning to the case in hand, it will be seen that the copies sold by the defendant, having been surreptitiously obtained from the copyright owner, did not carry with them the ordinary incident of alienation which goes with genuine copies, properly obtained, and therefore left the copyright proprietor what the Judge has termed the "copyright incident of control over the sale;" and their sale by the defendant became an "interference," to use a convenient expression, with the copyright, because, it will readily be seen, the copyright owner was as much injured by the loss and subsequent sale of these genuine copies as he would have been by the manufacture and sale by the defendant of five pirated copies.

The case of Clemens vs. Estes (22 *Federal Reporter*, 899–901) is distinguished in the opinion, it being pointed out that in that case the agents had purchased the copies of Mark Twain's book directly from the copyright owner, and therefore had a right to sell them as far as the copyright went, the only limitation upon that right being the agreement not to sell except by subscription, which agreement was not within the domain of the copyright statute; and redress for a breach of such contract could be sought in any court of competent jurisdiction.

A decree was awarded the plaintiff for the small amount of profit testified to, with interest, and the defendant was adjudged to pay the costs of the suit, and enjoined from selling the copy of the book undisposed of by him. In regard to this remaining copy the Judge doubted whether the Court could, under the Revised Statutes, declare a forfeiture of it, but thought the defendant ought to be enjoined from every conceivable use of it as a literary production, even from reading it—until he had paid the author for that privilege—and certainly from lending it, and thus cutting off possible buyers of the book; and leave was therefore granted the plaintiff to apply for an extension of the injunction if the defendant should refuse amicably to surrender it.

HALIFAX.

THERE are at least seven different ways of going to Halifax from the States, each of which has its peculiar attractions. The most direct, as well as the least expensive, is by sea, either by the steamers of the Allan Line from Baltimore, the Red Cross Line from New York, or the Prince Edward Island boats from Boston. An alternative all sea route is by steamer from Boston to Yarmouth at the southwestern end of the Peninsula of Nova Scotia, and from thence by the Halifax boat, which, as it touches at the prominent towns on the seaboard, gives the traveller an excellent opportunity of enjoying the beauties of a coast, like that of Maine, deeply indented with bays and thickly strewn with islands. If the weather should prove unfavorable for this coast trip, Halifax can easily be reached by land by the way of Digby. A pleasant combination of sea and land is obtained by going by boat from Boston or Portland (touching at Eastport) to St. John, and thence by rail to Halifax, or by boat across the Bay of Fundy to Annapolis, which is in direct rail communication with the city. This is by far the most enjoyable route, since the traveller passes through the Digby Gut (a narrow passage between high cliffs through which the tide rushes with such force that at times the boat seems to be ascending or descending an inclined plane) into the beautiful land-locked Annapolis Basin, at the head of which lies the interesting town of the same name, and from whence the road to Halifax lies through the very garden of Nova Scotia. We should strongly advise travellers, however, to take this route on their return, as the beautiful sunny meadows and orchards of Grand Pré, the Evangeline country, and the Annapolis valley will seem far more beautiful from the contrast with the sterile and fog-haunted Atlantic coast, than if one came to them direct from the States. It should be mentioned that there is also a boat direct from Boston to Annapolis, and, during one season two years ago and possibly this, a boat from Mt. Desert to the same place. Of the all-rail line by Bangor and St. John it is unnecessary to say more than that the scenery is generally tame, with the exception of some twenty miles on the St. John River, the building of a railway bridge across which, thus obviating the disagreeable ferry and carriage transfer, has added much to the comfort of the traveller by this route.

Halifax presents an attractive appearance from a distance, whether one approaches it by sea or by land, though naturally the view is far finer from the steamer's deck as one comes up the harbor—under the noble cliff from which frown the batteries of York Redoubt, past the grassy slopes of McNab's Island, dotted with the tents of the soldiers' summer camp, by the beautiful park, with its virgin forest of pines, into the inner harbor—than one gets from the car window as the train winds along the pebbly shore of Bedford Basin. As in many other places, however, these first favorable impressions prove deceptive as one goes to his lodgings from the steamboat wharf or the railway station. The dirty, ill-paved streets are lined with dingy, often shabby houses of a uniformly unprepossessing appearance, attributable in great measure to the soft coal which is universally burned. The eye seeks in vain for any attractive point, there being barely half-a-dozen buildings with any pretence to architectural design. There is a prevailing air of seediness, an out-at-the-elbow look, so to speak, which makes one feel as if the place had seen its best days. This impression grows stronger on closer observation, for though there is considerable bustle and animation in the principal streets, many of the wharves seem deserted, and the harbor, but for the war and cable steamers, would often be nearly empty. The "Haligonians," as they style themselves, are much inclined to attribute the decline of business mainly to the union with Canada, and to think that prosperity will return if Nova Scotia resumes its independent position. However this may be, the fact is that Halifax is too far out of the way for a large carrying trade. Then the country back of it and along the coast is sterile and uncultivated, with a very sparse population (the nearest town of any size being nearly fifty miles distant), so that it cannot be a distributing port. In fact, there is no town in the Province which is not on the sea or on a navigable river. With the fish, which have largely deserted the Nova Scotian waters, has gone the West Indian trade also, the chief source of its former prosperity. Still another cause, not infrequently mentioned by the older inhabitants, is the unfavorable influence on busi-

ness habits of the officers of the army and navy who are always to be found here in considerable numbers. Having abundant leisure, they naturally devote themselves vigorously to seeking amusement, and all of the townspeople who belong to their set are under constant temptation to leave their business for a game of cricket, a picnic, a yacht-race, or some winter sport.

The mere passing traveller will soon exhaust the sights of Halifax. In the city itself, the Province Building, standing on the site of the first settlement in 1749, is the only one of any interest, the Council Chamber being a stately room of fine proportions, with some excellent wood carving and a few portraits. The Assembly-room is not so fine, but contains a good picture by Sir Benjamin West. Between the two is the Legislative Library, a very fair though not large collection of books, apparently not much used. On the opposite side of the hall are the archives of the Province, the most interesting document being the baptismal register of the Acadians. The citadel should be visited, not so much for anything it contains as for the fine view, especially at sunset, from the ramparts. At the foot of the citadel hill is the Public Garden, of which the people are with good reason very proud, since a naturally ugly piece of ground has been made beautiful by the tasteful planting of trees and shrubbery and the turning of a bog into a pond. Here during the summer the garrison band plays at least one afternoon in the week. The most beautiful place within the city limits, however, is the park at the extremity of the peninsula on which Halifax is built. It belongs to the Imperial Government, but is leased to the city at a nominal rent. Its seven miles of roads have been laid out with wonderful taste, the natural beauties being preserved to a remarkable degree. There is no attempt at cultivation; only occasionally the trees, mostly pines, have been cut away so as to permit glimpses of the water which surrounds it on three sides. Wood paths wind here and there through as wild nooks as would be found in the heart of the mountains; but one is startled at times, in climbing some of these paths, to come upon a battery, or suddenly to find himself under the walls of a fort. This park, which for the beauty of its situation can hardly be surpassed, is mainly the work of a former general in command of the garrison, and was laid out by an officer of the engineers, the roads being built by the soldiers.

There are two or three pleasant drives, the most interesting being to cross the harbor on the ferry-boat to the bustling little town of Dartmouth, and down by the east passage to Cow Bay, where there is a fine beach; or, in the opposite direction, around Bedford Basin, a ride of about eighteen miles, with water views of great beauty. An excursion of still greater interest is to York Redoubt. While this can be made by water, and also, though with some difficulty, by carriage, the pleasantest way is to go to the end of the park and be ferried across the entrance to the Northwest Arm, an inlet from the sea which, with the harbor, forms the peninsula, into a little cove whose heavily-wooded shore rises sharply to the height of a hundred feet or more. One or two neat little cottages peep invitingly out from among the trees, and very possibly there may be in the deep green waters of the cove a school of mackerel, confined in a net, scudding hither and thither on the surface of the water, making a ripple as if a sudden breeze had sprung up. A steep and very rough path leads up the bank to the fishing village of Maitland, a most quaint and interesting collection of whitewashed houses perched wherever there is room on the side of the cliff, a bright little stream dashing merrily down the side of the road. The foreign impression which this village gives is strengthened by the Catholic church, in a niche on the outside of which is a statue of the Virgin and Child. The highest point of the cliff, just beyond the village, is crowned by the fort which commands the entrance to the harbor. The view from the foot of the walls (a permit is needed to go within) is delightful; and if one climbs the rocks back of the fort, the coast for many miles can be seen, as well as a less attractive view far into the interior of the Province. One may prolong this excursion to the little fishing hamlet of Herring Cove, and return around the head of the Arm, past the pleasant houses, with lawns stretching down to the water's edge, of Halifax's only suburb. It is hardly necessary to add that the excursions upon the water by steamboat, yacht, canoe, and rowboat are numerous, and very varied in their character and interest.

With these things it may fairly be said that we have exhausted the attractions of Halifax for the mere passing traveller; and were there nothing more, we should hardly dare to recommend it to those who, wearied with Long Branch, Newport, Saratoga, and the mountains, long for a complete change both of scene and life. In what, then, does its charm consist—a charm felt not only by Americans, but by English army officers, who regard it as the best of the foreign stations? To a certain degree this charm is purely intellectual. It is quickly evident to the most casual observer that the place has a distinct and strongly marked character. It is not wholly provincial nor entirely English, but a mixture of the two which is quite unique. The shops, with their signs of royalty; the bright color of the soldiers' uniforms; the sentinels pacing back and forth before a Government building or wharf; a staff officer on duty, brilliant in scarlet and gold; the men-of-war's men, with their trim suits—all these delight the eye and give a sense of restful change to those who come from the dull monotony of our streets. While these scenes do not differ materially from those of any English military and naval station, there are others peculiar to this town. On a Saturday morning especially, for instance, the sidewalks and streets of the central part of the city are thronged from early morning with people from the country for twenty miles around. One has a few berries in small birch baskets, or some vegetables, for sale. Still another may have a calf, a bundle of hay, or a fagot of wood. But nearly all have flowers—pansies, geraniums, and pond-lilies chiefly—and lovely baskets of ferns; for the Haligonians are very fond of flowers, and window-gardening is very general. In the sunshine or the rain, it makes little difference, they will sit and chaffer with the housewives and servants who, basket in hand, come to buy. A market-house has been built for them, but they cling to the sidewalks and gutters. If you should chance to be making your purchases about ten o'clock, over the murmur of the market you will hear the firm tread of the soldiers as the relief guard comes swinging down the street.

The market people are mostly negroes of three different origins: there are the descendants of the maroons of Jamaica, of the negroes who came from New York at the close of the Revolution, and of the fugitive slaves who found here a refuge during the years preceding the civil war. Sitting side by side with these, however, are Indians, and not infrequently there is in the motley throng a maiden's face of the Madonna type, such as one sees in Brittany. "Evangeline!" springs instinctively to the lips; for she is a true Acadian, and though it is more than two hundred years since her ancestors left sunny France, her face has preserved the race-type, and probably you would find that in her religious faith, her habits of thought and life, in all but her mere external surroundings, she differed but little from her far-away French sister. On Sunday mornings, also, the streets near the Catholic cathedral and the garrison chapel are bright with color as detachments of the various corps march to service. Among other peculiar customs are the six-o'clock morning weddings, in which the church-bells play a prominent part, and the display of wreaths and banners before the house or shop the proprietor of which has been married. One day in the year is known as "Queen's Day," during which no citizen is permitted on any ground belonging to the Imperial Government. Sentinels are posted at every entrance to the citadel hill, the different barracks and Government yards and wharves. The park is closed, and for twenty-four hours many of the inhabitants are put to serious inconvenience; but they submit to it apparently with great good-humor.

While many little peculiarities could be pointed out which interest the visitor, and make him feel that he is, though near home, in a foreign city, the great charm of Halifax after all is in the people. The natives are fond of their city, and are especially pleased if the strangers who come among them discover its attractions. To them they are cordial, and, when the first stiffness natural to the English character is overcome, exceedingly hospitable. The best society is of a remarkably varied and interesting character, as would naturally follow from the fact that the military and naval officers stationed here with their families, together with a few scientific men attached to the cable steamers, one or two of which are nearly always in port, form an important part of it. It is a society which never becomes stagnant, as is the danger in small places, but is constantly changing as the regiments forming the garrison are relieved and new ships are sent to the station, bringing in entirely new elements. One who gains entrance to these circles is thrown into the pleasantest contact with persons who have not only visited, but have resided in, every part of the habitable globe, and who are full of their experiences of India, Afghanistan, the Sudan, and the Cape. Many of them are also very agreeably ignorant of the States, and are as eager to learn about us as we are about them.

From this it will be evident how far from dull is the real Halifax, contrary to the impressions of the mere visitor of a day. During both summer and winter there is an unceasing round of gayeties and entertainments of every kind, from the great balls and state dinners at the Government House, the Admirals', and on the Flag Ship, and the annual artillery ball, to the most informal tea. Picnics are innumerable both by land and water, now on the army boat to McNab's Island, where some of the garrison are always in camp in the summer months, now to the gold mines, to Cow Bay, to York Redoubt, or to one of the stations further down the coast. Every week in the season there is a yacht race in the harbor or in the beautiful Bedford Basin, according to the wind. Two or three times a week cricket matches attract large numbers to the grounds of the Wanderers, a local club, or the garrison field. The Rifles' band, or, if the navy are playing, the Admiral's band, furnishes music, and a large sprinkling of uniforms gives a vivid color to the scene. A soldier builds a fire in a shanty or out in the open field and makes tea which, with slices of bread and butter, is handed round by the players to the gayly dressed ladies who are watching the game. The same scenes are repeated at the tennis parties held nearly every afternoon in the public garden. In addition there are the races, the dances on board the various war ships, the Monday afternoon tennis parties at the Wellington Barracks, and frequent lawn parties at the houses on the Arm. On Saturday afternoons a quoit club brings together a score or more of

gentlemen, enthusiastic devotees of this sport, with perhaps as many more spectators. Lunches, evening gatherings, and musicales, it is almost unnecessary to add, are also very numerous.

It only remains to say a word as to the best time to visit Halifax. They who wish chiefly to escape the heat of July and August will find these the best months, as it may be safely said that Halifax is never hot. The skies are bluest, however, the fogs are less frequent, and the air is most invigorating in September and October.

THE DEPARTURE OF THE ABERDEENS.

DUBLIN, August 7.

THE departure of the Earl and Countess of Aberdeen last Tuesday marked distinctly the termination of the Gladstone, and the commencement of the Salisbury, régime in this country. It was attended with unprecedented circumstances. The Earl, as "His Excellency," "The Lord Lieutenant-General and General Governor of Ireland," "wielding the sword which our Sovereign Lady the Queen hath committed into his hand," enjoying a salary larger than that of the President of the United States, not only represented a Home-Rule and consequently popular, administration, but, with the Countess, exercised the possibilities of their wealth, position, and breeding in a manner which disarmed all criticism, and was highly prejudicial to the spread of republican principles. No wonder Lord and Lady Aberdeen were popular. We have had the unwonted spectacle of poor children, the aged inmates of asylums, the patients in Incurable Hospitals, invited to entertainments at the Viceregal Lodge, where the Countess herself, endowed with an extraordinary grace of person and manner, waited on them personally. Moreover, although Presbyterians, attending a Presbyterian church in state—so far as I know, the only regal representatives not belonging to the Established Church—they have, without compromising their Protestantism, manifested the most scrupulous respect for the religion of the majority. And there was nothing "put on" about them. In their replies to addresses, and in the short speeches which they had opportunities of making at schools and other gatherings, they showed a practical knowledge of social questions, and a genuine appreciation of the working of philanthropic and other public institutions. They went about freely and unostentatiously in their carriage, with a couple of mounted policemen to keep away the crowd—a very pleasant change from the old custom of the Lord Lieutenant galloping by unexpected routes through the city, surrounded by an escort of cavalry with drawn swords. But of course all this had to be paid for in other respects, and from the moment that the Earl shook hands with Michael Davitt, and the Countess was known to have urged prominent Nationalists to attend her parties, the Viceroy and his lady were effectually boycotted by the conservative and upper classes, and were often subjected to actual rudeness. For instance, at a yacht-club lunch they were served off a soiled table-cloth; and again, they were informed by an eminent scientist whose works they proposed visiting, that they might come, but, if so, he would leave the premises. However, they carried the country entirely with them. Prominent men appeared for the first time at the levees and at the Viceregal Lodge, and the corporations of Dublin and the chief towns in all but the north-west of Ireland, presented farewell addresses.

It was determined that a great popular procession should take place in honor of Lord and Lady Aberdeen, on their departure last Tuesday. An Irish procession is essentially different from those of other countries. We are an undrilled people mentally and physically, lacking the discipline of responsibility; consequently our demonstrations are without the order and regularity of yours, for instance. Except by politicians, our popular displays are not openly sympathized in, to any extent, by persons with pretensions to respectability, and therefore have no artistic or historic completeness. Added to this, there is a singular want of bright tints in an Irish, especially an Irish town, crowd. There is a painful suggestion that the mass of the individuals wear their only suit of clothes, faded and shabby as they generally are; so that, on the whole, Irish processions, although wonderful as displays of feeling, are not particularly exhilarating or picturesque. Some forty trades, or societies, each headed by a banner conveyed on a carriage or by bearers, generally with bands playing national tunes more or less faultily; the men belonging to the trade or society well dressed and orderly, and each division followed by men, women, and children, who had irregularly squeezed in from desire to take part in the demonstration—the children often in arms, the women sometimes bareheaded; hundreds of well-mounted and decently dressed farmers and hack drivers, on well-groomed horses; here and there something of a carnival air—men with strange hats, a donkey-cart ornamented with green ribbons, a few lads with tin whistles (anything tolerated so long as it falls in with the spirit of the occasion); hundreds of banners, green and gold, red-white-and-blue, stars and stripes, tricolor—but not a single union jack or shred of "England's cruel red"—such was the procession which for two hours, on Tuesday afternoon, moved through the streets of Dublin.

But it had many unwonted characteristics. The streets were lined with soldiery; the Lord Mayor and Corporation—that is, the Nationalist members of the Corporation—attended in state. It was received by the Earl and Countess and their family in front of the castle; their carriage surrounded by the Citizens' Committee who had charge of the arrangements, many of them among the most pronounced Nationalists. And when it had passed on, the viceregal party took their place in the rear, with a military band, and squadrons of dragoon guards, and proceeded to the terminus, *en route* for Kingstown, to take shipping for Holyhead. I never saw greater crowds or more manifestation of deep public feeling. Even the *Daily Express*, the exponent of Conservatism in Ireland, writes:

"It is due to the trades of Dublin and to the other persons who took part in the demonstration, to recognize and commend the perfect order and decorum which they showed, and the perfect peace which reigned in the city last night. Their conduct presents a contrast to that of the working classes in Belfast and other places, whose political demonstrations are usually attended with violence and bloodshed. The proceedings yesterday were unexampled, and possessed undoubtedly a higher claim to respect in the fact that they were conducted throughout with exemplary good-humor, and without the slightest display of rowdyism or roughness. The trades showed that they were well organized, and the spectators that they were well satisfied with the same."

But the editor prefaces these admissions with the following:

"Even a stranger might have been struck yesterday by the marked and significant absence of respectable citizens, representing the wealth, rank, and moral weight of the professional and commercial classes in Dublin, those who have the largest stake in the country, and the deepest interest in its welfare. The absence of any representation of loyal citizens in the ovation of the populace was more strikingly unprecedented than the picture of the exhibition which the Lord Mayor desired his Excellency to deliver to her Majesty. Loyalists could not mingle in a demonstration which was, in its essential character, repugnant to their feelings. They could not seem to endorse by their persons, or by any expressive emblems, the action of the Viceroy in degrading his high office, as they believe, by becoming a patron and promoter of an agitation which is avowedly disloyal. We protest against the action of the Viceroy, and the false impression it may produce."

Such reasoning, from such premises, while not unnatural, is essentially shallow. Which is better, a harmonious and inoffensive multitude, marching under Irish national banners and the stars and stripes, and playing national airs, in honor of the Queen's representative, or a Belfast mob, marching to a chorus of "Rule, Britannia," to pelt rivets at police and soldiery? From which is solid peace more likely to be evolved? As it is, signs were not wanting of the rapid change fermenting in the country under the hopes inspired by the Gladstone administration. The union jack was displayed from many houses on the route, and was tolerated, as it would not have been a year ago by such a gathering. At Kenmare, some weeks past, the National League band played "God Save the Queen" before the Earl and Countess (it is said the band had to sit up all night to learn the new air). Judging by what I know of the real average feelings of individual Nationalists, self-restraint was needed by them, not to conceal deadly animosity, but rather to resist the impulse towards too hasty conciliation.

In the admissions and comments of the *Express* is epitomized the entire state of the case in Ireland. Do statesmen mean to govern this country by gratifying the sentiments of the people, and by throwing responsibilities upon them, or by pleasing the minority, and governing the majority by the sword? Are the people to be won, or are they to be coerced? Last Tuesday we had the two policies exemplified: in Dublin, "perfect order and decorum" and "perfect peace"; and in Belfast—where the minority cherishes the hope that its ascendency is not yet past—riot, pillage, and bloodshed. Tuesday's demonstration should convince the most obdurate of the impossibility of governing Ireland except through the sentiments of the people. As I looked at the procession, the thronged streets, the crowded windows, the signs of strong feeling, my thoughts went back to the many similar gatherings I had witnessed within the past forty years. (The triumphal car upon which I had seen O'Connell borne from prison in 1844, formed part of the display.) Under different guises, often mistaken, often obscure, often unreasonable, the same unsatisfied longing for some form of nationality and the management of our own affairs is ever showing itself; and never has it been greater than at the present moment. The national fealty to the young, reserved, unromantic leader of the present day is profounder and stronger, more tough and logical, than was the fealty to O'Connell on his gilded car, with a harper at his feet, and surrounded by the halo of "First flower of the earth and first gem of the sea" oratory. It is vain to expect that the stream of national sentiment, which gathers volume and force with education and communication with other countries, will yet lose itself in the sands of time. British statesmen have formally propounded a measure of settlement, which has been as formally accepted by the leaders of the Irish people. When justice is done, good feeling will soon begin its work, as has been already proved. A Lord Lieutenant guarded by men, many of whom a few years ago were perhaps sworn against any connection between Great Britain and Ireland—a national procession in his honor—these phenomena, let us hope, are only a sample of what Irish feeling will be generally towards the Empire when the sentiments, prejudices, and wishes of the majority here are respected by laws and institutions, as they have been by the Earl and Countess of

Aberdeen, in both their public and private capacities. We are now to have a new Lord Lieutenant, a descendant in blood and name and policy of the man who carried the Union. It will be interesting to watch the course of Irish history during the next few months or years. D. B.

THE REDISCOVERED PETRARCH AUTOGRAPHS.

MUNICH, August 3.

THE revived interest in Francis Petrarch, more particularly in his character and relations as the leading figure of the Renaissance—that infancy of our modern life—and the consequent investigations in regard to his life and works, are resulting in many notable discoveries. It is but a few years since Giuseppe Fracassetti gave to the world, in his carefully edited collections, several scores of Petrarch's letters, which, hidden away in libraries and archives, had remained unprinted. It is still fewer years since Attilio Hortis added some important fragments to the already known Latin writings of Petrarch. It is but a dozen months since Adolfo Bartoli, through a fortunate chance, was able to end a long literary war by indicating with reasonable certainty the individual to whom Petrarch addressed his famous political ode, "Spirto gentil." And now a French literary investigator, one of those to whom a wise Government has given peculiar opportunities for the study of Latin and Italian palæography in the École de Rome, has discovered, or rather rediscovered, three of Petrarch's productions in his own autograph—clean copies, as we should say in this day of presses and publishers, prepared for publication, with final corrections, by the author's own hand. The import and surprisingness of this find may be adequately estimated when we consider that one of these works is that collection of sonnets, canzoni, sestine, and ballate known as the 'Canzoniere,' which, in the original, has passed through more editions than any other modern classic; and when we furthermore reflect that of all the compositions of Shakspere, who was born very nearly 200 years after Petrarch's death, not a solitary autograph line is believed to exist.

Students of Petrarch have all along known that documents, which may be said to be indisputably penned by himself, are preserved in three of the Italian libraries. In the Ambrosian at Milan is the splendid vellum codex of Virgil, executed perhaps, with its remarkable Giottesque illuminated frontispiece, by Petrarch's own orders, and rendered more valuable by many annotations in his writing, among them being the celebrated note concerning Laura (*Laurea propriis virtutibus*) on the prefixed vellum folio or fly-leaf. In the Laurentian at Florence are various autograph letters of Petrarch, some of which were last year reproduced in heliotype facsimile. In the Vatican are what were formerly nineteen loose paper leaves, which permit us to form a clearer conception of Petrarch's method of composition than we can of that of any other equally famous early modern writer. These sheets now number 3,196 among the Latin codices of the Vatican library, and contain the drafts of several pieces of Petrarch's Italian verse, with erasures and emendations, and having the finally adopted reading and the date of composition indicated marginally by himself in Latin. This singularly preserved relic was published at Rome in 1642 by Francesco Ubaldini, whose text was reprinted at Turin in 1750, but a critical edition is still a desideratum. While these three book collections, outside of Venetia, can boast autographic Petrarch fragments, it is worthy of note that in the invaluable library of St. Mark, which owes its foundation to Petrarch's generous gift of manuscripts and to his scholarly instincts—always in advance of his age—no absolutely authentic scrap of his handwriting is to be found.

The first (Venice, 1470) and second (Rome, 1471) editions of Petrarch's *Rime* are of slight value as texts, so evidently faulty were the manuscripts from which they were printed; but the third, issued by the printer, Bartolomeo Valde, at Padua in 1472, has, in this century, been recognized, on internal evidence, as of high authority. In the colophon it is stated to be reproduced *ex originali libro*—so that at that time, less than a century after Petrarch's death in the neighboring village of Arquà, there apparently existed at Padua a manuscript believed to be Petrarch's own copy of the *Rime*. Not long after this date began the labors of the commentators and emendators, and, as a result, the text became more or less corrupted. In 1501 the elder Aldus as printer, and Pietro Bembo as editor, determined to publish a purer text, and in this (the first Aldine) edition the fact is twice asserted that it is based on a *scritto di mano medesima del poeta, havuto da M. Piero Bembo*. Too little weight has been attached to these statements of 1472 and 1501, and some modern critics, like Adolfo Borgognoni, have attempted to disprove them; others have credited them without the ability to demonstrate their truth, and one, Luigi Arrighi, whose enthusiasm outran his zeal, fancied that he had discovered at St. Petersburg the very manuscript *havuto da M. Piero Bembo*, of which he printed at that city in 1825 an account which was reprinted the following year at Milan.

Thanks to the careful researches of M. Pierre de Nolac, the manuscript in question has now been rediscovered among the treasures of the Vatican library, and the lucky searcher has traced its history in a preliminary essay (printed in 150 copies), addressed to the French Académie des Inscriptions et Belles-lettres under the title of 'Le Canzoniere autographe de Pétrarque' (Paris: Klincksieck). As has come to be a matter of course in all similar cases, M. de Nolac's claim to priority of rediscovery has already been contested, the counter-claimant being Dr. Arthur Pukscher, a German scholar now sojourning in Rome; and the controversy thereby initiated is not likely to be the less bitter in that the two adversaries are of different nationalities. So far the evidence seems to be in favor of M. de Nolac, who was certainly the first to signalize his find to the general public (*Revue Critique*, Jan. 4, 1886). It ought perhaps to be premised, before summarizing M. de Nolac's historical sketch, that the name of the original Paduan possessor of the codex, at the time of the Valde edition, is not yet known, and that the manuscript used by Bembo has not been positively identified with that employed by Valde, but the close resemblance of the texts of 1472 and 1501 renders it almost certain that they were derived from the same manuscript. It is not at all likely that two autograph copies of the 'Canzoniere' existed at Padua.

It is from a letter addressed by Lorenzo of Pavia to Isabella of Este, dated at Venice in the very year of the Aldine edition, that we learn that Bembo's manuscript had been borrowed from some one at Padua. The edition prepared, Bembo naturally returned it to its owner. Nothing is again heard of the precious monument until 1544, when Bembo receives a letter from Venice, stating that Petrarch's own manuscript of the 'Canzoniere' had been discovered at Padua. Bembo, who meanwhile had been raised to the cardinalate and was living at Rome, had, as would appear, expressed a desire to his correspondent to find and purchase the manuscript, for in his reply (August 23) he says: "It seems to be the book of which I am in search." He then, very fortunately, proceeds to give a description of it as he remembered it, and says that he will send on the autograph of Petrarch's Latin Eclogues, already in his possession, in order that the handwritings may be compared. A month later Bembo secures the prize for 80 zecchini, and expresses his delight in warm terms, saying that 500 zecchini would not buy it from him. Five years later the Cardinal died, and all the literary and antiquarian treasures amassed by him came into the hands of his natural son, Torquato Bembo, and were stored in the palace owned by Bembo at Padua. The manuscript, therefore, still clung to the city in the vicinity of which the poet's life terminated. But Torquato, after the manner of heirs, began to disperse the collections, and parted with many things to the Roman archæologist Fulvio Orsini, the greatest bibliophile of his day. Orsini acquired from the Bembo library not only the vellum autograph 'Canzoniere,' but the nineteen detached folios of Sonnets and the vellum autograph Eclogues already mentioned. The 'Canzoniere' reached him at Rome March 6, 1581, and he, as Bembo before him, received it with much exultation. His acquisition made a great noise at the time—Cardinal Granvelle congratulating him from Madrid, and the Grand Duke of Tuscany (Ferdinand I.) endeavoring to induce him to part with it—and it seems strange that the echo of it should have so soon died away. Orsini died in 1600, and bequeathed to the Vatican his magnificent collection of books. By the terms of his will they were always to retain an indication of his previous ownership; but, in the changes to which all libraries are subject, some of them subsequently lost this distinctive mark, and among them certain of the Petrarch autographs. The 'Canzoniere' came to be treated as *a* Petrarch codex, the fact of its being *the* Petrarch codex passing out of remembrance. In part this oblivion was doubtless due to the reaction which set in against those slavish imitators, the "Petrarchisti," which resulted in reducing the number of editions of the master's Italian poetry from nearly two hundred in the sixteenth century to less than a score in the seventeenth; and in part it was owing to a confusion of the complete autograph 'Canzoniere' with the fragment of sonnet drafts, an error perpetrated by Apostolo Zeno and other bibliographers. As an Italian scholar, in a letter addressed to Mr. Willard Fiske of Florence (published in the *Nazione* of that city and copied by the *Perseveranza* of Milan and other journals), points out, the last published notice of the manuscript was by Tomasini in his 'Petrarcha redivivus' (Padua, 1635)—a mere catalogue or title allusion, which is likewise cited by M. de Nolac. That at Rome in 1642 its existence had been totally forgotten, both inside and outside of the Vatican walls, may be inferred from Ubaldini's silence.

Meanwhile, the sheets of autograph sonnets (cod. 3,196), edited by Ubaldini, have continued to be known to the public, as they have long been exhibited under glass to all visitors to the Vatican Library. But M. de Nolac has virtually regiven to the world of letters three other Petrarch autographs. He has refound and identified the Aldus-Bembo manuscript (cod. 3,195), consisting of seventy-two vellum leaves, preceded by two extra folios containing an index to the sonnets and odes; the codex, as in Bembo's time, lacking the Trionfi. These seventy-two folios are written partly by Petrarch himself (1—38a, 53—61), partly by a copyist (38b—49, 62—72) under the author's direct supervision. M. de Nolac has likewise identified the Bembo-Orsini autograph of the Latin Eclogues of Petrarch (cod. 3,358) and still another autograph of Petrarch (cod. 3,359), being his Latin treatise, 'De sui ipsius et multorum ignorantia,' which also came from the Orsini collection. It was while engaged in the preparation of a work descriptive of this great private libra-

ry of the sixteenth century that the French scholar succeeded in tracing the Petrarch codices, and that work, now in the press, will contain fuller details of his remarkable success. Of course, such authoritative texts cannot long remain inedited, and Adolfo Renier, in an instructive notice of the discovery in the Turin *Giornale storico della letteratura italiana* (No. 21), urges that facsimiles of the three manuscripts be at once published. Librarians and other custodians of early codices containing works by Petrarch will thus be placed in possession of trustworthy specimens of the poet's handwriting at different periods in the later years of his life.

The general results of these rediscoveries are likely to be of high literary importance. They naturally put an end, so far as the whole of Petrarch's Italian verse (except the Triumphs) is concerned, to all discussion in regard to the text. They render more doubtful than ever, even if they do not completely disprove, the genuineness of those innumerable sonnets and canzoni which the Italian literati have exhumed from various repositories of manuscripts, and edited, *per nozze* or otherwise, as compositions of Petrarch omitted from his printed works. They establish the fact that the modest title bestowed by Petrarch upon his Italian lyrics was 'Rerum vulgarium fragmenta'—that is, 'Fragments in the Italian Tongue.' They give us the pure text of two of the Latin productions, one in verse, the other in prose, and render less difficult the preparation of that complete edition of the Latin works, freed from the numberless corrupt readings which now disfigure them, which has so long been vainly awaited by the learned world. And lastly, they excite the hope that, among the thousands of Petrarch codices to be found in the older libraries on both sides of the Alps (the three principal Florentine collections alone possess upwards of 200), autographs of other works may yet be identified.

Correspondence.

THE UNIVERSITY OF MISSISSIPPI.

To the Editor of The Nation:

Sir: One of the sixty "who stood for Greek" at the recent election at Oxford, Miss., would like to say to "One of the Five Hundred" that, even from his point of view, only 440 "seem to have gone on a fool's errand." The sixty who stood for Greek had as much chance as they expected to have, and all but one were bound to be disappointed anyhow; ergo, they had rather be excused from belonging to the number of those who "seem to have gone on a fool's errand."

As for "the sole and only man taken from the five hundred," whether he had from his minister a "certificate of orthodoxy" or not, I have seen in print the statement that he was endorsed by Doctors Boise, Gildersleeve, and Goodwin, who will scarcely be denied the title of "masters" in all that pertains to Greek scholarship. Moreover, he was not one of the thirty-five who "hastened" to Oxford, "to be on the spot." Ergo, it is hardly true that *les absents ont* TOUJOURS *tort*.

Respectfully,

One of the Sixty.

MR. BLAINE AND THE COLONIAL COLLEGES.

To the Editor of The Nation:

Sir: In a recent address at the Chautauqua Camp in Maine, Mr. Blaine referred to a well-known historical fact, but with a singular misapprehension as to dates. He said, if correctly reported in the Boston *Daily Advertiser:*

"In the colleges which have come down to us from the colonial period, the ancient habit was to arrange the boys in the class-roll according to the recognized social rank of their parents. The establishment of a national republican Government, as the result of our successful revolution, broke down this aristocratic pretension, and the names of students were thenceforward called alphabetically."

As a matter of fact, the last class appearing under the old arrangement in the Yale "triennial" catalogue is that of 1767, and the last in the Harvard "quinquennial" is that of 1772; the change thus beginning at a time when the most sanguine person in America hardly dreamed of such a thing as "successful revolution" or "a national republican Government." It was a most important event in the social development of the colonies, and deserves more thorough investigation, both as to causes and consequences, than it has ever yet received. But such investigation must proceed from some student of much more careful historic methods than have ever yet been shown by Mr. Blaine.

Cambridge, Mass.

THE PROBLEM OF THE NEW ENGLAND COLLEGE.

To the Editor of The Nation:

Sir: The leading New England colleges, after many years of highly honorable work for their own section and for the whole country, are just now compelled to consider some serious questions concerning their future. Harvard, by a series of bold and at present apparently successful experiments, and by the remarkable advantages of her environment, is somewhat freed from the duty of considering these questions; but every other New England college of standing must recognize their force, at least in part.

The population of Maine, New Hampshire, and Vermont is practically stationary. Maine and New Hampshire actually lost population between 1860 and 1870; while the country towns of the two States—the old recruiting-ground of their colleges—did not gain between 1870 and 1880. Wealth in the farming and other classes of moderate means has not materially increased since 1850, if it has held its own; while college expenses are about fifty per cent. greater. Western Massachusetts is in a similar condition; and while Rhode Island and Connecticut are in some ways more favorably circumstanced, such institutions as Brown, Wesleyan, Trinity, and Yale itself, not less than Amherst and Williams, must feel that to maintain their numbers is about all they can do, without apparent hope of increase. The Middle and Western States are multiplying and improving their higher institutions; and the South, still poor, is keeping at home the class of young men whom she used to send North for an education, before 1860. At the same time the pressure for broader and better instruction in New England is increasingly powerful; elective courses and means of study in the sciences, history, and modern languages are imperatively demanded; and university or post-graduate courses and degrees are urgently requested in some quarters. Great as have been the sums received by the colleges since the war, these sums are inadequate to meet all the new demands; and a large amount has had to be applied to scholarship funds, without which the number of undergraduates would be smaller than it is.

The topics I wish to mention briefly in this article have been discussed at length and in detail by educators of the highest ability. I would not claim to throw new light upon themes so serious, which must be studied for decades to come, and which vary in importance at different times and in different institutions. I have only thought it might have some general interest if I could summarize modestly and briefly the principal points which have forced themselves upon my mind during four years' experience as a teacher in a New England college. No one else, of course, is in any way responsible for what I say, but I believe the conclusions which follow may be considered fairly representative of the latest deductions reached by the majority of New England college instructors outside of Cambridge.

College or University?—It will not prove wise for the smaller New England colleges (all save Harvard and Yale) to try to broaden their field into that of the university. Their funds, their libraries, their teaching force, and their environment will not permit. In the Johns Hopkins graduate courses, perhaps the best we now have, it has been found, I am told, that sound college training forms a better preparation than loose elective or "university" work. This would be still more evident were our Amhersts, Dartmouths, or Bowdoins to try to become universities. They have a high—in a true sense the highest—opportunity as colleges. It should still be their mission to give a sound general training, with a limited range of valuable electives supplementary to that general training. How valuable is this work has been freshly and ably stated by Dr. Edward A. Freeman in his latest book, 'Methods of Historical Study.' A university nowadays needs an endowment of at least $1,500,000 for university or graduate courses alone, and the neighborhood either of a city or of great museums and collections. The university cannot be the college; the college cannot be the university, in the German, or best modern, sense.

Required and Elective Courses.—As the function of the college is that of general training, its curriculum should ordinarily be arranged with that end in view. Indeed, most of the smaller colleges have already introduced as many electives as their teaching force can try to give. The Freshman should be led through the classics (or one of them, with adequate collateral courses to take the place of the other), to science, philosophy, history, and literature. Electives and honor schemes may develop and carry on work in this or that line, but they cannot, with the means, numbers, and character of the New England college, be set promiscuously before a youth of eighteen, with privilege of free choice. Were they so set before him, the college would be destroyed, and no university would be created as a substitute.

Greek, Latin, and Modern Languages.—While, however, the classics should be retained, it is nowadays essential that a bachelor of arts be well equipped in English, French, and German. The times and the public demand that these three languages be taught by at least as many and as able and enthusiastic men in a college as teach Latin and Greek. Colleges that fail to recognize this fact will fall behind.

History and Science.—The public also demands, and with good reason, ample courses in history and science. To secure them, somehow, is a duty that cannot be avoided, else colleges will lose a class of students which they once attracted, and such students will go to the technological schools. One-half the students in the Massachusetts Institute of Technology or the Sheffield Scientific School would have been in college under the conditions of a quarter of a century ago. The colleges give more than they used to, but the public demands even more than they give.

Student Self-Government.—There is no special need of considering this problem in haste. It has not yet had the trial of any severe and crucial test. Students are more orderly, temperate, and moral, as well as older, than they used to be; but I can only say that at Dartmouth, at least, the students take little interest in the question, and that resolutions of alumni in its favor fall on listless ears. It does not really affect the more important questions at issue; for one, like our Dart-

mouth students, I neither oppose it nor long for it.

Athletic Sports and Student Expenses.—While recognizing the advantages of out-door exercise and good companionship, I believe that trustees, faculties, and parents should urgently endeavor to reduce the time and money now devoted to base-ball, foot-ball, tennis, boating, class, and society expenses, and expenses due to college-community pressure. They are not alarmingly large, but they are too large.

Compulsory Attendance at Church and Chapel.—There seems no good reason to doubt that every New England college founded by Christian men for Christian purposes should retain, within bounds of reason and prudence, required religious observances, once every week-day and once on Sunday. The community would distrust a college giving up such observances—to mention the lowest and meanest argument first. I prefer to say, instead, that a simple, short, attractive service in a fit and perhaps beautiful building, reserved solely for religious exercises, is a daily benefit. The college, save when avowedly founded and maintained as a denominational one, should never be a place of propagandism or sectarian superiority; but it should be a place where is taught idealism, not materialism; ethics, not utilitarianism; Christianity, not indifferentism.

The College and the Community.—Every college, says President Eliot, has its "natural watershed." Its relations with the residents of its peculiar district should be cordial. "Town and gown" difficulties are a thousand years old; too often the college is deemed aristocratic by the community, which in turn seems to the college selfish and short-sighted in its treatment of its most valuable educational possession. Ill feeling, whether of aversion or of mere coldness, should be removed by mutual concessions. National fame and large endowments do not emancipate a college from loyalty and courtesy to its community and its neighbors. Legislative aid, almost always given grudgingly, is now seldom asked; college presidents and professors are no longer found the ready servants of every conference, church, teachers' institute, or cattle fair; but they must feel and show a hearty interest in all that makes for the welfare of the State, in the broader sense of the word. In this whole matter there has been a manifest improvement within the last fifty years. Legislatures seldom attempt to tinker colleges as political machines nowadays.

The College and the Preparatory Schools.—The old country academies have for the most part declined in importance; some of those which once had 300 students now have perhaps no more than 50. They have been crowded down by the poverty of the farmers and middle-class workers, and still more by the growth of city high-schools, which sometimes, it should be added, send their graduates to large city colleges, now easily accessible by rail, instead of to the nearer institutions they formerly fed. The college, therefore, should maintain close relations with these new city schools, as well as with the older academies. The system of tentative admission to college by certificate from the schools, if strictly managed, may be one means toward this end; but its working thus far has been of doubtful success. It takes away the obvious right of any learned institution to manage its own tests and examinations, and it is by no means universally popular in the preparatory schools. By mutual counsel, and, best of all, by the exhibition of solid work, the college should recommend itself to the school, and the school to the college.

Beneficiary Aid.—Most colleges are chary of information as to the amount of beneficiary aid given to students. They offer and bestow "scholarships" liberally, sometimes without reference to scholarship; and in addition they remit tuition. The small colleges sometimes try to allure students from the large ones by promises of aid, while the large seek to deplete the small by assurances that though their cost be higher, so are their benefactions. Free tuition, or the old rates of $25 a year, would be better than the present system, which has been wittily called, "paying the salaries of the entire Freshman class." When this system is supplemented by written or personal appeals, or by recruiting trips to preparatory schools on the part of members of the faculty, the effect is belittling.

The Race for Numbers.—I believe the time has come for the New England colleges to give up all attempts and desires, expressed or unexpressed, to measure their success by the numerical showing on their catalogues. The race for numbers is productive of all kinds of mischief, scholarly and disciplinary. If the geographical conditions of New England have changed, they cannot be altered by the laxity of college faculties or trustees. Let every New England college give the broadest, deepest, soundest mental and ethical education it can, and then leave the results to take care of themselves. The college should proffer so good an education, at so reasonable a cost, that students in its own "watershed" cannot afford to go elsewhere, and that students from a distance will be attracted to it because of its excellent work. No point in college administration seems to me clearer or more important than this. Bowdoin, Dartmouth, Amherst, Williams, Brown, Wesleyan, were never better equipped than to-day; their past is secure, and so is their future if they will make scholarly work the sole plank in their platforms. I would rather teach one hundred well-equipped students for a salary of one thousand dollars, than try to benefit four hundred if a quarter of them were unfitted for college, and if I were rewarded with three or four thousand dollars for my yearly efforts. So, I am sure, would every ambitious professor in any of our New England colleges.

Trustees, Faculty, and Alumni.—It is simply indispensable that these three bodies work in harmony. If Christian colleges cannot show a spirit of mutual friendliness, help, and charity, what can we expect of socialists and the "laboring classes"? "If gold rust, what shall iron do?" The trustees, overseers, or corporation should govern, relying upon the faculty for information helpful in academic appointments and scholarly regulations. And boards and faculties must be in constant sympathy with the alumni. I lately heard an old and famous graduate of one of our colleges say to some younger alumni, in an alumni meeting, who were trying to secure a change: "If you don't like the way this college is run, go and start another." Whether the young men were right or wrong, this policy, thus frankly stated, and often maintained in secret, is nothing less than ruinous. No learned institution in the world—Berlin, Oxford, Johns Hopkins—however richly endowed, can afford not to welcome and courteously consider all proposals which come from well-disposed and loyal graduates. Without irreverence, one might apply to the matter the lesson taught by the mediæval circular device illustrating the doctrine of the Trinity. The governing board is not the faculty; the faculty is not the body of graduates; the body of graduates is not the governing board; but each is indispensable to the welfare of the college, and all three are bound in the same indissoluble ring.

CHARLES F. RICHARDSON.

DARTMOUTH COLLEGE.

THE TUMULUS AT MYKENÆ.

TO THE EDITOR OF THE NATION:

SIR: In his study of the tumulus at Mykenæ Prof. Goodwin has been by his Greek informant misled in general and in detail; but how he could have read the correspondence in the *Times* to which he alludes and then repeat the statement of his guide, I do not comprehend.

The elements involved in the Mykenæ monument are three—the old house walls which stand between the base of the tumulus and the ancient wall of Mykenæ; the circle of embankment crowned by a monument of the character of the Druidical monuments of France; and the quarry-stone wall which was originally intended, and now serves, to keep the material of the base of the tumulus in shape. Of these three the first, the house walls, are clearly long posterior to the ancient city, because they contain material borrowed from the ruins; they are clearly anterior to the tumulus, because they have been cleared away (in one case one of the jambs of a door has been taken and the other left standing) to make room for it. The second, the circular embankment, is clearly as it was made over the graves, because the monument which it carries is *in situ;* and the mass of earth which carries this Druidic circle has clearly never been disturbed, not only because the circle is in its original position, but from the solidity of the embankment—and for the rest it is well known that this was never moved. Thirdly, the broken or "quarry" stone wall, which was the outer limit of the tumulus, Prof. Goodwin's "sustaining wall of the Agora," has been in part demolished and restored to its original condition *with the original material*, and is now in the same state as that in which it was found. In this state I saw it immediately after Schliemann's excavations, when I asked the Ephor in charge how much of these walls was original and how much restored. He replied that all of the house walls were exactly as they were found, and never had been demolished or disturbed; the enclosing wall (the third element) identical in character, position, and function, but restored *in the parts* which had fallen by the necessity of keeping the general character of the monument unchanged. Of the "walls which lined" the tombs, I make no account, nor do they or the surrounding wall (No. 3) have the slightest importance in the question, for they may have been built yesterday or ten thousand years ago, being simply broken stone laid sloping inwards to contain an earthen embankment.

These "facts are beyond question." Dr. Dorpfeld has attempted to invalidate my conclusions as to the house walls by stating that they are foundation walls; but this is absolutely untenable, as they contain doorways, which foundation walls do not. And even if they were foundation walls, it does not in the least change their relations to the other elements, since the foundations must be earlier than the superstructure, but of the same approximate epoch. Dr. Dorpfeld's mistake lay in supposing that the stones of these walls were prepared for their present position, whereas they are clearly simply adapted from the ruins of previous structures; nor is there the least ground for assuming that they are later than the tumulus, or even, as I once supposed, additions to it, for they have clearly been demolished within a circular space, leaving the remnants entirely different from what they would have been if built into that space. These walls are in exactly the state in which I first saw them, except a top stone or two having fallen from them. I am inclined to think that they are of the same occupation as that which built the tombs and buried the dead there, but actually prior in construction, though Prof. Roussopoulos considers the interments to have been made by a tribe in migration, which did not really dwell at Mykenæ, but which, having lost several members of its chief family by battle or disease, had buried them here and went on. He is also emphatic as to the house walls being anterior to the burial.

As to Dr. Schliemann's accuracy in measurements, etc., Prof. Goodwin will excuse me if I attach no importance to it. I was fortunate enough to find in Ithaca a very early inscription, of which Dr. Schliemann had before me found one-half (the original tablet having broken in two), and of which he has given an incorrect and utterly unintelligible transcription in his 'Ithaca,' etc. This he says he found on the cover of a sarcophagus, of which he gives the "exact measurements" with great particularity, with engravings of objects found in it. The least examination of the stone would show a competent student that, as the inscription proves, it was a mural tablet, by far too deep to have been on a sarcophagus; that it was of the fifth or sixth century B. C., when such a thing as a sarcophagus was unknown in Greece. Among the contents is given a coin of Achaia of about 300 B. C., two or three centuries later than the inscription. Moreover, I was assured by the workmen that nothing had been found with the inscription, and it was perfectly clear that in the pile of stone of which it was part, and which had been disinterred altogether, there had not been a fragment that had ever belonged to a sarcophagus, which, "exact measurements" and all, were a pure invention. The scientific accuracy of Dr. Schliemann (where Dr. Dorpfeld has had nothing to do) is a pleasant joke, but will not (as is well known in Athens) do to build an argument on, not even *à propos des bottes*.

But Prof. Goodwin does great injustice to the Greek Archæological Society by his gratuitous hypothesis that "irresponsible workmen" were allowed to change, demolish, or reconstruct the monuments in question, or any part of them. Only where repairs were needed, and in exact accordance with the previous state of the work, were they made, and always under the supervision of an Ephor. If ever we get the report of Stamatiades (now deceased), who supervised the work at Mykenæ, we shall know the true history of these excavations—not before; but of the utterly untrustworthy character of Schliemann's archæological conclusions, every scientific archæologist, German, French, or English, was satisfied long ago. Dr. Dorpfeld's accuracy I will not call in question, but when he has spent as much time as I have on the examination of really prehistoric monuments, he will probably not be misled by such structures as that at Tiryns.

Yours truly, W. J. STILLMAN.

VENICE, July 30.

A CURIOUS CARELESSNESS.

TO THE EDITOR OF THE NATION:

SIR: The abilities as a critic of the Vte. E. M. de Vogüé are not, I suppose, to be questioned; at any rate, this is not the occasion to question them. But I may point out a strange mistake of fact he has fallen into. In writing of Gogol's 'Taras Bulba' he says: "At the period when the poet wrote, scarcely more than half a century had passed since the dissolution of the camp of the Zaporogues, since the last war with Poland. . . . This war forms the centre of the dramatic action" of 'Taras Bulba.' In continuing he adds: "His symbolic death [that of Taras] shows us the glory and the liberty of the Cossacks disappearing into the tomb with their last ataman." And he makes a great point of "the fortunate conditions" under which Gogol wrote, in having "had the direct impression of what he celebrated."

Turning to the story itself, we read:

"Bulba was terribly headstrong. He was one of the characters which could only exist in that fierce *fifteenth century*, in that half-nomadic corner of Europe, when the whole of Southern, original Russia, deserted by its princes, was laid waste, burned to the quick by pitiless troops of Mongolian robbers; . . . when the ancient peaceable Slav spirit was seized with warlike flame, and *the Cossack state was instituted*, a free, wild burst of Russian nature."

This is the opening of an historical sketch, four pages in length, of the times of the scenes that follow in the book; touching on the attitude of "the Polish kings who found themselves sovereigns in place of the provincial princes" towards their subjects the Cossacks, and dwelling on "the well-known story" "how their [the Cossacks] incessant fighting and restless life saved Europe from the merciless hordes which threatened to overwhelm her." It was "this Iliad" which M. de Vogüé asserts the grandfather of Gogol was witness of and actor in, and that to write 'Taras Bulba' Gogol had but to "rédiger" the grandpaternal narratives! His grandfather was indeed an old Zaporogue, familiar with incessant fighting and restless life; but he was not a contemporary of Taras—Taras, who, dying in tortures, cries triumphantly and prophetically: "Wait: the time will come when ye shall learn what the orthodox Russian faith is! Already the people scent it far and near. *A Czar shall arise from Russian soil*, and there shall not be a power in the world which shall not submit to him!" This does not sound precisely like a symbolic disappearance of Cossack glory and liberty!

On one unfamiliar with Russian history the not infrequent historical references in the book make little impression; but M. de Vogüé would know their weight. Has he never wholly read the book from which he largely quotes? It would seem so, not only from what we have now noted, but from this further inadvertence. He gives a long quotation describing the public execution of some Cossack prisoners, among them a son of Taras, and continues, "Taras, hidden in the crowd, had seen his son die; he turned on his steps to linger out his sorrow in the solitudes of the South"; and he then quotes a passage describing this sorrow in the South, *which precedes by thirty pages the death of the son!* The truth is, that the sorrow in the South was after the *capture* of the son, when Taras was "markedly sad and morose," when "he gazed grimly and indifferently at everything," and when "his gray moustache turned to silver and the tears fell one by one." After the *death* of his son, "An army of a hundred and twenty thousand Cossacks appeared on the borders of the Ukraine. . . . And among all these regiments, one regiment was the choicest; and that regiment was led by Taras Bulba. . . . His gray head dreamed of nothing but fire and the halter, and his utterances in the council of war breathed only annihilation."

M. de Vogüé was certainly not "up" in his 'Taras Bulba.' * *

Notes.

CHARLES W. SEVER, Cambridge, announces for the beginning of the college year the publication of a series of French texts which is to differ materially from anything of the kind before offered. The texts will in every case be reproductions of original or characteristic editions, complete and unexpurgated, designed rather for college than for school classes. As the spelling, punctuation, and other peculiarities of the editions reproduced are to be preserved as far as possible, these texts are not designed for elementary students. Montaigne's essay, the 25th of Book I, "De l'Institvtion des Enfans," is already printed from the original edition of 1580, differing materially from that of subsequent editions, and interesting as showing the first jet of Montaigne's thought unencumbered by his later careless additions, which have made it less clear. Among the works announced are: Racine's "Andromaque" and Corneille's "Le Cid," both from the last edition published in the lifetime of the authors; also Molière's "Le Misanthrope" (or rather "Misantrope," as it is spelled from the first edition of 1667). It is intended to continue this series by the publication of sixteenth and seventeenth-century texts, also by a few of the eighteenth and nineteenth centuries. These publications are under the direction of Prof. Ferdinand Bôcher, of Harvard.

Mr. E. R. Champlin, of the Boston *Literary World*, is engaged on a 'Handbook of Living American Writers,' to be published in November.

T. Y. Crowell & Co. announce for immediate publication the following translations from Dostoyevsky: 'Crime and Punishment,' 'Injury and Insult,' 'Recollections of a Dead House.'

It is now announced in London that 'The Wearing of the Green' and other novels by "Basil" were written by Mr. R. Ashe King. A recent guide-book, 'Living Paris,' by "Alb," was written by Mr. Richard Whiteing.

In addition to the half dozen or more English editions of the 'Autocrat of the Breakfast Table' recently published in England, the Rev. H. R. Haweis has been bold enough to abridge it for Routledge's 'World Library.'

Nearly twenty years ago, in the darkest days of the English stage, the London *Athenæum* contained a series of lively essays on the "Dramatists of the Present Day," signed "Q." One of them was on Mr. Tom Taylor, and it so roused the ire of Mr. Charles Reade that he burst into fiery correspondence, in the course of which he called "Q.'s" papers the productions of a cipher signed by an initial. To this "Q." retorted that Mr. Charles Reade was a literary fusee—"You have only to touch him and he goes off." It soon transpired that "Q." was Mr. Thomas Purnell; and Mr. Purnell has now published 'London and Elsewhere' (London: T. Fisher Unwin; New York: Scribner & Welford), a little book of pleasant little essays, very light, most of them, and playfully humorous. The essay on "First Nights" is quite out of date now, as the author confesses in the paper on "London Playhouses," *i. e.*, Mr. Irving's Lyceum Theatre.

The third volume of Mr. John Morley's 'Miscellanies,' in Macmillan's uniform edition, consists largely of book reviews which have the character and value of biographical studies. J. S. Mill, George Eliot, Harriet Martineau, Mark Pattison, W. R. Greg, and Auguste Comte are the subjects treated in Mr. Morley's well-known manner, in which sympathetic insight is blended on every page with unrelaxed judgment. As the objects of these masterly essays is personal and ethical, and not merely literary, they bear reproduction in permanent form as few reviews do or can. An address "On Popular Culture"; reflections on the death of Mill; and 'France in the Eighteenth Century' (a review of Taine's 'Origines'), are also to be found in this volume.

The latest text-book from the Clarendon Press is the sixth book of Clarendon's 'History of the Rebellion,' edited by Thomas Arnold (New York: Macmillan). Its apparatus leaves nothing to be desired—a preface giving the life of Hyde and a summary view of the contents of the earlier books of his history; and very full notes, for the most part, of course, biographical; but they contain also an independent account of the battle of Edgehill. There is a plan of this battle and a general map of England.

From the Cambridge (Eng.) University Press we have the first volume of a 'Cambridge Greek Testament for Schools and Colleges' (New York: Macmillan). Beginning is here made with the first Epistle to the Corinthians. A text other than the accepted has been derived in a way

which we need not describe, and the editor in each case is at liberty to dissent from it in his notes. These are, in the volume before us, very copious, filling more than 150 pages.

Mr. F. J. Church's 'Trial and Death of Socrates' (Macmillan) has been thoroughly overhauled, both as to the Introduction and as to the author's translation from the 'Euthyphron,' 'Apology,' 'Crito,' and 'Phædo' of Plato. The book is beautifully got up in the style of the Golden Treasury Series.

A selection, 'Poems by John Milton,' edited for the use of schools by John Merry Ross of the University of Glasgow, comes to us from T. Nelson & Sons. It has more notes than a schoolboy needs, and some may appear pedantic even to teachers. But natural selection deals quickly with the superfluous.

Cowley's Essays; 'Sir Roger de Coverley and the *Spectator's* Club'; Plutarch's Lives of Alcibiades, Coriolanus, Aristides, and Cato the Censor; and a portion of Marco Polo's 'Voyages and Travels,' are the latest issues in "Cassell's National Library."

Mrs. Sarah H. Bradford has published a new and partly rewritten edition of her biography of Harriet Tubman, 'Harriet, the Moses of Her People' (New York: Geo. R. Lockwood & Son). This remarkable character well earned her *sobriquet* of "Moses," as her mission was—herself a fugitive slave—to return to the South and bring off those whom she had left behind in bondage. "So she went *nineteen* times, and so she brought away over three hundred pieces of living and breathing 'property.'" The mixture of religious fatalism with extraordinary cunning and audacity made Harriet's exploits none the less marvellous or heroic. During the war she was full of good offices among the Union armies, and her life at Auburn, N. Y., where she had the esteem and aid of Secretary Seward, has continued to be philanthropic and charitable to the full extent of her slender means. The proceeds of the sale of this narrative will contribute to her comfort in her declining years. It is very readable, and is restrained in tone.

Dr. Geo. H. Moore of the Lenox Library has published in pamphlet form a second paper on the "History of the Old State House," read before the Bostonian Society, February 9, 1886 (Boston: Cupples, Upham & Co.). In it he describes the principal events which took place within its walls between the years 1776 and 1830, the most interesting being the visits of Washington in 1789 and of Lafayette in 1825, and the meetings of the various constitutional conventions. In an appendix he discusses the use of the words Colony, Province, and State as applied to Massachusetts, and gives an account, with contemporaneous documents, of the controversy in 1802 between the State and the town as to the ownership of the building. Considerable space is also given to the difference of opinion between himself and Mr. Wm. H. Whitmore as to the original internal arrangement of the old building. While leaving to others the task of deciding this vexed question, it is just to say that American antiquarians are greatly indebted to both of the learned disputants—to Dr. Moore for the interest which he has shown in the history of the building, to Mr. Whitmore for having contributed more than any single man to its preservation as an historical monument. The Bostonian Society is about to publish a volume containing other papers read before it within the last few years.

Mr. John H. Hickcox, Washington, D. C., sends us a by no means thin pamphlet 'Bibliography of the Writings of Franklin Benjamin Hough, Ph.D., M.D.,' lately deceased. From the quantity of newspaper articles here recorded we should judge that this prolific and very miscellaneous writer kept a scrap-book which has been useful to his bibliographer. Science, history, and geography may be called Dr. Hough's specialties through life, but in his latter years it is well known that he became principally absorbed in the promotion of forestry.

Science for August 13 condenses Surgeon John S. Billing's annual address in medicine before the British Medical Association on August 11. It is accompanied by very suggestive charts of the United States, showing the distribution of deaths from malaria, cancer, consumption, and pneumonia. The German element in our population, it appears, is most exposed to cancer; the Irish next. Colored people at the South are but half as liable to this disease as white.

The *Science* Co., by the way, will publish directly in pamphlet form the economic discussion lately carried on in its columns by H. C. Adams, Richard T. Ely, Arthur T. Hadley, E. J. James, Simon Newcomb, F. W. Taussig, and other writers. Prof. Ely furnishes the introduction.

The London *Graphic* for July 24 contains a very instructive map of the world, with two diagrams showing the present extent of the British Empire and its growth in population, trade, shipping, and revenue in the last thirty-five years. From these it appears that the area of the colonies is nearly six times as great as that of the dependencies, and twenty times larger than that of the United Kingdom, while the population is only about a quarter of that of the latter and not a twentieth part of that of the dependencies. Since 1851 the sea trade and the revenues of the colonies have increased some sevenfold, while that of the mother country has not doubled. It is interesting also to note that while in this same period the imports from the United Kingdom into Canada have risen from a little over eight millions in 1851 to only nine and a half millions according to the latest returns, in Australia and New Zealand, with a smaller population, they have increased tenfold, being now nearly thirty-two millions, while the exports are nearly three times as great. Capt. J. C. R. Colomb, M.P., who prepared the tables, accompanies them with an earnest plea for imperial federation.

M. J. Weber, the musical critic of the *Temps*, completely demolishes the theory spoken of in the *Nation* of July 8, which attributes the music of the Marseillaise hymn to a certain Grisons, the composer of an oratorio called "Esther." It is shown by him that Grisons, who died only in 1815, simply took at some time unknown the melody of Rouget de l'Isle, and, with a few changes not for the better, adapted it to religious words. Thus falls again the accusation of plagiarism started in the *Univers* in 1878, and reproduced with satisfaction in the anti-republican press of France. With excess of zeal, M. Arthur Loth, in his recent work, 'Le Chant de la Marseillaise' (Paris, Victor Palmé) reproduced the original manuscript from "Esther," thus furnishing the best weapons to those who are less ready than he is to find in the Marseillaise, not the product of the French Revolution, but of the "musical schools of the Church."

M. Auguste Vitu, best known as the brilliant dramatic critic of the *Figaro*, is also an antiquary of no mean equipment. He has lately published a 'Petite Histoire de la Typographie' (Paris: Delagrave; New York: F. W. Christern) which we recommend to all who seek an outline sketch of the invention and improvement of typography. Like all French books, it is calculated a little too closely for the meridian of Paris; but we should be glad if there were any brief history of typography as good as this accessible in English. The illustrations by M. Coppin have a most romantic appearance, and seem to have been left over from some flamboyant book by one of the men of 1830. As an appendix, there is a little vocabulary of the technical terms of the printing-office—useful, although not so elaborate or so nearly complete as the useful dictionary of the late Joseph Boulmier.

Madame Michelet has published a volume taken from the writings of her husband and called 'Notre France, sa géographie, son histoire' (Marpou & Flammarion). It is made up of the introduction to the second volume of the 'Histoire de France,' of portions of 'Le Peuple,' and of extracts from hitherto unpublished journals of travel by the historian. The arrangement and selection are said to be done with surprising skill, and to have a coloring, and life, and completeness which is extraordinary.

There is perhaps no branch of literary composition in which there is less danger of being called to order than in that of the folk-lorist. M. H. Gaidoz, for example, taking up the subject of alphabet cakes ('Les Gâteaux alphabétiques') to make a little wreath in memory of Léon Renier, the late President of the École Pratique des Hautes Études, begins with a pertinent story of the Irish St. Colomba, and presently has to check himself with the remark that he is treating a question not of theology, but of pastry. Presently, however, it appears to be a question of linguistics, for he discerns the cakes in question, or an allusion to them, in Horace's lines:

> "Ut pueris olim dant crustula blandi
> Doctores, elementa velint ut discere prima";

and then cannot forbear a footnote reference to M. Havet's remarks on the etymology of *elementa* proceeding from LMN., in a manner analogous to our substantive use of ABC. We are landed finally in the 'Vicar of Wakefield' and in 'Humphry Clinker,' and when the small brochure is quite read through, we are sorry that the delightful writer was not more discursive and more long-winded.

The *Jahresbericht über die Erscheinungen auf dem Gebiete der Germanischen Philologie* for its seventh year (1885) has just appeared, and contains as usual its valuable bibliography in this department. The section on English, which is under the direction of Dr. J. Koch, Berlin, comprises 285 titles. We know of no more serviceable bibliographical work for students of Germanic philology.

—Two books about books have recently been issued which deserve more elaborate criticism than we can well spare space for. One is French and one is English. The former makes one volume of a new "Bibliothèque illustrée pour les prix," and is called 'Le Livre et les arts qui s'y rattachent' (Paris: Firmin-Didot & Cie.; New York: F. W. Christern). It is written or compiled by M. P. Louisy, who has avowedly drawn much of his material from the works of the late Paul Lacroix, besides borrowing freely from that admirable book, which we should be glad to see better known in the United States, the 'Histoire du Livre,' by M. E. Egger. M. Louisy's book covers much the same ground as M. Egger's, but it has not the coherence or the charm of style. Its chief merit is in the 200 and more woodcuts with which it is adorned, most of which are relevant to the text and all of which have been extracted from the various works of Paul Lacroix published also by MM. Firmin-Didot. We do not know any other book containing as many interesting illustrations of the progress of the art of book-making. We have here before us the Egyptian papyrus, the Pompeian tablets, the Roman *capsa* or box for scrolls, the mediæval MSS., the early block-books, the first attempts at printing, the Arabic bindings, the marks of the great printers, etc., etc.

—The English book is Mr. H. B. Wheatley's 'How to Form a Library,' the first volume of the projected series of the "Book-Lover's Library" (London: Elliot Stock; New York: Scribner &

Welford). It is a manual for the beginner in book-collecting, with the fault that it seems to have been written up to the title, which is very large. The suggestions and directions are a trifle scattering, but are all valuable, and the book is welcome. Like most English books of reference, it is calculated very closely for the latitude and longitude of London, which detracts from its usefulness to Americans. But Mr. Wheatley seems to be familiar with much of the good work which has been done by American librarians—although apparently he does not know a little book on the 'Home Library' included in Appleton's series of "Home Books"—and he is frequent and cordial in his allusions to American authors. It is with some surprise, therefore, that we note the omission of both Webster's and Worcester's from the list of English dictionaries (p. 106), and neither Taine's 'History of English Literature,' nor Mr. Sabin's catalogue of American books is included. What is most curious in Mr. Wheatley's pages are the lists of recommended books drawn up by Dr. Johnson, by Auguste Comte, and by Sir John Lubbock.

—On Monday, August 9, passed away in Boston Mrs. Clara Barnes Martin, for eight years one of the most constant and valued contributors to the *Nation*. During the greater part of this time she has conducted a well-known private school in Boston, for which she possessed unusual accomplishments, and the idea of which she had entertained before the death of her husband, an architect by profession. Mrs. Martin herself was the daughter of a lawyer, the late Phinehas Barnes, of Portland, for many years editor of the *Advertiser* of that city, and highly esteemed for character and ability. Her contributions to the *Nation* were very miscellaneous, but she was early engaged to write collective reviews of novels, and to this rather thankless task she brought the utmost conscientiousness, diligence, and sound and independent judgment. In our last issue we printed her final criticism in this or any field. It was composed on her bed, in full view of her approaching dissolution, and she ended it only to begin the painful struggle with death which was to endure a week longer. Mrs. Martin's acquaintance with current Continental literature was fresh and extensive, and she was one of the few Americans of either sex who have acquired a literary knowledge of the Russian language. An article from her pen, about a year ago, on Turgeneff's private correspondence will be remembered with pleasure by not a few of our readers. She also, in her journeys, wrote admirable letters from the South and from England. She was the author of the standard guide-book to Mt. Desert. Whatever she wrote was marked by excellent qualities of style, great refinement, and elevated moral tone. We deeply regret that so cultivated and true a woman should have been cut off in middle life, though the loss of her husband and of their only child had long ago robbed existence of its charm, and left only high ideals of duty and usefulness to sustain her.

—Recent advices from the Pacific Coast show the progress making by Mr. Lick's Trustees towards the completion of his principal scientific bequest, the Astronomical Observatory on Mount Hamilton, California. The superintendent of construction is at present engaged in the erection of the walls of the dome for the great telescope, which are nearly forty feet high and enclose a diameter of seventy-five feet. The Trustees have decided to adopt the ordinary form of hemispherical dome, and the contract for its construction has been signed with the Union Iron Works of San Francisco. The only novel feature embodied in the plans is the use of hydraulic power to raise and lower the floor of the dome, thereby obviating the necessity of an observing-chair. This general plan was first completely worked out by Mr. Howard Grubb of Dublin, and by him presented to the scientific societies of Great Britain some months ago. The tube of the telescope now constructing will be fifty-six feet long, and, with the enormous spectroscope attached, the extreme length of the instrument will approach sixty-five feet. Messrs. Warner & Swasey, the well-known mechanicians of Cleveland, have contracted to complete this tube, and all the necessary mechanical contrivances for manipulating it, in April of next year. It will contain many novel devices, among them an application of a modified form of the bicycle ball-bearings to the right ascension and declination axes, which will insure great ease of movement of the telescope. Some weeks since we noted the fact that the Trustees had given the Clarks an order to figure a third, or photographic, lens for this telescope; but while the tedious process of polishing the other two lenses has been going on successfully for a number of months, and is now nearly completed, the third glass has given a great deal of trouble by its cracking around the edge as the surplus material is removed in the process of making it into a lens. It remains to be decided whether the same piece of glass shall be used for the photographic lens, with a diameter of about twenty-six inches, or an entirely new disk shall be procured, so that the finished lens may have the full diameter of thirty-six inches.

—The connection of the Observatory with the outside world is gradually coming about in more ways than one. Accurate time is now furnished to the railways daily over an electric line connecting the summit with San José, and a line of stages now running every day between these points renders the mountain readily accessible, so that the problem of what to do with the increasing number of visitors already confronts the Trustees. It is probable that one or two days each month may be set aside for their accommodation. Among minor points of progress may be noted the installation of a set of meteorological instruments, and a seismograph for the registry of earthquake-shocks is soon to be in position. The first volume of the publications of the Observatory is well advanced, and will contain a history of the Lick Trust and all the proceedings of the Trustees relative to the Observatory since the constitution of the second Board in 1876, including an account of the selection and preparation of the site, the construction of the road to the summit and of the buildings, together with a description of the instruments and a record of the discoveries and observations already made with them. It is estimated that, on the completion of their work a year hence, the Trustees will have expended all but $200,000 of the sum set apart for the Observatory by Mr. Lick; and this sum must, by the terms of the bequest, remain as the partial and insufficient endowment of an establishment which will require an annual income of more than $20,000 for its proper maintenance. A considerable deficit will, therefore, need to be provided by the State or by private munificence.

—A good history of advertising, ancient and modern, is a book still waiting to be written. Although the subject was attempted years ago by one of the late John Camden Hotten's young men, a careful and conscientious investigator would find the field both fresh and fertile. Of printed advertisements perhaps the most important are those inserted in newspapers, but second only to these are the handbills posted on walls. The historic value a collection of these may have is shown in the interesting French work on 'Les Murailles Révolutionnaires'; and the artistic merit of many of the more recent pictorial posters has led M. Henri Beraldi, the author of the invaluable and most comprehensive iconography of the 'Graveurs du XIXe Siècle,' to give a list of more than five hundred designs by M. Jules Chéret, the French lithographic draughtsman who has done much to raise bill-posting to the level of a fine art. More elaborate yet is the latest French book on the subject, 'Les Affiches Illustrées,' by M. Ernest Maindron. Herein the bill-poster's art is taken seriously, and considered from its origin, with most abundant illustrations, including a score of chromo-lithographs in M. Chéret's best manner. M. Maindron draws chiefly on his own collection for his pictures, but his earliest is an inscription discovered in 1872 in the Temple at Jerusalem, by M. Clermont-Ganneau, and probably of the time of Herod the Great in the last years B. C. He comes down through the ages rapidly to France and the present century, and two-thirds of his broad folio of a hundred and fifty pages are devoted to recent French posters. Although he mentions Mr. Herkomer's elaborate cartoon for the *Magazine of Art*, he omits Walker's simpler and finer 'Woman in White.' Among the French artists who have attempted this humble form of mural decoration are M. Clairin, Daumier, Gavarni, Manet (a bold and striking black-and-white to announce M. Champfleury's 'Les Chats'), De Neuville, M. Félix Régamey, and M. Vibert. M. Maindron's book will have to be included in all future collections of Dickensiana, as it contains a colored reproduction of a design of M. Chéret's in advertisement of a French translation of 'David Copperfield.'

—We ought before now to have called attention to M. Fustel de Coulanges's 'Recherches sur quelques problèmes d'histoire,' published last year by Hachette. Every student of the problems discussed will find instruction in a field in which the author ranks second to none. And although, as the title implies, the work is mainly controversial, it is only rarely that the intense anti-German sentiment, which is so marked in some of his writings, is suffered to be seen. The studies are four in number. The first, upon the *colonatus* of the later Roman Empire, is a model of sound inductive reasoning. The reader sees the process by which this institution was developed, traced in actual examples. The author appears here to have finally solved his problem. In the second study: "Were the Germans acquainted with property in land?" M. Coulanges places himself essentially upon the same ground as our countryman, Mr. Ross, whose work he cites with commendation. He treats, however, of an earlier period—the date of Cæsar and Tacitus—and we cannot on the whole accept his conclusions. He admits that Cæsar describes a system of community in land, but thinks that the famous 26th chapter of Tacitus describes a system inconsistent with this. Here we cannot think that he has made out his case: he has, however, given very strong grounds for the existence of proprietary estates *by the side of* the communal estates. The third paper, a very short one, upon the Germanic Mark, undertakes to show that the prevalent school of opinion is wrong in considering this word to designate a tract of land held in common. The last paper, upon the organization of the judiciary in the Kingdom of the Franks, is directed against the opinion, chiefly associated with Sohm, that the administration of justice in the Frank Empire was at bottom a popular administration of justice, in which every freeman in the *Mal* was called on to take part. His arguments are exceedingly strong, but we must reserve our judgment upon them, as it appears to us that his evidence is incomplete. He limits himself, it is true, to the Frank Em-

pire; and the Frank Empire, being the most despotically governed of all the Germanic kingdoms, may have discarded utterly all popular elements while the others preserved them. Certainly the northern countries, retaining the present Germanic institutions, did have a popular administration of justice, and it is hard to believe that this could have so completely perished under the Franks as is here urged.

RECENT FRENCH BOOKS.

In the almost universal hymn of praise that arose immediately after the death of Victor Hugo in May, last year, there were but few discordant notes. The portion of the French press hostile to the ideas he represented in the last half of his long career, either kept a decorous silence, or dwelt with measured praise upon his early work and upon his merits as a poet only. Not so with *L'Univers*, which, ever since 1842, had pursued with a ferocious pertinacity the *transfuge* who, if he had remained what he was still in 1832, would have had the adoration of all the supporters of the throne and the altar. M. Eugène Veuillot, following in the footsteps of his more illustrious brother, Louis Veuillot, closed the series of his articles upon the death of the poet and his final transfer to the Pantheon, by one beginning and ending with the words "Dies iræ, dies illa." These he has now added as an appendix to the collected onslaughts of his brother which first appeared in *L'Univers*, in a volume, 'Études sur Victor Hugo,' par Louis Veuillot (Paris: Victor Palmé; Boston: Schoenhof). This is not a mild book. It comes as the first shrill hiss after the immense round of applause that seemed, but only seemed, universal. Victor Hugo has been so loudly, so unwisely, praised and deified for qualities which in the eyes of many were defects, that an early reaction is inevitable. For nearly twenty years all criticism has given way to mere flattery and adoration. A period of neglect, of indifference, perhaps, with occasional ungentle attacks and revisions of the admiration of the *Hugolâtres*, will surely follow. M. Eugène Veuillot has not thought it prudent to wait too long, and yet even now his brother's violent, outspoken articles are interesting, rather because they show strongly one side of Louis Veuillot than because they speak of Hugo.

Veuillot as a critic is relentless. He never forgets that he possesses the truth, that the doctrines he professes are from an infallible source. He thunders, he anathematizes, he fulminates, not so very unlike in all this to the author of 'Les Châtiments.' No two modern writers have dealt out abuse to those whom they disliked, more vigorously than Veuillot and Hugo. No two men could have less expected to have their names coupled together after their death, for they hated each other heartily; Veuillot hating with words of pardon on his lips as a good churchman can hate, and Hugo hating with the bitter animosity of the *proscrit* who made of his rock of exile a pedestal. The present volume, besides adding another to the long list of books that might be headed "Quarrels of Authors," is full of sound and deep criticism. The poet, the prose writer, the orator, the politician, the social reformer, the historian, are all mercilessly lashed as they are incarnated in Hugo. No more searching and forcible criticism can be found in French than that in the article which Veuillot wrote immediately after the publication of "Le Rhin" in 1842. In this he first stated the opinion, which he maintained until his death in 1883, that Hugo is the poet of exterior things: "il a des reflets éclatants, des échos magnifiques. . . . Mais rien ne sort de lui-même, et comme il ne réfléchit que des surfaces, à son tour il éblouit sans pénétrer. . . . Il excelle à peindre ce qui se voit, à répéter ce qui se dit; mais ce qui se sent, il l'ignore."

The second volume of the posthumous works of Victor Hugo was written, in great part, in 1854. In the preface to 'La Légende des Siècles,' in 1857, Hugo, with his usual magniloquence, spoke of the book he then published as only a fragment, of which the whole would "express humanity in a kind of cyclic work." Hence the ambitious title, with the sub-title, "Première série—Histoire—Les Petites Épopées." In the same preface he spoke of two other poems, almost finished. These, with some additions made in 1860, are now published under the title 'La Fin de Satan' (Paris: Hetzel-Quantin; Boston: Schoenhof). Admirers of Hugo will find in this volume ample reasons for calling him the greatest "manufacturer of verses, and of fine verses, that France has produced." He certainly shows himself, as ever, a dazzling, deafening juggler in words, whom we leave, wondering whether he had an idea to express, or whether we perhaps are not tuned to the right pitch to be responsive to the lofty and strange vibrations of his complicated music. Milton was satisfied to speak of "Nine times the space that measures day and night to mortal men"; but Hugo begins in the very first line: "Depuis quatre mille ans il tombait dans l'abîme"! He gives us a dialogue between the Deluge and Chaos, the latter having "deux gouffres noirs à la place des yeux." But it is unjust to such a comprehensive genius as that of the author of 'Les Châtiments' to judge him thus summarily. Mr. Swinburne, who calls 'La Légende des Siècles' "the greatest work of the century," would be the proper person to praise rightly 'La Fin de Satan,' which really forms the introduction to that gigantic succession of one hundred and thirty-eight poems. In connection with this, it may not be amiss to call attention to an excellent critical and very sympathetic article in the *Revue Bleue* (May 22), entitled "Deux grands poètes ennemis—Victor Hugo et Racine."

It is a pleasure to have to speak of the Swiss writer Töpffer, and to recall the memory of a genial humorist, of an amiable story-teller, now a little neglected, who charmed the readers of the middle of the century. This pleasure is given us by the book of the Abbé Relave, 'La vie et les œuvres de Töpffer' (Paris: Hachette; Boston: Schoenhof). The biographer shows us in succession Töpffer as a designer, as a novelist, as a teacher, as a publicist and journalist, but principally as a "critique d'art et esthéticien." It was to speak of him in this last capacity that the author undertook to write his biography. He calls the 'Réflexions et Menus-Propos d'un peintre genevois' "a serious and complete treatise on æsthetics." He tells us that Töpffer will be for posterity "l'auteur des Menus-Propos." This is saying too much of a work more rambling than deep, but which is certainly a charming book to read, full of Töpffer's humor, and very suggestive. As to his stories, the 'Nouvelles genevoises,' 'Le Presbytère,' 'Rosa et Gertrude,' why should they not be recalled to the memory of those who with reason complain of the licentious tendency of a great part of modern French fiction? Sainte-Beuve hailed them as masterpieces soon after their publication. The Abbé Relave tells us of the exuberant joy of the young author when he found himself accepted by the *Revue des Deux Mondes* and praised by the "prince de la critique."

But Töpffer was only incidentally a novel writer: his taste and inclinations would have made him an artist. A weakness of eyesight turned him away from art, but not wholly. He was also by nature, as so many of his countrymen have been, an educator. The series of 'Voyages en zigzag' show him in his capacity of director of youth, and also as an artist of merit who could accompany his illustrations by a cleverly written and humorous text. Later he had charge of a course in rhetoric and belles lettres at the Académie de Genève. In the long appendix to the biography, made up of hitherto unpublished or little known fragments, there are about fifty pages selected from the notes used in his course on general literature. These, as well as other literary essays there given, show that Töpffer as a critic had qualities which, if not brilliant, were solid, and eminently fitted him for the chair he occupied. As a publicist and journalist, in spite of the efforts of his biographer, he is less interesting. Even as an art critic he retains too much of the pedagogue; his humor is at times heavy and forced. He was not in sympathy with modern ideas, but he was always a genial and kindly conservative, one who could excuse everything in his adversaries except intolerance, an excess which he was ready to blame even in those who were on his own side. The Abbé Relave, who, as the title-page tells us, is a lecturer of the Catholic Faculty of Letters at Lyons, has certainly discussed the works of Töpffer, many of which are decidedly Protestant in tone and feeling, with perfect impartiality. The only fault that might be found—a very excusable fault in this case—is that his admiration is excessive. Those who have felt the charm of the 'Nouvelles genevoises' or of 'Le Presbytère' will be ready to accept this kindly recognition of Töpffer's merit with sympathy and gratitude.

Were it not for its intrinsic merits and its originality, it would be too late to speak of the little volume of M. Georges Noufflard, 'Hector Berlioz et le Mouvement de l'art contemporain' (Florence: Herman Loescher; Boston: Schoenhof). Only the second part of the title indicates the nature of the book, as the author has comparatively little to say about Berlioz, but a great deal that is new and even startling about contemporary and future art. After some very interesting chapters on the purely ornamental nature of the art of the *ancien régime*, in which the form was everything, he discusses the tendencies of modern art, in which he sees a constant effort to substitute for the ornamental form that which "things have in themselves." But it is in the concluding pages of his work that M. Noufflard has condensed his ideas. In all the arts an analogous transformation has been going on. Flaubert was the first writer who completely banished from the novel an artificial plot, Wagner and Liszt broke the old moulds of ornamental music. Our century, in painting as well as in other artistic manifestations, is like the fifteenth, not like the sixteenth. What hindered artists and poets at the period of the Renaissance was too vivid reminiscences of Greece and Rome. The creators of the twentieth century will be free in their expression of beauty as they see it. Painting, prose, and the "*art mixte* which results from the union of poetry and music," will be the three modes of expression of our immediate descendants. It will be seen that the author abandons poetry, which has "no other base than its expression," and sculpture, which he thinks, in recent times, has produced nothing truly original without manifesting "tendencies which it cannot realize entirely." M. Noufflard avoids the words naturalist and realist. He speaks of the novels of Zola as so painful that he could never read one through, but of the writer in the highest terms as a literary critic. What he thinks wanting now to both painters and novelists is subjects really beautiful and great, and perhaps also "the elevation and serenity of soul which high art demands."

'Alexandre Dumas: Sa vie, son temps, son œuvre,' by M. Henri Blaze de Bury (Paris: Calmann Lévy; Boston: Schoenhof), is neither a

very minute nor an exhaustive biography of the elder Dumas; but it is a thoroughly readable book, in which the author seems to have caught at times the very spirit of the charming story-teller whose life he was writing. Everything in the book that relates to Dumas as a playwright is particularly interesting. In fact, the dramatic part of his work is constantly brought out at the expense of that of the novelist. And yet who here reads any of the plays of Dumas (there are twenty volumes of them)? 'The Three Guardsmen' and 'Monte Christo,' on the other hand, are known to all. In France, however, it is felt that the dramas of 'Henri III.' and 'Antony' will keep alive the name of Alexandre Dumas *père* when other fiction shall have wholly superseded the stories that delighted the generation of Thackeray.

M. Petit de Julleville a few years ago published the best book we have on the *Mystères* of the Middle Ages. This was but the first part of a comprehensive work of which the general title will be "Histoire du Théâtre en France," and of which a new volume is now issued under the title 'Les Comédiens en France au Moyen âge' (Paris: Léopold Cerf; Boston: Schoenhof). In spite of its title, the whole book tends to prove that there were no *comédiens*, strictly speaking, in France in the Middle Ages, but only various groups of more or less transient or occasional actors. These M. Petit de Julleville very pleasantly and learnedly studies, speaking in turn of the various *confréries*—the *Basochiens*, the *Enfants sans souci*, and the *Sociétés joyeuses*. It results plainly from these studies that the common opinion promulgated by Boileau in regard to actors and the stage before the Renaissance is entirely erroneous. There was no hostility in France to the stage; on the contrary, the people were always passionately fond of theatrical performances.

Dr. Saucerotte wished to prepare a kind of expurgated edition of Montaigne, one that would put the author of the 'Essais' within the reach of more readers, especially of more female readers. This has been done in the posthumous publication 'L'Esprit de Montaigne' (Paris: Perrin; Boston: Schoenhof). But the plan of Dr. Saucerotte is the very antipodes of the spirit of Montaigne, who delights in repetitions, in quotations, in details of a personal character not always delicate, all of which the present compiler carefully sets aside. And this is not all: he has reduced the rambling essays to a system. The reveries and disconnected remarks of the author are carefully classed under precise headings: Man, his faculties, education, society, etc. But if Dr. Saucerotte cannot be said to have rendered the spirit of Montaigne, he has made a book that may be of interest to one already acquainted with the Essays. In spite of the many carefully made indexes, it has been difficult to find just when wanted the often apparently contradictory statements and opinions of the most unsystematic of authors. The present volume will, in a measure, help the reader in this direction. As to the notes and commentaries, they are in general pretty good, but not at all such as would be useful to a reader somewhat conversant with modern literature.

M. Paul Mougeolle has published in the "Bibliothèque des Sciences Contemporaines," which has been called "a kind of materialistic encyclopedia," a volume entitled 'Les Problèmes de l'histoire' (Paris: Reinwald; New York: Christern). In the philosophy of history which M. Mougeolle develops in his interesting volume, individuals, even the greatest, count for very little; it is to humanity alone that any real importance is attributed, and above humanity he places only a single power, *le milieu*. These are the very expressions of M. Mougeolle (p. 419), and yet they give an erroneous impression of his meaning, for with him humanity is in no sense an impersonation of man as an individual; his conceptions are never anthropomorphic, whether they refer to man in the broadest of senses, to races of men, to civilizations, or to political governments. The tendency of human nature to animate everything with its own ideas and passions and instincts, he loses no opportunity to attack. Man as an individual, or humanity as an impersonation (in however grand a form) of the individual man, he considers of little value in itself; but, acted upon and surrounded by "la matière impersonelle, immense et éternelle," everything which is not man and which he calls the *milieu*—this is the material out of which he makes his solutions of the Problems of History. Whatever the opinions of the reader may be, the book will interest any one who takes it up, for the writer has an ardent and enthusiastic faith, and at the same time a clear and sober manner of presenting it, which claims and obtains both attention and respect.

The latest addition to the "Bibliothèque des Sciences Contemporaines" is a volume by M. C. Issaurat, 'La Pédagogie: Son évolution et son histoire' (Paris: Reinwald; New York: Christern). M. Issaurat is a revolutionist, an iconoclast. The number of sacred images which he breaks, nay pulverizes, is not to be counted. And he is equally violent whatever the object of attack may be. Religion in its most comprehensive sense; *le froid protestantisme*, which seems even more objectionable in his eyes than abstract religion, and far more dangerous than Catholicism, which he looks upon as already demolished; the "sentimental and philanthropic religiosity" of Jean-Jacques Rousseau and of Pestalozzi and Fröbel; Mme. Neckar de Saussure, who always excites him to a kind of frenzy; the modern *philosophie spiritualiste;* the Bible; *l'Être suprême;* the spirit in which the laws in regard to public instruction are now executed—M. Issaurat writes with violence upon all these things. He disclaims the intention of attempting to convince any one whose opinions and beliefs differ from those he expresses; his book is not written for those who have need of it, he says in his astonishing preface. He does not say for what purpose it is written, but it is evidently to furnish weapons of attack upon the present methods and *esprit d'enseignement* in France; and arguments for the establishment of new methods of national instruction "absolument laïque, c'est-à-dire matérialiste."

A Subject Index of the Modern Works added to the Library of the British Museum in the years 1880–1885. Compiled by G. K. Fortescue, Superintendent of the Reading-Room, British Museum. Printed by order of the Trustees. London. 1886.

"This Index," says Mr. George Bullen, keeper of the department of printed books, "has been compiled, under my sanction, by Mr. G. K. Fortescue, Assistant of the First Class and Superintendent of the Reading-Room. It is mainly designed to assist those who use the Reading-Room of the British Museum; but it is hoped that it will, in some measure, fulfil a wider purpose. This useful work forms a nearer approximation to a general index of current literature than has yet been attempted." In the preface Mr. Fortescue thus explains the scope of his compilation: "This work consists partly of a Subject Index and partly of a Class Catalogue of Parts i. to lxv. of the 'Accessions, Sections A and B,' of the Catalogue of Printed Books. These sections include all the new books, that is to say, books acquired within five years of the date of their publication, except those in the Slavonic, Hungarian, and Oriental languages. Part i. was issued in January, 1880, the date when the system of printing the Catalogue was introduced; Part lxv. in August, 1885; so that in this Index will be found references to the whole of the current literature of the years 1880-1884, and a large proportion of that of 1879 and 1885. . . . Novels, tales, plays, and poems have also been omitted."

The value of this Index must be commensurate with the completeness of the collection of books in the British Museum. The latter is commonly supposed to contain all works published in Great Britain, and all the important publications of the other principal countries of Europe. But this assumption will soon be relegated to the realm of exploded myths by any one whose studies in the Reading-Room of the British Museum involve contact with a wide range of books. One seeks in vain for Jonson's edition of Rymer's 'Foedera,' England's great national collection of documents; for Schmid's 'Gesetze der Angelsachsen' (Berlin, 1858), the best source of Anglo-Saxon constitutional history; for the Records of the Convention of Royal Burghs of Scotland (1856-1885), invaluable to the student of British commercial and municipal history; for Gneist's 'Englisches Verwaltungsrecht' (Berlin, 1883); for the 'Urkundenbuch' of the Hanseatic Verein, and for the latest edition of Dahlmann-Waitz's 'Quellenkunde,' and Thom's edition of Stow's 'History of London'—all works of prime importance.

In the publications of English local societies the British Museum is remarkably deficient. The Proceedings of the Devonshire Society for the Advancement of Science, Literature, and Art, of the Shropshire Archæological and Natural History Society, the Bristol and Gloucestershire Archæological Society, the Derbyshire Archæological and Natural History Society, and many other historical, antiquarian, and archæological associations are wholly or in great part wanting. As for works relating to particular towns of Great Britain, not to be found on the shelves of this library, hundreds of them may be enumerated. Here are a few examples: Hewitson's Preston, Pritchard's Deal, Dymond's Exeter in the last century, Ingamell's Newcastle-under-Lyme, Read and Hicks's Bristol, Seyer's 'Charters of Bristol,' Strang's 'Statistics of Glasgow,' Gordon's Glasgow, Pagan's Glasgow, Hardy's 'Documents of Stratford Guild,' Gillespie's Londonderry, Martine's Haddington, Parkhill's Paisley, White's 'Great Domesday Book of Ipswich,' Elwes's Bedford, Brimelowe's Bolton, Poole's Coventry, Muir's 'Dysart Records,' 'Lancaster Records,' Roberts's 'Municipal Government of Lyme Regis,' 'Memorabilia of Perth,' Malcomson's 'Carlow Roll,' Beatt's Dundee, Henderson's 'History of Dunfermline,' Young's Elgin, Watts's Kintore, Fittis's books on Perthshire, Loftie's Windsor, Robbins's Launceston, 'Civitas Lincolniæ,' etc., etc. Doubtless many students, interested in other lines of work, could point out equally important deficiencies. The truth is, that the authorities of the British Museum, in their search for rarities, lose sight of many prominent omissions in their collection of books, the want of which readers often keenly feel. They do not see the wood for the trees. In thus characterizing generally the incompleteness of the British Museum Library, we indicate a defect of Mr. Fortescue's Index. Though no one will deny its value and utility, it is certainly not what it claims to be, a repertory of "the whole of the current literature" of the years which it covers.

Besides pointing out the fallibility of the custodians of the British Museum Library in the selection of books, and plainly showing that the law requiring a copy of every work published in Great Britain to be placed on its shelves is frequently evaded, Mr. Fortescue's Index reveals another defect in the working of this great insti-

tution. Months and even years elapse before a new book becomes accessible to readers. Sometimes the fault lies with the English publishers, who do not always forward their publications promptly; but even after the latter reach the Museum, several months invariably expire before they are entered on the accession lists placed on view in the Reading Room. The delay in the case of foreign books is generally much greater; if a reader finds them in the catalogue within two years after they are printed, he may be thankful. Of these facts Mr. Fortescue ought to be cognizant; and yet he states in his Preface "that in this Index will be found references to the whole of the current literature of the years 1880-1884, and a large proportion of that of 1879 and 1885." The truth is, that the 1,044 double-columned pages of the Index contain comparatively few books bearing the date of 1885, probably not 200 in all, which certainly cannot be denominated "a large proportion" of the literature of that year. Besides, as any reader in the British Museum, acquainted with its slow process of acquisition and cataloguing, would at once surmise, very many publications of 1878 and 1877 are cited in the Index. Mr. Fortescue's statement would be more correct if it read, "references to a large proportion of the literature of the years 1877-1884."

The arrangement under the particular headings, for example, "Geometry," is scarcely to be commended, for it is neither chronological nor alphabetical; nor has any other tangible system been followed which will enable the reader to see at a glance whether any particular book on a given subject has been acquired by the British Museum during recent years.

The above strictures are not intended to reflect general discredit upon the British Museum Library, which, notwithstanding some patent defects, stands as a whole without a peer; nor do we desire to detract from the real value of the Index, for which every student must feel truly thankful.

Bolingbroke: A Historical Study; and Voltaire in England. By John Churton Collins. Harper & Bros. 1886. 12mo, pp. 261.

Mr. Collins's study of Bolingbroke will help to make more real to the present generation a name which ranks among the most interesting in both the political and the literary history of England. The reader is impressed, as all readers of English history and literature must be, with the intellectual greatness of this man, amounting perhaps to genius; and the question must arise, as with so many other characters, Why were his achievements not commensurate with his genius? With abilities as an orator perhaps second to no Englishman, and as a statesman no doubt the most brilliant of his time; the creator, we are told, of English prose style; great in every department of activity—why does he not rank as a great man? And the answer must be one which is most satisfactory to those who believe that moral greatness is, after all, the highest kind of greatness. Bolingbroke failed in his career, failed to be a great man, simply because he lacked high moral qualities. This comes out clearly as cause and effect from Mr. Collins's sketch, although we do not remember that he says it in so many words.

The sketch of Bolingbroke is in three essays, originally articles in the *Quarterly Review;* and from their titles it might be supposed that they were, in part at least, independent essays, treating his career from different points of view. They make, however, a continuous narrative. The first, the Political Life, covers the reign of Queen Anne, when he was an active politician; the second treats of the period of his exile; the third, entitled "the literary life of Lord Bolingbroke," is rightly named, because the literary period of his life was peculiarly that which followed his exile. But he was active in literature all through his life, and he was a good deal of a politician at all periods. Perhaps the most important fact brought out by this work is the extent and degree of Bolingbroke's influence, especially upon Voltaire and Pope. He shows that these two great writers were very largely directed in their thoughts and even in their immediate literary activity by this master mind. His relation to Pope is, of course, a familiar fact; the degree of his influence over Voltaire "has, we believe, escaped the notice of all his biographers and critics" (p. 115)—owing to the fact that they have considered his printed works rather than his direct personal intercourse. Voltaire came into personal connection with Bolingbroke during his exile, in 1721, and "never made any secret of his obligations to Bolingbroke." This fact, which Mr. Collins appears to have made out, explains the insertion in this volume of the papers on Voltaire in England, first printed in the *Cornhill Magazine.*

The author's style is agreeable and graphic, but sometimes one misses a date, as on page 110, where its absence is somewhat misleading.

Studies in General History. By Mary D. Sheldon, formerly Professor of History in Wellesley College, and Teacher of History in Oswego Normal School. Boston: D. C. Heath & Co. 8vo, pp. 556.

Miss Sheldon's history is not a text-book of the ordinary type, but is upon a wholly novel and original plan—one which, if well carried out in detail and faithfully followed by the teacher, must produce admirable results. The "studies" are real *studies,* not *lessons;* that is, for each period they place before the pupil a number of facts, carefully selected and arranged, and then aim to establish in his mind an immediate and comprehensive understanding of the period from the direct study of these facts and deductions from them. Among the facts thus grouped are extracts from laws and contemporary documents or literature, illustrations of works of art and other characteristic objects, maps (taken from Mr. Freeman's atlas), and brief summaries of events, while a number of skilful and searching questions are attached to each study, to teach the scholar what to look for.

The aim of the studies is to follow the main current of history, without diverging to unessential and merely incidental events. It is the course of history as a whole, not the special chronicles of the several nations, or the detailed events of the several epochs, that forms the subject of examination. To lay out such a sketch of the essential in history is not an easy task, especially for the modern period; but Miss Sheldon has accomplished it with much skill and good judgment, and, by keeping carefully to her plan, has succeeded in embracing in a moderate-sized volume a complete view of the course of history, from the early Egyptian empire to the present day. It seems to us that modern history receives less space than it deserves. Charlemagne comes just midway in the volume, and Charles V. midway in the last half. This proportion answers very well if the general view is followed up by a special study of the modern epoch, which is far the most important for most students; but in most cases this will not be done.

As a whole the material is selected with admirable judgment, and even where we have at first been inclined to question the wisdom of the selection, we have on further examination generally found that the author was in the right. For example, a list of Caxton's publications (p. 368) seems to be mere dry, useless detail; but, after all, a careful examination of this list affords the best possible view of the condition of the English mind at this epoch. We must think, however, that too much detail is given upon the Roman Constitution. Fundamentally important as this is in the study of constitutional history, and closely interwoven as it is with the life of the nation, it is too intricate and extended a subject to admit of any adequacy of treatment in this space; and it is better to be satisfied with the barest delineation than to attempt a more complete view which still is not complete enough. We have an analysis of the Roman Constitution at three epochs—the period of the kings, the early republic, and the beginning of the Punic wars: in all occupying about four pages. Here the statement that the Senate "confirms or rejects decisions of centuries"—a statement correct so far as it goes, but incomplete—cannot help giving the American boy the notion that the Roman Senate was, like the American, a second chamber. The statement, again, that the Censors "declare who has the right to sit in the Senate, vote in this or that assembly, hold this or that office," needs too much qualification to be accepted as a general statement. On page 147 we find *Manlius* (for *Manius*) Curio; on page 5, *sphynx* for *sphinx.* On page 6 it is very well to pass over all Egyptian history after the nineteenth dynasty in two lines; but these two lines might contain the important fact that in this period the seat of government was transferred to Lower Egypt. In the lists of authorities it would probably have been well to give the titles of books, not merely the names of their authors.

A History of Education. By F. V. N. Painter, A.M., Professor of Modern Languages and Literature in Roanoke College [Virginia]. D. Appleton & Co. 1886.

This volume, although designated as vol. ii, appears to be the first published in an International Education Series, projected by its well-known publishers and edited by Dr. W. T. Harris, who prefixes a short preface to the volume. That such a work is a want in English literature will be readily conceded. The author says: "As far as was consistent with the limits of this volume, the great teachers of all ages have been allowed to speak for themselves—a method that appeared more satisfactory than to paraphrase and epitomize their views"; and again: "In support or illustration of various statements, recognized authorities have been permitted to speak freely." This is manifest throughout the volume, which consists largely of quotations from the works named in the preface—the French work of Paroz, and the German works of Dittes, Raumer, and K. Schmidt. Thus the best Continental authorities have been followed, but one could have wished a more independent treatment, especially of the history of education in England, which receives scant notice.

The book comprises four chapters: The Oriental Nations, The Ancient Classical Nations, Christian Education before the Reformation, and Education from the Reformation to the Present Time; the first two occupying about one-fourth of the volume, an amount of space disproportionate to their value. It is questionable whether it is worth while to bring not only Greece and Rome, but China, India, etc., into a history of education written for the use of modern schools. All that is valuable is comprised within the period since Christianity became a motive power in the history of the world, and especially since the Reformation. Perspective is much better observed in Compayré's 'History of Pedagogy,' although for the English reader it is liable to the charge of giving too great space to the history of education in

France, which was, indeed, its original purpose. It is noteworthy that in treating the history of education in the sixteenth century neither of these works mentions Sir Thomas Elyot's bulky 'Boke called the Governour,' written for the special purpose of detailing the education that an English gentleman should receive who intends to mingle in public affairs—a work of great popularity in its day, and now easily accessible in Mr. Croft's recent edition. Thomas Wilson, also, who may be styled the first English writer on Logic and Rhetoric, is omitted; and, more remarkable still, so is Roger Ascham's 'Schoolmaster,' one of the soundest books in pedagogy that have ever been written, also readily accessible in Arber's English Reprints. Ascham, who preceded Comenius, Milton, and Locke, is much more worthy of note than Milton in the history of education in England. It is somewhat surprising to find Bacon so prominently noticed in a history of education. The oversight in giving the date of his birth may be noted in passing, and it may be remarked with respect to several names that biographical details, which are given more fully in the ordinary text-book histories of literature, might have been omitted, and the space saved devoted to emphasizing the educational work of their special subjects.

The last section treats of Education in the Nineteenth Century; and after a notice of the work of Pestalozzi and of Froebel, we have a brief summary of Contemporary Education in Germany, France, England, and the United States.

The Student's Modern Europe: A History of Modern Europe from the Capture of Constantinople by the Turks to the Treaty of Berlin, 1878. By Richard Lodge, M.A., Fellow and Tutor of Brasenose College, Oxford. Harper & Bros. 1886. 8vo, pp. 772.

THERE is no doubt, as Mr. Lodge's preface remarks, that "a clear, impartial, and at the same time a concise narrative of European history during the last four centuries" will be very acceptable to many readers. The book before us appears to have these qualifications, and can be safely recommended to those who desire a book covering this ground, as the only book which does this at all adequately. It is published in the style of the well-known "Student's" series—in clear but rather small type, in close page, and with very few aids to the reader, such as running title, marginal index, and cross references. There is a general index and a chronological table, but the author apologizes for the omission of the extensive genealogical tables which he had prepared, referring the reader to Mr. George's "Genealogical Tables." Neither are there any maps. Considering, therefore, the cost of Mr. George's book, and of any good historical atlas—both of which must be added to this book in order to get the best use of it—we must think that the publishers have aimed overmuch at cheapness in its production. Most purchasers would rather pay their share of these desirable additions than buy the additional books which their absence makes necessary.

The book consists of twenty-eight chapters, so arranged as to present a very correct view of the general current of modern history. The grouping of the chapters is carefully studied, and assists the following of the principal current, with as few diversions as possible. For this purpose we think that a more distinct recognition of these groupings—by dividing them off as Periods or Books—would have been of advantage. The course of events in modern history is not hard to emphasize in this way; but when the emphasis is not made visible and intelligible by formal divisions, the reader finds it hard to keep the thread. It is the fashion with many writers to disparage such helps, as artificial and pretentious; but surely it is not assuming in the author to suppose that he, from his intimate knowledge of relations, can help his inexperienced reader to understand how these twenty-eight disconnected chapters stand to one another. On page 233 we find the misprint of become for became; on page 434, of Henry IX. for Henry IV.

The Story of Chaldea; from the earliest times to the Rise of Assyria. (Treated as a general introduction to the study of ancient history.) By Zénaïde A. Ragozin. [The Story of the Nations.] G. P. Putnam's Sons. 1886.

MME. RAGOZIN has performed her work in a way that merits unstinted praise. She does not bring to the task the same literary ability which her predecessor in the series, Prof. Hosmer, showed, but if her English is not so good, it is a fault which we can easily forgive. 'Chaldea' is much less an historical work than 'The Jews.' All statements about kings and dynasties and wars are avoided, but, on the other hand, themes are elaborated which even the professional Assyriologist has been wont to handle in the most gingerly fashion. The treatment of the ethnological questions involved is interesting and to many will be novel. Our author thinks that Shem, Ham, and Japheth are prototypes of white races, and that all others are rigidly excluded from the genealogical table in Genesis; that Chaldea was inhabited first by a yellow or Turanian race; that these were overcome by the Cushites, a Hamitic family, who, in their turn, were forced to succumb to a Shemitic invasion. No less originality is evinced in the treatment of the Chaldean religion and mythology. In the latter, unconsciously perhaps, the method so ably and so wittily defended by Mr. Andrew Lang is followed; and though almost everything ends as a solar myth, the methods are sound, even if the conclusions are not. The religious and ethical development is carefully traced in all its stages, and with the single exception of the statement that there was no room for reward and punishment in Aralli (the Chaldean Hades), no fault can be found. The teaching on this point is not clear, but the episode of Izdubar and Xisuthros seems to oppose our author's low view of Sumero-Akkadian spirituality. Folk-lore has its place alongside of mythology and religion; in fact, nothing is wanting to make this book the most valuable work on Babylonian culture-history that has yet appeared.

The introductory portion in regard to the first explorers is good and full, though we think Sir Henry Rawlinson deserves much more mention than he receives. Incidentally some new points are brought out, and older ones are emphasized. So good were the bricks used in the most ancient Babylonian building that they are found serviceable even at the present time, and this Babylonian fashion of using bricks was continued in Assyrian architecture, though stone of all sorts abounded in Assyria. This slavish copying of Shemitic Assyria is a point of no little significance in the ethnological discussion. Mme. Ragozin is in accord with the best historians in considering Abraham an historical figure, but all that is built on Lenormant's old translation of *tin-tir-ki* is wrong. The ancient name of Babylon does not mean "dwelling of the tree of life," but "dwelling of life," being so rendered in the Assyrian texts. It is not at all certain that *El*, and *Allah*, and *Elohim*, are from the same stem, nor is it true that the sun-god preceded the moon-god. In fact, in the earliest cities like Harran and Ur, the moon-god was almost the only one worshipped, and it is not impossible that the Akkadians was largely a moon cult. Even in modern languages moon is frequently masculine and sun feminine. English is the exception, not the rule.

The author has rendered a service to Assyriology as well as to the reading public. Her book is the best in English, and by no means inferior to those in French and German, besides affording a good introduction to the study of history as well as of comparative mythology.

Young People's History of England. By George Makepeace Towle. Boston: Lee & Shepard. 1886. 12mo, pp. 388.

MR. TOWLE has proved his power of writing for young people, and it is sufficient commendation of his 'Young People's History of England' to say that it is worthy to rank with his 'Heroes of History.' It seems to us, indeed, that his style is easier and better adapted to young readers than in his earlier works; there is less disposition to use large words. He has done well not to try to make the book too small. It is impossible to crowd the history of a thousand years into a few pages; and, after all, what is needed in history is to read a good deal in bulk, not a mere barren compendium. We wish that the illustrations were more worthy of their text. They are of the ordinary hackneyed style; well enough to look at, perhaps, but in no sense an illustration of the text. "Joan of Arc in battle" (p. 164) might just as well have been Talbot or Du Guesclin; the "Landing of Henrietta Maria" (p. 234) would do for Catherine of Braganza or Anne of Cleves; "George III. receiving intelligence of his accession to the throne" (p. 306) might represent any young man on horseback receiving a letter; and so on, with full half of the pictures. There are good tables and an index, but no maps.

BOOKS OF THE WEEK.

Baxley, J. R. The Temple of Alanthur, with Other Poems. G. P. Putnam's Sons. $1.25.
Bowen, Eliza A. Astronomy by Observation. D. Appleton & Co.
Braddon, Miss M. E. The One Thing Needful. Harper & Bros. 20 cents.
Branch, O. E. The National Junior Speaker. Baker & Taylor. 75 cents.
Branch, O. E. The National Primary Speaker. Baker & Taylor. 75 cents.
Cronkhite, H. M. Reymond: A Drama of the American Revolution. G. P. Putnam's Sons. $1.25.
Edwardes, Mrs. Annie A Playwright's Daughter. Harper & Bros. 25 cents.
Gneist. R. The English Parliament in its Transformations through a Thousand Years Boston: Little, Brown & Co.
Greene, Belle C. Adventures of an Old Maid. J. S. Ogilvie. 25 cents.
Hale, E. E., and Susan. The Story of Spain. G. P. Putnam's Sons. $1.50.
Herbermann, C. G. The Jugurthine War. D. Appleton & Co. $1.12.
Hood, T. Whims and Oddities. G. P. Putnam's Sons. 50 cents.
Howells, W. D. A Chance Acquaintance. Houghton, Mifflin & Co. 50 cents.
Lyon, D. G. An Assyrian Manual. For the Use of Beginners in the Study of the Assyrian Language. Chicago: American Publication Society of Hebrews.
Macfarlane, Margaret R. The Magic of a Voice. Cassell & Co.
Macquoid, Thomas and Katharine. Pictures and Legends from Normandy and Brittany. G. P. Putnam's Sons. 50 cents.
Morrison, A. H. The Art Gallery of the English Language. Toronto: Williamson & Co.
Peabody, Elizabeth P. Lectures in the Training Schools for Kindergartens. Boston: D. C. Heath & Co.
Quick, R. H. Pedagogical Biography. No. 1. School of the Jesuits. No. 2. Comenius. Syracuse: C. W. Bardeen.
Rickoff, A. J. Numbers Applied: A Complete Arithmetic. D. Appleton & Co. 75 cents.
Roosevelt, R. B. Love and Luck: The Story of a Summer's Loiterings on the Great South Bay. Harper & Bros.
Shaw, E. R. Selections for Written Reproduction, Designed as an Aid to Composition, Writing, and Language Study. D. Appleton & Co. 48 cents.
Short Studies in English. Illustrated. A. S. Barnes & Co.
Sidgwick, H. Outlines of the History of Ethics for English Readers. Macmillan & Co. $1.50.
Smart, H. Bad to Beat: A Novel. Harper & Bros. 25 cents.
Snider, D. J. An Epigrammatic Voyage. Boston: Ticknor & Co.
Snowed Up, and Other Stories. Cassell & Co. 15 cents.
Stevenson, R. L. Kidnapped. Charles Scribner's Sons. $1.
Stowe, Mrs. H. B. Sam Lawson's Stories. Houghton, Mifflin & Co. 50 cents.
Strong, J. Our Country: Its Possible Future and its Present Crisis Introduction by Prof. Austin Phelps. Baker & Taylor.
Valera, J. Pepita Ximenez. D. Appleton & Co. 50 cents.
Vane, D. Like Lucifer: A Novel. Harper & Brothers. 20 cents.
Van Zile, E. S. Wanted a Sensation: A Saratoga Incident. Cassell & Co. 25 cents.

IMPORTANT NEW TEXT-BOOKS.

WHITNEY'S FRENCH GRAMMAR.

A Practical French Grammar. By William D. Whitney, Professor in Yale College. (*NEARLY READY.*)

A practical class-book for academies, high schools, and colleges. Part first opens with a full account of the pronunciation of the language. In the next forty-two lessons the author unfolds those important facts of the grammar which the student must master as a foundation. The regular verbs are gradually introduced and fully explained, then the more common of the irregular verbs are taken up, and their conjugation exhibited by a new method of arrangement. The exercises carefully avoid the error of bringing in too many new words at a time, but give repeated practice in a carefully selected vocabulary of common terms. Part second is a more systematic presentation of the facts of French usage, in the order usual in scientific treatises on grammar. Its matter is meant to supplement and extend that of part first. The sentences for translating in this part are all quotations from French authors.

GOODELL'S THE GREEK IN ENGLISH.

First Lessons in Greek, with special reference to the etymology of English words of Greek origin. By Thomas D. Goodell, Instructor in the Hartford (Ct.) High School. (*NEARLY READY.*)

The Greek element of English in conversation, and especially in literature, carries many of the key-words to the thought, and he to whom these key-words are not alive with meaning is at a great disadvantage; and yet mere dictionaries or etymological hand-books alone cannot give what is wanted. *The words in their Greek form, and with some fragment of their Greek associations*, must become somewhat familiar before one can be sensible of that grasp of their English derivatives which will enable one to use those derivatives correctly and fearlessly. The Greek vocabulary surviving in English *can* be presented in a sort of Greek primer, with its relations to English pointed out; and this is just what this book aims to do. It is not intended to lessen the number of those who shall enter on a full course of study in the Greek language, but it is rather hoped that it may increase that number.

CLARK'S PRACTICAL RHETORIC.

A Practical Rhetoric, English Composition and Revision. By J. Scott Clark, Instructor in Syracuse University. (*NEARLY READY.*)

Its main source of inspiration was an attempt to work Herbert Spencer's 'Philosophy of Style' in the classroom, the result of which was the accumulation of a body of rules which adapt the principles of that incomparable treatise to actual work with untrained students. The author attempts no impossibilities. He believes that rhetorical training must be largely negative; that it cannot teach "invention," but can develop the ability to arrange and revise. The exercises, which are a leading feature, are treated somewhat after the manner of Abbott's 'How to Write Clearly.' They deal not with errors that have been committed by authors of reputation, but rather with those that are peculiarly apt to be committed by students in school and college.

PACKARD'S ZOOLOGY—ELEMENTARY COURSE.

First Lessons in Zoölogy. By A. S. Packard, Professor in Brown University. 12mo (American Science Series), 290 pp., $1.00. (*JUST PUBLISHED.*)

In method this book differs considerably from the large books in the series. Since it is meant for young beginners it describes but few types, mostly those of the higher orders, and discusses their relations to one another and to their surroundings. The aim, however, is the same with that of the others—namely, to make clear the general principles of the science, rather than to fill the pupil's mind with a mass of what may appear to him unrelated facts.

JOHNSTON'S HISTORY OF THE UNITED STATES.

History of the United States for Schools. With an Introductory History of the Discovery and English Colonization of North America. By Alexander Johnston, Professor in Princeton College. 12mo, 473 pp., $1.25.

A history of the United States, and not principally a history of the colonies from which the United States sprang. It is not a story-book, or a picture book. The author has written in the conviction that what the mass of pupils need is to learn from the history of the past how best to perform the simple and homely duties of good citizenship. Mr. John Fiske says of it: "Incomparably the best short history of the United States with which I am acquainted." The *Nation* calls it "The best school history which has yet been presented to the public."

REMSEN'S CHEMISTRY—BRIEFER COURSE.

An Introduction to the Study of Chemistry. By Ira Remsen, Professor in the Johns Hopkins University. 12mo (American Science Series), 389 pp., $1.40.

The one comprehensive truth which the author aims to make clear to the student is the essential nature of chemical action. With this in view he devotes the first 280 pages of a carefully selected and arranged series of simple experiments, employing only the four common elements—Oxygen Hydrogen, Nitrogen, and Carbon. In these experiments are gradually developed the main principles of the subject. His method is purely inductive; and, wherever experience has shown it to be practicable, the truths are drawn out by pointed questions, rather than fully stated. Next, when the student is in a position to appreciate it, and not at the start, as is usual in elementary treatises, comes a simple account of the theory of the science. The last 150 pages of the book are given to a survey, fully illustrated by experiments, of the leading families of compounds.

HENRY HOLT & CO.'S new educational catalogue, which contains full descriptions of these and other new and forthcoming books, will be sent free on application.

HENRY HOLT & CO., Publishers,
20 W. 23d Street, New York.

FRENCH BOOKS
For Students and General Readers.

WILLIAM R. JENKINS,
850 Sixth Avenue, New York,

Has just issued a *NEW AND COMPREHENSIVE CATALOGUE OF FRENCH BOOKS*, including not only a full list of his own publications, but a very extensive list of books, especially adapted for students and educational institutions. Prices moderate. Special rates to teachers. Copies of the catalogue mailed free on application. Importation orders promptly filled.

September Atlantic
Now Ready, Contains:

THE SALOON IN POLITICS. GEORGE FREDERIC PARSONS.
FRENCH AND ENGLISH. P. G. HAMERTON.
THE LAW'S PARTIALITY TO MARRIED WOMEN. FRANK GAYLORD CLARK.
MADEMOISELLE JOAN. REBECCA HARDING DAVIS.
THE PAPER MONEY CRAZE OF 1786 AND THE SHAYS REBELLION. JOHN FISKE.
EDWIN PERCY WHIPPLE. T. W. HIGGINSON.
SERIAL STORIES, by
HENRY JAMES, CHARLES EGBERT CRADDOCK. W. H. BISHOP.
Other Essays, Poems, Contributors' Club, etc.

35 CENTS; $4.00 A YEAR.

HOUGHTON, MIFFLIN & CO.,
BOSTON.
11 East 17th St., New York.

FOR EARLY PUBLICATION.

The English Parliament.
In its Transformations through a Thousand Years. By

DR. RUDOLF GNEIST,

Author of 'The History of the English Constitution,' Professor of Law at the University of Berlin. Translated by R. Jenery Shee. One vol., 8vo.

LITTLE, BROWN & CO.
254 Washington Street, Boston.

JUST PUBLISHED.

APHRODITE.
A Romance of Ancient Hellas, by
ERNST ECKSTEIN,

Author of 'Quintus Claudius,' etc. In one volume. Price, paper, 50 cents. Cloth, 90 cents. Sent by mail on receipt of price.

WILLIAM S. GOTTSBERGER,
PUBLISHER,
11 Murray Street, New York.

Book, Stationery, and Wall Paper Business for Sale.

Stock reduced to $11,000. Stand 25 years old; pays over 17 per cent. above investment. Small wholesale trade connected. College town of 9,000, and 2,500 College and High-School students: good established trade; reason, other business interest. Investigate; good chance.
R 16, care of the *Nation*.

THE WEST POINT HOTEL.—OPEN throughout the year. The only hotel on the military post.
ALBERT H. CRANEY, Proprietor.

The Nation.

NEW YORK, THURSDAY, AUGUST 26, 1886.

The Week.

THE verdict of the jury in the Anarchist trial in Chicago is a nucleus around which will gather the forces of public opinion. So little did anybody anticipate the wholesale slaughter of policemen in the public streets, so little apprehension was felt of the use of dynamite in a perfectly free country, so much rant had been indulged in by party demagogues and labor demagogues and newspaper demagogues, implying that the "poor man" belongs to an order of beings different from the rest of us, and that his infractions of law are to be judged by quite another standard, that there was a serious and very general doubt whether a verdict of guilty could be obtained from a jury drawn in the ordinary way. Such a verdict being obtained in the ordinary way and at considerable risk to the jurors individually, it is the best possible evidence that society has not been befooled by the perilous notion that the law is intended only for those who recognize its validity. The Anarchist conception that the social organization is not binding on those who deny its rightfulness, has received a tremendous setback. The conviction of the bomb-throwers and bomb-makers and bomb-teachers at Chicago will probably assist even the Senate of the United States to a clearer perception of the status of the dynamiter in the list of criminals extraditable between nations.

There is a remarkable contradiction of terms in the Anarchist jargon that has been heard since the close of the trial of the seven murderers at Chicago. In one breath they are appealing to the Supreme Court of the State, and, failing there, to the Supreme Court of the United States. In the next they are raving against courts and juries and law in all its manifestations. One of the female speakers at a meeting in Chicago said that it was impossible that the Supreme Court could allow the Anarchists to be hanged for merely seeking to improve the condition of the workingmen, but in general the tone of the Anarchist orators and press is pitched on the true bedlamite key: "Kill the police, blow up the capitalists, burn, destroy, overturn, wade in blood," etc., etc. Now anarchy, as its name implies, is the absence of law. It means that everybody is to do just as he pleases. The appeal of an Anarchist to the Supreme Court, or to any court, is a grotesque mixture of opposing ideas and conceptions of the social status. Such an appeal is allowed for the good order of society, but the good order of society is the very thing that the Anarchist who is true to his own creed curses and defies. If Spies, Fielden, and their fellow-bomb-preachers had the courage of their opinions, they would scorn to appeal to the Supreme Court, since an appeal is an acknowledgment of the very thing they most despise and execrate.

The Irving Hall meeting of Anarchists which came together on Friday to express sympathy with the Chicago criminals, appears to have been chastened somewhat in spirit by the fate of the Western bomb-throwers. There was a general disinclination on the part of the usual leaders to occupy positions of prominence at the meeting, and a still greater disinclination on the part of the speakers to refer to the Chicago verdict. Some of them did finally come to the point after much urging, and their language was incendiary and wild enough to satisfy the most bloodthirsty of the audience. It is noticeable that many of those present went away before the meeting closed, having become weary of the ranting speakers. A resolution was adopted expressing the determination of the audience to "strike with all means in our power to overthrow the present infamous, brutal society of robbers," and exclaiming: "Long live anarchy and long live social revolution." We venture the prediction that it will be a long time, however, before any of the supporters of this resolution commit an overt act towards overthrowing the "present infamous, brutal society of robbers." The anarchy of the immediate future will be confined chiefly to windy threats. Still, it would be unwise to allow even these to pass without notice. We understand that police-detectives were present on Friday evening, and if the language of the speakers brings them within the limits of the law, the violation of which by Most sent him to prison, they ought to be put speedily on the way to joining his company.

At the recent Bankers' Convention Mr. S Dana Horton offered a lengthy preamble as an introduction to a resolution proposing that the Convention should appoint a committee to consider the expediency of international action on bimetallism. Two sections of the preamble were in these words:

"Whereas, It is important, in order to prevent inequality between different nations, in the operation of the monetary system so proposed, that silver bullion and gold bullion should enjoy equality as well as silver coin and gold coin; and

"Whereas, Experience has shown that the provision of the law of Great Britain, whereby it is the duty of the Bank of England to buy all gold offered to it at a fixed price per ounce, tends to establish a fixed price for gold bullion universally, and that analogous provisions of law in the several nations of the European continent tend further to relieve gold bullion from local fluctuations of price; and it is evident that similar provisions applied to silver bullion, in support of its use as money, would give it similar protection from fluctuation."

Mr. Horton made a very good speech from the bimetallic standpoint. He did not fail to condemn in unmeasured terms the folly of our coinage of silver dollars in the face of the stolidity and non-action of the other commercial nations. While according so much to the distinguished delegate to the two Paris conferences, we are unable to perceive the meaning of either of the paragraphs here quoted. We do not know what is meant by "the equality of silver bullion and gold bullion," or how the enjoyment of it is to be reached. Nor do we understand how the buying of gold by the Bank of England at a fixed price (payable in its own notes, which are redeemable in the same gold) "tends to establish a fixed price for gold bullion universally." A fixed price in what?

Mr. Bodwell, the Republican candidate for Governor in Maine, of course came out strongly in favor of a high tariff in his letter of acceptance, but within two days after its appearance his argument was torn to pieces by the Portland *Advertiser*, an Independent Republican paper edited with no little ability. The *Advertiser* challenges his proposition that the principal *controlling* influence upon wages is the tariff—a protective tariff insuring good wages, while a revenue tariff causes poor wages. It says that, if this proposition is true generally, it must be true in all the States, and it then shows that in Massachusetts, where the facts have been carefully ascertained, it has been proved false. In his report for 1884 as Chief of the Massachusetts Bureau of Statistics of Labor, Col. Carroll D. Wright devoted more than 300 pages to an investigation of the course of wages and prices in Massachusetts during the period from 1860 to 1883, while in his report for 1885 he presented tables of wages and prices for the period from 1752 to 1860, thus completing his survey of the subject. The inquiry had no relation to the tariff, the statistics being collected simply for the purpose of ascertaining the facts concerning the fluctuations of wages and prices from year to year during the whole period from 1752 to 1883, and the showing is therefore the more significant. Between 1830 (when the modern industrial period really began, with the introduction of machinery and the factory system of labor) and 1860, the tariff was generally low; since 1860 it has been high, so that there is an excellent opportunity to compare these two periods with direct reference to the supposed influence of the tariff upon wages.

The investigation showed that ever since 1830 there has been a steady upward tendency of both wages and prices, the former advancing more rapidly than the latter; that during the low-tariff period, from 1830 to 1860, the average increase of wages in twenty occupations was 50.6 per cent., while the cost of living advanced only 12.7 per cent., so that the workingman gained almost 38 per cent.; but that during the high-tariff period, since 1860, the average increase of wages in twenty-four occupations has been only 24.4 per cent., and the advance of prices 14.5 per cent., so that the laborer's net gain was not quite 10 per cent. The figures are placed side by side below:

	Advance of Wages.	Advance of Prices.	Net Gain.
1830–1860	50.6 per cent.	12.7 per cent.	37.9
1860–1883	24.4 "	14.5 "	9.9

It is thus evident that wages were increasing twice as fast in the low-tariff period as under a high tariff, while prices have risen more rapidly under a high than under a low tariff. The *Advertiser* does not say that the tariff was the sole cause of these variations, but it does assert that "the facts show, beyond dispute, that if the tariff is, as Mr. Bodwell says, the principal influence affecting wages, then the high tariff

affects them unfavorably." Mr. Bodwell appears to enjoy writing "state papers," judging from the great length of his letter of acceptance, and perhaps he will conclude to get out a supplement confuting the *Advertiser*.

The President's recent circular against interference in politics by Federal office-holders is bearing fruit. The Columbus *Journal*, a bitterly partisan Republican organ, says of the Democratic State Convention in Ohio last week: "The postmasters and other Federal office-holders obeyed orders and stayed away." We have carefully examined the reports published by the leading Republican papers of Michigan and Missouri regarding the Democratic conventions held in those States last week, and find no charge that a single Federal office-holder attended either of them. In Pennsylvania a few officials are accused of having participated in the Democratic Convention last week, but these few constitute the whole number of offenders in four great States. One has only to contrast such a showing with the manner in which Federal officials used to attend party conventions under previous administrations, to be convinced that civil-service reform under Mr. Cleveland really amounts to something.

Southern Democratic papers are discussing the question as to the President's strength with his party which was recently raised by the Butler organ in this city, and it is noticeable that no sympathy is expressed with the unfavorable conclusion reached by that paper. The Savannah *News*, for instance, says it is doubtless true that the politicians as a general thing are against Mr. Cleveland, because they have not been permitted to handle the patronage as they pleased, but it thinks that he is strong enough to defy them. "The President," says the *News*, "has succeeded in making the people believe that he is honest, and that his first and only consideration is the public good. If he can continue to make them believe this, it will not be possible for the politicians to defeat him if he seeks a renomination." Evidence that the Savannah paper is right in this opinion of the President's strength with the people is furnished by the recent action of the Democratic Convention in the Sixth Congressional District of Georgia, which adopted this resolution:

> "That we hereby express our sincere admiration for the honesty, purity, and patriotism of Grover Cleveland, President of the United States, in his efforts to restore to the American people the high and pure government their fathers established; and that we will uphold and support him in his purposes to maintain and perpetuate Democratic principles, and keep inviolate all the promises and pledges which he made to the people before his election."

Mr. Blount, who was renominated by the Convention, and who is one of the ablest Representatives from the South, heartily endorsed this resolution in his letter of acceptance, saying: "In Mr. Cleveland I see a pure, strong, brave man, intent on elevating the administration of public affairs, and so establishing faith in the permanency of free institutions. Such a man, with aims so lofty, gives assurance of success to the principles of the party he represents."

It begins to look as though the Republican organs had at last got an "issue" for the campaign in the President's method of taking a vacation. The Cincinnati *Commercial Gazette* is entitled to the credit of having conceived the idea that party capital was to be made out of Mr. Cleveland's choice of the Adirondacks for his outing. A few days ago it came out strongly against the President for "betaking himself to his old hiding-places in the woods," said that the idea of his talking about rest and retirement was "ridiculous," and declared that "it is sluggishness that takes His Heaviness to the woods-pasture of New York." The Utica *Herald* falls in behind the Cincinnati paper, and sarcastically remarks that "Republican Presidents never sought to hide away from the people." There is no telling but a deliverance against the Cleveland policy of taking a vacation will turn up in the Republican platforms yet; it is perhaps as good a substitute as can be found for the "view-with-alarm" plank.

To a person innocent in the ways of politics it must seem very strange that in Maine, a State which two years ago gave a Republican majority of nearly 14,000, the campaign for the election of a Governor and Congressman is this year to be conducted with all the preparations of a Presidential year, including not only a continuous series of speeches by Maine's "retired" statesman, Mr. Blaine, but nightly speeches by as many political orators from other States as can be induced to go down East. The Augusta correspondent of the Boston *Herald* throws some light on the situation. As every one knows (who believes all he hears), the Presidential nomination in 1884 was forced on Mr. Blaine against his inclination. Having, however, got a taste of running for the high office, he seems to like the occupation, and this year's Maine campaign is all planned to assist him in gratifying his ambition. The correspondent quoted tells us that "it will be the first time in many years that Mr. Blaine has been assigned to so many speeches"; that "for weeks he has been preparing himself for his efforts"; that "it is believed that he intends to strike the keynote of the next Presidential campaign"; that Representative Dingley is predicting on the stump "that Mr. Blaine will again lead the Republicans," and that a vote for Bodwell for Governor is considered a vote for Blaine's nomination in 1888. This change in Mr. Blaine's tactics, as compared with his "lying low" methods in 1884, is undoubtedly a confession of weakness. He has heard, as persons who talk with leading Republicans from all parts of the country are hearing, the sentiment that the Republican party has had the name Blaine dinged into its ears long enough; that the campaign of 1888, to be successful, must be something else than defensive, and that it is time for the party to present to the country a new name which will not labor under any personal handicap. Knowing the prevalence of these sentiments, the man in Maine plans to renew his own prominence by having a lively campaign in his own State, of which he will be the central figure, in order that he may not drop out of the list of eligibles. This may be fun for him, and if his coming speeches involve him in his usual self-contradictions, it may do his party some service by again setting forth his defectiveness as a candidate.

Senator Frye sounded the "keynote" of the Blaine campaign in Maine on Saturday evening, and a very discordant one it was too. In explaining the defeat of Blaine in 1884, he said:

> "I will tell you what did it. There were three distinct causes. First, the suppression of the right to vote in the South did it. Next, the Republicans did it. What kind of Republicans? Mugwumps! What are Mugwumps? Men who thought the Republican party had done an immoral thing in nominating James G. Blaine for President of the United States—men who thought they were better than the majority of the men in the Republican party—men like Carl Schurz, George William Curtis, and Henry Ward Beecher, who were too good to vote for James G. Blaine. I tell you to look carefully at every man who thinks he is better than the majority of the voters. If you see a man marching through the streets marked 'I am an honest man,' distrust him at once. You take a magnificent bridal dress, with its ribbons and splendid laces, and put it on exhibition with a little ink spot on its skirt, and you will find plenty of men and women who will see nothing but that spot. Now the people of this country, with an exquisite fidelity to the best interest of the nation, saw the little bit of a smirch on the skirt of Mr. Blaine's coat, and therefore voted that Mr. Cleveland, a man who was smirched from head to foot, should be President."

We venture to predict that Senator Frye is going to get into trouble with Mr. Blaine on account of that passage. It is a very remarkable statement to come from a friend of Mr. Blaine. So there was a "smirch," was there? Will Mr. Frye tell us what it was? We do not agree with him about its being a "little bit of a smirch"—quite the contrary; but his admission that there was any smirch at all, coming as it does from one of Mr. Blaine's most devoted friends, is so unusual that we are willing to waive for the moment the question of size.

Nothing makes a Republican organ more angry than a suggestion that the negroes are at last becoming really free men in the matter of suffrage, and that the color line at the South is beginning to break. We invite the attention of the Chicago *Journal* and other like-minded Republican organs to some evidence bearing upon this question which is not to be dismissed as forged or fabricated by "rebel" Democrats, since it is given by Gen. S. C. Armstrong, a Union soldier and a Republican, who has for many years been the head of the Hampton (Va.) Institute for the instruction of colored youth. In a letter published in the August number of the *Southern Workman*, Gen. Armstrong, who has recently been on a tour through Virginia, says that "the color line in politics is swiftly fading." He finds "blacks who have Democratic leanings," and he quotes Mr. Yost, editor of the *Valley Virginian*, a leading Republican paper, as saying that intelligent colored men are discussing the tariff and other such questions, and dividing in their views about them, like white men. The difference between the partisan and the patriot is clearly shown when one contrasts the regret of the Republican organ at this division of the negro vote, because it weakens that party, with the satisfaction at this sign of progress expressed by Gen. Armstrong, who says: "The last Presidential election undoubtedly hastened this

fading of the color line, at which all good citizens will rejoice."

The call of the Anti-Saloon Republican party for a State Convention to meet at Binghamton in September is calculated to make the Prohibitionists of this State smile broadly. The call says that a Convention has been decided upon because of the failure of the Republican State Committee to call a Convention, and that in addition to the selection of delegates to the national Anti-Saloon Republican Convention at Chicago, the duty of the Binghamton Convention "shall be to consider what action shall be taken by the Prohibition and anti-saloon Republicans of the State with reference to the relations of the Republican party to the temperance question." We venture to predict what the decision upon this point will be. It will be solemnly decreed that the only rational course for true Prohibitionists and all other temperance people to follow will be to work for reform within the ranks of the Republican party. The folly of nominating a separate Prohibition ticket will be pointed out, and also the desirability of the Republican party's declaring in favor of submitting a prohibition amendment to the popular vote. When all this has been promulgated, it is hoped that the angry Prohibitionists will forget that dreadful *Tribune*-Shook telegram, and walk meekly back into the Republican fold. We doubt, however, if such will be the effect.

The Newport *News* asks and answers the familiar old question, "Does prohibition prohibit?" It says that after prohibition went into effect in Rhode Island a few weeks ago, its friends "pointed with pride" to the fact that the number of arrests for drunkenness was at first very much reduced, and they paraded these statistics as evidence of the wisdom and efficiency of the law. But since then there has been a change, and during the past two weeks the number of such arrests in Newport has been about twice as large as for the corresponding term last year. The *News* truthfully says that the argument is just as good in one case as in the other, and is of but little value in either. The number of arrests is no sure criterion of the number of offences in any case, as the law may be more strictly enforced under the administration of one officer than when another is in authority. The conclusion that the Newport paper reaches is this: "In the temperance crusade no greater mistake can be made than to feel that the battle is won because a friendly statute has been enacted. As a matter of fact, the battle of prohibition was then only begun. If, therefore, any one asks, 'Does prohibition prohibit?' we should say, 'No,' and that, too, without the least disparagement of the principle involved."

Senator Vest of Missouri gave the public the whole gospel of finance last week in a single exclamation. "When there was a run on the Treasury of the United States," he said, "there would be a run on the Maker of the Universe." He added that he said this "with reverence." We say, with or without reverence as the case may be, that if John Smith has a pecuniary obligation to meet in England, and if he can get the money to meet it from the Maker of the Universe and nowhere else, or if he can get it from that fountain a tenth of one per cent. easier than elsewhere, he will certainly apply there for it. Also, that Jones, Brown, and Robinson will pursue the same course under like circumstances. There may be a sufficient number of them to constitute a "run." No sense of shame will deter them, or ought to, in claiming their own when they need it, whether it is held in the Treasury or in the New Jerusalem. Mr. Vest is much better acquainted with the laws governing tradership in the Indian Territory than with the laws of finance.

A very interesting fragment of departmental history has been brought to light by the recent contention between Comptroller Durham and Land Commissioner Sparks. The Commissioner, having delayed for some time the settlement of a certain account, was directed by the Comptroller forthwith to adjust it, and to transmit it to him, together with the vouchers, for his examination and decision. This the Commissioner refused to do, and asked to be shown by what authority such a demand was made, since, by the law contained in the Revised Statutes, only the First and Fifth Auditors could be directed by the Comptroller in this manner. In reply the Comptroller shows that his office was created in 1789, and charged with the duty of examining all accounts settled by the Auditor; that at that time there was but one auditor, and his duty was to receive and examine all public accounts, and, after examination, to certify the balance and transmit the accounts with the vouchers and certificates to the Comptroller for his decision thereon; that in 1792 the War Department accounts were taken from the Auditor, and an officer termed an "accountant" was required to audit them; that in 1798 the Navy Department accounts were in the same manner taken from the Auditor, and another "accountant" was charged with their examination; that in 1796 the office of Surveyor-General was established, whose accounts were reported to the Auditor for settlement, thence to the Comptroller for his decision; and that in 1809 the Comptroller was authorized to direct the Auditor and these "accountants" of the War and Navy Departments at any time forthwith to settle any particular account belonging to their respective offices, and to report the settlement for his revision and final decision. The Comptroller upon this statement maintains that his power to direct the auditor who examined the Surveyor-General's accounts to proceed in a given case to make a report to him, was not affected by the creation in 1812 of the office of the Commissioner of the General Land Office. The Commissioner by the act of 1812 was placed in the exact position which the Auditor had previously occupied concerning land accounts, and the supervising authority continued to remain in the Comptroller. The Revised Statutes, it is true, mention only the First and Fifth Auditors in that section which authorizes the Comptroller to direct immediate adjustments of accounts, but in the recent decision the Comptroller argues that this does not repeal the act of 1809, which was meant to include any of the accounts sent to him for revision by the auditing officers required to report to him.

Two or three interesting illustrations of the changes in party relations at the South have just been reported. In the Texas Democratic Convention Major Holmes, late of the Union Army, rose to urge the claims of Captain Walsh to the Land Office Commissionership, and concluded by saying that "as an old Federal officer he took pleasure in putting in nomination this gallant old Confederate officer." In Florida the Republicans have nominated for Congress Jonathan C. Greeley, whose last public service was as a member of the "rebel" Legislature in that State during the war. In Mississippi the Republicans are again supporting for Congress Gen. Chalmers, who has been for nearly a quarter of a century notorious as "the hero of the Fort Pillow massacre," and who, so long as he was a Democrat, was the object of as violent attacks from Republicans as almost any man in the South except Jeff Davis. It is no wonder that the negroes are coming to divide their votes when they find the political traditions violated in this wholesale way.

Editor Cutting having been released by the Supreme Court of Chihuahua through the refusal of Medina, the libellee, to prosecute the case further, and Mr. Cutting having betaken himself to Texan soil as fast as a mule-driven street car could carry him, we have nothing to do but to discuss the abstract question whether there is a class of offences lawfully punishable in Mexico when committed on our territory, and if so whether Cutting's offence was one of them. This will come up on Cutting's claim for damages, for, of course, he will make such a claim. The prosecution of the claim in the recesses of diplomacy will have one good effect at any rate; it will educate us upon some recondite points of international law. It will also enable Gov. Ireland of Texas to disband his forces meanwhile, or, at least, to give them a furlough. It will likewise relieve the gallant band of newspaper reporters who have been furnishing us all the despatches that passed between President Diaz and the ruffian judges on the frontier. These admirable detectives must be greatly fatigued. We can only hope that they may get out of the country safely.

The fully ascertained result of the recent Congressional elections in Mexico leaves the present situation in that country something unique in the history of representative governments. The Opposition has completely disappeared. Not a single member of the new Congress will be opposed to the Government. There will be a small Gonzalist faction of a score or more, but this stands for nothing but personal politics. The real Opposition, viz., that led in the last Congress by Miron and Duret and Viñas, has not been able to return a member. Singularly enough, the Administration organs are rueful rather than triumphant over the result. The victory has been all too sweeping. The inference is too irresistible either that the election was dictated by troops and officials, or that the people do not vote.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 18, to TUESDAY, August 24, 1886, inclusive.]

DOMESTIC.

MR. T. McC. STEWART wrote to the President that he appreciated the rebuke which he gave the narrow-minded men of both parties in re-appointing Mr. Matthews to succeed Frederick Douglass as Marshal of the District of Columbia. In his reply the President says: "I very much hope that this act will not be regarded as in any way defiant to the Senate or as an attempt to appear heroic. I have deemed the question involved in this matter as one rising above politics, and as offering a test of good faith and adherence to pledges—nothing more or less. When this thing is put face to face there should be no shuffling. It is absurd to promise all and perform nothing. If the colored man is worthy of a promise, he is absolutely entitled to its fulfilment by every honorable man. I am glad you are pleased, but fail to see how I am entitled to especial credit for being honest."

The Civil-Service Commissioners have ruled that a person whose name is duly placed upon the clerk's eligible register for a customs district is entitled in due course to certifications to each office in that district.

Mr. Taylor, the pension agent of Knoxville, Tenn., has resigned, in accordance with the President's letter, before entering upon a canvass for the Governorship of his State.

The Foreign Mails Office of the Post-office Department has perfected an arrangement with the Pacific Mail Steamship Company to carry the United States mails to China, Japan, and Panama, sailing from San Francisco, and to Aspinwall, sailing from this city; the compensation to be the sea and inland postage on the mails conveyed.

The Acting Secretary of the Treasury on Thursday issued a call for the redemption of $15,000,000 of the 3 per cent. loan of 1882, the principal and accrued interest to be paid on October 1. It is ascertained at the office of the Comptroller of the Currency that of these bonds, $11,521,600 are held by 166 national banks, as follows: For circulation $11,086,100, for deposits $435,500.

A letter dated last Christmas has been received from a member of Lieut. Stoney's expedition, which was sent out by the United States Government to Alaska to explore Putnam River, discovered by Lieut. Stoney in 1883. The writer reports that Lieut. Stoney had discovered a river to the north, which the natives say empties into the Arctic near Point Barrow. This river is supposed to be the same as the one at the mouth of which Lieut. Ray established his headquarters during his observing expedition. Along the banks of this river were Indians who had never before seen a white man.

The jury in the case of the Chicago Anarchists found the following verdict last Friday: "We, the jury, find the defendants August Spies, Michael Schwab, Samuel Fielden, Albert R. Parsons, Adolph Fischer, George Engel, and Louis Lingg guilty of murder as charged in the indictment, and fix the penalty at death. We find the defendant Oscar W. Neebe guilty of murder in manner and form as charged in the indictment, and fix the penalty at imprisonment in the penitentiary for fifteen years."

It is said that Senator Mahone will run for Congress in the Petersburg (Va.) district.

The Pennsylvania Democrats last Wednesday nominated Chauncey F. Black for Governor. The platform favors a just and fair revision of the revenue laws in accordance with the letter and spirit of that declaration of Democratic principles, the Chicago platform of 1884, and says: "We endorse the Democratic reform Administration of President Cleveland. It has given confidence to the business industries of the country, purged the departments of corruption, checked extravagance, discouraged class legislation and monopolies, elevated the civil service from the partisan debasement to which it had been reduced by previous administrations, and has made the people of the United States feel an assured confidence in the perpetuity and safety of the nation."

The Michigan Democrats and Greenbackers "fused" last week, giving the Greenbackers the Governor, Treasurer, Commissioner of the Land Office, and Superintendent of Public Instruction, and the Democrats the Lieutenant-Governor, Secretary of State, Auditor-General, Attorney-General, and member of the State Board of Education. The Democratic platform "endorses the policy of applying the surplus in the national Treasury, as fast as it may accumulate, to the payment of the national debt, retiring as rapidly as practicable the national-bank circulation, and the direct issue by the national Government of legal-tender treasury notes, gold and silver coin, and coin certificates." It contains also the following: "Resolved, That the Administration of Grover Cleveland, by its vigor and thoroughness, by the precedence it has given to considerations affecting public service over those merely partisan, by its practical denial of the legitimacy of governing by means of Federal appointments, by the discouragement of office-seeking through political intrigues, by its endeavors to preserve public land for actual settlers, by restoring by practical administration the great principle, 'A public office, a public trust,' commends itself to the judgment and approval of all honest people."

The Ohio Democrats last week nominated a ticket headed with John McBride for Secretary of State. The platform says: "We cordially endorse the Administration of President Cleveland, as we believe the people of all parties are convinced that his official conduct has been marked by great courage and honesty." It also reaffirms the national plank on the tariff; approves "the policy of paying out the surplus revenues heretofore accumulated in the Treasury, on the interest-bearing debt"; denounces the "attempt to change the measure of values in the face of the world's vast debts from gold and silver to gold alone, as an act of monstrous injustice, and demands that both gold and silver, as established by the Constitution, shall be maintained as the basis of our money system," and "heartily endorses" the course of Senator Payne.

The Delaware Democrats last week nominated B. T. Biggs for Governor and J. B. Pennington for Congress. This was a defeat for the Bayard faction. The platform favors a revenue tariff, and says: "The Democracy of Delaware, in common with the people of the whole country, recognize in President Cleveland an honest and patriotic Chief Magistrate, anxious to secure a proper administration of public affairs, and entitled to the confidence and support of the American people."

The Democratic platform of Washington Territory endorses President Cleveland's Administration, demands the repeal of the Burlingame Treaty and a strict enforcement of the Chinese Restriction Bill, and censures Gov. Squire for declaring martial law during the anti-Chinese riots last winter.

There is a split in the Second Iowa Congressional District. Forty-seven of the delegates voted to support the candidate of the Knights of Labor, and thirty-seven voted to support ex-United States Senator Kirkwood. The district gave a Democratic majority of 4,500 in 1884.

The Convention of the Irish National League of America was held in Chicago last Thursday. The proceedings were exciting at some points, but there was no disorder. Judge John Fitzgerald of Nebraska was elected President, receiving 703 votes to 244 for Hugh McCaffrey of Philadelphia. Judge Fitzgerald is said to be the richest man in the League. He is worth about $5,000,000, is the President of three national banks, and the largest railroad contractor in the West. The resolutions adopted express "unqualified approval of national self-government for Ireland," "heartily approve of the course pursued by Charles Stewart Parnell and his Parliamentary associates in the English House of Commons," and renew the expression of "entire confidence in their wisdom and in their ability to achieve home rule in Ireland, and extend heartfelt thanks to Mr. Gladstone for his great efforts in behalf of Irish self-government." The following section of the Constitution caused some opposition, but was adopted amid excitement: "To hurt the enemy where he will feel it most, by refusing to purchase any article of English manufacture, and by using all legitimate influences to discourage tradesmen from keeping English manufactures on sale." The London *Times* gives prominence to a letter suggesting the prosecution for treason, on their return to their homes, of the Canadian delegates and other British subjects who figured in the Chicago Convention.

The American Bar Association, in session at Saratoga, voted last Friday 58 to 41 in favor of codification.

Squire and Flynn formally pleaded not guilty last Thursday to a new indictment for conspiracy found against them. Their counsel will move to have their trial transferred from the Court of General Sessions to the Court of Oyer and Terminer. This is simply an attempt on the part of Tammany Hall to keep control of the Department of Public Works until after election, so that the patronage of that Department may be used to help in electing the Tammany candidate for Mayor.

The strike of the nailers at Cummings, Ill., which has been in progress for the last fourteen months, was brought to an end last week. The old men will be accommodated by the company so far as possible, and every department of the Calumet Iron and Steel Company's works will start up with a full force. None of the non-union men with whom the company has contracts will be discharged to make places for the old hands. The action of the men is approved by the Knights of Labor.

The referee to whom the question of the legality of the will of Samuel Wood of this city, who left nearly $1,000,000 to found a college of music here, was referred, has decided that its provisions cannot be legally carried out, and the money will go to a nephew of the testator.

A great storm occurred on the coast of Texas and for 200 miles inland last Friday. Galveston, Indianola, and other coast towns were inundated. A large amount of property was destroyed, and about thirty lives were lost.

J. Scott, a noted fisherman of Lewiston, was drowned in the Whirlpool Rapids at Niagara on Thursday in trying to swim through them. Graham, the cooper, again went through the rapids safely in his barrel on the same day with his head out; and last Sunday William J. Kendall, a detective of Boston, aged twenty-four years, swam the Rapids and the Whirlpool with nothing on but an ordinary cork life-preserver.

The body of William Gray, jr., the defaulting Treasurer of the Atlantic and Indian Orchard Mills in Massachusetts, was found in the woods near Milton, Mass., last Wednesday. He had shot himself through the heart. It is said the Atlantic Mills will not be seriously embarrassed by their loss. The Indian Orchard Mills are closed, and are not likely to reopen. Samuel R. Payson, who had been considered one of the wealthiest men in Boston, has made an assignment. His difficulty is said to have been caused by the endorsement of paper of the Indian Orchard Mills, which are virtually owned by him.

Mr. John Dougall, the founder and editor of the New York *Weekly Witness*, died suddenly last Thursday at Flushing, L. I., aged

seventy-eight years. Mr. Dougall founded the Montreal *Weekly Witness* in 1846, and the daily edition of the same paper in 1861.

Prof. Calvin E. Stowe, husband of Harriet Beecher Stowe, died in Hartford, Conn., last Sunday at the age of eighty-four years. Amos A. Lawrence, a leading merchant of Boston, who had been Treasurer of Harvard College, and was two or three times the candidate of the Whigs and Unionists for Governor of Massachusetts, died on the same day.

FOREIGN.

The Eastern question was reopened last Sunday by the forcible deposition of Prince Alexander of Bulgaria. According to the best advices, one thoroughly Russianized regiment of cavalry was detained in the city after nightfall when the other troops retired to their barracks. This regiment surrounded the palace about two o'clock A. M. Prince Alexander was in bed. The revolutionary leaders forced their way to the Prince's ante-chamber, and bluntly made known to him their purpose. He was taken completely unawares. When he recovered his self-control, he bitterly reproached his captors for their treachery. The revolutionists declare that Alexander signed a formal abdication of the throne. Others, however, assert that he firmly declined to sign an abdication, and that he was made a prisoner on his yacht, and so was conducted out of the country. He is said to be a prisoner on Russian soil. Diplomatic circles in Europe are much excited. Two provisional governments have been formed. The inhabitants of parts of Bulgaria have started a movement for Alexander's restoration. The Russian press generally do not believe that any of the other Powers will interfere with Russia's "direct pacification of Bulgaria."

A blue-book about Batum was published in London last Saturday. The following is its concluding passage: "Her Majesty's Government cannot consent to associate themselves in any shape with this proceeding of the Russian Government, and are compelled to place on record their view that it constitutes a violation of the Treaty of Berlin unsanctioned by the signatory Powers, that it tends to make future conventions of the kind difficult, if not impossible, and to cast a doubt at least on those already concluded." M. De Giers immediately replied: "I did not conceal from Sir R. Morier the painful surprise this communication caused me, especially the accusation made against a great Power of violating the faith of treaties. I repelled it with all the strength of my convictions." These two expressions of opinion show the fundamentally bad feeling between England and Russia underlying much diplomatic courtesy.

Parliament met on Thursday, and the Queen's speech was delivered. It was very brief. Alluding to the Irish question and the result of the late election it says: "The result has been to confirm the conclusion to which the late Parliament had come." It adds: "I abstain from recommending now for your consideration any measures except those which are essential to the conduct of the public service during the remaining portion of the financial year." Lord Randolph Churchill, outlining the Tory policy, said that the Government had concluded that the adoption of coercive measures for Ireland would be unwise. The Ministry wished the question of local government to be treated as a question affecting the United Kingdom. With reference to Kerry, he said the Ministry had resolved to send there a special military officer of high rank (Sir Redvers Buller), invested with such powers as would enable him to restore order. The moment the Government became conscious that further powers were necessary they would summon Parliament to their assistance. Regarding the land question, he said the Government for all present purposes would take their stand on the Land Act of 1881 as a final settlement. At the same time the Government had decided to appoint a royal commission [laughter on the Parnellite benches] to make a careful inquiry during the ensuing autumn and winter into the working of the existing land system in Ireland. The Government did not intend to deal with the land question by making any reduction in rents. The Government also proposed to utilize the autumn and winter by procuring the best information obtainable regarding Irish industries. They proposed to appoint a small commission of three gentlemen of position and experience, who would be able to give conclusive information to the Government on such points as the creation of a deep-sea fishery on the west coast, harbors of refuge, the extension of railways, arterial drainage, etc. The Government intended to devote the recess to a careful consideration of the question of local government for all three kingdoms. They hoped that when Parliament reassembled in February they should be prepared to submit definite proposals on that most important of all questions. In conclusion he said that the Government took the verdict of the country in favor of maintaining the Union as final and irrepealable. Upon that verdict they based their policy, and by that policy they, both as a Government and as a party, would stand or fall. Lord Randolph was followed by several Parnellites, who declared that they were not satisfied with a policy of delay. The Government is already dubbed "a universal examination and inquiry bureau." The *Freeman's Journal* says: "The proposal to meet the pressing difficulty of the rent question by the expedient of a commission is indicative of deliberate and criminal delay." The *Irish Nation* says: "The Cabinet leave the landlords and the devil to make their way easy. Evictions and crime are their hope." *United Ireland* of Dublin (Mr. Parnell's organ) reiterates the declaration that there will be war to the knife against Lord Salisbury. The people of Ireland, it says, will resist him with a desperation and skill that have never before been displayed.

In the House of Lords the same evening Lord Salisbury admitted that the situation in Burmah was unsatisfactory, but he thought there was no reason for apprehension or alarm. The Afghan Boundary Commission, he said, had not been withdrawn. There was a reasonable prospect of accord between England and Russia with regard to this question. The course of the Government towards Turkey would be to continue the policy of late years.

In the House of Commons on Thursday evening Mr. Bradlaugh made a motion against the sessional orders forbidding the peers to concern themselves in the election of members of the Commons, on the ground that it (the Lords) was a sham house, and, in the words of the Attorney-General 200 years ago, should not bark where it cannot bite. One hundred and twenty-two members voted with him, but, of course, his motion was defeated.

Mr. T. P. O'Connor in a speech in the House of Commons last Friday night maintained that Lord Randolph Churchill's speeches were the original cause of the Belfast riots. He said a commission ought to be appointed to inquire into the actions of the Primrose League, which was guilty at the last election of boycotting and intimidation to an unheard-of extent. The policy of the Government of inquiring into the judicial rents was illogical and impracticable, because the Commission could not complete its report before the spring, while the evil existed now, and the crisis would come in November

In the new election in Leith to fill the vacancy caused by Mr. Gladstone's choosing to sit for Midlothian, which he was also elected to represent in Parliament, Mr. Ferguson, the Gladstonian candidate, has polled 4,204 votes, against 1,528 for Macgregor and 1,499 for Jacks. Both Macgregor and Jacks ran as Unionists. Jacks was returned as a Liberal to the last Parliament by a majority of 3,870 in a total poll of 8,840, and then opposed Mr. Gladstone's Home-Rule Bill.

The Protestants in Belfast are very much irritated over Lord Randolph Churchill's defence of the police who have been engaged there during the riots. They declare that the facts warrant the suspicion that a conspiracy exists between the police and the Catholics there.

Minor disturbances have continued in Belfast. Six conspicuous rioters have been committed for trial.

The Duke of Leinster has arranged to sell to his Irish tenants a large portion of his Kildare estates on an eighteen years' purchase plan.

Lord Iddesleigh, the British Foreign Secretary, has written to the International Arbitration Association, saying that he concurs in the belief of his predecessor, Lord Rosebery, that the moment is inopportune to receive a deputation to discuss the subject of opening negotiations with the United States for the establishment of an Anglo-American tribunal whose duties shall be to consider international questions. Lord Iddesleigh says that the fishery question, which the Arbitration Association refers to, is at present the subject of diplomatic negotiations, and expresses the hope that the result may be favorable.

There is a rumor in Rome that Queen Margarita is using her influence to bring about a reconciliation between the Italian Government and the Papacy. Under the arrangement contemplated, it is said, the Pope will receive from Italy arrears of endowment to a large amount, which will be devoted to extending Catholic missions.

A large party of tourists have had a narrow escape from death on the Matterhorn. While on that mountain an avalanche occurred, and they were completely imprisoned by huge banks of snow. Forty guides went to their assistance with ropes and ladders, and, after superhuman exertions, rescued them. Many of the tourists were suffering from frost-bite, and one has since died.

A passenger steamer plying on the River Volga was burned on Saturday at Saratov, capital of the province of Saratov, in Russia, and 200 lives were lost.

The Marquis Tseng is reported to have declared that Corea is an inseparable part of China, and that his Government is determined to resist any attempt on the part of a foreign Power to seize that kingdom. The Chinese Government has decided to despatch troops to the neighborhood of Port Lazereff as a precautionary measure against the reported design of Russia to seize that place.

As the President of Uruguay was entering the theatre at Montevideo the night of August 17, an ensign named Ortiz fired a revolver almost point-blank at his head. The ball entered the President's cheek, inflicting a slight wound. An infuriated crowd attacked the would-be assassin so that he died soon afterwards. A revolution is threatened. Several persons have been imprisoned, among them the widow of General Pagola and four of her female relatives. The city is guarded at night by mounted police.

Cutting was released from prison last Monday, the Supreme Court of Mexico holding that as Medina, whom he libelled, refused to prosecute him civilly, his imprisonment before the trial had been punishment enough. Mexico does not, however, withdraw its claim to the right to try an American citizen in that country for a crime committed in the United States

The Canadians complain that American fishermen are taking fish with impunity in Canadian waters. One fishermen on Prince Edwards Island is quoted as saying that if the Dominion Government continues to treat the fishery question the same as of late, he would like to see the stars and stripes hoisted over the island.

THE CIVIL-SERVICE COMMISSION.

MR. OBERLY, of the Civil-Service Commission, has sent to the *Times* a very interesting letter defending that body from certain charges made by Republican Senators during the recent session, and since taken up by Republican organs all over the country. The most specific and serious of these charges was made by Senators Plumb and Ingalls of Kansas, and concerned the appointment of special pension examiners under the civil-service rules by the Commissioner of Pensions, the accusation being that, through the collusion of the Commission as now constituted with a Democratic majority, Mr. Black managed to get 71 or 72 Democrats out of 76 or 77 clerks, which was held to be proof of a grossly partisan administration of the law.

Mr. Oberly scores a very neat point when he contrasts this charge of Republican Senators against the integrity of a Democratic Commission, because Democrats were chiefly appointed, with their naïve admission that under a Republican Commission only Republicans were appointed. Senator Voorhees said in the course of the debate on this matter: "I desire to say that the first seventy-two special pension examiners appointed by Gen. Black after he came into office were every one of them Republicans." Thereupon Mr. Allison interjected this remark: "That is, he retained one-half of the force of 150 Republicans." This shows that Mr. Allison supposed, and, indeed, took it for granted, that these 150 examiners, who entered the service by the competitive system under a Republican Commission in 1884, were of course all Republicans. Senator Teller, who was Secretary of the Interior when these examiners were appointed, would not concede that all of the 150 were Republicans, but he admitted that "the great mass of them were, of course, Republicans"—apparently in blissful unconsciousness of the implication of those two words, "of course." Mr. Oberly very properly holds that Senator Teller should have explained why it was a matter "of course" that "the great mass" of persons appointed under the Civil-Service Law as administered by a Republican Commission were Republicans.

Mr. Oberly gives a detailed account of the curious modifications in the rules allowed by the Civil-Service Commission while a majority of its members were Republicans, in the case of pension examiners—as in reducing the minimum standing in examinations and certifying the entire eligible list—modifications of which it is sufficient to say that, if made by a Democratic Commission, they would have justly provoked the severest criticism. In point of fact, since the majority of the Commission became Democratic, it has discontinued the reprehensible practice of certifying unconditionally the whole list of eligibles, and has declared that only four names, taken from among those graded highest on the eligible register of pension examiners, shall be certified for the purpose of filling a vacancy in that grade; and has provided that certifications shall be made for the purpose of filling vacancies in the grade of special pension examiner in the same way that certifications are made to fill vacancies in any other class or grade. Mr. Oberly closes his clear and candid letter with this very notable declaration of faith:

"In concluding this paper I desire to say that the Democratic members of the Civil-Service Commission will not permit anxiety for the success of their party to induce them to wander into any of the by-paths that lead away from the broad highway of the civil-service-reform movement. They are determined that the Civil-Service Act shall be executed in its spirit as well as its letter, and that the merit system shall be strengthened by their official acts. All they can do will be done to perfect the competitive system of appointments to the civil service, and to this end they have made the examinations of the Commission non-partisan by reversing the practice of their Republican predecessors in the Commission, who made of Republican partisans the Chief Examiner and all the members of all the Examining Boards. Upon the suggestion of the Democratic members of the Commission a Republican has been appointed Chief Examiner, and, by an order of the Commission made by its Democratic members, the Customs and Postal Boards of Examiners cannot now, as under Republican Administration, be constituted entirely of members of one political party. Every Republican who desires to enter the civil service through the competitive-examination door may therefore be assured that the fact that he is a Republican will not make more difficult his entrance than would be the entrance of a Democrat; and every Democratic applicant will learn, if he does not already know, that the fact that he is a Democrat will not make easier his entrance than would be the entrance of a Republican."

We are very glad to say that we believe this statement may be accepted as truthfully representing the convictions and purposes of the Commission. Nobody questions the sincerity of Mr. Lyman, the Republican Commissioner, or of Mr. Edgerton, the senior of the two Democrats. The wisdom of Mr. Oberly's appointment was questioned by many, but his course has justified the opinion, candidly expressed by the Hartford *Courant*, Gen. Hawley's paper, that his excellent record as Superintendent of Indian Education justified the hope that he would make a first-rate Commissioner. Gen. Hawley, by the way, did himself credit in the Senate debate by frankly saying that "the majority of the Civil-Service Commission is Democratic, and earnestly endeavoring to enforce the law."

The actions of the Commissioners speak even more loudly than their words. They have recently been called upon to fill the important position of Civil-Service Examiner, and they applied the true reform principle by promoting Mr. William H. Webster, a chief of division in the Pension Office, who has been Chairman of the Interior Departmental Board of Civil-Service Examiners, and is thus excellently qualified for the higher place—the fact that he is a Republican not being allowed to stand in the way of his elevation. The Commissioners have just secured the promulgation by the President of a most important change in the rules, which provides that, in future, applications for examination shall be made to the Commissioners if for places in the Washington departments, and to the customs and postal boards of examiners if for places in those branches of the service, instead of, as now, to the appointing or nominating officer. This will remove the temptation now presented such an officer to inquire into the political opinions and affiliations of applicants for appointments, and end an abuse which has undoubtedly existed under both a Republican and a Democratic administration. The Commissioners are also considering another most desirable change, which will cut down the limit of fifty employees now required to bring a post-office or custom-house under the Civil-Service Law; it being obviously absurd to apply the competitive system to one office which has fifty employees, and not to another which has forty-nine.

The course of the present Commission, as now fully organized a year and a half after the inauguration of a Democratic President, proves that the reform is safe in their hands. It has "come to stay," and the despairing wails of the spoilsmen in both parties show that they realize the fact.

THE SILVER QUESTION IN ENGLAND.

THE Salisbury-Churchill Ministry is already known as a Government of Inquiry. The number of things it Wants to Know is without any assignable limits The curiosity of the London *Times* is also remarkable. The *Times* has apparently assumed the rôle of Inquisitor for the new Chancellor of the Exchequer. In a recent article it extends the line of general investigation into the region of bimetallism, concluding that "unless the signs of the times are strangely misleading, a royal commission on the currency crisis will be appointed before another six months are over." The existence of a currency crisis in England apart from Indian affairs had not been suspected on this side of the water, but the *Times* assures us that such a crisis exists, in the popular imagination, if not in fact. The tone of the article implies that the *Times* does not look upon the crisis as imaginary, but real. At all events, we have its word for it that bimetallism "has come to the front by leaps and bounds in the last few months." That the present is a favorable time for taking up the question is made clear to the *Times* by the terms of a resolution recently offered in the United States Senate, requesting the President to open correspondence with the commercial Powers of Europe on the subject of international bimetallism. This resolution was offered by Senator Evarts, who, it says, "knows exactly what he means"—which will be gratifying news to the commercial community here.

Emboldened by the intrepidity of Mr. Evarts, the *Times* goes on to say that it is no use to pooh-pooh the discussion as antiquated; that "the best theoretical arguments are a weak answer to the sharp cry of practical distress"; that over and over again doctrines which have long dominated the lecture-room have had to descend to the market-place "to be heckled"; that monometallism may appear as convincing as ever to the majority of students, but "the commercial and industrial world declines to be convinced by their demonstrations; it is beginning to insist, with no uncertain voice, on the reopening of the question, and on an appeal from the doctrinaires to the men of business."

If we cared to controvert the positions of the *Times*, we should say that the commercial and industrial world were just that part of the whole world which had brought monometallism into force, and that the theorists had had nothing to do with it except to point out the fact. But we leave the discussion of bimetallism for England to English disputants, merely cherishing the opinion that any ministry

which makes bimetallism a definite part of its policy, will come down with a crash, the suddenness of which will amaze all the thunderers of the press. We are concerned with the "leaps and bounds" of bimetallism in England, and with the supposed policy of the new Chancellor of the Exchequer, only as they may relate to the financial policy of the United States. And first it must be pointed out that the *Times* either misconceives the attitude of the silver party in this country, or misconceives the subject of the discussion altogether. There is no bimetallist party in the United States. There is a gold-standard party and a silver-standard party, but no double-standard party at all. The bimetallists are an omnibus load of doctrinaires: we could name them if it were necessary. It is not for the purpose of disparaging them that we say they do not constitute a party, or even a faction. The force which keeps the mint working on silver is the silver-standard party, the cheap-dollar party. This is the reason why no attention is ever paid to the appeals of the bimetallists at home and abroad to stop our coinage of silver, and thus "bring a pressure" on Europe in favor of international action. The silverites simply laugh at all such stuff. International action means bimetallism, and bimetallism means parity between gold and silver. This is exactly what they do not want. The shrewdest of them have discovered that bimetallism is impossible both politically and physically; and they are glad that it is so. When therefore, the *Times* says that "the simultaneous move forward in England and America may not be without important consequences," the answer is that the "move," whether forward or backward (and we consider it most decidedly backward), is not simultaneous, nor convergent. If it is bimetallism in England, it is certainly not that in the United States. It has been the rule of the gold-standard party to favor international conferences in the vain hope that the silverites would stop the coinage meanwhile, or when the failure of the conference should take place. But this child's-play is very nearly at an end, the other side having seen through it. We are not sorry that it is so.

The suggestion of the *Times* that Mr. Goschen should be at the head of the proposed commission of inquiry will lead people to ask what Mr. Goschen's views are on this subject. We all know what they were when he was a member of the Paris Conference of 1878. His idea then was that bimetallism, national or international, was impracticable and visionary, but that it would be much to the advantage of the world if other countries than England would make a more generous use of silver than they seemed inclined to. The only country that has followed Mr. Goschen's advice is the United States, but the advantage to the world or to any part of it except silver miners has not become apparent. Perhaps Mr. Goschen has so far changed his views as to think that bimetallism is now practicable, and that England may find her interest in it as an active partner in the concern. It is more probable, however, that the new Chancellor of the Exchequer does not know exactly what his policy is, and is waiting for Mr. Goschen or some other kind friend to tell him.

THE BULGARIAN REVOLUTION.

WHEN, a fortnight ago, the Emperors of Germany and Austria-Hungary had their cordial meeting at Gastein, accompanied by their Ministers of Foreign Affairs, Bismarck and Kálnoky, the impression prevailed everywhere —though it was vividly reflected only in the non-official press of St. Petersburg—that something more than an exchange of civilities was being carried out at that idyllic Alpine retreat. The chief representative of Russia's diplomacy, M. de Giers, shone by his absence—he was just starting for another watering-place not far from the spot where Kaiser William and Francis Joseph, with their advisers, talked friendship and politics. The Russian press had no doubt that the meaning of this was that the so-called Three Emperors' Alliance, formed in September, 1884, at Skierniewice, was being narrowed down to a Two Emperors' Alliance at Gastein; Italy being an appendage to it, and England, under its Tory Government, possibly a future member. There appeared semi-official refutations of this view, and the simultaneous visit of an Austrian Archduke at Peterhof, the residence of Czar Alexander III., was pointed out as an indication of the continuance of perfect harmony between all the members of the Imperial triple alliance. But these quieting assurances fell flat, especially in view of Russia's unbroken hostility to Alexander of Bulgaria, who enjoyed the protection of Bismarck; her massing of troops in the neighborhood of the Rumanian and Armenian borders; and her defiant repudiation of the clause in the Treaty of Berlin concerning the port of Batum.

The startling announcement which was made on Sunday from the capital of Bulgaria shows that the assertions of undisturbed harmony between the three imperial courts were fallacious. Prince Alexander has been driven from his Bulgarian throne by a stroke of conspiracy as obviously Russian as it was sudden. Troops surrounded his palace, and forced him to abdicate. The populace assembled and adopted a resolution invoking the sympathy of the Czar. This resolution was laid by a kneeling multitude at the feet of the Russian agent. A provisional government was formed, of which the highest dignitary of the Greek Church in Bulgaria is Minister President, and Zankoff, the notorious leader of the pro-Russian party, Minister of the Interior. Moreover, a Cabinet proclamation assures the people that the Czar will not leave the country without his protection. Thus by one swift blow all the humiliation which Russia has had to swallow—thanks to the powerful influence of Austro-German and British interests—since the *coup d'état* of September 18, 1885, which made Alexander of Battenberg ruler of both Bulgaria and Eastern Rumelia, and especially since his victory over Servia, which rendered him defiant and almost independent, has been completely wiped out. This stroke is one of the grandest triumphs which Russian secret diplomacy ever achieved, though its achievements have been both numerous and striking. If it is not reversed by a speedy, powerful counteraction, the united Bulgaria which Russia spurned when Alexander of Battenberg ruled it, will soon become what it was destined to be by the Treaty of San Stefano in 1878—which Germany, Austria-Hungary, and England contemptuously annulled in Berlin—the chief seat of Russian power in the Balkan Peninsula, a base for new operations against Constantinople, and also against Austria-Hungary. Anti-Turkish risings in Macedonia on one side and, on the other, a revolution in Servia, which will drive King Milan, Austria-Hungary's protégé, into exile, and replace him by the pretender Peter Karageorgevitch, or the latter's father-in-law, Nikita of Montenegro, the Czar's stanchest Slavic ally, may be speedily expected.

There can hardly by a doubt that Germany and her Austro-Hungarian ally will not regard with indifference this complete reversal of the situation in the Balkans, or, to speak more correctly, in southeastern Europe. If the blow be a total surprise, it must be as provoking to the pride of the crowned heads and diplomats that met at Gastein as it is unfavorable to their policy. It is, however, more probable that it was expected by them, and the Gastein meeting considered it as a contingency to be reckoned with and withstood. But action in this case is one of the most arduous tasks. Intervention in Bulgaria can have no other meaning than the restoration of Prince Alexander to the throne; but who can undertake to keep him on it? The revolution of August 21, 1886, is as legitimate as was that of September 18, 1885. The union of the two Bulgarias is a fact acknowledged and sanctioned by the Powers. Turkey alone could interfere, but she is just now disbanding her troops, penniless, and cowed by Russia's menaces. Russia herself would have to be attacked, while she would plead not guilty and keep on the defensive—which is her strength—with France burning with the desire of revenge on Germany and armed to the teeth in the rear of the coalition. This would mean a general European war on a stupendous scale. The great conflict between the Slavic East of Europe and its Germanic centre, however, must one day take place, and the Continent may possibly drift into it now.

HEIDELBERG'S FIVE HUNDREDTH BIRTHDAY.

HEIDELBERG, August 7.

A HUNDRED years ago, when the University of Heidelberg celebrated the four hundredth anniversary of its existence, the first day's procession was marred by a snow-storm. It was probably to prevent a similar accident that the celebration of the five hundredth anniversary was held this week instead of in the autumn, where it properly belonged, as the University was first opened on October 18, 1386. The rain, however, remained to be reckoned with, and it seemed at first as if it had made up its mind to spoil everything. But as soon as the festivities had commenced, the sky became clear, and there was no more rain until six hours after the historic procession on the fifth day. Had this procession been arranged a day later, about a hundred thousand people would have been disappointed; for besides the 25,000 or more inhabitants which Heidelberg boasts, there were at least 75,000 visitors from all parts of Europe and America—a terrible strain on the capacity of a town with only two (narrow) streets, a mile long though they be. The railway station, ordinarily one of the busiest in Germany,

became almost inaccessible. Everything, however, had been done to provide accommodations for the visitors. A small building was erected opposite the station, where rooms were assigned, and where former students of the University were provided, in return for fifty cents, with neatly designed cards of admission to the various festive occasions, and with a bronze medal imprinted with the University's coat of arms and framed in with red and yellow ribbons. By fastening these on their coats the non-society men —who now constitute about one-half the number of students, though formerly much less numerous—were able to indicate their academic origin; while the ex-corps-students, of course, brought along their old caps, the color of which—red, blue, yellow, or white—indicated to which societies they had belonged. These caps, together with cavalry boots, a colored ribbon worn diagonally across the breast, a whip, and an *obbligato* gigantic dog, constitute now the ordinary costume of the class of students who in former generations and centuries gloried in a peculiar mixture of carnival, clown, and military attire and outfit.

Heidelberg is the oldest of the German universities proper; for Prague, founded thirty-eight, and Vienna, founded twenty-one, years before Heidelberg, belong to the Austrian Empire. Beyond doubt, however, it was less the sense of Heidelberg's antiquity than an æsthetic instinct which brought such a large number of visitors here this week. What the honeymoon is in a man's life, Heidelberg is in the German student's curriculum. Here every student endeavors to spend at least one summer, and there are few who would hesitate to call it the happiest summer of their life, though they might have little difficulty in remembering a similar period elsewhere during which they attended more lectures and read more books. The temptation to remain in the open air, to walk in the woods, is too great to be often resisted. For picturesqueness of location Heidelberg has no equal in Europe. Perched above is the finest ruined castle in existence, commanding a superb view of the rapid Neckar below and the lovely hills beyond, in which one knows not what to admire most—the soft, feminine curve of contour, the deeply saturated green of the dense masses of trees, or the ever-varying change of aspect from various points of view. To the left the eyes command an extensive view of the flat Rhine Valley, bounded in the distance by a dim blue chain of mountains. In summer the warm air of this valley rises and sucks a current of cool air from the Neckar mountains, between which Heidelberg lies. Hence the town is always cool, and is one of the fortunate and rare places that enjoy a real spring of three or even four months. Hence the facts that for every twenty-five natives there is a foreign resident here; that outside of Switzerland it would be difficult to find a town which has so many hotels and pensions for its size; and that Dr. Schwenninger, who succeeded several years ago in reducing Bismarck's weight by forty pounds, is at present building a large sanatorium on the hill near the Schloss Hotel. Add to this that Heidelberg is one of the cheapest towns to live in—a dollar a day being sufficient for an economic student—and that the beer is usually placed before him by a brown-eyed maiden quite as pretty as a London barmaid; add to it that Mannheim, only half an hour's ride from here, has an excellent theatre and opera-house; add to it a few other trifles which even in Heidelberg cannot be entirely ignored—namely, lectures by world-famed professors, one of the best and largest libraries in Germany, and several new laboratories containing every convenience for original scientific research—and one can understand why Heidelberg is to-day one of the most frequented German universities; why all the horrors of mediæval wars and repeated destructions of the town only succeeded in temporarily retarding its growth; and why its great jubilee has created an interest unprecedented even in Germany, which makes a specialty of jubilees.

The festivities began on August 2 with the reception of the guests specially or generally invited, and closed this evening with the illumination of the castle. The reception was held in the Festhalle, an enormous building specially constructed for this occasion, with seats for at least 5,000 persons. To this building any one could obtain admission during the week on payment of twelve to twenty-five cents, except on two special occasions, when only students and other ticket-holders were admitted. That the press does not hold in Germany such an influential position as in English-speaking countries, was shown by the fact that although there were almost 200 journalistic applicants for seats—German and foreign—only 30 places were reserved for the press. As far as the average German newspaper is concerned, this slight was perhaps deserved, for besides the *Frankfurter-Zeitung*, the *Kölnische*, *Neue Freie Presse*, the Berlin *Boersen-Courier*, and *Tageblatt*, there were few whose representatives have not indulged in the lazy feuilletonistic habit of writing sesquipedalian platitudes evolved from their imaginations, instead of going about observing what happened and telling it to their readers in plain language. A few American reporters are sadly needed in Germany, as well as a few journalistic business managers. To an American it will seem incredible, but it is a sober fact, that on the day of the historic procession, when tens of thousands of bored people were sitting for more than an hour in booths, waiting for the "show" to arrive, not a single newspaper, with "full accounts of yesterday's proceedings," was hawked about the streets—not even the Heidelberg paper, of which I have in vain sought to buy a copy for several days. The deepest depth of German stupidity in practical matters has never yet been sounded.

To return to the reception: It consisted principally of an address by the Ober-Bürgermeister and the singing of the festival hymn, written by the late Victor von Scheffel—whose death a few months ago alone prevented him from being the central figure of this festival, in reward for his previous glorifications in verse of "old Heidelberg"—and composed by Vincenz Lachner. The music of this hymn is quite as uninspired as most "occasional" pieces, but it was sung under the composer's direction with an enthusiasm which only a composer's presence can arouse, and today the boys in the streets are already singing and whistling it.

The second day of the festival opened with religious services in the old Heiliggeistkirche, conducted by Prof. Bassermann. Next to the Castle and the University this church is Heidelberg's greatest curiosity, less on account of its appearance than of its having been the cause of Heidelberg's ceasing to be what it had been for six centuries—the capital of the State. It was owned jointly by the Catholics and Protestants, and in 1705 a central wall was built, separating it into two equal halves, one for each denomination. The Elector, however, insisted on reserving the whole edifice for the Catholics and tore down the wall. For this he was censured by the Kirchenrath, which so enraged him that he left Heidelberg and transferred the capital to Mannheim. The wall was rebuilt and remained until this year, when its removal was decided upon as one of the deeds commemorating the fifth centenary of the University.

In this same church, on the day following, Dr. Kuno Fischer delivered his *Festrede*—a rhetorical and historical achievement of great merit and interest. A vast number of books and pamphlets have been published apropos of Heidelberg's jubilee—a mere list of them would take up half a column of a daily paper—but so far as I have examined them none (except the 'Illustrirte Fest-Chronik') is half as fascinating as Dr. Fischer's oration. Its delivery occupied three hours; printed, it makes a handsome pamphlet of ninety-eight pages. It was in print before its delivery, for Kuno Fischer is not inclined to hide his light under a bushel, and is quite willing to give everybody full opportunity to admire his genius. He has been made an "Excellenz" this week, which the students say will increase his conceit, if possible. Concerning his vanity the following story is current here: One day a fresh student, having heard others refer familiarly to "Kuno," saw a small man, with a small antique hat, standing in front of the University. "Can you tell me," says the student, tapping this man on the shoulder, "in which room Kuno lectures?" "If you refer to the Geheimrath Dr. Fischer," was the reply, "I lecture at number 16." But "Kuno" has good reason to be vain. He has written the most complete history of modern philosophy in existence, and has even succeeded in making Kant and Fichte as clear as sunshine; and he is perhaps the most eloquent of all German professors. Of his lectures, which I heard seven years ago, I shall never forget one in particular, on Spinoza, which brought tears to the eyes of many of the students, and was followed by thunders of applause, rarely heard—or permitted—in academic halls.

In his "Festrede," one of the most interesting things was the account of the founding of the University. At first there were only three *magistri in artibus;* and four weeks after the opening of the school, one of them, Marsilius, was "unanimously" elected rector by his two colleagues. Before the end of the first year the number of professors had risen to sixteen. A medical faculty was not created till four years later, and the whole institution had a clerical character—so much so that celibacy was prescribed, and a full century passed before a married teacher was reluctantly admitted to the faculty, at the express command of the Elector. Preparatory schools there were none. The high school had to stoop at first to the elementary instruction of young boys, and not till 1464 were boys under fourteen excluded, whereas a special preparatory school was not opened till 160 years later. "The constitution of the mediæval university was well adapted to create and preserve a certain type of clerico-secular instruction, but it was not supplied with the means for contributing to the sciences and accelerating their progress." As for the resources of the University, Ruprecht II., the son of the founder, found a very simple way of augmenting them by expelling the Jews and making over their property to the University.

Dr. Fischer also gives an elaborate account of the fate of the famous library which in 1622 was taken as booty of war by the Duke of Bavaria and presented to Pope Gregory XV. This library known as *Optimus Germaniæ literatæ thesaurus*, consisted of more than 5,000 volumes, including some extremely valuable manuscripts. It was fortunate that the library was thus removed across the Alps (on mule-back), for on a subsequent occasion, when the University was destroyed, it would have become a prey to the flames. In 1816 Pope Pius VII., at the respectful request of Heidelberg professors, returned 852 of the German and Latin MSS. Most of the others remain in the Vatican; but Pope Leo XIII., in honor of Heidelberg's jubilee, has had an elaborate catalogue of them prepared and forwarded to the Grand Duke as a present—a tantalizing present, if not an ironic one. But the

Heidelberg faculty, deeming the catalogue better than nothing at all, have honored the Pope's messenger equally with the other delegates.

Of these delegates there was a most imposing array, as was shown especially at the reception tendered them in the newly decorated Aula, which is now the finest in Germany. Every civilized country had sent delegates to represent one or more of its universities. Paris was represented by Oppert, Du Camp, and Zeller, who were made especially welcome by the hosts; and the Frenchmen present in Heidelberg, including the correspondents of the *Figaro* and *Voltaire*, commented with great satisfaction on the fact that Prof. Zeller was the only one of the speakers whom the Grand Duke of Baden honored by a congratulatory hand-shake after his neat address in behalf of the Académie Française. Of well-known German professors there were present Haeckel of Jena, Kussmaul of Strassburg, Helmholtz, Gneist, Mommsen, E. Zeller of Berlin, and a hundred others whose names are familiar wherever the sciences are cultivated; all of them in their official garb, thus presenting a picturesque variety of costumes and colors. Among the speakers were the Crown Prince of Germany and the Grand Duke of Baden, his brother-in-law. The procession of dignitaries had marched in to the stately strains of Wagner's "Meistersinger" march; and the next afternoon almost the same company assembled for a dinner in the "Museum," on which occasion Helmholtz delivered a short but magnificent address, in which he tried to account for the fact that Heidelberg has become so famous for the scientific discoveries made within its walls. He attributed it largely to the vital energy and the inspiration given by solitary walks in the pure and bracing air of the Neckar hills. The man of science, as well as the poet, requires the faculty of a suggestive imagination; and it could hardly be regarded as accidental that from these green hills human sight for the first time penetrated the mysteries of the universe, and discovered what before had seemed impossible—the chemical composition of stars. Had the speaker's modesty not forbidden, he might have added, as another delightful coincidence, that the mysteries of the human eye, too, were first revealed in Heidelberg, where that organ for ever revels in scenic luxuries.

Helmholtz also was the man who first explained the mysterious charm of tone-quality in diverse human voices and musical instruments. But although this discovery was also made in Heidelberg, the town itself can have suggested it only on the principle of contraries. A few centuries ago there was hardly any difference between German students and highwaymen. Not only did they engage in fatal duels on the slightest provocation, but they plundered and murdered peasants and tradesmen, and were in continual conflict with the military and with the police, who had a special apparatus for catching them and making them harmless. At the present day the murderous propensities of German students have apparently all been concentrated on the sense of hearing. There is a case on record of several hundred students leaving a German university in a body because a law had been made forbidding their singing and howling in the streets at night. Those who have been in Heidelberg this week have been able to sympathize with the townspeople who made that law. Such incessant singing and playing till four or five in the morning, such howling and clashing of glasses in beer-gardens, have never before been heard even in a German university town. The climax of the noise was not reached at the great Commers in the Festhalle, at which 5,000 students and ex-students finished the "salamanders" with a thunderous simultaneity of setting down their glasses, executed with marvellous military precision; it was reached in the old Schloss, the quasi-subterranean rooms of which were crowded with students and Philistines, cheering and howling at the top of their voices, until even the waiter girls—who had been selected for their beauty from among all the neighboring restaurants and beer-halls, and who are used to the ways of students—put down their wine-pitchers to stop their ears. But then the wine which they dispensed had a truly antique Bacchanalian flavor; it was wine such as can only be found on special occasions like this—wine like the liquid Hungarian gold sold in the Esterházy cellar in Vienna. It was taken ostensibly from the great tun in the adjoining room; but a man in charge informed me that it was an optical illusion: that there was no wine in the historic tun, for if it had been filled, even the thirsty legion of the jubilee days would have required weeks to empty it. Its contents are forty-nine thousand gallons.

These scenes in the vaults of the *grosses Fass* were enacted every afternoon, and were open to all. But there was one "Fest" in the Castle which was open only to invited guests. Little lamps had been placed in the evening in lines at every accessible place of the inner façades, making the court-yard a fairy-like abode. But these rows of lights were quite thrown in the shade, as regards number and attractiveness, by rows of beer and wine-kegs the contents of which were free to all. It seemed like the old days when emperors were crowned and the populace treated to a grand picnic of free beer and roast oxen on toast.

Three important features of the programme remain to be mentioned: First, a torchlight procession, in which many of the academic dudes ruined their gaudy costumes because the professors, in their zeal for antiquarian realism, had decided that old-fashioned pitch torches must be used, and these were continually falling to pieces. They disinfected the town for a century to come, and blackened the faces of the students so much that their hideous scars—which are greatly honored, though the signs of unskilful fencing—for once became invisible. Second, grand illumination of the ruined Castle—a most imposing spectacle, the red light suffusing the whole castle, and showing every detail of the ruin, making it seem as if the French had just been at their work of destroying this "architectural poem," the work of three centuries of princes and artists. Third, the historic procession, which took just half an hour in passing any given point. It was unanimously pronounced the finest thing of the kind ever seen, as regards not only extent, but historic accuracy, realism, and splendor of every detail, for the attainment of which no expense had been spared. The procession represented characteristic scenes and important personages in the history of the University from 1386 to 1803. To describe it is impossible. It included princes, knights, huntsmen, monks, nuns, soldiers, musicians with the instruments of their period, devils and other masks, lecturing professors; the great tun drawn by two superb oxen; citizens, boys and girls, a Venus, ambassadors, and a score of other characters. This was the climax of the Heidelberg festival. How great was the crowd that witnessed it may be inferred from the fact that Mannheim alone, a city of about 50,000 souls, sent 22,000 visitors.

H. T. F.

THE DUC DE NOAILLES ON THE AMERICAN REPUBLIC.

PARIS, August 11, 1886.

CONSTITUTIONAL law is not much the fashion in our time, and the Abbé Sieyès, who wrote so many contributions, would not, if he were still living, be much appreciated. We have ceased to believe that humanity can be made much better by clever rules and well-devised arrangements; we are inclined to believe that institutions are worth only as much as the men who undertake to give life to these institutions. This reaction against the old constitutional school is owing to many causes; it is in great part the work of the modern historical school—a school which is very realistic, very hostile to all preconceived theories, to all generalizations. We have become more materialistic than our fathers: "Tant vaut l'homme, tant vaut la chose." We care less for the monarchy and more for the King; less for the empire and more for the Emperor; less for the church and more for the Pope. We are also more sceptical, and we see the inconveniences as well as the advantages of every kind of human arrangement or solution. We are, in consequence of our scepticism, less enthusiastic, and few causes would find among us blind partisans, because we secretly deem that there are few causes worth fighting for. There is a certain sort of pessimism which underlies all our judgments, all our opinions, and consequently all our acts. There are few among the members of the present generation who would not be ready to say with Musset:

"Je suis venu trop tard dans un monde trop vieux."

Compare the present republicans in France with the republicans of the old school, with the men of 1848. The modern republicans (I speak of the most notorious, of such men as Gambetta and his lieutenants) have chosen for themselves the name of opportunists; they have in this name compressed their principles, or rather their want of principles. Their only real principle is a negative one: they do not admit a monarchy, they are hostile to the hereditary principle. But on all other points they have no theory; they are the slaves, and the willing slaves, of circumstance; they do not even care to have their institutions fixed in a written constitution; they are contented with constitutional laws, and they can change these laws as easily as any other law. No obstacle has been placed in the road; the constitutional laws of 1875 have already been twice revised. The new republican school is fully imbued with the idea of development; it looks upon a constitution as the mere epidermis of a living, growing nation. I will not here discuss these new theories; I only allude to them in order to show that it is just now somewhat an ungrateful task to write in France on mere constitutional law.

The Duc de Noailles has nevertheless had the boldness to do so; he has written a volume on the American Constitution, under the title of 'A Hundred Years of Republic in the United States.' One of the ancestors of the Duc de Noailles was among the Frenchmen who fought in America during the war of independence. He has himself not been in the United States, and those who read his volume will regret it, as it is not possible to understand any country thoroughly without entering, so to speak, into its life. The Duc de Noailles says himself: "To pretend to be a prophet in speaking of a great country which you have never inhabited or visited would be a temerity without excuse." If you are not and cannot be a prophet, you may try to be a judge. The task is easier, but the political judge cannot form a perfect judgment if he sees not what the past has accomplished. The history of the debates of Congress, of the struggle of American parties, is one thing; the spectacle of the great American community is another. Let us take the title of the Duc de Noailles's book, 'A Hundred Years of Republic,' and ask ourselves, What have these hundred years produced? How much has the republican

constitution counted in the result, and how much has the natural work of civilization? This is in reality the sense of the inquiry made by the Duc de Noailles; his study is, so far, conceived in the same spirit as Tocqueville's 'Democracy in America.' But fifty years have passed since the work of our great constitutional writer appeared, and Tocqueville had already on some points entertained some apprehensions. The Duc de Noailles complains that "the public obstinately refused to see anything in his work but the eulogy of American institutions and the continuation of the transatlantic legend brought back by Lafayette. All reserves and criticisms disappeared in the midst of a great current of superstitious enthusiasm. Nobody had a right to point to a single spot on the sun of the model republic."

The Duc de Noailles is right when he says that there was a time when the American republic could flatter itself by ignoring social discords, pauperism, socialism and its dangers. Nobody foresaw that the socialists or communists of the great cities or industrial centres would some day try to defend with arms in their hands what they call the rights of labor. It seemed as if misery was the special plague of aristocratic and monarchical communities. People forgot that "the poor you have always with you." The situation of America, says the Duke, was privileged. "No dangerous neighbor obliged it to keep numerous armies at a great cost. . . . Nature gave it sources of wealth of which the least would have assured the fortune of a people; an extraordinary abundance of earthly goods—iron, coal in larger strata than those of England, 'the nerve and sinews of industry,' cotton, gold mines, silver mines, petroleum; every ten or fifteen years a new source of prosperity. . . . This concourse of happy incidents or of privileges more or less durable cannot be attributed to this or that political system. Free space, endless prairie, fertile desert, facilities of subsistence, high wages, are not institutions." Assuredly they are not, but they cannot, either, become arguments against institutions. I do not believe, with the Duc de Noailles, that "if Louis XVI., when he opened the States-General, could have declared that on all the frontiers and in the interior of France, without robbing anybody, he would bestow on whoever wanted it excellent land at five francs an acre, we should have seen, instead of 1793, the triumph of monarchy. Popular enthusiasm would not have failed to proclaim paternal and royal absolutism as the best of régimes." This is too materialistic a view of history; the French Revolution ended in a great confiscation of land, but it was not made by the hungry peasantry, it was made by the intellectual classes; at any rate, it was begun by them.

The American Constitution must be judged by itself and in itself. As the Duc de Noailles justly observes, the framers of the Constitution attempted to conciliate two principles: the sovereignty of the people and the supreme authority of law. In the preamble of the Constitution, the people declares its desire to establish the reign of liberty and of justice. "A noble design, surely, but how can we prevent popular sovereignty from resolving itself, in America as elsewhere, into the brutal law of numbers?" It must be noticed that the law of numbers is always taxed with brutality by the party which is excluded from power. It seems difficult, however, to evade it in a democracy; all we can hope for is to place a certain number of rules, of traditions, of institutions, out of the immediate reach of the "brutal" majority. The Duc de Noailles confesses that "America possesses a very powerful preservative against the transformation of Congress into a single omnipotent convention. The Federal Senate has nothing in common with those factitious institutions which are condemned to vegetate in obscurity. It represents the individual States; and this special origin gives to it a vitality and a credit of which many upper chambers are often devoid." The Duke praises also the Supreme Court, but his praise is two-edged. "The judicial power," he says, "offers the strangest contrast. While it attains at its summit a high degree of honor and of power, it touches at its base the lowest term of infirmity. The Supreme Court of the United States, appointed by the President himself, and unremovable, has known how to maintain itself above the quarrels of parties. On the other hand, the local magistrates, who are almost all elected by the people, for a short term, have lost all independence."

One of the indispensable conditions of stability in the American democracy has been found in the sacrifice of ministerial responsibility. The Ministers do not form a cabinet, in the English sense of the word; they depend solely upon the President, who is alone responsible for all executive acts. The Duc de Noailles says that this method is just now much criticised. The isolation of the various departments may have its inconveniences, but it is difficult to reconcile in practice Presidential responsibility with a new responsibility; we can hardly imagine a prime minister taking a constant and active part in the Congressional debates if the President did not condemn himself to complete apathy, and did not accept freely the function of a constitutional monarch. Two responsibilities, one before the people, the other before Congress, could not run long in two parallel lines; there would be constant conflicts between the nominee of the people and the favorites of the legislative chambers.

It would be very difficult to give a succinct analysis of the work of the Duc de Noailles. The subjects which are treated in succession by him are these: the principle of popular sovereignty; popular sovereignty and the law of numbers; the right of suffrage in the United States; the limits of the sovereignty of the people; the guarantees against the omnipotence of numbers, and the mission of minorities; the Federal Constitution and the work of the Philadelphia Convention; the Federal system and liberal institutions; the limits of legislative power; the House of Representatives; the origin of the Senate—its organization, its legislative and judicial attributions, its executive attributions. This is a very extensive programme. The Duc de Noailles is not an admirer of democracy; he tries to prove that the executive power and the Senate owe much of their excellence to a percentage, if I may so express myself, of aristocratic and monarchical ideas, while the greatest imperfections have revealed themselves in the House, where the democratic percentage is the highest. He strongly criticises the short term of the legislative mandate, the standing committees, the lobby, the suspension of the rules of the Chamber, which prevents all discussion and allows the Representatives the right to pronounce themselves by an immediate and single vote, without any amendment. This hasty legislation is, in his eyes, all the more dangerous in that the deputies can be classed in two categories, viz., those who have no experience of legislation, and a few old stagers, the favorites of universal suffrage, who are constantly reëlected, and who have become in fact deputies for a long term, and are the real masters of the situation. The Duc de Noailles cites on this point, as on many others, the *Nation*, which has often denounced the politicians, the wire-pullers, who use their long experience of Congress for the most selfish motives. His criticism of the Presidential power is interesting, but seems to me tinged with too much severity. The last Presidential election showed that there is no desire in the American nation to reduce the President to an insignificant rôle; that character, honesty, firmness are not a bad note for a Presidential candidate. We may fully agree with the Duc de Noailles when he denounces plutocracy as the great danger of American democracy, as well as of any democracy; but we will not go as far as to say that the constitutional powers have become in the United States a mere curtain, and that behind this curtain are the real powers, the financial powers. There are many other forces at work, and these forces are not yet preparing to abdicate. It would be difficult to find a country where the rights of intellect, of virtue, and, I may say, of birth, are more highly appreciated than in the United States. The Duc de Noailles could easily have a proof of it if he crossed the Atlantic.

Correspondence.

GRIMM'S LIFE OF RAPHAEL.

GEEHRTE REDACTION:

Indem ich Ihnen für die freundliche Aufmerksamkeit Dank sage, welche Sie meinen Arbeiten zu Theil werden lassen, erlaube ich mir in Betreff des 'Leben Raphael's' (*Nation*, July 8, 1886) zu bemerken, dass ich, so wohl was Vasari als was Passavant anlangt, in der zweiten Auflage des Buches meinen Standpunkt nicht geändert habe, sondern denselben einnehme, auf dem ich in der ersten Auflage stand. Von Passavant wird Seite lxiii der ersten Auflage mit beinahe den gleichen Worten gesagt: "Sein zweiter Theil ist ein Muster- und Meisterwerk deutscher Arbeit. Er bildet die Grundlage unserer Kenntniss Raphaels," etc., während Vasari's 'Vita di Raffaello' als das, wovon alles Studium Raphael's auszugehen habe, der Arbeit vorangestellt worden war.

Hochachtungsvoll der Ihrige,

HERMAN GRIMM.

BERLIN, MATTHÄIKIRCHSTRASSE, 5, d. 6 August, 1886.

GEN. MÜHLENBERG.

TO THE EDITOR OF THE NATION:

SIR: I find in the *Nation* of July 15, on page 54, a correction concerning the birthplace of J. Peter G. Mühlenberg, Major-General U. S. A. The same article introduces statements which again call for amendment and amplification. He was born October 1, 1746, at New Providence or Trappe, Montgomery Co., Pa. With his parents he moved in 1761 to Philadelphia, and in 1763 with his younger brother, Fr. Augustus C., and Henry Ernest, on the same ship which carried W. Allen, Chief Justice of Pennsylvania, was sent to England, and by the way of London and Hamburg to Halle, there to receive his education. Peter was, however, already, in October, 1763, apprenticed to a Mr. Niemeyer, a druggist in Lübeck. Finding his position unprofitable and disagreeable to his taste, two years later he joined a military troop passing through the town; soon afterwards, through the influence of friends, he received an honorable dismissal and found his way back to America in 1766 (not 1772, as the article of July 15 states). Here he was introduced by his father, Rev. H. M. Mühlenberg, D.D., and the Rev. M. Wrangel, D.D., Provost of the Swedish congregations on the Delaware, and pastor of Wicaco or Gloria Dei Church in Philadelphia, to the study of theology, began pastoral work in vacant charges in Pennsylvania, and, after being examined and properly acknowledged by the Lutheran Synod, he officiated in Lutheran churches in Hunterdon Co., N. J. Here in 1771 he received a call to congregations in Dunmore Co., Va. To have a legal standing as a clergy-

man in that province, he went well recommended to England, and there, April 21, 1772, was ordained a Deacon by Edmund of Ely in Mayfair Chapel, Westminster, London, and April 23, with the Rev. Braidfoot of Virginia and Rev. White, later the highly honored Bishop of Pennsylvania, ordained a Priest by the Bishop of London. In the autumn of 1772 he settled at Woodstock, Va.

W. J. MANN.

PHILADELPHIA, August 17, 1886.

THE YOUNG DEMOCRACY.

TO THE EDITOR OF THE NATION:

SIR: Your comment on the Democratic State Conventions of Indiana and Tennessee in your "Young Democracy" editorial in this week's *Nation* will apply with equal force to the Democratic and Greenback State Conventions of this State, held on the 18th. The assembly of delegates to each Convention was composed largely of young men. George L. Yaple, the candidate for Governor, is but thirty-six, and a number of the other candidates on the ticket are young men. The managing men were all young. The manager of the Yaple canvass was Mr. Rowley, of the Lansing *Journal*, almost a boy. The real head and front of the Greenback party—and now Secretary of the Greenback State Central Committee—was C. S. Hampton, of Harbor Springs, scarcely thirty. The candidate for Secretary of State was P. B. Wachtel, of Petoskey, about the age of Yaple.

The leading men were all young. The only contest between the older element and the younger was in the Greenback Convention on a ballot for candidate for Governor—ex-Gov. Begole against Yaple, the latter leading three to one. The gatherings were orderly, well dressed, and quiet, but full of determination and enthusiasm. I did not see but one delegate under the influence of liquor. The platform probably fairly represents the Democrats of this State, and presages, as your correspondent from West Virginia recently predicted, an eventual "long, hard fight" on that line; but the enthusiasm in support of the President and for tariff reform is great. The outlook for Democratic or Fusion success this fall is good.—Respectfully yours,

H. J. MARTIN.

VERMONTVILLE, MICH., August 21, 1886.

BLACK SPIRITS AND WHITE.

TO THE EDITOR OF THE NATION:

SIR: It would perhaps be scarcely courteous to send the following story to the English *Journal of Psychical Research*, or to its American child; but it seems a pity that the readers of the papers therein published should not have the benefit of this narrative. And if I may not assume that your readers are also their readers, I will shift my ground and plead for its admission to your columns because of the interest attaching to such an amusing occurrence in the lives of historic personages, especially when told by one of the most famous of them. I extract it from the 'Memoirs of Cardinal de Retz.' The incident took place, apparently, in 1640, when the future Cardinal was about six-and-twenty and as yet only an abbé. He was just then much befriended by Mme. de Vendôme (the daughter-in-law of Henri Quatre), and by the excellent Bishop of Lizieux (Caspean), whose devotion to Louis XIII. may be remembered, and who, just at this time, was doing his best to bring about the conversion of M. de Turenne, already famous, though only some two years older than M. de Retz. These circumstances, and some others not worth entering into, threw these three men into frequent companionship with one another and also with Mme. de Vendôme and her daughter, and one day they all went out together to Saint-Cloud, accompanied by Mme. de Choisy, a great lady of the day, a M. de Brion, and Voiture, the well-known Academician of the Hôtel Rambouillet. It was for the purpose of giving the Bishop a theatrical entertainment. The good prelate, who was a great admirer of Corneille's tragedies, did not scruple to listen to one provided it were out of town, and the company but small. So to Saint-Cloud they went and were so well amused there that, as the nights were at the shortest, the day began to dawn as they returned. On the way—

"Our coach suddenly stopped. As I was at one of the boots (*une des portières*) with Mlle. Vendôme, I asked the coachman why he stopped, and he answered me in a very amazed tone, 'Would you have me drive over all the devils that are there in front of me?' I put my head out of the door, and, as I have always been very short-sighted, I saw nothing. Mme. de Choisy, who was at the other boot with M. de Turenne, was the first in the coach to perceive the cause of the fright of the coachman; I say in the coach, because five or six footmen who were behind were crying out 'Jesus Maria!' and already quaking with fear. M. de Turenne, at the shrieks of Mme. de Choisy, jumped out of the coach. I thought we were beset by highwaymen, and I got out of the coach likewise. I took one of the footmen's swords, and, drawing it, went to join M. de Turenne on the other side, whom I found looking steadily at something I could not see. I asked him what he was looking at, and he answered in a very low voice, jogging my arm: 'I will tell you; but these ladies must not be frightened.' They were in truth howling rather than shrieking. Voiture began an Oremus. The sharp tones of Mme. de Choisy may be not unknown to you. Mlle. de Vendôme was at her beads; Mme. de Vendôme was trying to confess herself to M. de Lizieux, who said to her: 'Daughter, be not afraid; you are in the hands of God.' The Comte de Brion was on his knees, chanting very devoutly with all our footmen the Litanies of the Virgin.

"All this went on, as you can imagine, at once and in less than no time (*en meme tems et en moins de rien*). M. de Turenne, who had drawn the short sword at his side after he had stared into the distance as I have already told you, turned to me with the same air with which he would have asked for his dinner, or with which he would have given battle, and uttered these words: 'Let's go towards them.' 'Towards whom?' replied I, and truly I thought everybody had lost their senses. He answered me: 'I actually believe that they may be devils.' As we had already made five or six steps forward . . . and were consequently nearer the spectacle, I began to perceive something, and what appeared to me was a long procession of black phantoms, which caused me at first more emotion than it had M. de Turenne. But making the reflection that I had long sought to come across spirits, and that apparently I had here found them, my excitement made me move more quickly than the deportment of M. de Turenne permitted his doing. I leaped forward towards the procession. The people in the coach, who thought us encountering all the devils in the world, made a great outcry, and yet it was not they who were the most frightened. Some poor reformed barefoot Austin Friars, who are called Black Friars, were our supposed devils; and seeing two men approaching with swords in their hands, they were in the greatest terror, and one of them, coming forward, called out: 'Gentlemen, we are poor friars, who do no harm to any one, and who are going to bathe in the river for health's sake.' We turned back to the coach, M. de Turenne and I, with such bursts of laughter as you can imagine, and he and I made at that moment two reflections, which we told one another the next morning. He declared to me that at the first appearance of these imagined phantoms his feeling was of joy, though he had always thought he should be frightened if he ever saw anything supernatural; and I confessed to him that the first sight had startled me, though I had wished all my life to see spirits. The second observation that we made was that all that one reads in the greater number of biographies is false. M. de Turenne assured me that he had not felt the slightest start, though he agreed that I had reason to believe from his fixed gaze and slow motions that he was much startled; and when I confessed to him that I had been startled at first, he declared that he would have sworn on his soul that I had felt no emotion but of courage and spirit."

But this discussion, which the Cardinal continues, concerning the veracity of history we will not enter into. One word only in conclusion. Will all Psychical Researchers observe that if M. de Turenne and M. de Retz had not got out of the coach, the Austin Friars might never have been discovered, and coachman, footmen, ladies, Bishop, and Academician would all have testified to devils disappearing in the river? * *

Notes.

T. Y. CROWELL & Co. will publish in the early autumn a translation of Don Armando Palacio Valdés's novel, 'Marta y Maria,' from the pen of Mr. Nathan Haskell Dole.

On September 1 Thomas Whittaker will issue 'Records of an Active Life,' by Heman Dyer, D.D.; and a volume from the unprinted sermons of Charles Kingsley, entitled 'True Words for Brave Men.'

Harper & Bros. will publish the last novel of the late Mary Cecil Hay, completed on her deathbed, 'A Wicked Girl'; and a thoroughly revised edition of the late Dr. Worthington Hooker's 'Child's Book of Nature.'

John Bernard, some time Secretary of the Beefsteak Club, was an English actor who was in America during the last years of the last century. He was an acute observer and kept a voluminous diary. He died nearly sixty years ago, but his American notes have only recently been rescued from oblivion. They have been edited, with an introduction and abundant notes, by Mr. Laurence Hutton and Mr. Brander Matthews, and will be published shortly by Harper & Bros.

Mr. Lang's 'Letters to Dead Authors' have got into a second edition in England, and in the preface to this Mr. Lang half promises a second series, which will include epistles to Homer, Hawthorne, Swift, Longfellow, Montaigne, Pepys, and Thucydides. To this edition he has also appended this neat little "Envoy":

"Go, letters to the irresponsive Ghosts
That scarce will heed them less than living Men.
For now new Books come thicker than, on Coasts
And Meads of Asia, throng the sea-birds when
The snow-wind drives them South in clamorous Hosts
From their salt marshes by Cayster's Fen."

M. Austin Dobson has written a Prologue for Mr. E. A. Abbey's illustrated edition of "She Stoops to Conquer," soon to be published, and he is engaged on an annotated edition of Goldsmith's 'Poems,' for the Clarendon Press, which will publish it uniform with his excellent volume of 'Selections from Steele.'

Among books recently published in France may be mentioned 'Les Dernières années du duc d'Enghien,' by Count Boulay de la Meurthe (Paris: Hachette). The author, in a previous work, had proved himself very familiar with the period immediately preceding the Consulate. In this he shows how the arrest of the Duc d'Enghien, in 1804, was brought about, and how, partly by his own imprudence and partly owing to false reports made to Bonaparte, his iniquitous execution took place at Vincennes.

M. le vicomte Onfroy de Thoron is known by two works on Equatorial America. He has just published an astonishing pamphlet, 'Découverte du Paradis terrestre et de la langue primitive parlée depuis Adam jusqu'à Babel' (Paris: Leroux). In this the author tries to establish that the primitive language is no other than the Quichua, still in use among certain native tribes in Peru, Ecuador, and Bolivia.

A very interesting volume has recently been published in Paris by Fetscherin & Chuit: 'La France socialiste: Notes d'histoire contemporaine,' by Mermeix. The author gives an account of the various socialist doctrines of the day, of their origin and development, and of the

aspirations and projects of the leaders of the revolutionary movement. He thinks the present state of things favorable to them; that they are no longer a little band ready for any upheaval and without ideas or settled plans, but a great mass, counselled and led by deserters from the classes threatened; and that the only safety for society in future is in a wise and strong union which will demand immense sacrifices of opinions and prejudices from all.

Burma is the subject of an interesting paper by Mr. J. Annan Bryce, published in the August Proceedings of the Royal Geographical Society. A rapid sketch is given of the physical features of the country and its productions, with a more detailed description of little known parts which the writer has explored within the past five years. Vegetation appears to differ in one respect from that of most tropical countries, in that there is a "great number of flowering trees and shrubs, many of which are sweet scented. There is hardly any time of the year at which the landscape is not bright with the bloom, and the air loaded with the perfume, of one or more of these trees, and they are often in such masses as to form a striking feature in the scene." Of the various races which inhabit the whole country, the Burmese number between three and four millions, or one-half of the population. They are a hardy, vigorous people, but their passionate love of sport and impatience at restraint, unfitting them for military service, are causing them rapidly to fall behind the more diligent but probably less intelligent Hindoo and Chinese. This is the more to be regretted as in certain characteristics—less servility and more regard for truth, for instance—the Burman is far superior to the other races who dispute the supremacy with him. Mr. Bryce has even a kindly word to say for King Theebaw, many of whose cruel acts were "political necessities in the eyes of his advisers, and the details were often grossly exaggerated by the newspapers in India. In regard to one batch of alleged massacres, that which is said to have taken place in 1880, I can say with confidence that, having been in Mandalay at the time, and having taken trouble to get to the bottom of the evidence, I am firmly convinced that the allegation was absolutely devoid of foundation."

In the same number Col. Ardagh gives some account of the Red Sea petroleum deposits, which in April last were discovered to be commercially worth working. From the want of drinking water on this part of the coast, it is proposed to lay a pipe line 150 miles to Suez, where the storage tanks and refineries will in that case be built. Mr. J. W. Wells, in a description of the sugar plantations near Pará, on the Tocantins River, says of the Amazon's delta generally: "I do not know of any place on the globe that is so exceptionally favored by nature for the cultivation of tropical produce, and yet which is so little utilized." A market is near at hand and prices are high, while the soil is so rich and the climate so equable "that it is only necessary to plant anything in plots of plantations in rotation, to have a continual crop of any produce all the year round." In one place he saw a "cane-field twenty years old, from which yearly crops had been taken without replanting." There is also an abstract of the valuable report on Tunis, the result of a tour last autumn, made to the Foreign Office by Sir Lambert Playfair, the Consul-General. He gives a very favorable account of the condition of the country since its occupation by the French. There are excellent roads, cultivation has largely increased, and the state of financial affairs is most satisfactory, there being a surplus for public works. He regards the country as "one large archæological museum, and a perfect library of epigraphical treasure, previously unexplored. . . . Triumphal arches, city gates, ruins of temples, mausolea, and Roman forums are still found in their classic grandeur," though they are in great danger from the greed of the railway contractors, "who look upon Roman ruins as quarries of good bricks."

The *Scottish Geographical Magazine* for August contains a paper on the resources of the lower Congo, by H. Nipperdey, formerly Director of Agriculture in the Congo Free State, which is not very encouraging as to the commercial prospects of the new State. In treating of the food-stuffs, he mentions the curious fact that "none of the means of subsistence cultivated by the negro at the present day are indigenous in Africa. They have all been introduced within three hundred years by the Portuguese or others," and it is accordingly an interesting question as to what they lived upon before this time. Following this is a description of a paradise discovered in the Patagonian Andes by Col. Fontana, Governor of Southern Patagonia, as related by him to the Argentine Geographical Institute last June. An exploring expedition, headed by the Governor, set out from Chubut, a Welsh colony numbering about three thousand souls on the eastern coast, in October, 1885. After several days' march in a southwesterly direction across the characteristic stony wastes, they came, in the Andine region, in lat. 43°, upon a great lake surrounded by verdant meadows and forests of fine timber. "Further on we came upon plains of strawberries and currants, as if we were in some market-garden near a populous city." The expedition turned back within a short distance of the Pacific, and reached their point of departure after an absence of four months, having explored about three thousand miles.

'The Customs and Songs of the Turkish Serbs' is the title of a work which has lately been published in St. Petersburg by I. S. Yastreboff. The compiler has devoted many years of personal labor to collecting these songs and customs on the scene of their production. His collection, which contains nearly 600 songs, fills out former collections of Servian national poetry with fresh and rich material. In order to render his work available for those who are not versed in the Servian tongue, the compiler has appended a brief dictionary of Servian words and Turkish expressions.

'The Annals of My Life,' by N. I. Gretch, is a book which throws great light on Russian society and the system of government at the end of the eighteenth century. Gretch was born in 1787, and died in 1868. After his death a few fragments of these annals appeared in various Russian journals, but they have never been known as a whole until their recent publication in St. Petersburg. They contain many curious details of the times of the Empress Catherine and of the Emperors Paul and Alexander I., which have up to this date never been fully described. Gretch was able to obtain information from behind the scenes, which constitutes the value of his memoirs.

The only serious historico-literary work evoked by Gogol's famous comedy, "The Revisor," has just been published in Moscow by Nikolai Tikhonravoff. It is now known (and it was not wholly unknown before) that the comedy appeared to spectators and to readers in two different forms. It was not played in the theatre as it was printed, and theatrical critics, who were familiar with the printed text, often reproached the actors for mangling it. Mr. Tikhonravoff has now published the first stage text, with minute indications of the variations in other well-known manuscripts and the first printed text. To this edition he has prefixed an ample introduction, containing the history of the play founded upon these various texts and Gogol's transcriptions. It is known that Gogol labored long and assiduously over his works, and "The Revisor" confirms his own statements on this point. He had it in hand from 1832, when the first rough draft was made, until the last corrections were made in 1842. It was licensed by both the theatrical and the ordinary censor, at the same time, in 1836, but not all the changes in the stage text were introduced into the printed version. This probably arose from the difficulty of making alterations in print, and Mr. Tikhonravoff says that Gogol attached more importance to perfecting the stage than the printed text, since the conditions of censorship were more unrestrained and easier at that time for the printed than for the acting version. On the St. Petersburg boards the stage text of 1836 was given until 1870; on the Moscow boards until 1882; and meanwhile the printed text was exclusively that of 1842. These two texts had nothing in common in the majority of the scenes. The publication of the original text, as presented by Gogol to the theatrical censor, with indications of all the changes made by Gogol himself, and by the censor up to the date of the final stage and printed forms of the comedy in 1836, furnishes very curious materials for the study of Gogol's methods. Just at that time he was beginning a new period in his career, which is indicated in his own letters, when the "demand for diverting himself with innocent, careless scenes" was being replaced by the deeper requirement of artistic comicality, which imparted to "The Revisor" its great social and literary importance.

We have been reminded that our musical correspondent at Bayreuth, in the number for August 12, writing of Wagner's treatment of the mediæval legend of Tristan and Iseult, falls into error when he says (p. 135): "By the introduction of the magic love potion he removes the action of the lovers from the region of mere amorous adventure (as treated by the mediæval poets) to the sphere of inevitable tragic necessity." But the magic potion and the consequent character of fatality attached to the love of Tristan and Iseult is a necessary part of the original story, and is found in all the old versions of it, both in verse and in prose. It is one of the characteristic differences between this story and the more recent and much less ideal one of Lancelot and Guinevere, so similar in many external respects. The beauty of the stories of Wagner's music-dramas depends, not upon what he adds to the old poems which he uses, but upon his choice of their oldest and most poetic forms and incidents.

The eighth and what seemed to be the concluding volume of M. Lorenz's 'Catalogue général de la Librairie française depuis 1840,' was published in 1880. The first fascicule of a ninth volume has just appeared (Boston: Schoenhof). This is really the first number of a new work, which will be a catalogue of all books published in French from the 1st of January, 1876, to the end of 1885. It will be in two volumes, forming the fourth part of the General Catalogue. The author announces his intention of publishing in 1888 a final volume, which will contain a classified index, according to subjects, of the two volumes now in course of publication. The catalogue is in every respect excellent, giving, besides sufficiently full titles, bibliographical and biographical information which cannot be found elsewhere. It is very clear and accurate, and as complete as such a work could reasonably be expected to be.

—In the September *Atlantic* Mr. P. G. Hamerton's second paper, comparing the French and English peoples, easily outranks everything else in thoughtfulness, freshness, and literary handling; and, like its predecessor, it gives a shock to several antiquated notions. Few convictions are more firmly settled in the British mind than that the French are a fickle nation, liable to periodical

attacks of revolutionary mania, never settled and never likely to be; to the British throne Paris is as sand to the rock, and consequently the French have been pooh-poohed at politically by the English after the uncivil fashion of which the Laureate has given more than the one example Mr. Hamerton so gently deprecates. We, too, think of the French temperament and Rochefoucauld's maxim, "Tout arrive en France," at once. But Mr. Hamerton, as a writer, is in nothing more successful than in his discovery of happier points of view than are afforded by the beaten path of old landmarks. The reader will be told in this article that this depreciation of French political genius is petty; that the numerous written constitutions since 1789 are a proof of an order-loving spirit; that there seems great probability, in the age now coming on, of France being the country of stability and England that of vast and disturbing change in the structure of society and the state, and, in fact, the Presidency may outlive the throne. In his last delightful chapter the author reads Mr. Arnold a lesson for joining in the common cry that in France the poor hate the rich; one must go into Lancashire to find class-hatred, says Mr. Hamerton, and forthwith takes us there with a few pertinent anecdotes. The rest of the number is very readable also, with a note on Whipple by Col. Higginson, a sketch of the paper-money craze in 1786 by John Fiske, and an excellent paper in respect to the property rights of married women, in which it is very meekly suggested that the law has gone beyond justice in relieving the wife's property from any charge for the household, and even for her own maintenance; both the husband and the creditors of his estate are pleaded for.

—*Harper's* contains no article of specially marked interest, but is a number of even and high excellence of the sort that seems to place this magazine beyond competition as a periodical devoted to the contemporary. The article which is somewhat inappropriately entitled "Ferdinand Barbedienne" is made up of a sketch of the modern growth of the artistic bronze industry in Paris, an account of mechanical processes involved in it, and a description of the manufactories which form, as the author says, a kind of industrial republic specifically Parisian, and not without instructiveness in these times. The portraits, both literary and pictorial, of the workingmen in Parliament are another attractive feature; and it will be interesting for those who oppose "labor in politics" to observe that these representatives are men formed by the unions, of which most of them are officers, while it is also noticeable that many of them are religious men of a pronounced preaching kind, and temperance reformers of the total-abstinence group. Prof. Ely, continuing his discussion of the railroads, comes to his foreshadowed conclusion that public control should be exercised either by delegated authority of a recognized kind or through direct State-ownership, which he prefers; and in the course of his reasoning lays down in very terse and clear terms a number of general propositions of a socialistic color, to the effect, for example, that State-help is another form of self-help; that the State's duty is limited only by the possibility of man's development in all his nature; that one generation should not assume to grant rights and privileges in perpetuity, and the like. Col. Higginson tells the adventurous story of the development of our foreign trade by the Salem sea-captains from the Revolution to the Embargo and the War of 1812; and there are several other hardly less interesting papers on short-horn cattle, strawberry culture, and those two subjects of perennial importance, the United States Navy and the sun.

—The total eclipse of the sun which occurs early in the morning of Sunday next, has long been known to astronomers as the "great eclipse of 1886"—a name derived from the extraordinary duration of the total phase, six minutes thirty-five seconds in the most favorable locality, thus approaching within about a minute of the greatest duration possible under any conditions. The prospective value of such an eclipse will be apparent if we compare its totality with that of some recent eclipses which have become famous in astronomy—that of the 17th of August, 1868, belonging to the same saros as the eclipse of the present year, and widely observed in India, with a duration of about six minutes; of the 6th of May, 1883, visible for about five and one-half minutes in the Caroline Islands; of the 29th of July, 1878, for three and one-half minutes in the Western States; of the 7th of August, 1869, for three minutes in the Western and Southern States; and of the 16th of May, 1882, for about a minute and a half in Egypt. Most unfortunately, however, it so happens that all the localities where this eclipse will have an unusual duration are on the water instead of on land, and astronomers have not yet found any way of mounting their instruments on shipboard with sufficient stability to enable them to make observations of value. Still, the path of the eclipse of 1886 is so long that, after reaching all the way across the Atlantic, from the African to the South American continent, there is enough foothold left for the astronomer to set up his instruments and get good observations, if only he can have a clear sky. Near Benguela, on the west coast of Africa, the eclipse will remain total something less than five minutes; but the locality is not an inviting one, and Congress failed to make the appropriation necessary to defray the expenses of such an expedition as the Government astronomers had planned to send to that point. So far as we know, no observing party of any nationality will watch the eclipse from the African coast, and no American astronomers will, we believe, observe it at all, except, perhaps, one or two who may have gone to the only other available point—in the island of Grenada, of the Windward group, off the northeast coast of South America. Here the moon will completely hide the sun for something more than three and one-half minutes, and a large English party now stationed there may be expected to get good results if the sky is auspicious.

—The *personnel* of this expedition, which left Southampton on July 29, includes Mr. J. Norman Lockyer, the celebrated spectroscopist, who will photograph the eclipse with two telescopes so arranged as to take three-inch and three-quarter-inch pictures of the solar corona, some of the exposures being instantaneous; Dr. Arthur Schuster, who will photograph the corona and its spectrum also; Mr. Turner and Mr. Maunder, assistants in the Royal Observatory, who will conduct a variety of spectroscopic and photographic work; the Rev. S. J. Perry of Stonyhurst College, who has a large outfit of apparatus, and will observe, among other things, the first and the last contact spectroscopically, also any difference he may be able to detect in the spectrum of the inner corona near the poles and equator of the sun; Prof. Thorpe, replacing Capt. Abney, who will observe the intensity of light of the corona; and Capt. Darwin, who carries a coronagraph, an instrument invented by Dr. Huggins for taking photographs of the corona in full sunlight. It is made without lenses, the image being formed by a concave mirror, thus reducing the amount of scattering light to a minimum. A comparison of photographs taken before and during the eclipse may be expected to show whether the light effects obtained on the plate are due to the true corona or to some atmospheric or instrumental cause. Also, when the sun is partially eclipsed, the image of the moon should be shown eclipsing the corona. To any one seeing the sun totally eclipsed on that day the sky will present an unusually brilliant spectacle, the bright star Regulus being close to the sun, Mercury and Venus and Saturn to the north, and Mars and Jupiter to the south, and all these objects being approximately in line. The eclipse cannot be seen at all in North America, except as a very partial one, for a short time after sunrise, in the States east of the Mississippi River and south of the forty-third parallel.

—The Philadelphia Social Science Association publishes an interesting paper by Mr. Robert Adams, jr., on "Wife Beating as a Crime and its Relation to Taxation." Mr. Adams was a member in 1885 of the Pennsylvania Legislature. At the request of one of his constituents he introduced a bill to provide corporal punishment for all "male persons convicted of wilfully beating their wives." The bill was defeated in the Senate, 26 to 16. The Senator who thus introduced the bill did so by "request," and was not himself in favor of it at first; but a study of the subject converted him, and in the paper above named he presents some reasons in favor of the measure. It appears, by a quotation from Darwin, that, "with the exception of the seal, man is the only animal in creation which maltreats its mate or any female of its own kind." English statistics are quoted as showing in the three years 1874–1876 an average of over 2,000 aggravated assaults per year made by husbands on their wives. In Pennsylvania, for the year 1885, there were 525 complaints by wives against their husbands for "brutal beatings"; 337 of these complaints were endorsed by the grand jury, and 211 of the husbands were convicted and sentenced "for terms averaging three months each, thus depriving their families of necessary support." This statement gives only a part of the actual cases: "Hundreds of minor cases appear before the justices of the peace, or are settled before trial." "Many more wives are abused who will not make a complaint." Most of the husbands complained of were foreigners, and were "under the influence of liquor." The author insists successfully, we should think, that such a law would not necessarily be unconstitutional as authorizing a "cruel and unusual punishment," or rather "a cruel punishment," which is the phrase of the Pennsylvania Constitution. The experience of Maryland is referred to, where a law of this sort was passed in 1883, "and the District Attorney of Baltimore informed the writer that after the first conviction the crime ceased as if by magic in that State." The author does not discuss the subject from the point of view that flogging is a form of punishment which brutalizes the offices of the law and all who take a part in it. But if the experience of Maryland may be relied upon, that objection is mainly answered.

—Scarcely a week passes in France without bringing about the inauguration of a statue or bust of some great man of a past more or less remote. In the month of July alone there were more than half-a-dozen such solemn occasions. The monument to Lamartine we have already mentioned. The statue of Diderot collected the free-thinkers not of France only. The author of 'Kraft und Stoff,' Dr. Büchner, made a speech upon this occasion, and M. Hovelacque, the President of the Municipal Council, answered in the name of the city of Paris. M. Hovelacque, who never misses an opportunity of preaching doctrines dear to his heart, had a subject which seemed fully to satisfy him when he pronounced the eulogium of Denis Diderot, "the real chief of the materialistic scientific school," in whom the

orator saluted an "apostle of modern times." The theatrical character of the proceedings upon the occasion of the unveiling of the bust of Rabelais at Meudon made this small event rather interesting. Two literary societies, composed of men from the south of France, the *Félibres* and *La Cigale*, took upon themselves to atone at this late day for the neglect of northern Frenchmen. Under the pretext that the "jolly priest" of Meudon, a native of Chinon, in Tourraine, had studied medicine at Montpellier and dwelt for some time in the Golden Isles, the *Isclo d'oro*, they came to an understanding with the municipal authorities of Meudon, and the result is a bust by the sculptor, M. Truphème, of the author of Gargantua and Pantagruel. On the 11th of July the invited guests were received at the station by a picturesque *cortège*, composed of ancient heralds-at-arms and lansquenets surrounding the triumphal car of Gargantua, followed by twelve "thélémites" in brilliant costumes and a numerous corps of "escholiers" of the sixteenth century. In this order they proceeded to the little square where the bust had been erected with the inscription: "À François Rabelais, Curé de Meudon, Docteur de Montpellier et Caloyer des Isles d'Hyères; Les Cigaliers et les habitants de Meudon." M. Henry Fouquier was the orator of the day. In a very bright introduction he denied that the Frenchmen of the south wished to claim as one of their conquests a man who belongs to all France. After this speech M. Mounet-Sully of the Comédie-Française recited a charming poem by M. François Fabié, "La Cigale à Rabelais." We have been so fatigued, not to use a more violent and expressive word, by the semi-official and bombastic verses pronounced of late at the foot of various statues, that the stanzas of M. Fabié come as a graceful reminder that poetry is still possible on such occasions.

THE INDIAN EMPIRE.

The Indian Empire. Its history, people, and products. By W. W. Hunter, C.S.I., C.I.E., LL.D. 2d edition. London: Trübner & Co.

THIS compilation belongs to that class of books which, according to Charles Lamb's classification, bears the same relation to literature, properly so called, as does a backgammon board lettered on the back to represent the 'History of England.' It is the work of a clever man and an accomplished writer, and must have demanded a great deal of labor in its preparation; but it is difficult to conjecture the kind of reader for whom it can have either utility or interest. The "general reader" is generally credited—upon no trustworthy evidence, so far as we can see—with an insatiable voracity for every species of information; but if there be one of these persons who could sit down and work his way through Dr. Hunter's 'Indian Empire,' he ought to be put under a glass case and preserved for the instruction of posterity as an extraordinary *lusus naturæ*. His thirst for information would indeed be abnormal. From the "physical aspects" of India, he would pass lightly to a study of her "Non-Aryan populations"; then of the "Aryans," then the Buddhists, the Greeks, the Scythians, the Hindus, the Moslems, the Mahrattas, the British; agriculture, trade, geology, meteorology, vital statistics, and much other miscellaneous information. The student, on the other hand, of one or more of these various subjects would be repelled from Dr. Hunter's by another cause. It is an attempt to achieve the impossible. "The book," to quote the author's own words, "tries to present within a small compass an account of India and her people," and no account can be given in a small compass of so vast a subject without being misleading and unsatisfactory. Dr. Hunter is himself partially aware of this:

"Continuous condensation," he says, "although convenient to the reader, has its perils for the author. Many Indian topics are still open questions, with regard to which divergences of opinion may fairly exist. In some cases I have been compelled by brevity to state my conclusions without setting forth the evidence on which they rest, and without any attempt to combat alternative views. In other matters, I have had to content myself with conveying a correct general impression, while omitting the modifying details."

The opening sentence of this paragraph ought, we think, to be reversed and run as follows: "Condensation, although convenient to the *author*, has its perils for the reader." We cannot profess to be an authority on the greater part of the matters treated of in this volume, but to a few of them we have devoted considerable thought and study, and of these we are bound to say that Dr. Hunter has, in our judgment, signally failed, in many instances, to "convey a correct general impression." To say this is to make no impeachment of Dr. Hunter's ability or veracity. It is the natural consequence of the method which limitations of space have compelled him to adopt—namely, that of "stating his conclusions without setting forth the evidence on which they rest." When we remember that upon nearly all the controverted points of Indian history (and their name is legion) the controversy is upon the evidence—upon the authenticity, that is, of the facts which are appealed to in support of this or that conclusion—the omission which Dr. Hunter acknowledges, deprives his historical dissertations of all value for any student who is not prepared to accept his conclusions at second hand.

Apart from this, however, there is another consideration which makes this volume of very doubtful value as an independent testimony to either the past or present condition of India. It is an official publication, prepared and published by a highly paid official of the Indian Government, and it is idle to suppose that one occupying this position can weigh evidence or state facts with the calm dispassionateness of a Grote or a Thirlwall. The consequence is that the more nearly he approaches the present day, the more grievously does an instructed reader find occasion to complain of Dr. Hunter's way of putting things. The impartial historian withdraws further and further in the background, and his place is supplied in the most unwelcome manner by an advocate holding a brief in favor of the bureaucratic system by which India is governed at the present day. We do not mean that Dr. Hunter is guilty of deliberate and intentional inaccuracy, but that from his position he is unable to weigh impartially the relative value of different orders of facts; that he places, so to speak, the emphasis on the wrong place, and is a great deal too apt to write as if good intentions on the part of a Government were identical with successful administration. Take, for example, the following passage, contrasting the present state of land-tenure with that which prevailed in India anterior to British rule:

"Legal titles have everywhere taken the place of unwritten customs. Land, which was merely a source of livelihood to the cultivators and of revenue to the state, has become a valuable property to the owners. The fixing of the revenue demand has conferred upon the landholder a credit which he never before possessed, and created for him a source of future profit arising out of the unearned increment. This credit he may use improvidently; but none the less has the land system of India been raised from a lower to a higher stage of civilization—that is to say, from holdings in common to holdings in severalty, and from the corporate possession of the village community to individual proprietary rights."

There is hardly a sentence in this passage which does not, to our thinking, convey an impression to the mind exactly the reverse of the truth. For example, it may be true, in a sense, that "legal titles have everywhere taken the place of unwritten customs"; but of what advantage is that to the peasant proprietor of India if, under the "unwritten custom," he enjoyed a sense of security in his property which is altogether wanting under the British system of "legal titles"? And that that is so is a fact notorious to every one who has been in India. It is a common but most mischievous error to suppose that individual rights of property did not coexist with the ancient village-community system, which the English have done so much to break up. They did; and, being founded upon "unwritten custom"—*i. e.*, upon the common faith and sanction, and the immemorial practice of the community as a whole—they were practically impregnable. But, by the English system of "legal titles," the rights of each little cultivator are recorded in a language which he does not understand; are in the custody of underpaid native officials over whom he has no control; are virtually inaccessible to his inspection; and, by means of fraud and bribery, have, in myriads of cases, instead of serving as a protection, become the means of ousting him from his little possessions. In nothing has British rule in India failed more signally than in giving firmness and security to the tenure of landed property.

Again, Dr. Hunter says that "the land system of India has been raised from a lower to a higher stage of civilization; that is to say, from holdings in common to holdings in severalty, and from corporate possession of the village community to individual proprietary right." There might, perhaps, be some cause for congratulation in this change if the transition had been effected with deliberate foresight and intention. Actually, however, the British rulers of India could not conceive that landed property could be held anywhere except upon precisely the same conditions under which it was held in their own island; and the havoc and desolation which under this mistaken impression they have wrought in their newly acquired Indian possessions, is one of the most harrowing stories on record. When the village brotherhood tried to explain to the English official that they did not know what a "landlord" meant, the latter imagined that they were seeking to impose upon him; but, not being able to discover the genuine article, he seized upon some unfortunate official in the little village republic, and insisted upon investing him with all the responsibilities of a landlord. This man was held responsible for the payment of the revenue, and when he failed to do that, which was wholly beyond his power, the entire village community was sold out for a demand of which they had never heard, and found themselves transformed, by the flourish of a pen, into tenants at will of some greedy money-lender who had bought them, like so many head of cattle, at a public auction. As compared with the land-revenue system of their Moslem predecessors, that of the English in India must be pronounced a ruinous failure. The leading feature of the Moslem system was to root, so to speak, the entire machinery for the assessment and collection of the land-tax in the soil itself, and thus to give to all the functionaries employed a personal interest of the most stringent kind in the reduction of the State demand. The whole hierarchy, from the Zemindar downwards, were holders or cultivators of the lands which they had to assess, and it is obvious at a glance how strong a protection against undue exaction on the part of the state was provided by this felicitous arrangement. But an English revenue collector and his horde of native underlings are altogether divorced from the soil. Their duty is merely to realize the revenue at the ap-

pointed seasons, without regard for the consequences to those who have to pay it.

"Our system," writes a brother official of Dr. Hunter, "is simply to collect the tax to the last penny through the agency of the native tax-collectors. As the instalments fall due, the native tax-collector scatters his notices to pay all over his subdivision; there are no jungles to fly to for refuge, and there are auction sales which are upheld by the arm of a resistless Government. The English collector knows little and does less. The landowners feel that mercy is not to be expected; they pay what they can from the rents, and they mortgage or sell their property privately in order to liquidate any balances, for they fear that a smaller sum will be secured if the sale is an auction one managed by dishonest Government subordinates. *There is, in fact, no real revenue administration.*"

There is, in point of fact, a double aspect belonging to the British connection with India. Morally and intellectually, its influence for good largely preponderates. Not only have widow-burning, female infanticide, Thuggism, and other unnatural crimes been suppressed, but their perpetration has, in a measure, become impossible by the gradual restoration of the Indian mind to a sound normal condition. The remarkable intellectual capacities of the Indian races have been furnished with a common speech, and their energies turned into fruitful channels; and it is from this point of view that the future of British supremacy in India is full of hope and promise. But in the actual conduct of the Government, the experiment of administering the affairs of a vast continent by a foreign bureaucracy and without the coöperation and assistance of the people has failed, as it was bound to do. In the assessment and collection of the land-tax, in the administration of justice, in the management of the finances, in the organization of the police, the history of British rule in India is a history of almost unrelieved blundering, and consequent grievous sufferings on the part of the people. This it is which Anglo-Indian officials as yet lack the courage and candor freely to acknowledge, thereby building up an impassable obstacle to the carrying out of really efficient reforms. And the question, just now, that is of vital importance to the millions of that strange empire is, Will the rulers be wise in time, or will they delay concession until the time for concession is past? For the English have themselves kindled a new spirit in India which no earthly power can now restrain, which must bear down all barriers that impede its expansion; and the British officials must either consent to work in harmony with it, or be crushed before it, to the irreparable misfortune of India, and indeed of all Asia.

POLYNESIAN AND ARYAN.

An Account of the Polynesian Race: Its Origin and Migrations, and the Ancient History of the Hawaiian People to the Times of Kamehameha I. Vol. 3.—Comparative Vocabulary of the Polynesian and Indo-European Languages. By Alexander Fornander, Circuit Judge of the Island of Maui. London: Trübner & Co. 1885. 8vo, pp. xii, 292.
